"American Prisoners of the Revolution," by Danske Dandridge, published by the Michie Company, Charlottesville, Va., is a compilation of some 500 pages of material extracted from such contemporary sources as the "Adventures of Ebenezer Fox," Thomas Dring's "Recollections of the Jersey Prison Ship," and the "Memoirs of Andrew Sherburne." The author has done little more than furnish the comments necessary for connecting the long extracts from these books which make the substance of the work. "The accounts could have been given in the compiler's own words," she says in the preface, "but they would only, thereby, have lost in strength. The original narratives are all out of print, very scarce, and hard to obtain, and the author feels justified in reprinting them in this collection, for the sake of the general reader interested in the subject." The work is devoted mainly to the prisons and prison ships in and about New York. No effort has been made to establish the trustworthiness of the sources; and the extracts selected are those which best support the assertion that the prisoners "suffered terribly and died grimly, . . . without betraying the cause of that country which was dearer to them than their lives." The mitigating circumstances, if there were any, have been passed over in silence.

Of those who visit Palestine for more than a two weeks' glimpse, it should seem that at least 50 per cent. publish their experiences. E. P. Dutton & Co. have just added one more to the innumerable list ("Palestine Depicted and Described," G. E. Franklin). The author is quite unknown to us, but from his preface we judge that he is a lecturer-guide for Palestine tours. In this rather bulky and most profusely illustrated work, he takes us over the conventional tourists' route, to Jaffa, Jerusalem and its environs, through Samaria and Nazareth to the northern end of the Sea of Tiberias, and thence to Damascus, Baalbek, and Beirut. The half-tone photographs, some 350 in all, are almost without exception admirably reproduced and constitute an interesting memorial for any who have made that now quite common trip. Of the text, the less said the better. In general tone and style it is calculated for the intelligence of extremely simple-minded tourists; but it is so full of inaccuracies and misinformation that we cannot commend it even to these.

Sir Edward H. Seymour, Admiral of the Fleet, gives in "My Naval Career and Travels" (Dutton) a plain-spoken sailor's story. He is no writer, and he has little grace as a narrator. But the recollections of a hard-headed officer, who entered the British Navy in 1852 at the age of twelve and served in all parts of the world until 1910, when he retired as Admiral of the Fleet, could hardly fail to be of interest. Seymour saw service in the Black Sea during

the Crimean War; at the Taku Forts, and again in Chinese waters at the time of the Boxer rising. The main part of his book, however, has to do with ordinary service, and it is particularly valuable as showing the changes that have taken place from tho days when screw corvettes were the pride of the British Navy to our day of superdreadnoughts. One is struck by the haphazard career of even a markedly successful officer like Seymour, and by the determining power of social and political influence on promotions. During the Boer War we heard it often said that, although the army, in which favoritism prevailed, was incompetent, the navy, ruled by merit, was sound to the core. After reading Admiral Seymour's book, we wonder whether a sea war might not disclose some ominous defects in the British Navy. His own unconscious assumption that anything English, because it is English, must be best, is not reassuring. But in general there is little polemic in his pages. He is uniformly courteous. He has a good many pleasant stories, and frequent mention of the celebrities with whom he was officially concerned. Best of all are his *obiter dicta* on naval problems. His remarks on flogging, for instance, furnish food for thought (p. 99). A seaman used to be flogged "for an offence not really disgraceful," for which he may now suffer five years penal servitude, with the resultant ruin for life of himself and family; formerly, having been flogged, he was ready for duty in a day, and the fact would not have been known outside of the ship. His family would have continued to receive his pay, and there was "nothing to prevent his rising to warrant rank."

Under the title "Charles Dickens as Editor" (Sturgis & Walton), R. C. Lehmann has selected and edited, with running comment and a good index, the letters written by Dickens to W. H. Wills, sub-editor of *Household Words* and *All the Year Round*. The correspondence extends, with interruptions, from the year 1837 until the death of Dickens in 1870. The letters are surprisingly varied and frank, dealing with almost every phase of the novelist's restless life. Yet it is Dickens the editor that holds the dominant place in the book; it is his critical attitude towards himself and his collaborators—Sala, Wilkie Collins, Miss Martineau, Mrs. Gaskell, Charles Reade, Leigh Hunt, Henry Morley, and others—that will yield the most curious interest. *Household Words* has become so much a part of him that he writes about it in quite a solemn strain, and expects from his subordinates a corresponding loyalty. His own contributions are usually regarded with impersonal admiration—"I think what I have done is exceedingly droll and new." The contributions of others are often ungrudgingly praised; but the temptation to touch them up is not seldom irresistible—"Trollope's story is *exceedingly good;* . . . But he mars the end by over-anticipating it, and I have changed it there, a good deal"—"If he [Wilkie Collins] should break down, I would go on with his story, so that nobody would be any the wiser." Other characteristics of the painstaking and enthusiastic editor appear on every page: his power of concentration—"I sat at it nine hours without stirring"; his versatility; his abhorrence of slovenly work, of slang, of twaddle; his uneasiness about poetry—"Pray, pray, *pray*, don't have poems unless they are good"; his concern for punctuation and the best title; his dislike of those who imitated Carlyle, or Tennyson, or himself. Many of the later letters recount with unabashed delight the triumphs of his reading tours in England and America.

A series of biographical addresses on various leaders of the slavery agitation and the Civil War is offered by Newell Dwight Hillis, under the title, "The Battle of Principles" (Fleming H. Revell Co.). Intended to inspire very young men, the book naturally consists of interesting information easily accessible elsewhere, edifying generalities, and well-established opinions concerning Calhoun and Lincoln and other figures whose importance is agreed upon by historians. The addresses are perfectly safe reading. The death-bed utterances of Webster and the devout lives of Lee and Stonewall Jackson are discussed with the most impeccable reverence. The heroism of the heroes of that heroic age is duly praised. The hand of God guiding the nation along its perilous course is appropriately made clear. A very young man might become impatient while marching through this same battle of the principles of right and wrong, freedom and slavery, etc., recurring in a dozen successive chapters of biography, especially as he catches only glimpses of the conflict and sees few signs of its drawing to a close. But he would possibly find compensation in the vividness of descriptive passages and the oratorical swing of the sentences.

The sixth volume of the revised edition of "Der junge Goethe," by Max Morris (see *Nation*, January 6, 1910), has just appeared, marking the completion of this scholarly work. The five volumes of text contain every authenticated word, apart from "Dichtung und Wahrheit," that has come down to us from Goethe before his removal to Weimar, together with all known utterances of contemporaries bearing on his life and character in that period, so far as they are based on actual observation and not hearsay. A comparison of Morris's text of Goethe's writings with that of former publications, including even the Weimar edition, reveals a host of new readings, some of which are of consequence. The changes are quietly incorporated with only a single remark in the preface to call attention to them. The sixth volume is devoted wholly to a commentary and an index, with due consideration of items of doubtful authorship and lost compositions. The commentary, the first to embrace the whole of young Goethe's work, is a notable contribution to our knowledge of the poet, and will often be consulted with profit by mature scholars, while for the oncoming generation of specialists it is indispensable. There is no better known Goethe scholar than Morris, and this series of six volumes will make his fame even more secure. The work contains sixty-eight pages of illustrations.

George Borup, who accompanied Peary on the successful expedition to the North Pole, and who published, after his return, "A Tenderfoot with Peary," was drowned on Sunday in Long Island Sound by the upsetting of a power canoe. He graduated from Yale in 1907.

The Rev. George William Knox, professor of religion in the Union Theological Seminary, died on Friday in the Philippines, after a short illness. He was born at Rome, N. Y., in 1853. In 1874 he graduated from Hamilton College, and three years later from the Auburn Theological Seminary. Soon after being ordained, he went as a missionary to Japan, and for the efficiency of his work there during the fifteen years of his stay, received from the Emperor the Order of the Rising Sun. Among his many works, mostly on religious subjects, are "The Direct and Fundamental Proofs of the Christian Religion," "Japanese Life in Town and Country," "The Spirit of the Orient," and "The Religion of Jesus."

The death of Justin McCarthy, which occurred in England on Wednesday of last week, marks the passing of one of the most notable Irishmen of his time. By his long association with the various leaders in the Irish battle for Home Rule he has been widely known to the public, but he achieved distinction also as a parliamentarian, journalist, essayist, novelist, popular lecturer, and very readable historian. He was the son of Michael Francis McCarthy, and was born in Cork in 1830. His education was fairly liberal, but he did not enter Dublin University because, at that time, degrees were not conferred upon Roman Catholics. In 1860 he found a place in the reporters' gallery of the House of Commons, and from this moment may be dated the beginning of his active political career. Before long he attracted the attention of John Bright, who made him the editor of his London organ, the *Star*, which, in those days, exercised a powerful influence. This post he occupied until Mr. Bright accepted office, and the *Star* passed into other hands. Coming to America in 1868, he obtained a position as leader writer on the New York *Tribune*. He remained here at that time for five years, during which he travelled extensively about the country, visiting no less than thirty-five States, and laying a solid foundation for that intimate acquaintance with American political affairs, and especially with the conditions and ambitions of the Irish, which he exhibited in later life. During this period he contributed freely to the American and English press, including the reviews, and published several novels.

On his return to England he assumed the direction of the London *Daily News*, and in 1879 was elected member of Parliament for Longford, Ireland. It is unnecessary to follow his Parliamentary career in detail. He figured conspicuously and constantly among the most enthusiastic champions of Home Rule, was second in authority to Parnell up to the time of that remarkable man's political shipwreck, and for a while succeeded him in the leadership. He resigned the chairmanship of the Irish Parliamentary party in 1896. Yet his influence remained active, through both his journal and his public lectures. His literary output was enormous. In addition to his miscellaneous writings on social, political, and ephemeral topics, and his copious magazine work on both sides of the Atlantic, he published many novels, including "Dear Lady Disdain," "Miss Misanthrope," "Donna Quixote," "Maid of Athens," "Red Diamonds," and "Mononia." He wrote also a critical volume on Prohibition in the United

States, a "History of the Four Georges and William IV," a "Life of Sir Robert Peel, "The Epoch of Reform," "The Prime Ministers of Queen Victoria," a "Life of Leo XIII," and various minor historical pieces. But his most important and best-known work is "A History of Our Own Times."

THE AMERICAN PHILOSOPHICAL SOCIETY.

PHILADELPHIA, April 24.

The session of the Society at Philadelphia this year, April 18, 19, and 20, was exceptionally interesting and successful. The opening address was by the president, Dr. W. W. Keen, who, with Vice-Presidents W. B. Scott and E. C. Pickering, presided at the various sessions. The fame of the Society from some of its former members was set forth in a paper by Thomas Willing Balch, who mentioned Washington, Jefferson, Cleveland, De Witt Clinton, Thomas Francis Bayard, Carl Schurz, Benjamin West, John Jay, Joseph Bonaparte, King of Spain; Louis Philippe, King of the French; George G. Meade, Commodore Wilkes, the Rev. John Witherspoon, John Stuart Mill, Noah Webster, De Tocqueville, Henry C. Lea, and Michel Chevalier.

An analysis of "The Diary of a Voyage to the United States," by Moreau de Saint Méry, was presented by S. L. Mims of Yale University, who had the good fortune to discover it in the Colonial Archives at Paris, where it had lain forgotten for three generations. Among other interesting facts treated in the diary the speaker called attention to the very intimate relations existing between Talleyrand and Moreau, stating that the diary contained no less than seventeen unpublished letters from the hand of Talleyrand.

Dr. E. A. Spitzka of the Jefferson Medical College presented the results of his study of the weight and morphologic appearances of the human brain and its several parts, resulting from a series of studies upon specimens of various races and notable individuals, including those of Andamanse, Nicobarese, Chinese, Eskimos, and negroes, as well as of eminent scholars from civilized nations. Particular attention was called to the relative redundancy of certain association areas of the cerebral cortex in eminent men and women, and also to the relatively larger callosum, or great commissure, associating the hemispheres of the brain.

A series of papers on the various phases of heredity by Henry H. Goddard of Vineland, N. J., Dr. David F. Weeks of Skillman, N. J., and Prof. Charles R. Stockard of Cornell University attracted much attention. The last speaker contends that even the control of embryonic development is a practical problem. Abnormal individuals may be artificially produced at will, and the provoking cause is proved to be an unfavorable chemical environment acting on the germ cells of the parents or directly upon the embryo. The proposition of reversing the experiments thus presents itself, and some mode of treatment or control should be devised by which parents may be put into the proper state to produce as nearly as possible a normally vigorous offspring. Enough is known at present to make the control of development possible, to a slight degree at least.

Prof. V. C. Vaughan of the University of Michigan made the somewhat startling assertion, in the discussion of his paper on the preparation and nature of protein poison, that in his opinion the poison at work in all such diseases as scarlet fever, typhoid fever, pneumonia, smallpox, and the like, is identical; that the difference in symptoms is due to the different locations in the body where the poison finds lodgment.

The Friday afternoon session was especially devoted to botany, geology, and archæology. Prof. William Trelease of St. Louis stated in a paper on "The Classification of the Black Oaks" that attention to bud and fruit characters has led to a classification of these trees quite different from their usual arrangement, according to leaf-form. In this way he makes five groups of species, three of the Eastern States, one of the Southwest, and one of the Pacific States.

Prof. William H. Hobbs of the University of Michigan, in his paper on "Some Considerations Bearing upon the Origin of Lava," called attention to the fact that the ideas generally held concerning the origin of lava have all supposed a liquid interior to the earth. It has, however, been shown in recent years that the earth cannot have a fluid interior, but, on the other hand, must be as rigid as a ball of glass of the same size. There must, however, be local, and probably temporary, reservoirs which supply the lava which exudes or is rejected from volcanoes. The position of active volcanoes, particularly about the Pacific, suggests that the local reservoirs which supply their lava have been due to reliefs from pressure beneath arches of strong formations developed in the process of mountain-making.

The Saturday afternoon session was set aside for a special symposium on the use of the spectroscope in astronomy, Prof. W. W. Campbell of the Lick Observatory, Prof. E. C. Pickering of the Harvard Observatory, Prof. F. Schlesinger of the University of Pittsburgh, and Prof. H. N. Russell of Princeton University taking part. In illustration of the systematic photographic work in progress at the Harvard Observatory, Professor Pickering explained how easy it had been for him immediately to verify the discovery by Ennebo in Norway of the sudden development of a new star like our sun on the night of March 11. The star was plainly visible on the Harvard negatives of March 10 and 11, but not on that of March 9. This star has been studied with great interest since, and is found to be rapidly changing in character. It must be remembered that whatever is *now observed* to be going on must have actually occurred many years ago, the light having been on the way from the star during all this time.

On Friday evening a reception was held at the hall of the College of Physicians, when Prof. R. W. Wood of Johns Hopkins University gave an illustrated lecture on "The Study of Nature by Invisible Light, with Especial Reference to Astronomy and Physics."

On Saturday evening the usual banquet at the Bellevue-Stratford was attended by about seventy members and a few guests. An important feature of the dinner was the presentation of the Henry M. Phillips prize of $2,000 to the author of the crowned essay on "The Treaty-Making Power of the United States and the Methods of its Enforcement as Affecting the Police Powers of the States." This was awarded to Charles H. Burr of Philadelphia, the judges of award being Joseph Choate, Judge John C. Gray, Dean Henry Wade Rogers, J. M. Dickinson, former Secretary of War, and Joseph Brown Scott of the Department of State in Washington.

ARTHUR WILLIS GOODSPEED.

The scientific papers of Sir William Herschel, which have appeared in various publications, are to be issued in two volumes by the Royal Society and the Royal Astronomical Society of London. The work will also contain autobiographical notes never before published.

"Sir John Burdon Sanderson" (Clarendon Press) in a very attractive memoir prepared in part by his widow, and revised and completed after her death by a nephew and a niece. A more formal obituary notice of Sanderson's scientific career was written several years ago by Gotch for the Royal Society of London, and is printed in its Proceedings for 1907. In the book before us more attention is paid to the man himself, and many interesting details of his life (1828-1905) and work are given. Sanderson began his public activities in 1853 in London, where he had hospital appointments and lectureships, and presently became a useful health officer, taking part in many investigations of important problems concerning sanitation. In a limited way he was also a practitioner of medicine. It was not until 1870 that he turned to purely scientific investigation, opening a small private laboratory, which did much to attract Brunton, Ferrier, and Schaefer, not to name others, to scientific research. Soon afterwards he became the first director of the Brown Institution, just then newly established. He was concerned with

many pathological problems, although his chief interest was physiology. To him and to Foster, whom he followed at University College, may be said to be due the revival of physiological research in England. At the end of 1882, when about fifty-five, he was called to Oxford as the Waynflete professor of physiology, and established a laboratory there. A dozen years later he became the Regius professor of medicine at Oxford, and was influential in much improving the teaching of medical students at this University, resigning the chair a year before his death. The detailed account of such a life, nowhere unduly expanded, makes a charming story, and not the least valuable part of it is the light which it incidentally throws upon the circumstances that shape the career of scientific men in England. In a considerable appendix are reprinted seven papers and addresses, ranging from 1882 to 1901, and giving the reader a very good idea of Sanderson's attitude towards certain larger questions of general interest, as well as of his power as a writer, which appears to have much exceeded his ability as a speaker. There are pictures showing the bust of Sanderson in the University Museum and reproducing photographs of him in middle life, and also when far along in years. The last, by Miss Acland, seems to us decidedly less pleasing than one taken by her eight or ten years earlier and printed by Gotch in his obituary notice.

As a starting-point, Edwin Sharpe Grew, author of "The Growth of a Planet" (Macmillan), takes the nebulæ which may be observed among the fixed stars. He shows their connection with the several hypotheses most trusted in later years and brings out much that will prove of interest to the general reader. From the nebulæ he passes to the development of satellites and their relations to their parent bodies, giving special treatment to the earth and the moon. The face of the moon, with its peculiar craters, is of much significance. The writings of several recent students of the subject are passed in review, although some significant studies of G. K. Gilbert of Washington seem to have been overlooked. Attention is then directed to the analogies of the earth with the other planets of the solar system, to discussions of their atmospheres, and to the Martian canals and the general parallels between Mars and the earth. The remainder of the book is devoted to the earth. The physics and condition of its interior, its store of heat, its shape, and its volcanoes are topics all closely akin. While necessarily demanding excursions into the realms of speculation, the subjects are fundamental and are well reviewed. When the surface phenomena are attacked the author is on the solider ground of observed phenomena. His subsequent pages are a summary of historical geology, with special reference to the beginnings of life, its organic development, and at the close to the appearance of man and his ancestors. From this outline it will be apparent that Mr. Grew has presented a summary of the results obtained by both astronomers and geologists in their study of the planet on which we live. He has discussed the theme in an interesting and attractive manner and has brought the treatment within the range of the reader who has elementary preparation in science.

Dr. Francis Bacon, surgeon, alienist, and a recognized authority on yellow fever, died at his home in New Haven on Friday, in his eighty-first year. After serving in the Civil War, he was appointed professor of surgery at Yale, holding the position until 1877.

Drama

Three Plays. By Granville Barker. New York: Mitchell Kennerley. $1.50.

The Madras House: A Comedy. The same. $1 net.

The dominant impression after reading these four plays—"The Marriage of Ann Leete," "The Voysey Inheritance," "Waste," and "The Madras House"—is one of regret that a writer so capable, so observant, and so earnest, should not have known how to infuse into his work the necessary element of popular appeal. This does not at all mean that in themselves they are unsuitable for representation—although good taste would insist upon the modification of unnecessarily plain-spoken passages—but that they are written for a special audience, lack the spirit of broad humanity, are overcharged with flippant cynicism, and while often fiercely and justly satirical, sound no encouraging note of inspiration. The message with which they are charged is often true, if somewhat hackneyed, but the views of life are narrow, sordid, and particular, while the illustration of them is that of the heated tractarian rather than that of the wide-visioned dramatist.

"The Marriage of Ann Leete" is the least important of the series, because it has to do with the days of Queen Anne, a long gone-by era. There is not, perhaps, much illusion of atmosphere about it, but that is not a matter of present importance. The humor is artificial, with an odor of the lamp, and is flavored with a bitter tang. Neither incidents nor characters are natural, although they are, in a sense, realistic. They have a plausible air, but are clearly manufactured to serve a special purpose. Carnaby, the cynical, shameless trimmer, is a clever copy of a model familiar on the stage and in the fiction of the eighteenth century, but has no vestige of the human in him and is never credible. Ann's marriage is not the logical consequence of character, or conditions, but appears only as a bit of theatrical surprise, devised to fill a dramatic emergency, and therefore carries no special significance. And it is crudely stage-managed. The play leaves the reader amused by its satirical strokes and tickled by its smart phrases, but uncertain as to its intended drift and wholly unmoved.

"The Voysey Inheritance" is richer in the vitality of its characters. In many respects it is a veracious reflection of certain phases of middle-class suburban English life. Voysey himself—who has brought up a family in luxurious respectability by perpetuating his father's system of robbing his clients—is a realistic study of a jovial social brigand, who gradually has come to regard his successful iniquity as a credit to his intelligence. And the portrayal of the spiritual conflicts in the breast of his innocent son and heir, Edward, who finds himself virtually compelled to continue the imposition as the sole means of averting instant and irremediable ruin, show psychological insight and vivid imagination. There is humor of a genuine, if purely conventional, kind in the "booming" Major Voysey, a faithful reproduction of a familiar type of Victorian soldier, all pretence and pipe-clay. Booth, the confiding, selfish, genial, mean-spirited old capitalist, whose invested thousands have been the main-stay of Voysey's frauds, is also faithfully drawn. The female characters also are sketched with admirable variety and verisimilitude. But they are an ordinary and unattractive lot. Even in Alice, the heroine, the freshest and most engaging spirit of them all, who rallies to Edward in his trials and volunteers to share his fortunes, the moral sense seems to be defective. The taint of cynicism is over all. At best the play is a sordid and unprofitable page from the great book of life, in spite of the truth and artistry in the delineation of character and the indisputable dramatic value in some of the situations. At the very last there is a refreshing dash of virile sentiment in Edward's resolve to do his best unselfishly, without fear of consequences.

"Waste," the most brilliant of the series, recalls the narrow, bitter pessimism of Ibsen, and the sparkling and specious superficiality of Shaw. Thoroughgoing in its radical philosophy, dexterous in its analysis of character, and outspoken in its contempt for the cherished hypocrisies of modern society, it furnishes much entertaining and suggestive reading, and—although much more profuse in speech than action—some poignant drama. It discusses, moreover, with almost passionate earnestness, some of the most intimate relations and mutual responsibilities of the sexes, which lie at the root of the social fabric. Therefore it commands respect both by its motive and its constructive and literary ability. Yet it is equally futile in its exposition and its catastrophe because of its attempt to treat from the standpoint of pure intellect a problem whose solution must be largely dependent upon religious or moral conviction. Doubtless social and religious conventions are responsible for many flagrant wrongs and evils, but only inconceivable chaos and ruin could result from the subordination of moral and social law to the instincts and im-

pulses of nature. In the imaginary case of Henry Trebell—clearly founded upon those of Parnell and Charles Dilke—there was, beyond question, a pitiable waste of invaluable public material as well as of private opportunity, but it is a childish philosophy that would hold a social system responsible for the mischief done by individual acts of weakness or folly. Trebell, knowing the penalty, took his pleasure and his risk. Moreover, his egotistical and inhuman behavior to his accomplice, deprives him of sympathy, while his suicide is a confession of weakness wholly inconsistent with his supposed self-sufficiency and indomitable will. Here again the besetting weakness of Mr. Barker as a dramatist is revealed in his failure to give living reality to puppets. They are frequently amazingly clever creations, but are too often simply mouthpieces for the delivery of his iconoclastic utterances.

"The Madras House" is a study of the sex-problem from different angles, much more brilliant in its denunciation and ridicule of the slavish condition of many women in the family and the shop than it is helpful in its suggestion of constructive remedies. Like its companions, it is an illustrated discussion rather than a play.

"Fifty Years in Theatrical Management" is the title of a portentous volume of nearly 800 pages (Broadway Publishing Co.), in which M. B. Leavitt records his theatrical, operatic, and other adventures during his half-century of active connection with the footlights on this and other continents. To these he has added biographical notices of all his acquaintances and most of the prominent personages in public, private, or artistic life whom he has ever seen or heard of. Moreover, he has enriched his pages with memoranda of hosts of theatrical hangers-on, whose very existence might otherwise have been unsuspected. There are nearly forty columns of names in the index. Naturally there is an enormous amount of information, of a sort, in the book, but only a very small part of it is of any consequence. The opinions expressed, of course, whether original or adopted, carry no more weight than those of the ordinary press agent. Mr. Leavitt distributes his encomiums with generous impartiality. There are some interesting notes about theatres in different parts of the world, but the work contains little or nothing for the general reader. By the population of the amusement world, however, it will be sought eagerly, if only for the sake of its personal references and its countless photographs of ancient and modern show folk.

Harold Brighouse, who attracted critical attention in London not long ago with his one-act play, "The Price of Coal," is the author of a three-act comedy, called "The Odd Man Out," which has just been tried at the London Royalty. It is said to be full of humorous writing and situation, and to be a caustic satire upon Victorian manners and morals; but the story it tells is extravagantly farcical and it is difficult to understand how the piece can have much serious value of any sort.

The new comedy, "Jelf's," by Horace Annesley Vachell, seems to have made a pleasant impression at Wyndham's Theatre, in London. But it tells a conventional story. There is an old-fashioned bank with a new-fashioned president, a young colonel. He is in love with Lady Fenella, and when he discovers, or thinks he discovers, that she has a tenderness for Jim Palliser, a rival banker, who is in a very bad way financially, he nobly announces that his bank will back him. So Jim is saved, but presently "Jelf's" is in no end of trouble. Lady Fanella, however, comes to the rescue, and the gallant—but very unbusinesslike—colonel is made perfectly happy. The little piece is capitally acted by Gerald du Maurier, Alfred Bishop, Cyril Keightley, Rosalie Toller, and others.

Music

Having previously given to the world two books entitled "The Rise of Music" and "The Deeper Sources of the Beauty and Expression in Music," Joseph Goddard now adds a volume concerned with "The Rise and Development of Opera" (Scribner), in which he presents a comparative view of the art in Italy, Germany, France, and England. In an unconventional manner as far removed as possible from the textbook style he shows how, during the sixteenth and seventeenth centuries, the state of music in England was not much inferior to that of the other three countries named. But thenceforward England lagged behind so far as the opera is concerned. The causes of this falling back are considered, as well as the compensation which, in the author's opinion, that falling back involved. English church music was carried on by no unworthy hands, and finally in Elgar "the English school raises its head." To his dramatic oratorios, accordingly, a chapter is devoted, in which, as in the other sections, illustrations in musical type frequently help to elucidate the remarks of the author, whose language and aims are not always as perspicuous as might be desired.

Twenty-three years ago W. J. Henderson's "The Story of Music" was issued as an attempt to present the history of the art apart from the careers of the composers. The plan adopted evidently pleased music-lovers; a number of reprints were made and now, for the twelfth time the book has been issued by Longmans, Green & Co., with additions and with a new chapter devoted to the Italians up to Puccini, and to Wagner and his influence on operatic composers of Germany, France, and Italy. The latest advances in the field of orchestral composition are also discussed with special reference to Strauss and Debussy. A chronological table aids in impressing the most important facts on the reader's mind.

Florence May, who a few years ago wrote a "Life of Brahms," the value of which the Germans acknowledged by translating it, has now by her book, "The Girlhood of Clara Schumann" (Longmans, Green & Co.), made it possible for those who do not read German to familiarize themselves with the substance of Litzmann's "Life of Clara Schumann," a book which tells in detail the story of one of the most romantic courtships on record. Miss May's book is not a translation, but an independent volume based, necessarily, on that of Litzmann, who exhausted the particulars of biographic interest. She has, however, given her book a special reason for existence by including in it an account of the part Clara Schumann played in the development of both the creative and the executive sides of music. It is going too far to contend that this woman was "the first pianist to lead her musical public to the appreciation of the masterpieces of Bach and Beethoven, Schumann and Chopin," as well as Brahms; but she had a large share in this missionary work. One of the leading pianists of her time she certainly was, and perhaps the best composer of her sex of all time. Incidentally a good deal of intimate information is given regarding Schumann's early piano pieces, which were also his best. Without attempting to whitewash Clara's father, Frederick Wieck, who worked so fiercely to prevent her marriage to the composer, Miss May represents him, at the same time, as an enlightened musician of that day. Clara herself once wrote: "I must say with pain that my father has never been recognized as he deserved."

The Philharmonic Society of New York, in a prospectus just issued, announces a preliminary list of soloists and the dates of concerts to be given the coming season in Carnegie Hall, under Josef Stransky. It includes the first orchestral performance of the season by Ysaye and Mischa Elman, as well as by a number of other eminent artists. The series of sixteen Thursday evening concerts will take place as follows: November 14, 21, and 28; December 12, 19, and 26; January 2, 16, 23, and 30; February 6, 13, and 27; March 6, 13, and 27. The Friday afternoon series of sixteen concerts will fall on November 15, 22, and 29; December 13, 20, and 27; January 3, 17, 24, and 31; February 7, 14, and 28; March 7, 14, and 28. There will again be given eight Sunday afternoon concerts, the dates being November 17, December 1, 22, and 29; January 5 and 26; February 2 and 9.

Ossip Gabrilowitsch was one of the leading pianists of the time when he married the daughter of Mark Twain. He is now rapidly becoming one of the leading conductors. At a recent concert in Manchester, England, he made the Hallé Orchestra play "with something of its old precision," as the Yorkshire *Observer* remarked. According to the Leeds *Mercury*, it was in Liszt's "Les Préludes" that he "scored his greatest triumph. His treatment was essentially lyrical and his handling masterly." In this piece, according to the London *Musical Times*, Gabrilowitsch "obtained a sublimity of effect that even Richter might have envied"; and not even Nikisch "surpasses him in rhythmical strength and beauty." Evidently, in this case, as in that of Hans von Bülow, the piano was a good preparation for orchestral conductorship.

Among the twenty-six operas produced by Mr. Russell during the past season in Boston, there were fourteen in Italian: "Aïda" had six performances; "Tosca," five; "La Bohême," "Pagliacci," "Rigoletto," "The Girl of the Golden West," four each; "Madama Butterfly," "Lucia," "Germania," three each; "Otello," "Cavalleria," "Tra-

viata," two each; "Barber of Seville" and "Trovatore," one. Nine operas were in French; "Carmen" and "Faust," seven times each; "Samson and Delilah," six times; "Thaïs" and "Pelléas et Mélisande," five times each; "Werther," "Manon," "The Prodigal Son," and "Habanera," twice each. There were two in German, "Tristan and Isolde" and "Hänsel and Gretel," sung four times each.

Next season Toronto will not enjoy the blessings of its wonderful Mendelssohn Choir, which recently delighted New York. Its great leader, Dr. Vogt, is going abroad for a year. He goes first to Paris, where he will attend the international competition to be held in May under the auspices of the French Government, in which one hundred and eighty of the best choirs of Europe will participate. It is his intention to spend some time hearing festivals in Holland, Belgium, Austria, France, Germany, Switzerland, Italy, Russia, Norway and Sweden, and Great Britain. The Mendelssohn Choir will be reorganized by Dr. Vogt on his return to Toronto in the spring of 1913.

Art

THE AMERICAN WATER-COLOR SOCIETY.

That patriotic American who should express a pious desire for the destruction of most of the 272 water-colors and pastels included in the forty-fifth annual exhibition of the American Water-Color Society, in Fifty-seventh Street, would lay himself open to serious misconception. Nor would he better his position if he went on to explain that his wish was prompted by their general level of excellence. Yet that is perhaps the most serious fault to be found with the pictures—very much more serious than it might seem at first sight. Not more than twenty could truthfully be labelled unworthy; not more than three or four are really execrable daubs. I can understand my supposititious patriot declaring that these last alone show any promise for the future of American art.

Nothing is more inimical to progress than a dead average level of technical achievement. The canal with fewest locks is the most stagnant; the man who can do all that he attempts does not attempt more than he can do. The older British school of water-colorists, once unrivalled elsewhere in the world, is a case in point. It rested on the shoulders of perhaps a dozen men—with many others seeking, unsuccessfully, to rival them. There are to-day a thousand of high technical achievement to one in the times of David Cox, Cotman, Prout, or Peter de Windt. Yet visit one of the exhibitions of the R. W. S. in Pall Mall—and keep awake if you can.

Just so in the present—as in former—shows of the A. W. S., we find high technical achievement, little individuality, no definite ideals at all. Every European school and ideal and clique and -ism is represented—very few American. The imitations are in most cases excellent, but they are only the more imitative. You will find here a hint of Corot and there of Turner, here Velasquez and there Aubrey Beardsley and Hokusai and Constable and Manet, and, unless I am very much mistaken, Matisse. The artistic ideals—and fads—of only one people are conspicuously wanting in all these eight wallfuls of pictures—the American. So with regard to choice of subject. We see Cornwall and Normandy, French cathedrals and Venetian palaces, but when we get a glimpse of the Cinderella among continents, be sure that it has been "arranged" to look as European as possible. Consider Andrew Schwartz's very effective New England Hills, for instance. Mr. Schwartz must at least have *heard* of Arnold Böcklin. Arthur Schneider's luminous Sawmill, again, may be an American sawmill, but its atmosphere is decidedly European. Or Alexander Schilling's Showery Weather—one of the most attractive of the works shown—did those showers fall in Europe or America?

I have spoken hitherto only of paintings that are subtly derivative; this does not imply that none are unashamedly imitative. Admire, for instance—and you may without shame, for it is, in its way, quite admirable—Dugald Stewart Walker's quaint little Dew Bearers. It bears no such acknowledgment as "By courtesy of the Yellow Book." And rightly, seeing that the Yellow Book is long since extinct. But that its influence still lives, Dew Bearers bears witness. Consider again Edith M. Magonicle's Love Among the Artists. It shows us what I take to be a large man-artist professing to welcome a small woman-artist with one hand, what time he makes ready to stab her in the back with a knife held in the other. With the socio-political aspect of this work of art we have nothing to do; it is permitted to remark that in her determination to express her suffragist message Miss Magonicle has quite overlooked any artistic message that may await expression within her, preferring the frank imitation of a Japanese color-print. So it is with Wilfred J. Jone's neatly decorative little Poteen, showing us a Nipponese-Irishman struggling in the alluring folds of the Demon Drink. And so with very many others of the works shown.

It would be a waste of words to insist overmuch upon the need of an American ideal in painting—still more to uphold the choice of American subjects. It is, no doubt, pleasanter—and easier—to paint a Normandy haystack than the view of Manhattan from Jersey City; and it is not theoretically necessary to paint it after the manner of Cézanne or his latest successor of the moment. Yet it is a curious fact, not, perhaps, impossible of explanation, that the artists, in the present exhibition, who have dared to "see their own country first," have produced some of the most virile work shown. Henry Reuterdahl's Spring in Weehawken is an excellent case in point. I should not like to say that the artist found his ideals on this side of the Atlantic; at least, he has achieved a cis-Atlantic individuality in his work. Harriet Sartain's Showery Day in Philadelphia is similarly commendable—note that showery days are always increasing in artistic popularity, for obvious reasons, of course. Hopeful also is Alice R. Hugher Smith's Spanish Moss against the Sky, and Mary Trask's Indian Harvest Dance. I would not be understood to maintain that these reach the highest artistic level of all the works shown; at least they have individuality, the one thing lacking to "American" art as generally understood. As a matter of personal preference, had I the choice of any picture to live with from among those shown, I think I should select Charles Warren Eaton's brilliant little After the Rain—were I not a martyr to chronic rheumatism, that is to say.

In general the figure-work is curiously inferior to the landscape in technique. Perhaps fortunately, little is shown, and that little poor. The landscapes, on the other hand, are overwhelmingly neat, nice, and lady-like, such as might be described by an auctioneer as of "high finish." If they hold out little promise of the dawn of an American artistic ideal, at least they show that the American acquarellist is a docile pupil. And that is always something. O. M. H.

The Architecture of the Renaissance in France: A History of the Evolution of the Arts of Building, Decoration, and Garden Design under Classical Influence from 1495 to 1830. Two volumes. By W. H. Ward, M.A., Architect, Associate of the Royal Institute of British Architects, author of "French Châteaux and Gardens in the Sixteenth Century." New York: Chas. Scribner's Sons. $12.

It is an interesting, and indeed a somewhat remarkable fact, that within twelve months there should have appeared from the pens of English writers three important works on the architecture of the Renaissance outside of England. Two of these (Reginald Blomfield's "A History of Renaissance Architecture in France, 1494-1661," in two volumes, and the third volume of F. M. Simpson's "A History of Architectural Development," devoted to the Renaissance in Italy, France, and England) have already been reviewed in the *Nation*. The third of these works, the one under review, is published, like Mr. Blomfield's, in two volumes, but covers, as the title indicates, a much more

extended field, since it brings the record down to the days of the so-called Néo-Grec development. This the author looks upon as marking the extinction of that continuous life of the classical tradition derived from Italy, which began in the reign of Charles VIII.

Mr. Ward's study differs entirely, both in plan and purpose, from Professor Blomfield's. It is more consistently and technically a history, dealing primarily with periods and schools and developments and the buildings which they produced, and only secondarily with individual designers and their works. The difference of purpose and treatment might be emphasized by calling Professor Blomfield's treatise a series of historically related essays on the architects of the French Renaissance, and Mr. Ward's a student's manual of the historic development of French Renaissance architecture. But it is the advanced student, not the beginner, whom the author has evidently had in mind, and every page bears witness to painstaking study both of the buildings and documents. The controversial element has, however, been kept as much as possible in the background, and the emphasis has been placed on facts and data rather than on personal opinions. The historical environment, the social and political movements which influenced the art of building, the parallels or contrasts between the architecture and the literature of a period, are all adequately though concisely set forth, presenting, throughout, the position and relations of architecture with reference to the civilization of each reign or period.

Mr. Ward follows the traditional division into styles bearing the names of the French kings, and gives his reasons for so doing. Each chapter begins with a table of the kings and queens of France and of England whose reigns covered the phase or style under discussion, and is followed by an historical sketch of the period and a summary of the characteristics of its architecture. The discussion of the monuments, to which this summary forms the introduction, is divided in each case into two sections, respectively devoted to secular and to ecclesiastical buildings, the mention of individual architects being subordinated to the critical analysis of their works. A part of each chapter contains a discussion of particular topics or features, such as roofs, chimney-pieces, decoration, garden design, and the like. The number of buildings mentioned is remarkable: virtually every really important monument erected in France during the three hundred and thirty-six years included in the survey finds mention in the text, and the great majority of them are represented in the illustrations.

The illustrations, of which there are 259 in the first volume and 206 in the second, are extremely well selected and excellent in quality. Photographic prints of existing buildings and reproductions of engravings from Du Cerceau, Marot, and Pérelle are supplemented by plans and details, and by a number of charming drawings by Hepworth, Wornum, Gotch, Rees, and the author. The plans, which are numerous and each accompanied by a scale, are specially worthy of mention; those of Blois, Fontainebleau, the Louvre and Tuileries, and Versailles are tinted or lined in such manner as to show clearly the chronological development of the structure. By this means a mass of historical and chronological detail which would be tedious at best when set forth in words, is graphically presented in the most effective manner possible. The full-page photographic plates, like those of the Louvre, the Luxembourg Palace, Versailles, and the Château of Maisons, are exceptionally attractive.

The first volume carries the history of French Renaissance architecture through the style of Louis XIII, that is, well into the reign of Louis XIV. It is divided into four chapters, treating, respectively, of the styles of Louis XII, Francis I, Henry II, and Henry IV and Louis XIII. The second volume in like manner treats in four chapters the styles of Louis XIV, Louis XV, Louis XVI, and the Empire. Each chapter bears a sub-title characterizing the style it discusses, and these give a clear insight into the author's attitude towards his subject. Thus in chapter iv, the styles of Henry IV and Louis XII are described in the sub-title "Utilitarian Architecture and Rival Tendencies of Netherlands Barocco and Roman Classicism," while in chapter v we read, under the style of Louis XIV, "Barocco-Palladian Compromise—'The Grand Manner.'" In general, the critical views expressed are sane and sound. Mr. Ward writes in manifest sympathy with neo-classic art, and with full appreciation of the monumental quality, the stateliness and impressive dignity of the architecture produced between 1650 and 1780. This, indeed, is the attitude of all three of the books to which reference was made at the beginning of this review; and it is the increasing prevalence of this newer sympathy, hitherto so rare in England, that makes these three works so significant.

There is, however, one aspect of the historical development of this art in France which Mr. Ward alone of the three authors seems even to have glimpsed, and that but faintly in the sub-title quoted above of chapter iv. "Rival tendencies" indeed there were in French architecture, but not only under Henry IV and Louis XIII. The entire history of architecture in France from 1495 to 1912 has been marked by a continuous struggle of rival tendencies, the one classical and Latin or Italian, the other anti-classical and Gothic, Gallic, Celtic, Rococo, or anything else one pleases to call it. Under Louis XIII and XIV the classical tendency won a temporary and brilliant supremacy, but before Louis XIV had passed away artists like Boule in furniture, like Boffrand, Oppenord, de Cotte, and others in interior decoration, had broken away from classical restraint, and the *genre rocaille* and the Louis XV Rococo were the results and expression of the protest of this anti-classical tendency: they constituted the *art nouveau* of the eighteenth century. The mixture of Gothic and Italian forms under Francis I finds its parallel in the hesitancy and vagaries of style under Henry IV; the classical victory of Louis XIV's reign is repeated under Napoleon I; the style of protest under Louis XV, confined chiefly to the interiors of buildings, has appeared in a new dress in the *art nouveau* of our own time, in exterior as well as interior design. No historian of the French Renaissance has thus far given adequate attention to this remarkable to-and-fro movement of the pendulum of tendencies in the architectural style of France; but no one can say that he understands those styles thoroughly who has not noticed the varied episodes of this struggle. To it has been due, in no small measure, the vitality and animation of French architecture even in periods when elsewhere in Europe architecture has sunk into dull copying or complete inanition.

The didactic purpose of Mr. Ward's book, the quasi-textbook form into which it is cast, with marginal topic-titles throughout, hampers somewhat the freedom of its literary style. But it is well and carefully written, and while less agreeable for consecutive reading than a less mechanical arrangement would have permitted it to be, it is nowhere dull, and for reference and for the purposes of the student it is unusually convenient. So far as the reviewer has observed, it is accurate in all its dates and historical data, and its careful proofreading is worthy of all praise. The index at the end is devoted solely to names of architects, places, and buildings, but within this limitation is very complete. The detailed table of contents at the beginning of the first volume partly makes up for the lack of an alphabetical index of topics.

"The Painters of the School of Ferrara" (Scribner), by Edmund G. Gardner, is a readable and scholarly compilation from approved sources. Besides the Ferrarese school, which is traced from its beginnings in the early fifteenth century to its decadence in the late sixteenth, the allied school of Bologna is fully treated. But the larger problem of the origins of these Romagna schools is barely touched, and what is more surprising, no adequate account of the patronage which for generations the House of Este extended to outside artists

is given. In short, Mr. Gardner, who is most competent to write on the artistic civilization of Ferrara in the broadest spirit, has disappointingly limited his interest to that of the ordinary art handbook. Having very little of its own to contribute, the value of the book lies merely in its assembling of scattered data. In this regard it may appeal to readers of scholarly temper and limited leisure for study. The book is accompanied by selective lists of paintings by the chief masters from Cosimo Tura to Scarsellino. As usual the fine examples in America are ignored. For Tura, Costa, and Ercole Grandi the Johnson collection would furnish desirable entries. Lorenzo Costa is also well represented in the Andrew Carnegie collection; Timoteo Viti in that of D. F. Platt.

PSYCHOLOGY OF A MARKET.

A certain psychological influence is often exerted, in the progress of events in financial markets, by so extraordinary an interruption to the usual lines of thought and conversation as occurred in the week when the Titanic disaster superseded all other considerations in the public mind. This is particularly true of a "bull movement" on the Stock Exchange, in which the general public has been participating. Such a movement begins with confident bidding-up of prices by professional operators, who see either an "oversold" speculative condition in the markets or a tendency in the financial situation towards better things. It is sustained and promoted through purchases, made at the lower prices, by large investing interests. It attracts the outside public through the mere spectacle of persistently rising prices, and in the end, if successful, it whips this outside constituency into a condition of excitement where nothing but "bullish news" receives attention, where all sense of proportion is lost, and where prices go to senseless heights in the fury of outside buying.

The later stages of such a movement had not been reached at the close of the second week in April. Whether, all other things remaining equal, we should by this time have been witnessing an outburst of the sort, is a matter of opinion. The market had been moving somewhat uncertainly ever since this month began; it was a subject of remark that the public appetite was being fed by general prediction rather than by definite fact or even concrete rumor. But whether this view of the matter was correct or not, the complete diversion of interest to other things was reasonably sure to break the spell.

The fortnight since the week of the ocean tragedy has had precisely such effect. The "outside public," which was so handsomely in evidence a month ago, apparently left the stock market to itself for the time being, and that was no doubt the wisest thing that it could do. There are too many visible uncertainties, immediately surrounding the financial situation, to make any other action advisable. But that the professional speculators should do the same, after last month's incidents, was not to be expected. When the ideas of that group of performers are stimulated by such a run of popular approval as the market had very recently allowed them, experience teaches that they continue to go through their parts with even greater enthusiasm after the audience is gone and the lights are out. Sometimes, no doubt, the fickle audience comes back when it learns that something is still going on; but whether it does or not, the professionals continue to act as if the play were still in progress. Not infrequently —as in this week's use of the somewhat notorious speculative football, Reading stock—they bring out their most startling "features" when there is no one to act to but one another.

When the factors now bearing on the financial situation are surveyed anew, they will be seen to involve more or less readjustment of ideas. This is more evidently the case in the crop outlook and in politics; for when the stock market was moving at high pressure, four or five weeks ago, the financial community was under the firm belief, first that the wheat crop's prospect, as a result of the winter snows and the abundant moisture, was extremely favorable, and secondly, that President Taft's renomination was assured. In both regards there has been a change in the situation, since that time, which may fairly be called sensational. It is now rather generally believed that the winter wheat crop will fall at least 50,000,000 bushels short of 1911, and will be the smallest since the very short crop of 1904. In politics, the present position is one of complete bewilderment, and the Steel Trust's report, last Tuesday, of only $17,800,000 net earnings for the March quarter (as against Pittsburgh's prediction of $23,000,000), leaving a deficit of $6,200,000 for the quarter after paying dividends, does not help to clear matters up.

On the other hand, other elements in the situation, which were susceptible of unfavorable inference at that time, and which might easily have caused financial hesitation, have since then taken a distinctly reassuring turn. There were people despondent enough, a month ago, to predict that our coal-miners' strike would duplicate the sensational incidents of the English coal trade demonstration. There were those who believed that the manifest deadlock in the negotiations between Eastern railway managers and their employees could end in nothing but a disastrous tie-up of transportation. Very few people, even of those who refused to take the ultra-pessimistic view of these affairs, would have ventured to predict that the double menace would have been so promptly and peaceably averted.

Along with this it is wise to keep in mind the really important fact—that in the pending settlement of the coal strike and the averting of the tie-up of the Eastern railways by the locomotive engineers, the conduct of the labor unions shows that the workingmen of this country have not lost their heads. The wildness and extravagance, the general defiance of public authority and of the orderly institution of society, which powerfully marked the recent labor disturbances of England, have put in no appearance at all in these two American disputes. There was a momentary suggestion of it in the truculent ultimatums of Chief Stone of the Railway Brotherhood, but a reasonably grounded suspicion exists that the labor leaders were more frightened than the general public at what they had undertaken to do, and that the prevention of their strike order, through the Government mediation, was to them a welcome solution.

This is a frame of mind so different from what the recent European strikes have presented that it should serve as a legitimate factor of encouragement, and such inference is all the more reasonable when one recalls what used to be the rule with American labor disputes in Presidential years. The labor episode certainly indicates at least an attitude of sanity in that part of the community, and it makes one wonder the more whether the voting community as a whole can have gone quite so mad as many apprehensive people seem to think it has. Even the singular results of last Tuesday's Massachusetts primaries have not settled that.

THE STORY OF MUSIC

By W. J. HENDERSON. *Twelfth Edition, Revised, with additional matter.* Crown 8vo. Pp. xx+206. $1.00 *net;* by mail, $1.10.

This edition has been brought up to date and made a practically new book by the rewriting of some passages and the addition of others. The progress of Italian opera to the completion of the extant works of Puccini is carried forward in two chapters. The creations of Verdi are dealt with in chapter 7, and an entirely new chapter is devoted to an exposition of the art work of Wagner, with the contributions of Strauss, Puccini, and Debussy to the lyric drama. A chapter discusses the latest advances in the field of orchestral composition.

A STARTLING AND ENTHRALLING AUTOBIOGRAPHY

These are the much-heralded "Memoirs" of the fascinating woman who was the reigning beauty of a brilliant and distinguished social set in Paris; who, as President Faure's friend, was said to have "ruled France"; and who some two years since was accused—and acquitted—of the murder of her husband and mother. A human document of alluring psychological interest. If you wish a copy of the first edition, order at once of your bookseller or the publishers.

MUZZEY'S AMERICAN HISTORY
$1.50

129 illustrations, 22 of which are full-page; 49 maps, 17 of which are either full or double-page.
Adequate *reference lists* and *topics for special reports* follow each chapter.

SPECIAL FEATURES OF MUZZEY'S AMERICAN HISTORY

Its presentation, in a continuous narrative and in vivid literary style, of the political development of our country, with a clear statement of the social and economic problems which have determined that development.

Its consistent topical arrangement, avoiding allusions to a vast number of facts not vitally connected with the topics in hand.

Its full discussion of the federal power in connection with the Constitution.

Its emphasis on the westward-moving frontier as the most constant and potent force in our history.

Its recognition of the influence of economic factors in our sectional rivalries and economic theories.

Its large attention to the political and economic history of the United States since the Civil War.

GESELL'S NORMAL CHILD AND PRIMARY EDUCATION
$1.25

A comprehensive manual for those interested in the teaching of the young child. The book gives sufficient insight into the background of biology and genetic psychology to make the suggestions embodied thoroughly practical and interesting. The treatment is specific with reference to the everyday problems; it is broad and suggestive with reference to the larger themes. Throughout, the discussions are non-technical. The appendix containing a critical exposition of the Montessori System will be of value to those interested in the subject. The book is fully illustrated.

KELLER AND BISHOP'S COMMERCIAL AND INDUSTRIAL GEOGRAPHY
$1.00

A textbook for young readers of grammar-school age. The important facts of production and trade are made particularly suggestive and comprehensible by being presented under three general headings—man's need for food, for clothing, and for shelter. The book is profusely illustrated with cuts chosen to portray the most interesting phases of present-day industries.

GULLIVER'S FRIENDSHIP OF NATIONS
60 cents

A STORY OF THE PEACE MOVEMENT FOR YOUNG PEOPLE

A rich fund of material on the subject of peace—telling of the first development of peace between nations, of the great peacemakers, of the part played in the cause of peace by discoveries, inventions and works of art, and of the business side of war and its preparations. The nobility of the art of peace is made very impressive and emphasis is laid on the growing spirit of justice among nations. The whole narrative is charmingly written and is richly illustrated. The book will be found a valuable supplement to courses in history, civil government, physical and commercial geography, and as a manual for the public exercises of Peace Day it is particularly timely.

A REVISED EDITION OF

MONTGOMERY'S ENGLISH HISTORY
$1.20

The best-known and the most popular of the shorter English histories has been recently published in an edition comprising a thorough rewriting, new illustrations, new maps, and new type. No other book on this subject has ever surpassed the Montgomery history in clarity of treatment, completeness and reliability.

DeFOREST'S ILLUSTRATIONS OF DESIGN
$2.00

A portfolio of carefully selected plates reproducing the exquisite work of the craftsmen of India among whom the author has studied for thirty-five years. The method of working from notes of line, as used by the Indian craftsmen, is clearly developed from the simplest to the most intricate patterns.

THE YALE UNIVERSITY PRESS

books are bought with confidence by scholars and librarians throughout this country, and abroad—through the Oxford University Press, because of the fact that no volume can be published under the imprint of the Press until it has received the endorsement of the Council's Committee on Publications of Yale University. A copy of our catalogue will be sent on request.

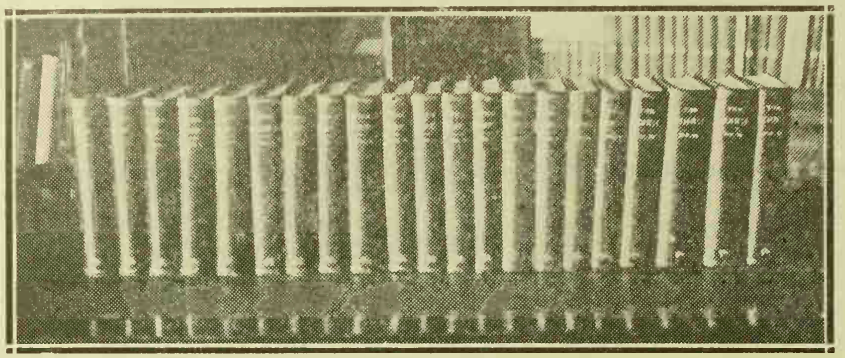
THE YALE UNIVERSITY PRESS

invites authors who appreciate the prestige of an endorsement by the Council's Committee on Publications of Yale University to submit their manuscripts for consideration. Publicity is thus given this announcement in order to correct a somewhat general, but wholly erroneous, idea that the Press seeks to publish only works by those connected with Yale University.

YALE UNIVERSITY PRESS, NEW HAVEN, CONNECTICUT

A PHILOSOPHICAL LIBRARY

21 volumes of the MONIST. $60.00. Cloth, with leather backs. 3,300 pages of original articles, including translations, criticisms and discussions of the modern trend of PHILOSOPHY.



THE MONIST, a Philosophical Quarterly. $2.00 a year; single copy 60 cents

Editor, DR. PAUL CARUS

ONLY SIXTEEN COMPLETE SETS ARE OFFERED AT THIS PRICE. Each year will add to the value of these books, as missing back numbers will *not be* reprinted. The Monist is international in scope. Many University libraries have duplicate sets of the Monist. This is sufficient endorsement of its value as a reference work of contemporary philosophical history and criticism.

NEW EDITIONS OF TWO IMPORTANT TEXTS

Outlines of Economics

DEVELOPED IN A SERIES OF PROBLEMS

By Members of the Department of Political Economy in the University of Chicago.

New and Enlarged Edition

The problem of improving the current methods of teaching elementary economics is now attracting widespread interest. This book is planned to answer the demand for improved courses. The ideals which have most fundamentally determined the character and content of the book are: (1) A belief that the elementary course in economics offers exceptional opportunities for training in thinking and reasoning; (2) A desire to connect the theoretical principles of economics with the actual facts and with current problems of the business world.

The result is a careful analytical syllabus of the subjects usually covered in the introductory course, accompanied by some 1,200 questions and problems. It is expected that the *Outlines* will be used in connection with some textbook. Wherever adopted, the book has improved conditions in a marked degree. It has stimulated interest, vitalized the subject, and aroused independent thought.

A Laboratory Guide in Bacteriology

By PAUL G. HEINEMANN

Second Edition, Enlarged and Revised.

The field in bacteriology is rapidly enlarging, and the knowledge gained is being put to vitally practical use, not only in medicine, but in several of the commercial industries. With the exception of the Laboratory Guide, there is no practical handbook for students preparing for work in the various branches of the science in the fermentation industries, in agriculture, in medicine, in the municipal control of milk and of water-works, etc.

The new edition of the Laboratory Guide is designed to cover the outlines for work in elementary courses in the various branches of bacteriology. It is intended to serve as a guide not only to the instructor, but especially to those practically engaged in applying the fundamental principles of the science. In technique and method it has been carefully revised and brought down to date, and itself represents the progress made in the science since the first edition appeared in 1905.

By GEORGE W. MYERS

Professor of the Teaching of Mathematics and Astronomy, College of Education, University of Chicago, and the Instructors in Mathematics in the University High School.

The most striking departure from the old way of teaching consists in the fusing of arithmetic, algebra, and geometry into a single study. To confine the student to the handling of symbols for one year and to the study of forms for another is to shut out all possibility of natural development. Instead he is now led to express geometrical facts by algebra and to illustrate algebraic ones by geometry, and thus to grasp the *essential* facts that underlie both.

ENGLISH POEMS

Selected and Edited with Illustrative and Explanatory Notes and Bibliographies

By WALTER C. BRONSON

Professor of English Literature, Brown University

EDUCATIONAL

The American Government

By FREDERIC J. HASKIN. The book that shows Uncle Sam at work, endorsed by the President, the Cabinet, the heads of departments, and prominent educators. With 24 full-page Original Illustrations. 8vo. Popular Edition $1.00 net. Postpaid, $1.15.

To fill a book with a great mass of facts about the Federal Government, having them so accurate that highest officials of the land can vouch for them, and at the same time weaving them into a story that compels the closest attention of the readers, is conceded to be a difficult undertaking. The author has demonstrated that this can be done.

Lippincott's Second Reader

By HOMER P. LEWIS, Supt. of Schools, Worcester, Mass., and ELIZABETH LEWIS. 4 full-page illustrations in color and 75 illustrations in the text. 12mo. Cloth. 40 cents net.

The Lippincott Second Reader continues the use of the same sort of material for reading as was employed in the First Reader, *i.e.*, fables, folk-lore, legends, myths, and fairy tales. Such of these have been selected as are simple enough in subject-matter for the comprehension of the child of this grade, and as, also, will make a permanent contribution to a good literary education.

Current Educational Activities

A Report Upon Current Educational Movements Throughout the World

Being Vol. II. of the Annals of Educational Progress. By JOHN PALMER GARBER, Associate Supt. of Public Schools of Philadelphia. In Lippincott's Educational Series, edited by MARTIN G. BRUMBAUGH. 12mo. Cloth. $1.25 net.

A report upon current educational activities throughout the world, dealing with such problems as vocational and agricultural education development affecting the public schools and higher institutions of learning, social problems, foreign educational institutions, meetings, etc. A unique year book. Very serviceable.

Number Exercises

By J. C. GRAY, A.M., Supt. of Schools, Chicopee, Mass. 104 pages. Limp binding. 25 cents net.

The purpose of this book is to provide all the necessary exercises for first grade work (work through the "number facts" to ten)—reading lessons, oral dictations for writing and exercises for constructions (seat objective work) in language and counting—which the Author's primary number method as outlined in his "Number by Development" requires.

"Will Levington Comfort's new novel confirms the large promise of his earlier books. This is the ripest novel he has yet written—an exceptionally fine and strong book of a man faring forth on the Supreme Adventure."—*Edwin L. Shuman, Record-Herald, Chicago.*

The Nation

NEW YORK, THURSDAY, MAY 9, 1912.

The Week

Mr. Roosevelt's moral sense was offended, so he informs us in his attack of Sunday on President Taft, not because of Mr. Taft's successful prosecution of the Oil and Tobacco Trusts, but "because after he had got these decisions, he then permitted the Department of Justice so to shape matters that the result was a complete nullification of all the good results of his suit." Mr. Roosevelt has no doubts about the iniquity of that policy. Mr. Taft's "conduct in this respect is quite incompatible with any sincere purpose really to enforce the Anti-Trust law. As a result of his action, the stocks of the corporations in question rose greatly in value" after the dissolution. Evidently, therefore, "Wall Street has made up its mind that Mr. Taft's prosecutions are fake prosecutions, whereas the bitter hostility of Wall Street to me shows how lively is its memory of the fact that my prosecutions were really prosecutions and hurt the persons prosecuted." Such is the ex-President's arraignment of his successor—its sternness being equalled only by the modesty of its references to himself.

Yet, if we mistake not, the form of dissolution, prescribed last November for the Oil and Tobacco Trusts, was founded precisely on the well-known precedent of the Northern Securities dissolution of 1905, under the Roosevelt Administration. On that occasion, as in the Trust disintegrations of last autumn, the plan of *pro rata* dissolution into the large corporations which had existed before the illegal Trust was formed, was opposed before the court as defeating the purpose of the prosecution. In that petition for a different method of disintegration for the Northern Securities, President Roosevelt's Attorney-General refused to participate; indeed, Mr. Knox had already declared that the Government "has never claimed that the law is any broader than its language plainly indicates," and had stated the Government's purpose "not to run amuck." The corporations left in the field by the dissolution were the Northern Pacific and the Great Northern Railways. Within four months after the courts in 1905 had sustained the original plan of dissolution which the Government approved, shares of the $155,000,000 Northern Pacific had risen from 165 to 216, and shares of the $125,000,000 Great Northern had risen from 270 to 327—an enhancement, figured out on Rooseveltian methods, of $150,000,000. For ourselves, we have always held that the Roosevelt Administration was right in its attitude towards the form of dissolution, and that the Taft Administration, following the Roosevelt precedent, was also right. But what is to be said of the impudence of the head of the 1905 Administration, when he declares today that the following of that precedent by Mr. Taft was a "fake prosecution," and that its bad faith was proved by the subsequent rise in stocks of the companies left as a result of it?

The menace of Champ Clark as the Democratic candidate for the Presidency daily grows greater. Maryland has gone for him, and with her delegates Clark will have no less than 226 Convention votes. Tennessee would add 18 more. Gov. Wilson had at the beginning of the week 127 delegates. He has apparently carried both South Carolina and Texas. Should he prove successful there, these two States will add 58 delegates to his column, giving him 185 in all. Mississippi voted Tuesday with only Underwood and Wilson contesting. Plainly, the man to beat Clark is Wilson. Fifty-four delegates have been instructed for Govs. Marshall, Burke, and Baldwin, and 109 are uncommitted. Of the latter, 90 New York's Tammany-controlled delegates are openly hostile only to Wilson. Clark may get them if he pays the Tammany price. Obviously, the greater the diversity of instructions among the delegates the better it will suit Murphy and the others who have delegates to swap. It is high time for those Democrats who do not wish to concede the election to the Republicans in advance to do their utmost to check the drift to Speaker Clark—a drift due chiefly to popular ignorance of his complete unfitness for the Presidency.

Much Monroe Doctrine hath made the Senate mad. So one would infer who should read what took place when Senators received the message from President Taft, and the report from the Secretary of State, knocking the stuffing out of that delightfully horrible ogre, the Japanese at Magdalena Bay. Lodge and Bacon and Rayner and the rest admitted that this particular mare's nest had been forever disposed of, but they protested that there might be discovered any day one even more terrible. Americans owning land in Mexico, or somewhere in South America, might sell it to Japanese, and then what would become of us? Such traitors ought to be hanged in advance. And suppose a South American owning an island or a strip on the coast were to sell it to Japanese citizens—ought that not to be regarded as an act of war? The thing to do was to prevent it by an extension of the Monroe Doctrine. We ought to declare that no native on this hemisphere should be permitted to sell to any foreigner land which, in the calm judgment of a Hobson or a Lodge, might be used as a "base" against the United States. It was conceded that such a proclamation would not lie within the four corners of the Monroe Doctrine, and that, of course, it would be in violation of international law, but still we have "the power" to issue, and it may soon become our duty to do so. But we have also the power to notify the world that we have gone stark crazy, yet no steps are taken to do so—beyond such debates as this in the Senate.

In its strictly legal aspects, the question which has arisen as to the authority of the House Banking and Currency Committee to insist upon some of the preliminary questions put by it to the banks in the so-called Money Trust inquiry, is interesting. The National Bank act, it appears, provides that "no association [bank] shall be subject to any visitorial powers other than such as are authorized by this title, or are vested in the courts of justice. The powers authorized by the act are conferred on the Government's official bank examiners, whose investigations and reports are routine and confidential. It is true that an act of Congress passed this year might supersede such a provision in an

older statute; but the resolution instructing the Banking Committee to make the proposed investigation is not such a law, having been passed in only one house of Congress. In general, the contention of the bankers, so far as they have raised the question at all, is that some of the inquiries already sent out in blank by the Committee affect the ordinary private business between the banks and their individual clients, and that the institutions would not be warranted, in view of the National Bank act's stipulations, in giving out such information in a public inquiry. This objection, however, affects very few of the questions asked, and we trust that the matter may be properly adjusted. Nothing would be more unfortunate, at this juncture, than for the banks to be placed in a position which would appear like resisting the official inquiries.

Whatever may be the merits or defects of the provision added by the House to the Post Office Appropriation bill, granting subsidies of $15, $20, and $25 a mile to all highways used in rural free delivery service, it is at least some satisfaction to know the approximate amount of the expenditure it will involve. This is estimated at about $17,000,000. Such a money consideration did not trouble Representative Sims of Tennessee, who advocated an amendment to the bill, designed to create at Federal expense such improvement of the worst rural routes as to bring them under the third class for which subsidies were proposed. When Mr. Sims was asked to give the House some idea of what his proposal would cost the Government, he contented himself with pointing out the impossibility of such knowledge, and a little later replied to a repetition of the question: "I do not know. I cannot tell anything about it." This airy manner of treating the financial aspect of his amendment was too much even for a House that was determined to "do something" for its large rural constituency, and, accordingly, it is left, as it should be, to the State and local authorities to provide their rural routes with "ample side ditches, so constructed and crowned as to shed water quickly into the side ditches," etc. If they are not willing to do this in order to make their roads eligible for part of the subsidy, they are far less enterprising than we have heretofore shown ourselves to be whenever Government aid of any sort was to be obtained.

The coining of three-cent and one-half-cent pieces has been unanimously recommended by the House Committee on Coinage, and has the support of the Secretary of the Treasury. The demand for the restoration of the three-cent coin is said to have originated in those communities that enjoy a three-cent fare on the street railways. In behalf of the ha'penny, Secretary MacVeagh says that it will benefit the slot-machine manufacturers. Beyond the special interests affected, however, there is apparent in the demand for an increase in the fractional currency that new spirit of thrift which is revealed in the general movement against waste and for "conservation." The lavish days when five cents or one cent didn't make much difference are passing. In California, for instance, the cent is a rare coin. Most of San Francisco's newspapers sell for five cents, and even where the official price is a penny, it is the larger coin that usually finds its way into the newsboy's hand.

A feature of the Oregon primary ballot is the brief "platform" which each candidate is allowed to have printed along with his name. Many of the candidates at the recent election took advantage of the opportunity thus offered them to display their ingenuity in contriving laconic statements. The almost inevitable consequence was that these "platforms" read like a series of telegrams. The statements of the four candidates for the United States Senate led in literary as well as in political importance. Senator Bourne's was the longest: "Advocates substitution of general welfare for selfish interests in all governmental operations." One of his rivals was equally illuminating: "I will support the great principle, 'Justice be done to all men.'" Another made an attempt to be more specific: "Lincoln Republican. A progressive, but not a radical." Benjamin Selling, who defeated Bourne, got in three strokes: "Always a progressive. Presidential primaries. Works industriously for all Oregon." One of the Democratic candidates for delegate to the Baltimore Convention managed the feat of being specific and general, local and national, in the same breath: "First-class roads. Improved schools. Progressive moves." Such personal platforms may come to constitute another argument for the short ballot.

With industrial unrest as great as it is, and strikes and threats of strikes becoming almost epidemic, no special attention would be given to the troubles which the Chicago newspapers have been having, were it not for one vital principle involved. This is the question whether labor unions can be held to their agreements. At least a part of the Chicago newspaper workers struck in flat violation of their contracts. So notorious and flagrant was this in the case of the stereotypers that the chiefs of their organization now threaten to take away the charter of the Chicago union. All intelligent champions of organized labor must see that such repudiation of formal agreements is fatal. It cuts the root of the whole argument for collective bargaining. If the trade unions will not live up to the terms which they have negotiated or even struck to procure, they put themselves out of court. Something of the same principle is involved in the dispute about resuming work in the anthracite coal mines. The form of settlement which the authorized representatives of the men made with the operators was no sooner arrived at than upset. In such a thing it is not only the authority of the labor-union officials that is at stake, it is the entire reason for the existence of the unions at all.

Lack of continuation schools is deplored by individuals and organizations interested in education in both Chicago and Philadelphia. In the former city, Prof. George H. Mead of the University of Chicago, who has investigated conditions among school children, declares that 49 per cent. of them do not complete the instruction of the elementary schools. They seek work too early, and, unfitted for the tasks they undertake, soon become rolling stones or lose employment entirely. In Philadelphia similar conditions prevail, according to Martin G. Brumbaugh, Superintendent of Schools. Mr. Brumbaugh and the Armstrong Association have each conducted investigations which have shown that in the years from fourteen to sixteen a large percentage of children are out of school and at the same time unem-

ployed. A law by which, at fourteen, a child may receive a certificate of employment, taking him out of school, but by no means guaranteeing him steady occupation, is in part blamed for this state of things. The remedy everywhere is said by experts to lie in upbuilding a continuation-school system, whereby the educational authorities may keep in touch with scholars after the completion of elementary courses.

Teachers compete closely with clergymen for the honor of composing the worst paid profession in the country. The figures of the Commissioner of Education show that, although in the last ten years the average monthly salary of men teachers has increased 38 per cent., and that of women teachers 27 per cent., the average annual pay of teachers is still under $500. In twenty-five States the expenditure for public education is less than five dollars per capita, and in ten States it is not half of this amount. While the average number of days attended by the pupils enrolled has gone up 14 per cent., the number of public schools 70 per cent., the value of school property 75 per cent., and the income of the schools 83 per cent., we have responded only half-heartedly to the growing complaint that the work of educating our future citizenship threatens to be left largely in the hands of those who cannot find anything better to do. It is to the credit of the best of those who take up teaching that the salary is not the only attraction, but that is no reason for making it a factor that tends to eliminate them from the ranks.

Political movements are obviously behind the flurry which the English Conservatives are raising over President Taft's letter on Canadian reciprocity. Similarly in Canada, the anti-reciprocity press has seized upon his unlucky phrase about making the Dominion an "adjunct" of the United States, and is loudly proclaiming that it justifies all that was asserted last year about reciprocity being only a disguised form of annexation. In England, the violence with which the thing has been taken up by the Tories will defeat its own end. To arraign Ambassador Bryce as being privy to a "plot" to dismember the Empire is so absurd as to excite laughter. Mr. Bryce had nothing to do officially with the Canadian negotiations, except possibly to report their progress to the Foreign Office. The whole affair was left to the Canadian Government, and any interference by the British Ministry would have been deeply resented. All this is perfectly well known to the House of Commons, and it will probably take only a quiet statement of the facts by Sir Edward Grey to put an end to the matter there. Yet the fact remains that it was most indiscreet in President Taft to publish entire his private letter to Roosevelt about Canadian reciprocity. It was wholly unnecessary, and his language was certain to be misunderstood or twisted. Strictly speaking, he referred only to a commercial and financial "adjunct," but it was easy to jump at the conclusion that he meant political. The blunder was comparable to his equally gratuitious slip in speaking of Canada as being "at the parting of the ways." Explanations of such blazing indiscretions only make them worse. When we recall that the "adjunct" letter was passed upon by the full Cabinet, and by other advisers of the President, the mistake of giving it out appears the more inexplicable.

Even in the House of Commons the Home Rule debate is reported to be a dead-and-alive affair, the speeches being delivered to empty benches. Outside, the interest taken is but slight. The difference from the tense and fevered days of 1886 and 1893, when Gladstone was fighting for Home Rule for Ireland, is admitted even by those who think that the country ought to be roused and militant. Various causes are assigned. Irish government is a warmed-over question. People believe that the bill is certain to pass the Commons and to be thrown out by the Lords, so why get excited? But the same remark about the surprising lethargy of Englishmen was made during the recent coal strike. It constituted an acute and threatening crisis for England, yet the public remained quiet. The explanation was given by an Englishman that his countrymen were ready enough to yell and riot if they thought it would do any good, but if not, why heat themselves up for nothing? This may be the reason why England is "most unusual calm" about Home Rule.

German protests against the proposed increase of the army have a not unfamiliar sound. Among the proposals are the organization of two new army corps, reorganization of the military aviation troops, higher pay for the soldiers, and forty-six new companies and batteries of artillery, or battalions of infantry, railway troops, etc., as well as many new machine-gun companies, engineers, etc. The critics point out that Germany has already twenty-three army corps to France's twenty; that France's peace strength has within a year decreased from 564,910 men to 550,000—just at the time it is proposed that the German army shall be increased by 30,000 more men withdrawn from industry, from 620,000 to 650,000. In every branch of the army, Germany is far ahead of France; and her relative position improves every year as the French population decreases; but there is a desire to set up a two-nation army standard as England has a two-nation navy standard, and in both cases the taxpayers pay the piper. But another motive is plainly stated by the anti-jingo Berlin press. It is the desire on the part of the officers for swifter promotion, that same longing for personal advancement which has played so large a part in the recent army and navy legislation in this country.

Details are still too meagre to enable us to judge of the real success of the Italian dirigibles, reported last week. If, as seems probable, the Turks had only ordinary artillery, the Italian attack may mean little. The first test of field guns against aeroplanes, made several years ago, showed such artillery to be quite useless. The experimenters used anchored box-kites and balloons, but, even so, little doubt was left as to the inadequacy of the guns. Since then, however, the Krupps have devised special aerial field-guns for the German army, and many others have been at work on the same problem. In 1910 reports of British army tests of aerial guns leaked out. In October of last year it was said our army had a field-piece that was highly efficient against airships, though a naval officer, as an offset to this, had invented a vanadium-steel rifle so light that it could be carried on an aeroplane and yet of sufficiently large calibre to be "a really formidable weapon." Obviously, pitting a military dirigible against old-fashioned field-pieces is very much like testing a modern armor plate with an axe.

UNSAFE POLITICAL PROPHECIES.

The word "never" in politics, once remarked Mr. Balfour, is used only by those who are very young. Another word of the same kind is "cannot." If there is anything which a little acquaintance with our political history teaches, it is caution about making sweeping assertions or confident predictions. The land is just now filled with them. Any one of a hundred infallible authorities on politics—infallible despite Jowett's famous warning that not even the youngest of us ought so to regard himself—will tell you that the Republican party is absolutely "wrecked." As for the prophets who proclaim from the housetops that Mr. Taft "cannot possibly be elected," their name is legion. What they say may prove to be true; but what is certainly true is that many a cocksure seer in times past, many an equally positive reader of the signs of the times, went on record as to what was and would be, only to have the event leave him looking ridiculous.

As for the Republican party now being "wrecked," it has been so, on evidence of this kind, so many times in the past that it should now be quite used to the experience. In 1884 there were many to say that it could never recover from its defeat. A nearer analogy to present conditions existed in 1880. Then, too, there was a bitter fight over a third-term candidacy. The party was torn into two nearly equal and very bitter factions. As Senator Hoar remarks in his autobiography, it seemed as if the fate of the Republican party were trembling in the balance. The Democrats were confident that Conkling and Grant and their indomitable 306 would make Garfield's election impossible. Yet he won easily. Again in 1892 there were dire prognostications. The Republican party was said to be forever done for. When the news came that Cleveland had carried Wisconsin and Illinois and, virtually, Ohio, a veteran Republican said: "This is not an election; it is a revolution; and the Republican party as we have known it will never carry another Presidential election." It did, however, readily carry the next four.

It is also true that the Republican party has before had Presidents upon whom the doom had been pronounced that they could not possibly be reëlected. Even Lincoln believed for a time in 1864 that this was true of himself. It is, of course, an easy and natural gradation which takes us from Lincoln to Roosevelt, and memories are so short that it will be a surprise to many to learn that, in 1903, there was grave doubt about even the invincible hero winning the Presidential election of 1904. This was in part the basis of the strong movement then set on foot to nominate Mark Hanna. Roosevelt knew of this movement and was troubled by it; and as it was Hanna, at that time, not himself, who was the sphinx and would not say whether he would seek the nomination, the President regarded the position of the Ohio Senator as both suspicious and unfair. One day in the White House, Roosevelt—so it is stated in the recent Life of Hanna—"sprang from his chair, walked nervously to the open fire and then back to his desk, saying in his emphatic way, 'Yes, Mr. Hanna ought to make an unequivocal public statement of his position.'" Possibly, Taft may have said the same thing of Roosevelt all through 1911 and up to February of this year! Hanna, however, kept obstinately silent, and there is no telling what he might have done had he not fallen ill and died. But the effort to have him nominated instead of Roosevelt went distinctly upon the theory that the latter could not be elected. One correspondent wrote late in 1903: "I was astounded to see in that club [the Union League of New York]—presumably as representative a body of Republicans as there is in the country—that there was not one out of the whole membership whom I met—not one—who believed that Theodore Roosevelt should be nominated, or if he were nominated, that he could be elected. The reasons given were not idle or prompted by personal feeling, but were based on the calm, sober judgment of thinking men." In line with this was a letter from Senator Scott, who wrote: "To my mind it is a foregone conclusion that if we renominate Roosevelt it means defeat." How odd all this reads in the light of the crashing majorities of 1904!

We do not say for one moment that, in this respect, history will repeat itself. History has a way of tricking us all when we undertake to read it into the future. But it does teach us something in the way of warnings against being too sure of our own judgment at any given time, and mightily reinforces the old injunction, "don't prophesy onless ye know." The one thing we do know is that the American political outlook can shift with amazing rapidity. We think we are looking at fixed facts, and suddenly discover that they were only a series of kaleidoscopic changes. Our shrewdest predictions cannot really get much beyond a "perhaps." Your "if" is the great preservative of a reputation as a prophet. And the surest foresight, in a time of confusion like the present, can cast but the light of a farthing dip on what is to come. The dejected poet who confessed his failure to predict how things were coming out—particularly, to make them come out as he wished—arrived at a bit of comforting wisdom when he wrote: "Sometimes I think 'twere best to let the Lord alone."

THE MONSTER SHIP.

The loss of the Titanic has brought up no more interesting point than that of the future of the monster ship. Shall the shipbuilders continue to turn out larger and larger vessels until the thousand-foot steamer is a reality, or is it time to call a halt? This is the question which confronts builders and public alike. If the latter should now show a decided aversion to the ocean giants, two particular arguments for their construction—their advertising value and their great earning power—would lose much or all of their value. It may, for instance, appear that the title of largest ship afloat and her kinship to the Titanic will together make the Olympic unpopular hereafter, and that the Gigantic, now under way, will repel people because of her size. Already it is announced that the Gigantic's plans are to be altered because of the loss of the Titanic, at least to the extent of adding an extra bottom; but nothing has as yet been said about any diminution of her length.

Some huge German vessels are also under way, of larger size than the Titanic. Probably it is too late now to change their construction. But there are certain striking facts in connection with the Titanic's end which may have the effect of checking any further increase in length and bulk for some years to come, if not permanently. One of these is brought out by the London *Economist* to the effect that, even if the Titanic had stayed afloat and been towed to Halifax, she would have been a total loss. Her cargo might have been

saved and her machinery taken out, but she herself could not have been repaired at Halifax or anywhere else on this side of the Atlantic. To have towed her 47,000 tons back across the Atlantic to Belfast for docking would, as the *Economist* believes, probably have been a hopeless task, despite the successful towing of the drydock Dewey to Manila. For the Titanic would have been at best somewhat waterlogged and a fearful burden for a fleet of towing vessels. Indeed, she could not in her disabled condition have entered the harbor of Halifax on account of her draft. The largest drydock on the Atlantic Coast, that at Newport News, is but 804 feet long inside, or 78 feet shorter than the Titanic. The new navy drydock at the Brooklyn navy yard is to be only 700 feet long. Hence, if any serious accident should happen to the Olympic or the new Hamburg-American boats, they, too, would be beyond repair on this side the ocean. "It is indeed a curious thing," says the *Economist*, "that this vital point seems to have been largely overlooked by the shipping-world in Great Britain, and many underwriters who had written the hull at the preposterously low rate of 15s. per cent. realized only after the accident happened that a vessel of over 800 feet in length is from its nature an undesirable risk."

Evidently, there must be either a limitation to the size of steamers or a great increase in the capacity of docks. But whether giant docks will pay for themselves is another question. Obviously, they would not, save at the terminus of such a well-frequented trade route as that of the North Atlantic. Even in New York or Norfolk, however, such a dock would be of comparatively little use, save in an emergency. Unless it were placed on very deep water it might be of no avail after an accident if the ship were lying very low in the water. Even in England there is, we believe, but one drydock large enough for the Olympic, and a British naval expert, Mr. Alfred Elgar, makes the surprising statement that if, in war-time, ships of the Titanic class "came in damaged, like lame ducks, you could not get them into drydock to be repaired; and the larger the ship the greater the difficulty." Mr. Elgar even goes so far as to say that there is not an English harbor into which "an original Dreadnought, let alone a super-Dreadnought, could get, lying very low, and the same is true of a big ship like the Titanic." The Titanic's injuries are cited as a fatal argument against the big battleship, for it affords no defence whatever against under-water attack from a submarine boat. A blow underneath and the Dreadnought goes down.

The recent extension of New York's docks for the Olympic and Titanic was announced as the last because of the river's limitation in width. Hence the International Mercantile Marine Company had begun to consider seriously a new harbor at Montauk Point or docking its future ocean giants at New London, a wonderful deep-water port. Indeed, New York was made possible for the newest ships only by the timely completion of the Ambrose channel. Moreover, the collision between the Olympic and the Hawke, and the tearing of the New York from her dock at Southampton by the suction of the Titanic, have made it clear that these monsters have yet to be carefully tried out before it is certain that they can be safely handled in confined waters. A barge sunk at Southampton is reported to have been dragged 800 yards along the bottom of the harbor by the Titanic passing over her. Fresh precautions, the *Economist* insists, must be taken if such big boats are to pass close together, or a big boat and a small boat, like the Olympic and the Hawke.

Important as all these considerations are, there is still another one which may limit the size of future ships, and that is the great concentration of human beings and wealth in a single vessel. Here is where the underwriters will again make themselves felt. There is a growing feeling among them that they are taking too great chances when they are asked to underwrite such heavy risks as are involved in one of these enormous vessels. Until the ship constructor can demonstrate that he has really built an unsinkable ship, the underwriters will be quite within their rights if they fix a definite limit to the liability that they will assume. As the *Economist* puts it: "The world's reserve of ability and capital is not so great that we can neglect the prudent policy of spreading risks; . . . . hull, passengers, and cargo [of the monster ship] are together too valuable to be hazarded in the perils of a single voyage." If this seems too sweeping a dictum, it might at least be pointed out that the insurance men would certainly be justified in insisting that all ships should run at no more than half speed through fog and when amid ice, and that safer routes should be followed.

NEWSPAPERS AS COMMODITIES.

A writer in the *University Magazine*, who announces himself as a newspaper man, opens his heart upon the subject of "Why Newspapers are Unreadable." This is the last charge that we should have thought could have been brought against them, but apparently the word is used in the article as meaning not "refined." In this sense, there must be admitted to be point in its title. To understand why newspapers are unreadable, we are told that it is first necessary to consider the case of the maker of cheese. The cheese man differs from his university mates who have become physicians or clergymen or pharmacists or teachers. They received special training for their work, and possess certain privileges which protect them in the exercise of their respective professions. While they are free to go into the business of making cheese, the humble cheese man is debarred from competing with them unless he goes through such a process of preparation as theirs. On the other hand, they have obligations which do not burden him. The physician must rise from his bed at three o'clock in the morning if a human being is in peril of death; the clergyman undertakes to live a life of such godliness as shall convince all beholders that he is sustained by a more than human power; the pharmacist is bound not to take advantage of the ignorance of a patron—or, at all events, such advantage as shall be perceivably injurious to him; and even the teacher is strictly limited in the amount and kind of punishment which he may inflict upon the most unruly of his pupils.

The cheese man is troubled by none of these things. As cheese man, he owes no duty to the community beyond that of selling it the sort of cheese that it likes, and this is not a legal but only a moral obligation. Furthermore, it is one of those convenient obligations the observance of which benefits the one bound by it. He must, to be sure, obey the law, but what of that? Like the arrogant Trust magnate, he may, if he desires, engage the statute-book in a le-

gitimate boxing-match, and even win some grudging admiration if he catches his opponent off his guard and scores a point. All that is really demanded of him is that he shall shake hands with the law before and after each bout. Now, the newspaper man, it appears, is not like the physician or the clergyman, but resembles the cheese man. Both discover as speedily as they can what flavor the public likes, and give it regardless of their own personal taste.

This particular newspaper man has found that the public likes its massacres in round thousands rather than in small and exact figures, that it is interested in religions only when they are fighting, that it has a passion for murders, and that it is utterly insensible to the monstrosity of the split infinitive. He has learned by the most convincing of all demonstrations—the sale of the product—that whereas readers want the truth about the price at which a neighbor has sold a lot, they prefer lurid romance concerning the reasons why Lord Haldane went to Germany; and, in a word, that they have no interest in international politics until they become bloody, none in art until it becomes scandalous, and none in philosophy under any circumstances whatever. "We have learned how to flavor the journalistic cheese," he declares roundly. "Shall we not do it?" But lest the minority that does not like its journalistic cheese so highly flavored should draw unwarranted conclusions from this frank disavowal of responsibility on the part of the newspaper cheese man, he hastens to explain that in practice the rule has the beautiful habit of tending in just the direction that this minority would desire. The cheese man, that is, who went to an extreme of coarseness in his flavoring merely because he found that the public was not fond of real delicacy, would be as foolish as his rival who made cheese that was not coarse enough. And in the end he would find it not only possible, but most expedient, to raise the taste of the consumers of his cheese. This is exactly what a newspaper does. It is dangerous for it to lower its standard for the sake of enlarging the circle of its readers, but it is the height of wisdom to retain its readers and imperceptibly elevate their tastes.

The difficulty with this theory is that it is too good to be true. Appetite is more likely to grow than to diminish by what it feeds on. Even the innocent cheese man, striving to give his customers what they want and at the same time make them want something else, has of late had to be put under pure-food regulations. Newspapers are exempt from analogous limitations, partly because of the difficulty of devising definitions of pure and impure reading matter, but more because of the deep-seated opposition to anything resembling a hampering of liberty of speech. To argue that the absence of such shackles is a sign and endorsement of newspaper irresponsibility is a strange reversal of logic. The moral responsibility of the press is great just because the fetters that once bound it have been struck off, and moral responsibility is worth while just because the press is and must be financially independent. An endowed newspaper would deserve no more praise for holding to lofty standards than a university student who had won a European fellowship would deserve for devoting himself to research work for a year. The problem and the opportunity of the journalistic cheese man is to provide a product that he can dispose of without selling his soul along with it.

TEACHING ARGUMENTATION.

Argumentation as a subject of instruction in schools and colleges is peculiarly American. There are signs, however, that its popularity with students is not growing, and the reason may be found in the tendency of the textbooks to lose touch with realities and become academic in the wrong sense of the word. If this be a true diagnosis, argumentation will soon share the fate of formal logic, and be pointed at as another product of perverted intellect. That would be unfortunate, for argumentation has an excellent place in education as a strengthener of mental fibre and a sharpener of reasoning, with the added advantage of being immediately practical.

If a trained advocate, whose profession brings him constantly before courts and committees and other public bodies, were to go through the current textbooks on argumentation he would be impressed by three facts. First he would notice how little attention is paid to the prepossessions and the practical interests of the persons addressed. When he himself has an argument to make he thinks of the men he has to win over; in these manuals the word audience hardly appears in the table of contents. In part this uncertainty of note is due to the nature of the case, for a real argument exists only for the purpose of moving minds, and arguments written as a class exercise have no minds to move. But even granting this difficulty, a textbook can emphasize thought of the audience in its analyses of famous arguments, and can impress the necessity of taking the audience into account by giving the matter a prominent place.

In the second place, the trained advocate would observe the fine disregard in these books for considerations of space. Few undergraduate themes or forensics can run above two thousand words, yet the textbooks urge on students such subjects as reëcho through the halls of Congress for two or three hours at a stretch. In one of the most widely used manuals the following propositions, among nearly three hundred, are recommended as suitable for undergraduate effort: National party lines should be ignored in municipal elections; organized labor should keep out of politics; the Federal Government should buy and operate the telegraph systems; raw materials should be admitted to the United States free of duty; the history of trade-unions for the past twenty years shows a tendency detrimental to the best interests of the country. To set a youth to arguing out such subjects in so small a space is to invite him to vague and superficial thinking.

The third point which a professional advocate would notice in these books is that subjects recommended for argument often call for advanced training in economics or sociology or the theory of government. Here are two topics from another book: Ireland should be granted home rule; railway pooling should be legalized. Such questions can be profitably discussed by students who are just about to become voters; but not under the guidance of instructors in English or in oratory who do not know the real range of the subject, the sources from which facts are to be gathered, and the special pitfalls which beset the reasoner. Skimming a subject and cocksureness in assertion are besetting sins of American education; and to urge a young man to argue large and complex subjects under an instructor who is not competent to check his assertions is to

make him more superficial and more cocksure.

How, then, to the abstract and potential usefulness of instruction in argumentation can value in practice be assured? Chiefly, we believe, by inducing instructors to lift their eyes out of the cloisters, and see things in their due proportions in the larger world. Let them ask their students to argue questions with which the student is fitted to cope and on which the instructor's own judgment shall be serviceable. Young men are arguing with their fellows and with their elders on an infinite number of subjects, and the value of their judgment is in direct proportion to their knowledge of the facts. If an instructor in argumentation can get the coöperation of instructors in economics and government, he may do well to let his class try their teeth on small portions of some of these great subjects; but for the mental discipline and the training in sound thinking many smaller subjects are as profitable. On most of the questions which are argued out in faculties young men have a direct interest and direct experience—entrance examinations, for example, or the rules for choosing studies. In athletics undergraduate captains and managers are all the time arguing out questions that, within the subject, are of critical importance; and older men who have worked with them testify that their spirit is excellent. Outside of academic topics, many local subjects can be made available; questions of the direction of new street car lines; of waterworks, of local government. What instructors in argumentation need is to trust less to textbooks and to make themselves wiser in human nature.

In all work concerned with teaching young men to think soundly and eagerly on everyday subjects rules must be kept flexible, and models be set up as models, and not as inflexible standards. Here there can be no laws of the Medes and Persians. "This is an effective device," "That is a good way to get at one class of readers," is about the most rigid advice a teacher of argumentation can give. Instructors who reduce the subject to a set of rules that will let them do their work with three-quarters of their minds asleep will surely and not very slowly carry it into the limbo of dead pedantries.

THROUGH THE OUTLOOKING GLASS

"If you promise to keep quite still," said the Poet Laureate, "I will read you my latest poem."

"I should be delighted," said Alice, whose manners never failed her.

The Poet Laureate cleared his throat and read:

> The sun was shining in the sky,
> Though dawn was far behind
> (No stand-pat luminary, he
> Had never yet declined),
> And folk in bed were luncheoning
> Because they had not dined.

"This doesn't seem to be quite clear," said Alice.

"Of course it isn't," said the Poet Laureate. "This is just to create the proper atmosphere." And he went on:

> The Colonel and the Harvester
> Had found a shady spot.
> They sorted Issues by the piece,
> The dozen, and the lot.
> And most of them were highly spiced.
> And all were piping hot.
>
> "For seven years," the Colonel said,
> "I walked the quarter deck.
> I smote the Trusts, and in their gore
> I waded to the neck."
> "I know it," sobbed the Harvester,
> And signed another check.

"I haven't overdone the pathos, have I?" said the Poet Laureate.

"Not at all," said Alice.

> "Oh Pledges, come and walk with us,"
> The valiant Colonel cried,
> "Your numbers clearly show my views
> Upon race suicide.
> Your countless faces fill my breast
> With pardonable pride."
>
> The elder Pledges shook their heads
> And whimpered as he spoke;
> The elder Pledges couldn't move
> Because their backs were broke,
> But all the younger fry obeyed
> And waited for the joke.

"I will now skip several stanzas because they are quite intelligible," said the Poet Laureate.

"It seems to me that you can read them all the better then," said Alice.

"But if they are already intelligible, what use is there in reading them?" said the Poet Laureate impatiently, and he went on:

> "The time has come," the Colonel said,
> "To speak of many things,
> Of Presidents, of sealing wax,
> And hats inside of rings,
> And why I feel so boiling hot,
> And whether truth has wings.
>
> "A brand new deal, Oh Pledges dear,
> Is what we chiefly need,
> A double-acting memory
> Is very good indeed;
> And if you're ready, Harvester,
> We can begin to feed."
>
> "But not on us," the Pledges cried—

"Please," said Alice, "please won't you skip what happened next? I have never been able to think about it without crying. It's too cruel."

"Very well," said the Poet Laureate, "I am rather tender-hearted myself. I'll pass on to the last verse":

> "Oh Pledges dear," the Colonel said,
> "Is not this bully fun?
> I thank you for the Harvester——"
> But answer there came none,
> And this was scarcely odd, because
> He'd swallowed every one.

THE NEW HISTORY.

Being somewhat unorthodox myself, it was with a keen expectation of pleasure that I opened the collection of essays on the "New History" by such a confessed heretic as Professor Robinson.* The net result of reading the volume was a disappointment; the expected novelty was not to be found. The book can be recommended, however, to the lay reader desirous of information concerning the present point of view of the historian; but Professor Robinson's colleagues are not going to be excited over the defeat of whole armies of straw-men such as he sets up for the purpose of exhibiting his delightful method of putting them to rout.

Of the eight essays in the volume, all, except one, "Some Reflections on Intellectual History," have been previously printed, but they have all received careful revision for this publication. The general subject of the essays is the interpretation of history in general, and Professor Robinson's thought ranges over the whole field from the time when the first ape took on the erect form of man and began to use his cunning in the struggle for existence down to the events of yesterday. He will "illustrate some of the ways in which the study of man's past as now understood can be brought into relation with the great problems which the present generation is called upon to solve." In the first essay, which gives the title to the volume, there is developed the theme of the continuity of history, its content and its meaning. The idea is not particularly novel to one familiar with recent European thought, nor are the other ideas hinted at in this and more fully developed in the following essays. But this restatement of the scientific position of historians is timely and invites us to the consideration of certain activities in the special field of American history which belong to this universal movement.

I.

For a better understanding of the conditions under which the history of America is being written, a short résumé of the immediate past of the science is necessary. Within the last generation, the cultivation of the science of history has passed virtually into the control of the universities. This is the day of the professional, or rather of the professorial historian. This change is in harmony with the rapid development of the scientific spirit in America that has been so characteristic of the last few decades. The historical science is a difficult one to acquire, and hence there is need of training and apprenticeship, which can be most easily acquired in the graduate school and through the practice

of teaching. The universities, therefore, oil their machinery for the purpose of turning out rapidly the proud doctors of philosophy. Only the layman with exceptional opportunities and leisure for study—and it is well there are still a few such—can hope to equal these Ph.D.s in their knowledge of the mechanics of the subject; for have not they learned how to take notes correctly, how to compile a bibliography, how to punctuate their footnotes, and how important it is to print documents with the capitalization, punctuation, and orthography exactly as found in the original? Just as in the Middle Ages the man who could write was accounted learned, so naturally the university-trained men with their knowledge of methodology have become the leaders in the science and most conspicuous members at the meetings of learned societies.

What has been the crop garnered from this sowing of doctors? Let one who well knows the genus speak. In an address delivered in October, 1910, Professor Channing of Harvard bewailed the barrenness of graduated students, who "stop with the work they do under direction. Get them out of the university, get them away from professional stimulus, make them teachers, make them librarians, and their original work stops. . . . Let any one turn the matter over in his mind and see if he cannot count the really first-class works of American historical writers within the last twenty-five years on his fingers." Professor Channing lays the fault on the commercialism of the times; and no doubt our energy as a nation has been expended in building up our great businesses and in the development of our natural resources, but I am not inclined to hold the universities themselves blameless. In most of our institutions the graduate work is but a continuation of the undergraduate. Students are forced into information courses that they may acquire by instruction a sufficient knowledge of facts to pass an examination which differs only in degree of intensity from those to which they have grown accustomed since the days of their grammar schools. The process simply intensifies in their minds that respect for "authorities" of which we all complain. This training exercises the functions of the memory, that sponge-like faculty, in which the least original minds excel, and by just so much stultifies the activities of thought. Even the boasted seminar, borrowed from Germany, has developed in many of our institutions far away from its ideal, and is only a class exercise wherein immature minds are guided in the writing of the theses, required for the doctorate, under the painstaking supervision of the professor, whose chief duty is to guard his pupils from learning anything in the harsh laboratory of experience. It is not surprising to one who knows the processes that little change in the interpretation of American history has been made since the passing of the older school of history. The universities have tenaciously clung to traditions, and thus far they have justified their leadership only by an occasional monograph of merit, and have left the work of Bancroft and Parkman almost untouched.

Unlike Professor Channing, however, I am not pessimistic about the situation, for my eyes are turned towards the future. Although the university historians have not yet produced a scholarly output commensurate with their opportunities, there has been created a guild of well-trained historians, and the demand for scholarly works has been broadened and intensified. Out of this guild there is growing the school of the future, of which certain indications are already to be seen; and, if this school fulfils its promise, the product will approach the ideals of Professor Robinson's "New History."

II.

American scholars have not been prone to discuss the methods and purpose of their science. Books like Professor Robinson's have rarely been printed by the American press. Yet the new development, here discussed, is due to a conscious effort to overcome the difficulties which lie in the very methods of the science. The fundamental question every historian must ask himself is: how can causal relations among past phenomena, upon which it is impossible to make observations, be established? The logical methods used by students of the natural sciences are not applicable to history, so that historical reasoning is fundamentally teleological. Events of the past are looked upon as purposive in character and directed towards a given end selected by the historian out of many possible ends. Now, the fault of former historians has been that they have selected as their criterion an end of too narrow a range and have in consequence concentrated their gaze on too small a stream of events to understand the forces which have been the effective means of movement. Purely political history in its narrowest sense cannot satisfy the demands of the modern man, who views the multitudinous forces, economic, social, and psychic, which are the influences underlying his own actions. The new history is but an attempt to find in the past similar forces shaping the historical ends. The teleological reasoning can only be acceptable provided the historian's view is most comprehensive. The movement I call the "new history" is seeking means of widening the vision of the past.

The first characteristic of the new form of historical research is the expansion of the sources to be investigated. The great mass of material is still unprinted and has been so little used that the rich archives of the United States and Europe are almost undiscovered countries. In spite of the examples of Bancroft and Parkman, who used the archives freely, our university-trained scholars have not sought out these depositories. The reason is obvious; the examination of archives demands both leisure and travel. The university professor's salary does not permit much of the latter, and the duties of his profession leave him little of the former. He is, therefore, obliged to rely on the printed sources, for the universities have not yet reached a stage in their development when they consider it proper to expend money on copying and photographing documents.

Within the last few years there has been a change, due primarily to the activity of two institutions, the Canadian Archives and the Historical Department of Carnegie Institution. The work of the former has so far been directed towards the collection of copies of documents, while the latter is making public through its guides a knowledge of documents in the great depositories in Europe and America, illustrative of economic, social, and political conditions. The first influence of this activity has been upon the publication of documents, for which there are many agencies in the United States; but, until recently, the ideal followed has not been high, and the so-called "collections" have made no attempt at exhaustive exploitation, but rather have given cause for the suspicion that their contents were largely fortuitous. The movement noticeable to-day in such publications looks to the methodical printing of all known documents on a given period or phase of development, so that scholars may not be limited to a partial view of the subject.

In reaching after wider and deeper information concerning our past, historical scholars are just beginning to learn the worth of newspapers and pamphlets. The pioneer work which made a large use of this ephemeral literature was McMaster's "History of the People of the United States," but much yet remains to be done in learning the methods of its use and the delimitation of its value. As recently as 1908, the American Historical Association devoted one of its conferences to the discussion of newspapers as sources of history, where it became evident that no one present had more than touched the edges of the problem. The reporter of the conference informs us that Mr. Rhodes, who has made effective use of the newspapers in his own work, held that this maligned "literature" supplied "a great amount of detail, color, and circumstantial evidence that it is difficult if not impossible to find elsewhere." The problem of the exploitation of news-

papers as historical material is no doubt difficult, but such a summary as the above is certainly inadequate; and the future historian will discover some means of interpreting the daily records of the press, which offers so much information, directly or by inference, concerning the aspirations and life of the people.

III.

All this search of archives, newspapers, and pamphlets is only an attempt to reach the life of the people of the past by a method approximating as nearly as possible that of the scientists of present-day social life, who can study the activities of the masses by means of statistics. The first successes of the new history have been naturally on the socionomic and economic side of life, where the activities of the masses may best be studied without taking account of that disconcerting element occasioned by the personal influence of the "great man"; and many historians think that through tracing the life and death of institutions and by following the development of the social-psychic life, they can establish the primary cause of movement. From this point of view the influence of any one man upon his generation is like the ripples on the surface of a lake, which gradually disappear without even changing permanently the surface. The advantages of this position are so great that it will always find adherents.

Besides these, there are found among the followers of the new history men of another turn of thought, for whom the chief interest in historical research lies on that line where the social-psychic development of the past touches the individuals of any generation, at which contact there is an ever-recurring but changing movement. Historians of the masses are compelled to trace the development of the generic, the typical man, whereas change is actually caused by those variations in each generation from the type. These variations are not due wholly to the physical and psychical environment, but come partly from the accidents of birth, which the historian cannot trace to their first cause. The forces, which are to produce historical movements, are not existent except in the souls of individuals, of which the mass average would take no account. History finds its most absorbing study, therefore, in the play of action and reaction along the frontier line where a new generation enters the contest with "the tradition of all dead generations," which, writes Karl Marx, "lies like a mountain on the brain of the living."

The chief development of this school in America does not mark it off very distinctly. There is the same expansion of source material in order to reach a broader view as is found among the institutional historians. With the search in the archives goes the systematic collection of manuscripts of all descriptions. The letters of John Jones and Jim Smith are important, as by them can be deciphered the soul of the common man. In the same way search is made for all kinds of material that may bring a clearer understanding of the "great man," and many are the "finds" that are being made and interpreted, so that the relation of the men whose heads rise above the general level to those people among whom they live may be really known. By studying the life-history of innumerable individuals whose actions are of importance, and by thus steeping himself in the life of the past, more completely than was done by his predecessors, the historian is getting behind the State law, the party platform, and similar documents, which have formed the stock in trade of the older historians, and is discovering the real purposes and desires of the people.

IV.

It is a commonplace among American scholars to-day that the older historians have neglected what is unquestionably the most important event of our history, namely: the development of the West, that great seething "melting pot," into which all the nations of the world have poured their contributions to be fused into the American people. There is a group of American historians who believe that westward expansion should be the centre of our view as we gaze back over the past generations; it must be the basis of our teleological reasoning. Naturally, the older historians interpreted our past in the light of the Civil War, that stupendous and dramatic conflict which was so titanic in its character that men living during or near such an event could not be expected to regard it as only an incident of more important developments; but, as time passes, we obtain a better perspective, and the fact of our national growth, due largely to the conquest of the West, begins to loom larger in the foreground of our mental picture. A host of problems are being investigated by these "Westerners": how is it that the West has been settled; what is the process by which new national characteristics have been developed; what has been the effect of the different environments upon our people; what is the influence of the discovered sectionalism upon national life? Prof. Frederick Turner has deliminated various economic-social areas, which do not coincide with political boundaries, and has described the influence of their physical and economic peculiarities upon man; and there have recently appeared more detailed studies which show the relation of the economic and political life within such areas. Definitive histories along this line of research may only be expected when it is possible to base a comprehensive synthesis on the studies of geologists, zoölogists, botanists, economists, sociologists, ethnologists, and their allies.

Finally the new movement in historical research has cast aside chauvinism, which has been so long a cause of the low plane of American historical writing. The conception that all history should be interpreted as a gradual development from absolutism towards democracy, and that the Government of the United States represented the culmination of the ages, the highest level reached or to be reached by humanity, was an inadequate and unscientific view for the teleological reasoner, if he desired to discover truth. Yet historians have been obliged to work under the burden of this belief. The recent action of the Legislature of California in condemning a certain monograph on pre-revolutionary conditions as "unpatriotic" proves that part of the public is not yet ready for the unprejudiced study of our past; but the recent "muck-raking" of our popular magazines and newspapers has shaken somewhat this self-complacency of the public, into whose mind there is beginning to penetrate a belief in the possible benefits of other forms of social organizations than our own. The reaction of this change in the public mind on the historian has been immediate and shows itself in a more careful examination of the sources for the purpose of discovering the truth irrespective of our national pride. Under this impulse we may expect less prejudiced views of such events as the struggle between Great Britain and her colonies, of our various wars, of the slavery contest, of the development of our educational system, and in short of the whole past of the people.

This paper can pretend to indicate only the direction of recent historical development, and no doubt some important lines of research have been omitted; but this is inevitable, for the "new history" has as yet a very meagre literature. Its actualities are small, but to one who knows the men and their work its potentialities seem to give promise of future results which will make the history of America more nearly scientific and finally justify the leadership of the universities in this field of research.

FRENCH BOOK NOTES.

Paris, April 20.

"Mémoires du Capitan Alonso de Contreras" (H. Champion), an autobiography not easy to be had in the racy Spanish original, has been done very adequately into French, with occasional notes by Marcel Lami and Léo Rouanet,

the latter being a specialist in the popular literature of Spain in the sixteenth century. The poet of the Conquistadores, José Maria de Heredia, was intending to translate it; and the contemporary, Lope de Vega, who was a friend of the Capitan, also intended writing an heroic poem about him, wanting which the adventurer spelled out his own story "without rhetoric or discretion." The book most like it in our own literature is Hope's "Anastasius," which was so persistently attributed to Byron; but that is infinitely longer-winded and less real, because its author knew how to write and was not writing his own story. The adventures of Contreras show his rise "from a scullion to be a Commander of Malta." He was "at once a hero and a ruffian, saving people and plundering them, deserving glory and the gallows." In this judgment, his translators hardly allow enough to the relative morality of violence in the flow of ages. The sap of a keener life than ours mounts up all through this "discourse of my life since I went off at fourteen to serve the King in the year 1595 to the end of the year 1630 on the first day of October, when I began this relation." The Commander of Malta, as he had then become, kept on relating till 1633; and leaves of later date are missing from his MS. which is in the Biblioteca Nacional of Madrid. If an English translation be tried, the publisher will have to lose a few more pages in which adventures not usually spoken of in our polite society are recounted crudely. Yet the ninth chapter—"I go away to become a hermit and they put me in prison while I am a hermit"—is both edifying and obviously sincere.

"Greco ou le Secret de Tolède" (Emile-Paul), by Maurice Barrès, may profitably be read after the Commander of Malta's adventures. It lingers over the art of Greco, who, from a boy of Crete, became a great religious painter of sixteenth-century Spain; and its aim is to open into twentieth-century souls windows from that other world. They are mainly stained-glass windows, whereas artless Contreras did his deeds in the open air and along the open sea. Besides the adequacy of his style, Barrès has an advantage over most English authors; he has had, in his youth at least, some personal acquaintance with the God of the Spaniards, in whose faith they wrought religious art and prayed in Toledo and fought Turks and Moors and English on the high seas. While it may be doubted if Maurice Barrès has attained to full comprehension, it is interesting to follow him in the contemplation of the paintings of Greco—"this Cretan who makes us understand best the contemporaries of Cervantes and St. Theresa." The book ends by bringing down to the commonplace present that spiritual exaltation which made the greatness of Spain, of her bad and good alike:

> Such a state of soul does not seem compatible with great civilization, for example, with the employment of a railway station-master. But such states of soul leave in Toledo an atmosphere which more than one who does not suspect it would profit by breathing.

"D'Artagnan" (Calmann-Lévy), by Charles Samaran, gives us in turn "the veridical story of a hero of romance." The romance is of Alexandre Dumas; in history the hero was captain of the King's Musketeers. He was killed at the stirring siege of Maestricht on Sunday, the 25th of June, 1673, which was not his day to fight, since he had been at it all the preceding night. Before his body was recovered from beneath the walls, four of his musketeers were killed around it or, as the legend says, eighty. The official poet wrote, "D'Artagnan and glory in one coffin lie." The present biographer, ending the veracious account of the hero's life, adds:

> Our melancholy is weighted by something like remorse. Will not the true history of d'Artagnan seem very pale beside his exploits in romance? Will it not spoil for many readers of Dumas the unmixed joys they have felt in following through love and war the adventures of the dashing Mousquetaire? And yet, perhaps, the expressive figure of Charles de Batz-Castelmore, known as d'Artagnan, deserved to live both in the truculent lines of romance and in severer and colder history. Long indeed it might be supposed that, a personage of legend, he had come forth armed and plumed from Dumas's brain. Henceforth we shall know better what he was in flesh and blood and bone—a Cadet de Gascogne, resourceful and choice soldier of Old France, penetrated with the sense of his duties, perfect servant of his King, and ready any minute to shed his blood for him.

"Lettres du Baron de Castelnau (1728-1793" (H. Champion), edited with notes besides the complete index of proper names which makes such books valuable, by Baron de Blaÿ de Gaix, is prefaced by the veteran specialist of French "letters," Arthur Chuquet. The Baron de Castelnau was an officer of carabineers in the Seven Years' War; and these familiar letters express his opinion very frankly on his generals and other things which have become matter of history. He lived to marry and to be guillotined at the last by the Terror in Angers; his daughter was shot soon after, because she embroidered "Sacred Hearts" supposed to be for the Vendeans; his wife learned of his death as she was dragged on foot to prison, but her turn for the guillotine had not come when Robespierre fell; and a son was forgotten in yet another prison. The letters do not reach down to these tragic events, and, except for these death notices, the book is of the old régime. It is published by the Baron's grand-nephew, who adds the "counsels to his children" drawn up by Castelnau's brother, his own grandfather, in 1777—a testimony of high order to the stern moral principle of a family of that misunderstood time. From the same publisher, we may note here two other volumes of letters edited directly by Professor Chuquet, each being a first series belonging to later years of Napoleon—"Lettres de 1812" and "Lettres de 1815"—all written in the fleeting intervals of enduring wars, and all more or less significant in history as genuine documents of the time and spot.

"Les Vainqueurs de la Bastille" (H. Champion), by Joseph Durieux, is very unlike literature and yet most fascinating to those who wish to have acquaintance with the real men that made history. The main part of the book is taken up with classified and annotated lists of the combatants who actually played a part in the storming of the Bastille: the *vainqueurs brevetés*, or those whose names were put forth in the official tableau; the Guards, grenadiers, and fusiliers; the Basoches or clerks at the courts of justice; the volunteers; and various citizens, soldiers, and women. There is an introduction explaining all these classes and what was done in recognition of their deeds; appendixes, with lists of the combatants by departments or countries of birth, of the dead and wounded, and of their widows and children; and Forget's memoir on the powder dépôt at the Bastille. Then there are classified lists, five in all, of bibliography, and a complete alphabetic list of names. It is not easy to point out to the general reader, who would, however, find many things for himself in it, the singular value such a book has for one who wishes to gain something like exact acquaintanee with the men of the French Revolution and with its women—for such as they were at the beginning, such they remained to the end, the proportions varying only. We have here a glimpse (for once not indicated by the author) of at least one of the ignoble assassins of the Princesse de Lamballe, just as in the list of those assassins we find one who cropped up still later among the brigand bands under the Directory. Unfortunately, not all writers as competent as the present author have such admirable indexes, by which to trace such men. Regularly, M. Durieux gives all that is known of each hero of the Bastille, down to his last demand for a pension forty years later—and it is this which makes his work so profitable.

"Etait-ce Louis XVII évadé du Temple?" (Perrin), by Madame J. de Saint-Léger, is a collection of documents, unpublished for the most part, copied from police and judicial archives and woven into a continued narrative of the imprisonment and trial (1815-1818) of the

first of the more notorious "lost Dauphins." This was the mysterious and grotesque Mathurin Bruneau, as the judicial sentence left him, or Phelippeau, as the latest specialist, G. de Manteyer, believes him to have been, or Hervagault, and perhaps the real Louis XVII, also as Madame de Saint-Léger seems to suspect, or all of them in one reappearing later in the Pretender Baron de Richemont, as Le Normant de Varennes labored to prove. The present reviewer has tried to put together the certain facts one after the other in order of time concerning this "Charles de Navarre," as he called himself until he came out openly as the escaped Louis XVII. He enters in no way into the Naundorff claims which were made last year an actuality in a report to the French Senate. The work of Madame J. de Saint-Léger, to which G. Lenôtre gives a sympathetic preface, is of great use and an almost necessary introduction to the documentary study of this historical mystery. It has been criticised, but not in sufficient detail, by G. de Manteyer, by the Robespierrist *Annales Révolutionnaires* (October-December, 1911), and by Frédéric Masson.

"Mélanges d'histoire" (Emile-Paul), by E. Angot, opens with twenty-eight clearly written pages on six months during which the absolutely genuine Dauphin had the Simons as his keepers in the prison where he is supposed to have died considerably later. Now it is the woman Simon who accredited all escaped Dauphins by the story in which she persisted until her death, long after the Bourbons came back in the person of the Dauphin's uncle, Louis XVIII. M. Angot is all for the death in the Temple prison; but the uncertain behavior of the Dauphin's sister, when Duchesse d'Angoulême, still keeps the mystery growing. S. D.

NEWS FOR BIBLIOPHILES.

In "Friendship's Offering" for 1826 there is a remarkable poem which is heralded by the editor in a fashion that indicates his high appreciation of it. The editor was Thomas Kibble Hervey, a man of influence in the literary world in the earlier part of the nineteenth century, and the author of at least one poem—"The Convict Ship"—which may still be found in some anthologies. The poem and the introductory note read as follows:

TO THE OWL.

[The following splendid lines were written in reference to a murder, whose details somewhat disgustingly occupied the public mind, two years ago. We regret that we are not at liberty to attach to them the name of the author.]

Owl! that lovest the hoding sky!
In the murky air,—
What sawest thou there?—
For I heard, through the fog, thy screaming cry!
"The maple's head
Was glowing red,
And red were the wings of the autumn sky;
But a redder gleam
Rose from the stream
That dahhled my feet, as I glided by!"

Owl! that lovest the stormy sky!
Speak, oh! speak!—
What crimsoned thy beak,
And hung on the lids of the staring eye?
"'Twas hlood, 'twas hlood!
And it rose like a flood,—
And for this I screamed as I glided by!"

Owl! that lovest the midnight sky!
Again, again,
Where are the twain?
Look! while the moon is hurrying by!—
"In the thicket's shade
The one is laid;—
You may see, through the boughs, his moveless eye!"

Owl! that lovest the darkened sky!
A step beyond,
From the silent pond
There rose a low and a murmuring cry:—
"On the water's edge,
Through the trampled sedge,
A bubble burst and gurgled by;
My eyes were dim,
But I looked from the brim,
And I saw in the weeds a dead man lie!"

Owl! that lovest the moonless sky!
Where the casements hlaze
With the faggot's rays,
Look! oh, look! what seest thou there?
Owl! what's this,
That snort and hiss,
And why do thy feathers shiver and stare?
"'Tis he! 'tis he!
He sits 'mid the three,
And a breathless woman is on the stair!"

Owl! that lovest the cloudy sky!
Where clank the chains
Through the prison panes,
What there thou hearest tell to me:—
"In her midnight dream,
'Tis a woman's scream,
And she calls on one—on one of Three!"
Look in once more,
Through the grated door:—
"'Tis a soul that prays, in agony!"

Owl! that hatest the morning sky!
On thy pinions gray,
Away,—away,—
I must pray, in charity,
From midnight chime,
To morning prime,—
Miserere, Domine!

These powerful verses refer to the murder of William Weare by John Thurtell, who had as accomplices William Probert and Joseph Hunt. The murder excited a most extraordinary sensation. Weare was a notorious gambler, and among others had fleeced Thurtell, who stood on the same plane morally. To revenge himself on Weare, and to obtain money for further debauchery, was apparently Thurtell's motive. Hunt and Probert were rascals of similar type. They agreed to murder Weare, but the deed was done, unaided, by Thurtell, who first shot Weare and then finished him with the butt end of a pistol. The body was first concealed in the hedge of a lane, then in a pond in Probert's cottage garden, and then removed to another pond. This last transfer of the corpse was watched by Mrs. Probert from a bedroom window. Hence the allusions in the poem. Thurtell on his trial made an eloquent and powerful appeal to the jury, but was convicted and executed at Hertford, January 9, 1824. The murder was perpetrated October 23, 1823. That Coleridge was acquainted with the circumstances of the murder is evidenced by his reference, in "Aids to Reflection," to the skull of Thurtell, which Spurzheim found had the bump of benevolence well developed.

The poem appears anonymously, but Hervey's introduction shows that the author was a notable. Apparently there is a clue to the mystery in a letter written by William Harrison Ainsworth, who was a likely man to know the literary secrets of 1825, when the book was issued. He had been in the closest relations with Hervey, and had acted as a sort of "literary agent"—the term had not then been invented—in obtaining some of the matter used in this very volume. They were both pupils of the Manchester Grammar School. Writing to the friend for whom he had acted, Ainsworth calls attention to two notable items in "Friendship's Offering" for 1826. These are "a song by Hood commencing, 'I remember, I remember,' a simple and beautiful ballad, *and some very extraordinary lines to the Owl by Coleridge.*" In the words which I have italicized there is enough to stimulate the curiosity of the Coleridgeans. Further evidence is desirable, and I hope it may be forthcoming. That Coleridge was an occasional contributor to the annuals is, of course, well known.

In 1825 Coleridge may have shrunk from the association of his name with a topic so grewsome and so sordid as the murder of a cheating gambler by another gambling blackguard, but there is no need for this reticence to-day. The poem shows a weird power not unworthy of the author of "Christabel." WILLIAM E. A. AXON.

NEW ENGLISH REQUIREMENTS.

TO THE EDITOR OF THE NATION:

SIR: A statement of recent legislation by the general faculty of the University of Texas, enacted with a view to cultivating in students the habit of writing good English, may interest some of your iconoclastic correspondents. It should be explained that this institution now requires of every freshman the conventional American college course in composition and rhetoric, involving frequent themes and conferences between student and instructor. To this course about a dozen trained teachers devote all, or a large part, of their time. But in addition every academic or engineering sophomore must finish a second English course requiring a great deal of written work. Even after two years' college training in English, some students fail to write their mother tongue clearly and correctly, as is evidenced by essays and reports prepared for other courses. Suspicion is strong that the students' attitude is reflected in the naïve statement of one of them, who, on being reprimanded for using slovenly and incorrect language in a literary criticism, explained, "I didn't put much English into that paper because I didn't think this was a course in English composition."

There is no thought of abolishing the present requirements, but with the aim of improving such conditions the faculty has created a standing committee on students' use of English. This committee is to pass each term on the written English of every student in the university above the rank of freshman. For this purpose the committee has received authority to call for and inspect all the student's written work submitted in any course, including theses, reports, and examination papers. In effect it is supposed that the committee will not

feel obliged to examine such papers of a student whose instructors positively declare the English satisfactory; but every student will be notified that his papers are subject to inspection and may govern himself accordingly. If the student's English as exemplified in these papers is unsatisfactory to the committee, he may have extra work assigned to him, even the prescription of an additional English course. But before May 15 of his graduating year he must satisfy the committee's requirements in order to obtain the bachelor's degree in arts, engineering, or law. To assist the committee all instructors are required to report the names of students derelict in this respect.

The chief sponsors for this new plan were not English instructors, though they were, of course, favorable to it, but teachers of other subjects, notably the dean of the faculty, himself a teacher of Greek, and the dean of the law department. After prolonged consideration both in committee and in open session, the plan was approved by the general faculty without a dissenting vote.

This law is avowedly experimental legislation, and its measure of success is problematical. Two objections to which it is open are the unusually wide powers placed in the hands of a committee, and the prodigious labor required of the committee's members. These objections, it is thought, may be overcome by tactful use of the powers granted, and by administrative recognition of committee service as equivalent to so many hours of teaching. Argument that the plan involves considerable expense will be disregarded if the desired results are obtained.

MR. STEAD ON THE SINKING OF THE VICTORIA.

TO THE EDITOR OF THE NATION:

SIR: At a time when the public is mourning the loss of Mr. W. T. Stead in the Titanic disaster, it may not be without interest to recall his tribute to those who perished in another tragedy of the seas, the sinking of the Victoria. In the *American Review of Reviews* for August, 1893, Mr. Stead wrote an account of the loss of the battleship Victoria, which had occurred in June of that same year. The circumstances which he recounts are not unfamiliar. The British squadron was engaged in naval manœuvres off Tripoli, when the Victoria, which was serving as the flagship for Admiral Tryon, was rammed by the Camperdown in obedience to an order given by the Admiral himself, but based upon a mistaken calculation. After the collision, the silence was such that every word of the commander could be heard on the decks. Each order was executed as if at drill. The ship was directed at full speed towards the shore only seven miles away, but only two miles could be covered. The crew were standing in perfect discipline when the end came. The ship turned completely over in the water. The screws continued to revolve, bringing a cruel death to those few who were struggling in the water. In three minutes more the boat sank, taking with her to death the Admiral and three hundred and thirty-eight seamen. The last that was seen of the Admiral, he was clinging to the bridge with his left hand, and had thrown his right arm before his eyes to shut out the sight.

In many ways the sinking of the Titanic has recalled this earlier tragedy, so that words spoken of one may be fitly applied to the other. As these are the words of one who perished in a like disaster, with the same quiet courage in which he exults, they have a peculiar right to be remembered now:

Ever and anon the sea seizes or makes opportunity to wreak a shrewd vengeance. . . . Sometimes a great storm arises, . . . but oftener, when the waves are still and danger seems afar, destruction swoops down upon the victor. . . . Britannia, while sorrowing for her sons who went out but return no more forever, sheds no unworthy tears and makes no fretful moan. She only asks if they bore themselves worthily at the supreme moment. . . . Notwithstanding the sense of loss, the sinking of the Victoria is already coming to be regarded with a feeling of pride, of gratitude and exultation, rather than melancholy. . . . With the exception of the one irreparable mistake, nothing went wrong—nothing was done that ought not to have been done; everything was tested under the breaking strain of imminent death, and everything and every one was found to be perfect and entire, wanting nothing. . . . Death is the sovereign alchemist who assays the value of the coin struck in the mint of life. Death is the supreme test. All the incidents of heroic unselfishness and a comradeship that is stronger than death—these things are a priceless addition to the heritage of our land. . . . Such things are to nations as the bread of life. . . . These were not picked souls. . . . They were taken at random out of the rank and file of life and put into the crucible. . . . So long as the chance samples of our common folk can die as did the men of the Victoria, there is not much fear but that the Empire will live.

MACAULAY ON ROOSEVELT.

TO THE EDITOR OF THE NATION:

SIR: The wisdom of the ancients is daily drawn upon for warnings and precedents; I see Bacon and Blackstone commenting on the campaign in the morning paper, and here is Macaulay on the situation. In his essay on Frederick the Great, we read:

For his commercial policy, however, there is some excuse. He had on his side illustrious examples and popular prejudice. Grievously as he erred, he erred in company with his age. In other departments his meddling was altogether without apology. He interfered with the course of justice, as well as with the course of trade; and set up his own crude notions of equity against the law as expounded by the unanimous voice of the gravest magistrates. It never occurred to him that a body of men whose lives were passed in adjudicating on questions of civil rights, were more likely to form correct opinions on such questions than a prince whose attention was divided between a thousand objects, and who probably never had read a law-book through. The resistance opposed to him by the tribunals inflamed him to fury. He reviled his Chancellor. He kicked the shins of his Judges. He did not, it is true, intend to act unjustly. He firmly believed that he was doing right, and defending the poor against the wealthy. Yet this well-meant meddling probably did far more harm than all the explosions of his evil passions during the whole of his long reign.

SLANG IN KANSAS.

TO THE EDITOR OF THE NATION:

SIR: In view of the somewhat wide publicity recently given to the report that the department of English at the University of Kansas has entered on a crusade against slang, it may be proper to say that it has done nothing of the sort. To the best of its ability the department has always opposed such flippant slanginess as "N." illustrates so amply from recent issues of the *University Daily Kansan*, in his letter published in your issue of April 25; and I think it will continue to do so. Obviously, its efforts have been unavailing, so far as the *Kansan* is concerned. It is but fair to note that, though the *Kansan* announces itself as "the official paper of the University of Kansas," the department of English is not now allowed to sustain any relation whatever to it, not even that of occasional adviser. No doubt, it may be said that this fact affords all the better evidence of the department's failure to impress the young men and women of the University of Kansas with an abiding sense of the truth that a reasonably dignified and respectful utterance is a thing from every point of view well worth while. Perhaps that is true. But anyhow, I am sure that our young journalists at the University of Kansas look upon themselves as very practical fellows, genuine newspaper men who know a thing or two about American journalism as practiced to-day, and whose freedom to cut verbal capers that will keep such academic persons as mere professors of rhetoric in a condition of perpetual shock, is very precious to them. Without exception, the comments that I saw made by newspapers in this part of the country on the reputedly new hostility of the department of English to the use of slang, were in a flippant and semi-derisive vein; a tone evidently taken, not because the hostility was supposed to be somewhat belated, but rather because it was regarded as essentially ridiculous. One of those newspapers is a journal of wide influence, well disposed to the University of Kansas, whose own headlines are as a rule unusually free from the slanginess of yellow journalism. So long as the *Kansan* is entirely in charge of professional students of journalism, as it now is, and so long as even the most respectable and powerful of the newspapers published in this vicinity see nothing but a subject for derision in the hostility of English teachers to the slang of the moment, and to all manner of verbal flippancy and smartness, so long, I am afraid, it will be in the power of "N." to keep making additions to his list of linguistic atrocities found in the headlines of the *University Daily Kansan*.

SOCIAL ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: With her (it is usually her) ingenious euphemisms and mellifluous flow of superlatives, the "society reporter" of the provincial newspapers has made large contributions to the gayety of American life. A recent example in an Arkansas paper, however, rather outdoes the ordinary run of "social notices," and deserves a wider circulation among students of English than it will get at home. The "portals" were of a

four-roomed cottage. I have merely substituted impersonal initials for the names, for in this wider publicity the "honorees" would prefer, I am sure, to remain anonymous. R. G. THWAITES.

Madison, Wis., May 2.

Very Informal Tea.

Verbally bidden a number of friends wended their way on last Saturday afternoon to the pretty cottage home of Mr. and Mrs. H., who, in her characteristic thoughtful way, arranged this social hour, to pay court to her household guests, Miss M, her great-aunt; Miss B, an aunt, and Miss S, a friend—all of Wisconsin. Guarding the portals and welcoming the incoming guest was Mrs. H. V., who in her sweet way directed them to the hostess and her trio of charming honorees. Informallty everywhere reigned; just the usual attractiveness of the home found accent in great crystals of spring blossoms. Incidentally and with a careless care, the winsome Miss N. led the way to the dining room. A rare beauty board gleamed with crystal, centred with a huge bowl of "pink pinks" about which burned pink tapers under pink shades, casting a roseate hue over the cluny lace cover and the crystal bon-bon trays. At either end of the table were seated Mrs. A. P. and Mrs. J. D., pouring a delicious tea concoction from exquisite tea urns. In this and the tempting sandwich service were Miss A. and Miss V. chattingly presiding. Much pleasure was enjoyed both by the delightful little house-party and their many guests—both gowned in the very top notch of style and beauty.

Textbooks

PEDAGOGY.

The teacher who should undertake to keep up with the literature of his profession in these days would have but scant time left for teaching, to say nothing of the distracting influence of a host of varying theories whose sole point of agreement, one is tempted to say, is the thesis that "whatever is, is wrong." In "All the Children of All the People" (Macmillan), by William Hawley Smith, the blame for all our educational woes is again heaped upon the alleged domination of public schools by "classical colleges," regardless of the fact that our young scientists can find scores of routes to their Ph.D.'s which will not take them near enough to either Greek or Latin to saddle upon their intellectual shoulders the slightest retarding weight of first-hand knowledge of the Greek and Latin terms which they are obliged to use. Mr. Smith, as so many other devotees of the "New Education" have done, butts savagely at Lowell's (misquoted) definition of a university. If he will but acquaint himself with that definition in full, with the author's own elucidation of it in the Harvard Anniversary Address, he will readily see the consummate folly of his remark that "Lowell was a great man in many ways, but he was short in his ideas as to the true purpose of educative work for the people of a democracy who have to earn a living and hoe their own rows."

"High School Education" (Scribner), edited by Charles H. Johnston, ambitiously undertakes "to treat from every angle possible the best approaches, theoretical and practical, to the genuine problems of high-school programmes of study and curriculums, and of all the special courses of study which a high school may hope to administer and teach." The editor, dean of the School of Education in the University of Kansas, contributes chapters on Current Demands upon the Programme of Studies, and the Disciplinary Basis of Courses of Study, while the remaining twenty-four chapters are written by various well-known school and college men, of whom the University of Michigan furnishes the largest number.

From Columbia University, in the Teachers College series of Contributions to Education, we have three new volumes dealing respectively with "Spinoza as Educator," "The Educational Views and Influence of DeWitt Clinton," and "The Social Composition of the Teaching Population." The author of the first, William Louis Rabenort, would have done well not to set the stumbling-block of a misshapen introductory sonnet between the reader and an inherently attractive subject. The study of Clinton's educational influence, by Edward A. Fitzpatrick, is an admirable example of the way in which such work should be done, and constitutes an important addition to New York educational history. The amount and variety of statistical material furnished in Lotus D. Coffman's study of the social make-up of the teaching population almost lead one to suggest a society for the protection of the teacher against the cruelty of the *questionnaire*. And yet many of his tables are of genuine interest and value.

Dean Briggs of Harvard and Radcliffe is the author of a readable little volume on "Girls and Education," published by Houghton Mifflin. Three chapters—to the girl who would cultivate herself, to school girls at graduation, and to college girls—are followed by an address delivered at the Bryn Mawr commencement of last June.

ENGLISH.

If American students do not read, write, and speak well, it is not for lack of textbook assistance. Twice a year there are printed "Sea-Brownie" elementary readers and "Great Speeches and How to Make Them" to a number that would suffice for our educational purposes if all the previous textbooks were destroyed. As usual, a large proportion of the recent publications are of dubious value; but a few are welcome and will prove useful. One of these few is "The Rhetorical Principles of Narration" (Houghton Mifflin), by Prof. C. L. Maxcy of Williams College. The aim of the book is a compromise between that of Professor Perry's "Types of Prose Fiction" and that of the short-cut-to-short-story-success textbooks; in other words, the book is addressed to both the student and the writer of narration. "Few courses," the author writes in the preface, "offer better material for arousing interest in good literature than does a course in narrative composition." Whoever agrees with this view will find Professor Maxcy's book extremely valuable. The style is vigorous and agreeable, the examples are apt and abundant, and the "rhetorical principles" are discussed with unusual clearness.

The problem of teaching engineers to write acceptably has become more and more perplexing; the usual freshman composition course has generally proved unsuitable, and, for want of good textbooks, a different course has been hard to plan. Prof. S. C. Earle's "The Theory and Practice of Technical Writing" (Macmillan) will go far towards removing this difficulty. Recognizing the peculiarity of the problem, and recognizing the fact that engineers are called upon to do a kind of writing different from that done by the merchant, the lawyer, and the scholar, Professor Earle has prepared a book that ought to prove serviceable in many of our engineering colleges. "Sweetness and Light" may be just the thing for the engineering student to read carefully; but he will find in "Major Squire's Multiplex Telephony System" a better model for his compositions.

"An Introduction to the English Classics" (Ginn), by Professors Trent and Brewster of Columbia University, and C. L. Hanson of Mechanic Arts High School, Boston, suggests a method for the study of the English and American classics listed in the current College Entrance Requirements in English. The authors discuss, in a concise style that is highly provocative of thought, typical novels, plays, poems, etc., to the number of sixty, from the "Iliad" to Huxley's essays, in each case dividing the material into introduction, occasion, and setting, the argument and the incident, construction and style, and other divisions appropriate to the various classics. If our teachers must prepare students for college by such a method as this, they will be wise in making use of this example of the method. What the book aims to do, it does uncommonly well.

Textbooks in English literature have been published as freely as ever. Thanks to the fluctuating college entrance requirements, and thanks to the competition among publishers, editors have been agreeably busy in preparing new editions, each of which, we are told, incorporates novel and valuable features. Shakespeare's plays have fared as well as usual. In addition to the new volumes in the Tudor series, we have received "Romeo and Juliet" (Houghton Mifflin), edited by Prof. William Strunk, jr., in the Riverside Literature Series; "King Henry the Fifth" (Silver, Burdett), edited by Edgar Coit Morris, "for use in secondary schools prior to the fourth year"; "Twelfth Night" (Ginn), in the New Hudson Shakespeare, recommended by its foot-notes instead of the customary perplexing thicket of notes at the end; and "Hamlet" (Ginn), edited by the Rev. Henry Hudson, school edition, in the Standard English Classics. In the last of these our attention is drawn equally to the serviceable notes and to the unsatisfactory introduction. We are told that Hamlet "is mad in spots and at times. . . . He *ought* to be crazy, and it were vastly to his credit, both morally and mentally, to be so"; and then the "members of the medical profession, deeply learned in the science, and of approved skill in the treatment, of insanity," are marched in to testify to Hamlet's sad derangement. We do not quarrel with the editor who has discerned the open secret of Hamlet and who pronounces him insane; but we do wince at being told that he was mad in spots and that he is therefore to be congratulated.

With the exception of "The Essential Poetry of Pope," an entirely acceptable little volume recently added to the New Universal Library (Dutton), the new textbooks of poetry are more or less miscellaneous collections avowedly designed to meet the college entrance requirements. Perhaps the most useful of these collections is "Palgrave's Golden Treasury" (Merrill), an ab-

normally attractive textbook containing, in addition to Palgrave's notes, a fourteen-page study of lyric poetry and further notes by Allan Abbott. The agreeably written introduction reviews briefly the nature of lyric poetry, of figures of speech—wisely restricted to the simile, the metaphor, and personification—of the pastoral, of rhythm, and of the commoner stanzaic forms. The notes, including those by Palgrave, will not give the student the impression that poetry is akin in difficulty to higher mathematics; they are confined to thirty-odd pages, and they present essential facts rather than æsthetic comment. At the close are two pages of suggestive and generally feasible "Topics for Study"; in particular we approve of the assignment of one poet for special study by each pupil, provided that poet is not John Wilmot or Anna Laetitia Barbauld.

CLASSICS.

Classical students have long needed a brief but comprehensive and readable history of classical philology. To meet this need Prof. H. T. Peck has published his "History of Classical Philology" (Macmillan). His catholic taste, wide study, and scholarly reputation pointed him out as especially fitted to write such a history, but his performance falls far short of expectation. This book must have been prepared or at least put through the press with great haste, for the proofreading is abominable, misspellings abound, particularly in proper names, which often appear in two or three forms, and some sentences seem to have no meaning. There are numerous wrong dates, as well as graver faults. There is a lack of proportion and inequality of treatment, which show clearly the tastes and preferences of the author, rather than his scientific judgment and method. We should expect from this book that he was a student of ancient society rather than of philology. Consequently, while the reader will find here much to interest, and not a little to amuse him, he must be prepared to check every statement of fact by reference to some more accurate treatise.

An excellent edition of Plato's "Phædo" (Frowde) is that by John Burnet, the editor of Plato in the Oxford Series of Classical Texts. No changes have been introduced into the text, but we have an elaborate introduction and a serviceable commentary. The latter is scholarly, in excellent taste, devoted principally to interpretation, not to grammatical discussion. The main interest lies in the introduction, in which Professor Burnet tries to show that Plato gives us a more accurate picture of the real Socrates than does Xenophon. Most recent commentators have followed the lead of Hegel in asserting that Xenophon's Socrates is a portrait truer to the life. But Xenophon was hardly more than twenty-five years old when he saw Socrates for the last time, and his later life was spent away from Athens, so that he had little opportunity even of coming in contact with the more intimate circle of Socrates's followers, to which Simmias and Cebes belonged. Many of the stories in the "Memorabilia" are obviously at second-hand, and some look very much as if they had been drawn from Plato himself. In further support of his contention Professor Burnet asserts that the "Theory of Ideas" was not original with Plato, but that he got it from Socrates, who in turn derived it from the Pythagoreans. These views are not new, but have been more or less discredited in recent years. Perhaps Professor Burnet's advocacy will give them a fresh interest to students of Plato.

The second edition of Prof. S. B. Platner's "Topography and Monuments of Ancient Rome" follows the first, after an interval of seven years (Allyn & Bacon). On its first appearance, this book was accepted as an authoritative treatise, and, while it met with much criticism as to details, its completeness and thoroughness were cordially acknowledged. The new edition shows changes on almost every page. The earlier criticisms have been all carefully considered, and many corrections introduced. Although comparatively little has been added to our knowledge of Ancient Rome by the excavations of recent years, the number of pages has increased from 497 to 520. Some new illustrations have been added, while others have been removed. A new map of the Forum has been taken from Baedeker. Considerable additions have been made to the bibliographies, mainly in citations from current periodicals. In its present form, the book is thoroughly trustworthy and indispensable to students and teachers of Latin.

The new "School Cicero," (American Book Company), by J. R. Bishop, F. A. King, and N. W. Helm, differs from the customary editions, by the inclusion of the "Pro Murena," as well as the "Pro Milone," the "Pro Marcello," and the "Pro Ligario," in addition to the usual six. Something similar was attempted in 1891 by Prof. H. W. Johnston, who, in his edition, substituted the "Pro Murena," the "Pro Sulla," and the "Pro Sestio" for the "De Imperio" and the "Pro Archia." This innovation did not commend itself to classical teachers, and in the recent edition of 1910, Professor Johnston returned to the recognized six. It will be interesting to observe whether this new experiment succeeds. The present edition presents the usual type of textbook. An introduction discusses Cicero's life, the Roman Body Politic, and similar matters, closing with an unusually extended bibliography. The notes are brief and not overloaded with strings of grammatical references; perhaps there is too much translation. The vocabulary also shows restraint. The illustrations are good, but not numerous. Altogether, the edition is commendable.

"Selected Letters of Pliny" (Scott, Foresman), by H. M. Kingery, is intended for freshmen and sophomores. The introduction is brief, but sympathetic and without pedantry. The notes, which are at the bottom of the page, give more translation than is necessary, and hardly enough information. The selection of letters is thoroughly representative, including, of course, those on the eruption of Vesuvius and on the Christians. Proper names are collected in an index. The book is useful.

A unique contribution to the apparatus of high-school teaching is "Two Latin Plays" (Ginn), by Susan Paxson. These two little plays, "A Roman School" and "A Roman Wedding," are interesting and amusing, as well as instructive. We find Cicero, Catiline, Antony, Cæsar, Pompey, Brutus appearing as boys in the first; while, in the second, we have the marriage of Piso and Cicero's daughter Tullia. The language is virtually a cento from Cicero's writings, put together with much skill. In some few cases the Latin is barbarous, and should be corrected. An amusing anachronism, recognized and defended by the author, is the inclusion of modern songs, such as "Mica, mica, parva stella," "Ioannes, Ioannes, tibicine natus," and "Iacobulus Horner," in the "Roman School." In the "Roman Wedding," the songs and invocations are partly taken from Catullus, partly original centos. Suggestions for music and costume are appended. This little book is significant of the new spirit which is rapidly becoming dominant in high-school teaching of Latin.

MODERN LANGUAGES.

"Le Français et sa patrie" (Sanborn), by L. R. Talbot, consists of a series of conversations and letters, in an accurate but colorless French, dealing with the experiences of two American students in France. Mr. Talbot writes chiefly of the customs and interests of modern Paris, with historical digressions and accounts of visits to the important monuments and of excursions here and there in the provinces. The material is varied in itself and is well arranged. After the text proper are printed several well-known modern poems and the words and music of five or six good songs.

There is no end to the editing of Daudet. The latest selection, "Neuf Contes choisis" (Holt), is satisfactorily prepared by Prof. V. E. François.

Professor Cloran has published a very diligent edition of "Atala" (Jenkins). The introduction contains good summaries of the other works of Chateaubriand. The notes really constitute a detailed study of Chateaubriand's many borrowings from Charlevoix and William Bartram.

W. O. Farnsworth has edited Sardou's "Les Pattes de mouche" (Heath) with a thoroughness worthy of a better piece of literature. It is an excellent acting comedy, but in book form its faults in construction and its lack of characterization are very noticeable, and many of the scenes are simply dull. The play is none the less an excellent basis for the study of idiomatic conversational French, and the precise care with which the vocabulary has been prepared will enable the text to have its due linguistic effectiveness.

"A Spanish Grammar for Schools and Colleges" (Holt), by Profs. E. W. Olmsted and Arthur Gordon, is a large and comprehensive work, containing much material that is not to be found in other books of the sort. The amount of grammatical minutiæ with which the beginner is confronted even in the earliest lessons will doubtless seem excessive to most teachers, and few will agree that the student should be made to memorize with each lesson fifty or more new words. The book is likely to render most service in work with advanced classes or as a reference grammar. The statements are clear verbally and typographically, and the examples are plenty and good.

F. W. Morrison has edited for Heath a number of "Cuentos modernos" selected by Prof. Fonger de Haan. The authorship of the stories is not indicated in any case. Few of them possess much literary merit, but they will serve well, thanks to good editing, as a basis for linguistic study and

for acquaintance with many phases of modern Spanish life.

Three excellent books have appeared in Holt's New Spanish Series, Hartzenbusch's comedy, "La Coja y el encogido," edited by Prof. J. Geddes; Ayala's "Consuelo," edited by Prof. A. M. Espinosa, and a collection of "Spanish Ballads," edited by Prof. S. G. Morley. The two plays are well worth reading and study, and these editions make them available for effective use in any course on modern Spanish literature. Professor Morley's collection of ballads is a notable piece of work. It should prove eminently successful in the classroom, for the poetry is of a type to appeal directly and strongly to the healthy undergraduate, and the admirable care and completeness with which the introduction and the notes have been prepared will make it a convenient handbook for scholars. It contains some bibliographical material that is new and valuable.

F. W. C. Lieder's edition of Schiller's "Don Carlos" (Frowde) is the first to be published with English apparatus. It is a careful and full compilation of matters of fact and opinion, including indeed, in the notes, some superfluous matter. Interpretation and illustration of details have been the editor's chief aim; there is little consideration of the drama as a whole or as a composition of parts. To the editor's mind the fault of an illogical and complicated plot is offset by eloquent language, exalted ideas, dramatic situations, and penetrating portrayal of characters. Even these qualities are rather assumed as self-evident than demonstrated; the last would be difficult to demonstrate. Since the play is significant principally as the product of a period of transition in the development of Schiller's art, Dr. Lieder has given an account, though slight, of the artistic and political constellation of this period. A bibliography of works in which Don Carlos is the hero or on which Schiller's drama had direct or indirect influence is followed by a special bibliography for Schiller. Dr. Lieder is an experienced bibliographer. Eight appendices and an index complete the comprehensive volume.

Though announced earlier, M. B. Evans's edition of Hebbel's "Agnes Bernauer" (Heath) is issued later than the edition by C. von Klenze. It is an entirely independent work which nevertheless profits, as the editor acknowledges, from its predecessor. The first impression that it gives is one of agreeable compactness; there is closer attention to minutiæ than Von Klenze everywhere gave, especially in the notes, but also in the introduction. On the larger bearings of the subject Von Klenze's introduction is, however, somewhat more satisfactory.

In the "Introduction to German" (Holt), by Eduard Prokosch, and "Beginners' German" (Scribner), by Max Walter and C. A. Krause, we have two attempts, similar and yet different one from the other, to smooth the path for those who wish, or are made, to learn grammar by observation and induction. Neither book, indeed, dispenses with a systematic formulation of the phonological and morpbological facts: Prokosch appends to his exercises a treatise; Walter and Krause are content with tables. Both volumes provide for the oral use of German at the start of the instruction. Prokosch lays most weight upon the intensive study of texts; Walter and Krause begin with instructive and easily comprehensible conversations before proceeding to texts; and this is the principal difference between the two applications of the so-called natural method. In the use of this method more depends upon the teacher than upon the book. A teacher of comparatively little experience would probably be glad of the greater fulness of Prokosch's manual, and he would find reinforcement in the sobriety of its tone—by which we do not mean dulness. But the born teacher and the clever pupil will rejoice in the vivacity and humor of Walter and Krause. True to their motto, "Mehr Freude an der Schule," they stimulate all the instincts of youth, whether these be curiosity, military solidarity, or enthusiasm that vents itself in song.

HISTORY.

Ostensibly "a complete course of study in history from the first to the eighth grades inclusive," W. F. Bliss's "History in the Elementary Schools" (American Book Co.) is in reality a pretty full outline of American history for the last two grammar grades, with very brief topical suggestions about world history preceding. An appendix contains sketches of stories and plays for the earlier grades.

The publication of historical source material for schools shows no decline. Two volumes of the American History in Literature series (Moffat, Yard), edited by Lilian M. Briggs, comprise selected speeches and messages of Washington, John Adams, Patrick Henry, and Lincoln, with short biographical introductions, but no notes. The idea of the series is excellent, and capable of considerable extension. Edgar W. Ames's "Readings in American History" (Merrill), of which two volumes have reached us, includes narrative extracts as well as speeches. The books are too brief to meet the needs of an extended course of study, but will be useful where nothing more elaborate can be had.

Alice M. Atkinson's "European Beginnings of American History" (Ginn) is a novel and interesting departure in history teaching. Following in the main the suggestions of the Committee of Eight of the American Historical Association, Miss Atkinson has prepared for sixth-grade pupils, at which stage it is supposed that the regular use of a textbook may be begun, an elementary sketch of European history, particularly of the history of England, to the end of the sixteenth century, as an introduction to the study of American history. Such a summary is a difficult task at best, and some of Miss Atkinson's pages will, we fear, prove ratber serious reading for the boys and girls to whom they are addressed; but as a whole the book shows real skill in writing for children, and is likely to prove a boon to teachers who must carry out this newest part of the historical programme.

There is so much that is attractive about the general appearance and make-up of David S. Muzzey's "An American History" (Ginn), and the text itself is so readable, that it would be a pleasure to commend the book without serious qualifications. Unfortunately, however, the author, in his effort to dwell only upon what is permanently worth while, to minimize antiquarian beginnings, and emphasize the victories of peace rather than those of war, has constructed a book whose proportions seem to us frankly exaggerated. The period of origins and colonial development is traversed with breathless haste, one-fourth of the total space sufficing for the record of events down to 1783; while another fourth carries us to 1854. Naturally, early military events are sketched in barest outline, as if it were only from disagreeable necessity that they must be told at all; while the story of the most recent happenings, agitations, and controversies is set forth at length. We do not recall a textbook of recent date in which England's treatment of the colonies is more airily condemned. The least virtue of a schoolbook is that it is accurate, yet the positive errors of detail are so numerous as to constitute a serious blemish. Doubtless it is the right of an author, even in an elementary work, to present a subject as he thinks it ought to be presented, to emphasize what he believes to be important, and to relegate to a secondary place or to the obscurity of silence what he regards as of minor consequence; but there is such a thing as a consensus of competent opinion regarding the relative significance of historical periods and events, departure from which is to be justified only upon indubitable proof that such opinion is unsound. It is much to be regretted that this latest illustration of the "new history," in spite of its many merits and undeniable literary interest, should not be as true as it is new.

Hilda Johnstone's "A Hundred Years of History" (Longmans), dealing with the period from 1216 to 1327, is made up entirely of extracts from contemporary records and chronicles, without connecting narrative, and with only a few notes explanatory of allusions or difficult terms in the text. Few American schools treat any period of English history so much in detail, but as a supplementary book for the teacher or the school library, the volume has usefulness.

Of recent textbooks of civil government, the first place should be given to William B. Guitteau's "Government and Politics in the United States" (Houghton Mifflin). Data of the more practical sort are abundant; the references include substantial treatises as well as elementary works, and there are numerous illustrations. A supplementary chapter on the government of the State of New York is contributed by Milton J. Fletcher. For schools that can devote a good deal of time to the subject, the volume may be heartily commended. Prof. James W. Garner's "Government in the United States" (American Book Co.) also emphasizes the operations rather than the organization of government. The questions for research, of which considerable point is made, are many of them rather formidable, and at best more suitable for college classes. "The American Republic" (Century), by S. E. Forman, is an abridgment of the same author's "Advanced Civics," with a really helpful equipment of notes, suggestive questions, and exercises.

"An Outline of British History" (Rivingtons), by Arthur D. Innes, is a suggestive and useful manual on a novel plan. The narrative is grouped into three sections, dividing at 1558 and 1763. Each section begins with a brief chronological outline, followed by two or more chapters of political summary, and then by chapters on industry, trade, social development, literature, and similar topics. Scotland and Ireland receive separate chapters, and im-

perial policy and colonial expansion are kept prominent. The book seems most suitable for elementary college courses, although a skilful teacher might make it serve the needs of a high school class.

R. G. Gettell's "Readings in Political Science" (Ginn), while primarily intended to accompany the same author's "Introduction to Political Science," can be used with any modern textbook or with lectures. The extracts, for the most part brief, embrace the whole broad field into which political science is now pushing its generalizations, from the physical and climatic bases of the state, through the multitudinous forms of political organization, to a concluding survey of the functions and ends of government.

SCIENCE.

Five years ago Prof. George Trumbull Ladd gave fifteen lectures on the philosophy of education to the school-teachers of Japan, Korea, and Hawaii. These now appear under the title, "The Teacher's Practical Philosophy" (Funk & Wagnalls). They defend a belief which long ago went out of style among American educators but is slowly returning to its own. It is the belief that "lack of discipline . . . is the prime source of all our national evils so far as they are connected with the educative processes now in vogue." This is a large thesis, but it has a broad basis of fact on which to build. Professor Ladd stands at the opposite extreme from the Montessori School and Dewey. He decries the present habit of allowing the student to follow his own impulses in choosing subjects and the way of learning them. To cultivate interest in the important things is the teacher's duty towards his classes, and he can discharge it only by sternly drilling the learner's attention. Reversing the prevalent rule, Professor Ladd says: "Let the pupil be disciplined in some kind of work until he takes pleasure in the work." The American custom of making school tasks easy and entertaining comes in for merciless condemnation. It is, he says, the chief cause of the all too familiar fact that most college graduates "have a host of confused ideas and unverifiable impressions on an unnecessary and absurd variety of subjects." It is less against this evil, though, than against the collapse of morals that the author inveighs. *Laissez faire* has its direct consequence in the decline of ethical instruction. It has deprived men of their sense of values. It has left them adrift in mad pleasures, brutalized them, and dulled the civic conscience. In spite of the writer's repeated assurance that he is not championing austerity, the reader's impression is quite the contrary. Indeed, Professor Ladd's censure overreaches itself. Our national ills cannot be laid in such large bundles at the poor teacher's door. The people have made the schools pretty much what they are. They have repeatedly prevented moral instruction because they stupidly feared that religious instruction might be smuggled in along with it. Again, the morality of our age is shaped by a host of economic and other circumstances which extend far beyond the school-room. Yet, when all is said and done, Professor Ladd's truths outweigh by a hundredfold his enthusiastic overestimates of the teacher's influence. The volume is spokesman for a pedagogical party whose ranks are fast filling up.

Extreme conservatives and extreme progressives will find little encouragement, but much sanity and wholesome admonition, in Prof. D. E. Smith's "The Teaching of Geometry" (Ginn). The noise and dust of agitators have not obscured Professor Smith's perception of the eternal truth that the great value of geometric study is in delight and discipline and not in utility.

The "Higher Mathematics for Chemical Students" (Van Nostrand), by J. R. Partington, should be of great advantage to mathematically inclined chemists as well as interesting to pure mathematicians. A philosophical introduction is followed by a treatment of so much of the differential and integral calculus, including the elements of differential equations, as is applicable at present to chemical problems. The reader is taught how to make the applications not only in physics but in chemistry.

J. V. Collins's "Practical Algebra" (American Book Co.), which is a second course partly reviewing the matter of a first course, contains nothing specially notable except some historical notes and the pictures of certain early mathematicians, Vieta (1540-1603), Tartaglia (1500-1559), Napier (1550-1617). Fletcher Durell's "School Algebra" (Merrill Co.) contains, besides pictures of Vieta, Descartes, Newton, and Gauss, a chapter dealing with the history of algebra. The unusual thickness of the book is due partly to long dwelling on the principles.

The third edition of Dr. J. Erskine-Murray's "Handbook of Wireless Telegraphy" (Van Nostrand) has been revised and considerably enlarged to keep up with the rapid progress of the subject. The book gives an excellent treatment, and, with the exception of the chapter on the theories of transmission, a very simple one. The tables at the end of the book are a valuable help both to the amateur and the professional.

Prof. J. A. Fleming has published his lectures on "The Propagation of Electric Currents in Telephone and Telegraph Conductors" (Van Nostrand). The lectures were originally given to a class composed chiefly of practical telegraphic and telephonic engineers and experts, and much subject-matter was discussed which has not as yet found its way into text-books. We have, as a result, an unusually valuable account of the very latest advances in both the theory and the practice of electric communication, presented in a lucid manner.

William A. Noyes's "Elements of Qualitative Analysis" (Holt), revised in collaboration with the author by G. McP. Smith, differs markedly from the earlier editions in a number of respects, the chief of which are: (1) More space is given to the discussion of the application of the ionic theory and the mass action law; (2) the analytical schemes for the metals, as well as the systematic procedure for the preparation of the solution for the metallic analysis, are essentially those of A. A. Noyes and his coworkers; and (3) the method for the acid anaylsis has been largely rewritten, which changes materially enhance the value of this book. In the directions for analysis, much explanatory matter is given in the body of the text which could be supplied to better advantage if printed in smaller type or given in footnotes. As this book is intended for university students, it should seem desirable to give more detailed references (Journal and page number) to the work of A. A. Noyes, particularly to the confirmatory experiments which are the basis of the system. In the solution of metals and alloys with nitric acid, mention should be made of the fact that a residue may also be aluminum due to the practical insolubility of this metal in nitric acid. The questions for review constitute a new and valued feature of the book.

Botanical instruction in our secondary schools is now devoted to general questions connected with the broader affinities of plants and to a study of the habits of a few illuminating kinds, instead, as used to be the case, of having pupils examine the plants around their homes. To meet the changed conditions, a host of hand-books have been issued in which botany is considered in its large scope. Among the latest additions are two manuals put out by the American Book Company, which, though convenient, possess few advantages over a good many already in the field. The first is "A Practical Course in Botany, with Especial Reference to Its Bearings on Agriculture, Economics, and Sanitation, by E. F. Andrews. The author has evidently had a good deal of experience in teaching, showing in his treatment of topics a right sense of proportion. We confess to having felt a shock at seeing "Systematic Botany" relegated to one page in an appendix, but probably the author expects every pupil to supplement this manual by assiduous study of some local flora. The second book, a "Manual of Experimental Botany," by Frank Owen Payne, is somewhat more elementary than the similar works by Ganong, Osterhout, and others, and has doubtless been prepared to meet special conditions in the High School of Commerce, in which the author is a teacher. Many of the experiments are attractive and very suggestive, but greater care ought to have been taken in the phrasing.

"Physiography for High Schools" (Heath), by Albert L. Arey, Frank L. Bryant, William W. Clendenin, and William T. Morrey of high schools of New York city, is a remarkable little book, and contains an amazing amount of information. The first hundred and eighty pages embrace astronomy, navigation, geodesy, magnetism, meteorology, and climate. The last half is mostly dynamical geology, with as much treatment of rocks and the forms of the land as is needed by a skilled teacher for explaining the living forces of the earth. It is evident throughout that the authors are interested in what Bergson calls "changes and acts" rather than in "things and states." Every page deals with movement, process, production, effect, so that, for a school-book, the reader feels that the high-water mark has been reached in making dry science interesting. The motive of the authors is to produce a book adapted to school pupils who are not going to college, and who ought to know the earth as a whole and all its processes in their relation to our country, our climate, our commerce, and ourselves. It is not narrowly American, and the influence of Suess and especially of Penck is clearly in evidence. The preface states that "the treatment of the subject here presented has been in successful use in our classrooms many years";

the reviewer can well believe it, for the completeness and balance of the work are in marked contrast to the books of physical geography which appear by the dozens in this country and are mostly crude and ephemeral. Especially noteworthy are the chapters on Latitude, Longitude, and Time, The Earth in Space, and The Solar System. The statements are condensed but accurate, and the illustrations original. The series of diagrams showing the sun's sky-paths at various latitudes, including the North Pole, are effective. Each chapter is supplemented by a number of questions for students, the answers to which are not found in the text, but require independent thinking. The nebular and planetesimal hypotheses are both concisely stated, but no preference is expressed. A chapter on Light and Electricity of the Air deals with mirage, halos, lightning, and thunder, and the information furnished on these subjects is modern and sound. Thus we find a discussion of the aurora, of protection from lightning, kinds of lightning, and the relation of lightning to rain. Weather and climate are clearly distinguished and very fully discussed, so that the pupil should be able, after studying this book, to use the publications of national weather bureaus with intelligence. The book is well illustrated with woodcuts, diagrams, maps, colored plates, and half-tones, and while the margins are ample and the type clear, the publishers have succeeded in keeping the four hundred and fifty pages down to small octavo and only seven-eighths of an inch thick—a triumph of compactness in these days of heavy clay-filled paper, mucilaginous odors, and lumpy tomes of oppressive weight. There are few subjects in the work for adverse criticism. We note on page 424 a reference to shrinkage due to "contracting of the crust" as producing folds. The contraction is commonly conceived as internal. The present reviewer quarrels with these authors in their use of "Physiography." The book ought to be called "Earth Physics." If "physiography" is to be restricted at all to geographical nomenclature, a questionable procedure, it is commonly understood to apply to geomorphology and not to geodynamics; and yet Salisbury and others have for some years been publishing books dealing almost exclusively with earth processes under the title "physiography." If dynamical geology is to be taught in the high schools, let us call it so, and not disguise it as a branch of geography.

A textbook, devoted almost exclusively to a consideration of bacteria and their effects, covers only a part of the ground indicated by the title "Microbiology: For Agricultural and Domestic Science Students" (P. Blakiston's Sons). The editor, Charles E. Marshall, need not have gone farther than Boston for a much more fitting and appropriate title; he would have found it in Sedgwick's "Sanitary Science." "Microbiology" means much more, namely, the biology of all microscopic living things. The present volume loses by comparison with the excellent treatises on bacteriology that already exist because it is not the carefully turned product of a single mind. Its seven hundred pages, written by twenty-one different contributors, give the student a distorted version of one subject, an inadequate idea of others, while the editor has admitted certain loose or contradictory statements, which are natural when so many writers are engaged. Protozoa and other forms of microscopic life that can be studied by bacteriological methods are included in all up-to-date textbooks on bacteriology, and find a place there frankly because of these methods. In the present book nothing definite is said of methods and the reader feels that moulds, yeasts, and protozoa are dragged in and disposed of in as short order as possible. This is particularly true of the protozoa which have played a most important part in the development of preventive medicine. With less than one page devoted to metabolism of protozoa, as against 103 pages on the metabolism of bacteria, one wonders why the subject was even mentioned until he reads such misstatements as: "protoplasm is a mixture of two fluids," or, amœbæ "may measure several centimetres in breadth," or that when protozoa died "their bones [*sic*] fell to the bottom and formed chalk," and sees that the writer had only a second-hand knowledge of his subject. The descriptions of the various blights, galls, rots, and wilts of plants and of the diseases of animals are also too meagre to be of much service except as a catalogue. The merits of the volume depend upon the presentation of the technical side of the subject of bacteriology. Here it is a pleasure to speak of the really excellent account of the food of bacteria, and of the mechanism and products of bacteria metabolism; these are simply, concisely, and forcibly written and may well serve as a standard of excellence for future editions. The practical side of the subject, dealing with the application of bacteria to agricultural and domestic science, should be condensed, whereas the pathogenic side should be much enlarged, if the editor would live up to the ambitious title he has chosen.

Literature

ENGLISH LITERATURE.

The Cambridge History of English Literature. Edited by A. W. Ward and A. R. Waller. Vol. VIII: The Age of Dryden. New York: G. P. Putnam's Sons. $2.50 net.

The present volume maintains, on the whole, the high level of scholarship which has marked recent volumes in the series. There is, moreover, an undeniable increase in the general interest of such a work as we advance into the later periods. The historical materials that throw light on both authors and their writings become more and more abundant, and if in the period covered by this volume there is a descent from the heights of Shakespeare and Milton in poetry, some compensation is afforded by the growing variety of prose. We observe not altogether with regret that the lion's share in the work is no longer allotted to Professor Saintsbury. A chapter on The Prosody of the Seventeenth Century is the only one from his pen. In this he displays his usual unconventional vigor in the treatment of metrical subjects and makes a just plea for catholicity of judgment in regard to the different varieties of the heroic couplet, which in the "stopped" form, the principal verse-form of this age, provoked the scorn of Keats. The advantages and weaknesses of the "stopped" couplet as illustrated by Dryden in the seventeenth century, and, with a difference, by his followers in the eighteenth, are well analyzed in Professor Saintsbury's discussion, and the same is true of the "enjambed" form which reached its climax in the seventeenth century, in Chamberlayne's "Pharonnida" and was revived in the nineteenth by Leigh Hunt and his more famous friends. The encyclopædic character of such a work necessarily involves some chapters of inferior interest—for example, that on Political and Ecclesiastical Satire, by C. W. Previté-Orton, which is infected with something of the dulness of the subject. Similarly, W. H. Hutton, in his Divines of the Church of England—Barrow, South, Tillotson, etc.—has failed to impart to his discussion of those foes of "enthusiasm" the interest of style which lightened the chapter from his pen, in an earlier volume of this history, on the religious spokesmen of a more spiritual age.

The largest place in the volume is filled by the drama, the treatment of which is divided among F. E. Schelling, Charles Whibley, and A. T. Bartholomew. It was a happy thought to engage a leading authority on the Elizabethan drama, like Professor Schelling, for this subject, inasmuch as one of the chief problems in the study of the Restoration drama is its relation to that of the earlier years of the century. The chapter is distinguished, however, by full and accurate scholarship rather than by critical power in characterizing the individual plays. A valuable feature of it is the condensed history of Spanish influences in the English drama of the sixteenth and seventeenth centuries, although the survey takes a somewhat wider range than the particular subject calls for. Professor Schelling adopts from Etherege's biographers 1690 as the conjectural date of the death of the dramatist. It is worth remarking, however, that Thomas Southerne in his prologue to Congreve's "Old Bachelor," first produced in 1693, speaks of him as though still alive. In rejecting all the poets of the time, except Congreve, as possible successors to Dryden, he writes:

> His eldest Wycherley, in wise retreat,
> Thought it not worth his quiet to be great.
> Loose, wandering Etherege, in wild pleasures tost
> And foreign interest to his hopes long lost:
> Poor Lee and Otway dead! Congreve appears
> The darling and last comfort of his years.

It seems strange that Southerne should not have heard of the death of his fellow-poet, if he was really dead

at this time. For the rest, Professor Schelling does justice to the gayety and brilliancy of Etherege. Perhaps more stress might have been laid on the merit of his originality in introducing into English literature a new style of comedy, which through a long line of successors from Wycherley to Sheridan was destined to exhibit an astonishing vitality. Unfortunately the peculiar profligacy of the Restoration drama originates with him also, and Steele was hardly too severe when he said of the brilliant "Sir Fopling Flutter": "I allow it to be nature, but it is nature in its utmost corruption and degeneracy." That the characters were often truthful portraits of actual persons of the time—Sir Fopling, for example, represents Beau Hewitt—does not mitigate the offence. There is less to say of the discussion of Wycherley—only we should ourselves have emphasized more strongly his striking vigor of dialogue and action, in the latter of which points particularly, when at his best, he has no equal among the Restoration dramatists. The chapter on Congreve, Vanbrugh, and Farquhar, which follows from the pen of Charles Whibley, is the best in the volume in respect to style, except the same writer's Court Poets. Here the stress is laid not so much on questions of sources and historical relations—Sheridan's great debt to Congreve is barely touched on—as on the critical appreciation of the works of these masters of the comedy of manners. Mr. Whibley's characterization of Congreve, especially, has something of the grace and finish of that author. It is a mistake, however, when he ignores the seamy side of the dramatist's work and reverts to Charles Lamb's sophistical apology for the writers of Restoration comery as dealing with a pleasant "land of cuckoldry," so plainly artificial as to give no offence. Nothing so limits the appeal of Congreve's brilliant comedies as the heartlessness of the characters, for whom it must have been impossible for any one but a man or woman of society of the author's own period ever to feel a complete sympathy. A prominent feature of this chapter is the destructive criticism of Collier's famous "Short View of the Immorality and Profaneness of the English Stage" (1698), in which, besides controverting Macaulay's view as to the author's polemical fairness, Mr. Whibley charges him with filching his good things from Rymer. There is only too much truth in his other contention that Collier's pamphlet did not effect the reformation of the stage with which it has been commonly credited. The facts are too plain to dispute, for much of Vanbrugh's production and all of Farquhar's falls after the date of the pamphlet, to say nothing of the constant revivals of earlier dramatists of their school; and even at a later time, one may add, when leading writers like Pope and Gay were capable of perpetrating "Three Hours after Marriage," or when "Miss Lucy in Town" could entertain Horace Walpole, the reform still wanted something of completeness.

Of the chapters which deal with other branches than the drama, that on the Court Poets—Dorset, Rochester, Sedley, etc.—by Mr. Whibley, offers the best specimen of critical skill. Particularly in the pages on Rochester the author displays an art which is only too seldom met with in these volumes—namely, that of recreating a character. It is a finished portrait that he has here given us: a vivid type of the Restoration period in its profligacy—somewhat exaggerated, to be sure, is this case by report—and at the same time in its intellectual energy, which we are too apt to forget. We have our rakes at the present day also, but what contributions do they make to literature? In connection with Rochester's escapade as a pretended astrologer, so charmingly told in the "Memoirs of Gramont," it seems worth while recording the probable influence of this incident on the fortune-telling exploits of Peregrine Pickle and Cadwallader in the episode of Smollett's novel where these two worthies assume a somewhat similar disguise. Certain, however, is the influence, which Mr. Whibley fails likewise to mention, of pseudo-Anacreon on Rochester's lyrics. "The Bowl," for instance, merely combines the *motifs* of the Fourth and Eighth Anacreontics, while giving them a true flavor of the Restoration period by allusions to contemporary political events and a character in "Hudibras."

In Dr. Ward's excellent chapter on Dryden we notice especially his remarks in regard to the preparation for satirical portraiture with which the previous dramatic experience of the poet had supplied him—also in regard to the self-control and wariness of the satirist in the political satires as of some great parliamentary orator: "Through all the force of the invective and the fervor of the praise there runs a consciousness of the possibility that the political situation may change." Totally different is the tone in Dryden's purely literary satire, when Settle and Shadwell (Doeg and Og), rivals from whom he has nothing to fear, are the objects of attack. It is a good point, moreover, in Dr. Ward's defence of Dryden from the charge of servility to royal influences in matters of religion, when he calls attention to the fact that "The Hind and the Panther," a summons to the Church of England from the Catholic side to join hands against the Protestant Nonconformists, was issued just when James II was trying to bring about an alliance between the Catholics and the latter to the detriment of the former body. He gives full credit to Dryden for his influence on the development of English prose in respect to simplicity, correctness, lucidity, and precision. Various views, however, are expressed on this subject in different parts of the volume. Mr. Hutton attributes the change to the example of Isaac Barrow and his fellow-preachers. Mr. Tilley gives prominence to the growing interest in science. No mention is made, however, of one literary influence which was surely as powerful as any—namely, the admirable dialogue of Restoration comedy.

We can only commend briefly in conclusion W. R. Sorley's chapter on Locke, a worthy addition to the able discussions of English philosophers which he has contributed to this work; W. F. Smith's on Samuel Butler—more particularly on account of the observations it contains on the sources of "Hudibras"—and E. Grubb's on early Quaker literature. Despite his great authority and unsurpassed familiarity with the subject, J. B. Mullinger's discussion of Platonists and Latitudinarians somehow does not bring closer to us this interesting group of men.

The most valuable section of the Bibliographies is that of H. B. Wheatley on Dryden, based largely on his own unique collections in this subject. We have observed no serious omissions in the lists, but the following works seem worth adding: C. Bastide's "John Locke, ses théories politiques et leur influence en Angleterre" (1907), W. Harvey-Jellie's "Les sources du théâtre anglais à l'époque de la restauration" (1906), W. Geiersbach's "Nathanial Lee's Zeittragödien und ihre Vorläufer im Englischen Drama" (1910). H. G. Paul's "John Dennis" (1911)—the best book on the subject—and H. W. Hill's "La Calprenède's Romances and the Restoration Drama" (1911), published in the University of Nevada Bulletins, probably appeared too late to be recorded.

CURRENT FICTION.

Stover at Yale. By Owen Johnson. New York: Frederick A. Stokes Co.

[The editor of the *Nation* thinks it right to state that this review came to him unsolicited from a distinguished Yale graduate.]

The exaggerated mystery of the societies at Yale has so long been an object of ridicule at other institutions, that it may be difficult for any but a Yale graduate to do them justice; but the best writers among the Yale graduates are generally members of the societies, and, therefore, not only under the bias of the inside, but under obligations of secrecy. For this reason Owen Johnson's story is a document as well as a novel. The main subject of the book is the effect of the society system at Yale, and, in exposing this, Mr. Johnson *bene meruit de republica.*

The secrecy which characterizes Greek-

letter societies at Yale, and has virtually disappeared elsewhere, is in plain imitation of Skull and Bones. It dominates the mind of the lower classes, though all grown men know it to be humbug. The tomb-like, unhygienic, and unserviceable character of the halls has no practical use but to hide articles to which the societies' titles are sometimes questionable; and, in some cases, doings which are not even questionable.

The elections to the Yale senior societies are given out on Tap Day, when the junior class assembles on the campus, surrounded by the rest of the college, and with friends of both sexes gathered in the overlooking windows:

"If you want a sensation," said McNab, "just go over to that bunch of juniors. You can hear every one of them breathe. They're scared to death. It's a regular slaughter." . . . It was a silent mass, waiting, watch in hand, trying stoically to face down the suspense of the last awful minutes. Men he knew stared past him unseeing. . . . Stover . . . looked in a dozen faces, amazed at the physical agony he saw in those who were counted surest. . . .

A great sensation spread everywhere. The Bones list had now reached thirteen; only two more to be given, and Allison of the crew, Dudley, and Harvey, chairman of the *News*, all rated sure men, were left. Who was to be rejected? . . . Dudley and Allison, prospective captains, roommates from school days at Andover, were left, and between them balancing the fates. . . .

Allison and Dudley waited, throwing back their shoulders a little, to meet the man who came straight to them, pale with the importance of the decision that had been given him. He reached Dudley, passed, and, seizing Allison by the shoulder, almost knocked him down by the force of his slap. Pandemonium broke loose: "It's Allison!" "No!" "Yes." "What, they've left out Dudley? "Missed out." "Impossible!" "Fact." "Hi, Jack, Dudley's missed out!" "Dudley, the football captain!" "What the devil!" "For the love of heaven!" "Why, Dudley's the best in the world!" "Sure he is." "It's a shame." "An outrage." . . . "They've done it just to show they're independent."

Le Baron, holding on to Stover, was cursing in broken accents. But Dink heard him only indistinctly; he was looking at Dudley. The pallor had left his face, which was a little flushed; the head was thrown back proudly, and the lips were set in a smile that answered the torrent of sympathy and regret that was shouted to him. . . .

"I was right by him. He never flinched a second" [said Stover].

"Dink, the whole thing is terrible," said Hungerford, his sensitive face showing the pain of the emotions he had undergone. "I don't think it's right to put fellows through such a test as that." . . . "The best thing in the whole society system," said Regan, with extra warmth. . . . "If you're going through three years afraid to call your souls your own, why, you ought to stand out before every one and take what's coming to you. That's my idea." "I don't know," said Hungerford, solemnly. "It's a horror; I wish I hadn't seen it."

"I'm glad I did," said Stover, slowly. . . . "We certainly learn how to take our medicine up here, Joe. It's a good deal to learn."

Tradition hath it that years ago the elections were given out quietly at night in the men's rooms. If this is true, the change illustrates the growth of distorted ideas. The students appear to have been gradually brought to the custom by their "mystery," their grewsome pin, their black-bordered stationery, their tomb, and their actual skulls and bones over the inner doors of their living-rooms. Is it strange that such toys have so destroyed their sense of humor, not to say of decency, that, drunk with arbitrary power, they have invented such an institution as Tap Day? The juniors submit because curiosity and imitativeness are as strong in young men as in young monkeys, and when subtly appealed to, and backed by ambition, are too strong for self-respect. If there is truth in the assertion that there are more Yale fathers with Harvard sons than Harvard fathers with Yale sons, how much of the explanation lies here?

If newspaper reports are to be trusted, this familiarity with things which Nature forbids has at last led the neophytes at this shrine of modern culture back some thousands of years towards one of the customs of the Egyptians which is most repulsive to the normal modern mind. The fifteen chosen men of each senior class at Yale, and many of those who have been so chosen for many years, now feast with the mummy at the board, or at least under the roof.

Contrast some of the Skull and Bones peculiarities with those of the corresponding institutions (so far as there is correspondence) at Harvard. The Porcellian Club has a cheerful, sanitary clubhouse in use all the time, as a gentleman's club is anywhere. The Skull and Bones tomb, with a mummy in it, is used for a nocturnal meeting once a week. The Harvard Club has no secrecy and no procrustean number. It begins taking in members in their sophomore year and continues till the end of the course, and as members from a man's class are taken in, they vote on him with the rest. If a man happens to be kept out by a single enemy in a class above him, when that enemy graduates there is still a chance. The Club also elects honorary members from the professional schools, and thus to some extent remedies mistakes made in its undergraduate elections. At Yale, no man votes on his classmates; the seniors elect each year's fifteen members from the junior class, and, no matter what the mistakes and injustices, the doors are closed forever. Skull and Bones men ostentatiously wear their grewsome emblems as pins constantly, even on gymnastic, bathing, and nightshirts, and each has an actual skull-and-crossbones over the entrance-door in his room. Contrast with all this the fact that the Porcellian badges are not worn in Cambridge. Which system, not to mention Tap Day, is the more apt to turn out gentlemen; one might, perhaps, ask, more indicative of gentlemen?

Perhaps the most important consideration is yet to come. Each University is largely ruled by its alumni sentiment, and the alumni sentiment is largely shaped by the leading social organizations: these do much to hold the alumni together, not only when they return to visit the College, but during their whole lives. Which method of selecting members is more apt to keep college and alumni sentiment in the best hands?

And now for some other questions, the last of which may perhaps cast some light on the earlier ones.

Why is Yale's general explanation of any feature, "It has always been so"? Why was it the last of the great institutions to introduce the elective system? Why is it among the last to hold on to compulsory attendance at religious exercises? Why has it been so barren of literary production? Why, needing a president, did it pass over its epoch-making Gilman and take saintly but unpractical Noah Porter? Why, as men in middle life recall a time when Harvard and Yale were first and the rest nowhere, and as Harvard is still first—why was a group of Yale's graduates lately heard discussing whether Yale is sixth or seventh? Why has it outgrown the necessary mediævalism of the earlier colleges more slowly than any other great institution? Why is it the stronghold of mediæval secret societies? Why is it advertised, uncontradicted, that Yale's chief social hall is decorated by an Egyptian mummy? Why are so many of its ways those of the Egyptians? Why, in short, does Yale so long abide under the shadow of the death's-head?

Joan of the Tower. By Warwick Deeping. New York: Cassell & Co.

This writer is able to turn out pseudo-historical romance with a readiness and a regularity which would be surprising if it were not evident that he has reduced the whole business to a process. He has his formula, and finds no difficulty in laying his hands upon the right material. Give him a renegade monk or nun for a central figure, a red-haired adventuress, preferably with green eyes, some bold bad fighting men, a moated tower, a broad flat brush and a bucket of blood—and he is perfectly at his ease. In the present instance it is a runaway monk who plays the leading part. On his first interview with fair Joan of the Tower, he tries to throttle her, but it is all a mistake, and we very soon find him in the rôle of rescuer and protector. At fairly regular intervals in the subsequent course of the narrative,

it devolves upon him—he is uncommonly strong—to bear her away from pursuit in his arms. By acting in accordance with the perfectly idiotic code of honor which governs the conduct of heroines in romance, she usually manages to slip back into trouble—but he is too much for her in the end, and the curtain falls upon the proper tableau. The really distinguishing feature of Mr. Deeping's tales is his fondness for nakedness. He is forever disrobing his manikins and insisting upon their being real flesh and blood—especially flesh.

Mr. Wycherly's Wards. By L. Allen Harker. New York: Charles Scribner's Sons.

Readers with a taste for the literature of the *enfant terrible* will recall Mr. Wycherly's "Concerning Paul and Fiammetta," by the author of the present sprightly narrative. The chief persons here are two English schoolboys known to us as Edward and Montague, their guardian, a scholarly old gentleman named Wycherly, and Jane Annie, a maid of all work. The housekeeping experiments of this odd quartet are broadly amusing, and of no small variety. The good-humored, if vague, guardian is kept well occupied by the pranks and extravagances of his wards, and is enough of a philosopher to get his money's worth out of his function. The dialogue supplied by the youngsters will strike the reader as funny or merely facetious, according as he may or may not be so constituted as to respond to "Helen's Babies" or "Peck's Bad Boy." Jane Annie has her obvious affiliations with other heroines of the type, but is none the worse for that. The book, in short, is good reading if one is in the mood to laugh and is fond of the farcical. Looked at sternly and impartially, the boys are clever little nuisances, and Mr. Wycherly an impossibly complaisant old victim.

My Actor-Husband. New York: John Lane Co.

Whether this startling and rather disconcerting book is in reality an autobiography, as it pretends to be, we do not know. It is manifestly written by a woman who has large and painful acquaintance with the kind of life depicted, but beyond that admission a reader made skeptical by similar claims to authenticity, will be slow to go. The conclusion of the book, whether true or not, is not *vraisemblable*, and produces the effect of rather conventional fiction. In brief, the book tells the painful story of a girl of romantic but self-respecting instincts married to an actor, well-meaning but weak, who is gradually spoiled by the adulation of matinée admirers. The description of the fast and bohemian society into which the husband's profession naturally carries the couple is unsparing in its cynical analysis and is hideously true to life, although there is a note of falseness in the implication that this is the only society open to actors. If a frank and gloating exhibition of corruption is ever good morals, the present treatise is justified. Certainly there is nothing in it to seduce the lightest imagination; it is only revolting.

ATHENS IN DECLINE.

Hellenistic Athens. By William Scott Ferguson. New York: The Macmillan Co. $4 net.

The decline and fall of Athens has never inspired an historical masterpiece, much less a masterpiece of literature. Rome went downhill with a great noise of her going, and as she lost ground or recovered herself her every vicissitude shook the civilized and barbarian world. Athens had not far to fall, and after the death of Alexander she was a mere pawn in the game, to be pushed aside or used or trampled on as best suited the policy of the warring kings of Macedon, Egypt, and Pontus, till she fell in line with the other dependencies of Rome. The truth is, she did not so much decline as come to an end. Gibbon himself could not have fascinated the reader with the tale of her provincial troubles, the ups and downs of her democratic and aristocratic factions, the entangled story of her flirtations with Oriental Powers, and her alternate submission to and revolt from the yoke of Macedon. But after all, no nation produces great men continuously, and the historian is not called upon to show why Athens had no more statesmen whose names were to become a household word, or to analyze the causes of her collapse. Whether that collapse was due in part to malaria or to the rise of commercial interests in which she could play only a small part, matters little. The real puzzle is how this "hermit-child" ever grew to the stature of her achievements in the fifth and fourth centuries.

Mr. Ferguson has not attempted to play the part of Gibbon, and he calls his book an "historical essay." He deals with a long and confused period, from 323 B. C. to the sack of Athens by Sulla in 86 B. C., an incident which, important as it was, has never seemed to the popular imagination so significant as the sack of Corinth by Mummius in 146. Contemporary historians, Greek and Roman, shirked the task that Mr. Ferguson has undertaken, and his record depends on documents that he calls "scrappy and exasperating, though reliable." He uses Diodorus of Sicily in part for the period 323-302 B. C., though Diodorus was not especially interested in Athens. Plutarch is useful in a disconnected way; but what were international politics to him, compared with the duty of illuminating the moral character of the politician by an anecdote?

For the first half of his book Mr. Ferguson quotes the fragments of the New Comedy on almost every page, and since he must have consulted the work so often it is surprising that the famous collector of those fragments is invariably referred to as "Koch." This is not an error in proof-reading, for it occurs too often, and the right form, Kock, is never used, even in the list of sources in the Appendix. But by far the greater number of Mr. Ferguson's references to sources point back to Greek inscriptions. To this is due, we think, one of the drawbacks of the work, at least for the reader who looks for a connected narrative of the affairs of Athens. Gibbon had very different materials, and his obvious course was to confine the details of Roman administration for each period to separate sections which the student could use and others could skip, and get on with his absorbing tale. The fact is that Mr. Ferguson very seldom has an absorbing tale to tell, and he falls back on minor antiquities gleaned in great numbers from inscriptions. The title of the book gives one no idea of the scope of his investigations. We think it would have been fairer to Athens, for example, since hers is the title-rôle, to reserve for an appendix or a separate work the sixty-eight pages that are here devoted to the fortunes of Delos. After the Romans allowed Athens to seize the island in 168, she became a sort of crown colony, and as she gradually fell more and more into the hands of Italian business men and financiers, she developed into a great emporium. Mr. Ferguson writes a very complete sketch of her Italianization, showing how she exchanged her sentimental reputation as the birthplace of Apollo to become the centre of a flourishing slave traffic and the meeting-place of Oriental cults. Isis was now more venerable on Delos than Leto and her son. It was as though Bethlehem had become the haunt of pirates and slave traders, outlandish priests, and strange gods. Inscriptions are the chief source for the administration of the island, and the topography has been illuminated by the excavations of recent years. If one wishes to know where it would have been wise to have a shop on Delos in 173 B. C., and how to take advantage of the boom in real estate, one can find here a full description of the best business sites, together with the conditions for holding office of the most insignificant official of Delos, to say nothing of Lemnos and Haliartus. We do not wish to depreciate the immense labor and ingenuity demanded by this reconstruction of municipal life from inscriptions. But it often gives us debatable results which would need a corps of experts to discuss fairly. Meanwhile,

though much of the evidence is consigned to footnotes, the reader inevitably feels that the story of Athens is buried under a mass of details.

As for the men of Athens, after Demetrius of Phalerum and Demetrius Poliorcetes had run their course, their successors come and go in these crowded pages and leave little impression on the mind of the reader, though doubtless they get all the consideration they deserve. Her philosophers were still the glory of Athens and more appreciated at home than they had been in the past. When she wished to cajole a foreign Power, she regularly sent as ambassador a professor of philosophy. Athens was still the home of "culture," and as such she received the homage not only of the Romans, who knew more or less what it was worth, but of the barbarians from all quarters who, like all uneducated persons, felt that they must propitiate a force that they did not understand. The Celts who invaded Greece about 280 B. C. were, however, free from this superstition, and we should have welcomed a longer account of their occupation.

Mr. Ferguson's English is often obscure. One must sometimes read a sentence twice to catch the meaning, as in the following example: "Rather, since the work of Chrysippus which he inspired was subtle rather than original, defensive rather than constructive; and, after Carneades had shown this to be the case, philosophy made, not the quest for ultimate truth, but the education of the Romans, its chief task, the new beginning was at the same time an ending" (p. 234). On page 68, "Talents of a dowry" seems to mean "a dowry of a talent." On page 19 Xenophanes occurs where Xenocrates is obviously meant, and the error is repeated on page 60. Colchis is twice spelt "Cholcis," and Megara occurs as "Magara" on page 115.

The House of Harper. By J. Henry Harper. New York: Harper & Bros. $3 net.

Copyright, Its History and Its Law. By Richard Rogers Bowker. Boston: Houghton Mifflin Co. $5 net.

The Law of Copyright. By George Stuart Robertson, M.A. Oxford: The Clarendon Press.

As long ago as 1840 Thurlow Weed found reason for comparing James, John, Joseph Wesley, and Fletcher Harper to the "Cheeryble Brothers." How well the compliment was deserved every line of Henry Harper's account of the founders of the house testifies. For long after the firm was established no separate accounts were kept for the four brothers, but each one took from the cashier's drawer what he required for his own needs, and the rest remained a common fund. It was not until the death of James Harper in 1869 that individual accounts became necessary. "Up to that time each brother was ignorant as to how much money the other three drew from the concern." These Cheeryble Brothers were not without their Tim Linkinwater in the person of the late William H. Demarest, who entered their service in 1833 and continued until 1878. Most of this time he was the cashier from whom the four brothers drew as they saw fit.

From 1817 until 1833 the title of the firm was J. & J. Harper, when it was changed to Harper & Brothers. Its founders were practical printers. Their first power plant was "a young white horse . . . harnessed to a beam which drove a perpendicular shaft operating the presses above, and here he worked at his circuitous path, creating by his progress around and around his little sphere the necessary power to keep the pressroom in a constant state of activity." After some years of faithful service he was pensioned. According to the present account:

> One morning when Father Harper went out to the field, he heard the seven o'clock whistle sounding, and to his surprise he saw the o'd horse slowly emerge from the shed and go to the centre of the pasture, where there was a solitary tree. Around this tree the horse travelled, round and round, as though he were turning his old-time shaft, until twelve o'clock sounded, when he promptly discontinued for lunch-time and went back to his shed. At the stroke of one o'clock he returned to the tree and moved round and round again until the six o'clock whistle blew, when he dropped work and sought the repose of his shed.

Mr. Harper's story is diffusive, leisurely, rambling, disconnected, elliptical, and full of abrupt transitions. Naturally, the body of the book is made up of gossip about writing men and of letters to and from authors, English and American, whose books have been published by the Harpers. In the nature of things considerable space is devoted to George William Curtis and to Nast's cartoons at the time of the great fight against the Tweed ring. When the fight was at its height an effort was made to bribe Nast. The story is told in these words:

> An officer of the Broadway Bank . . . called on Nast at his home. He talked of a number of things. Then he said:
>
> "I hear you have been made an offer to go abroad for art study?"
>
> "Yes," nodded Nast, "but I can't go. I haven't time."
>
> "But they will pay you for your time. I have reason to believe that you could get a hundred thousand dollars for this trip."
>
> "Do you think I could get two hundred thousand?"
>
> "Well, possibly. I believe from what I have heard in the bank that you might get it. You have a great talent, but you need study and you need rest. Besides, this Ring business will get you into trouble. They own all the judges and jurors, and can have you locked up for libel. My advice is to take the money and get away."
>
> Nast looked out into the street, and perhaps wondered what two hundred thousand dollars would do for him. Presently he said:
>
> "Don't you think I could get five hundred thousand dollars to make that trip?"
>
> The bank official scarcely hesitated.
>
> "You can. You can get five hundred thousand dollars in gold to drop this Ring business and get out of the country."
>
> Nast laughed a little. He had played the game far enough.
>
> "Well, I don't think I'll do it," he said. "I made up my mind long ago to put some of those fellows behind the bars, *and I'm going to put them there!*"
>
> The banker rose rather quietly.
>
> "Only be careful, Mr. Nast, that you do not put yourself in a coffin," he smiled.

It is when Mr. Harper comes to tell of the long fight for an American copyright law that his episodical and elliptical method becomes a trying defect. Unconsciously perhaps, he does not do justice or give credit to publishers other than the Harpers who were so largely instrumental in procuring copyright law. It would have been better to leave the story untold rather than attempt to tell it in an incomplete way.

Mr. Harper's omissions are more than offset by Mr. Bowker's solid volume of nearly seven hundred pages. A glance at the six parts into which it is divided gives a fair idea of its scope: Nature and Development of Copyright; Literature and General Copyright; Dramatic, Musical, and Artistic Copyright; Copyright Protection and Procedure; International and Foreign Copyright; Business Relations and Literature. An appendix gives in great detail the copyright provisions of the United States, the British Empire, International and Pan-American Union Conventions, with a chronological table of laws and cases, English and American.

Mr. Robertson's book is less ambitious and less comprehensive. He has endeavored, while rearranging the disordered provisions of the British Copyright Act, to preserve and apply so much of the sort of legal decisions as seem to be still applicable or capable of being adopted. In addition he has "ventured to express reasoned opinions" on points which are not illuminated by authority, and also to illustrate matters from his own experience of the various species of work which fall within the law of copyright.

The Fairy-Faith in Celtic Countries. By W. Y. Evans Wentz. New York: Henry Frowde. $4.15 net.

Mr. Wentz's book is noteworthy in that it approaches the subject of fairy-lore from a new, or at least from an unusual, point of view. It takes the matter up primarily as an inquiry in psychical research. The study, to be sure, is not without its forerunners in such

works as Robert Kirk's "Secret Commonwealth," written towards the end of the seventeenth century; and the method has been recently recommended by Andrew Lang. Similar material, too, has, of course, been often examined in works on demonology and witchcraft. But Celtic fairy-lore has not been ordinarily treated in this way, and the extensive literature of the subject has been occupied rather with the collection and classification of popular tales and sagas and the determination of their place in the history of fiction. Mr. Wentz, while conversant with the literary and historical problems involved, is chiefly concerned with the actual truth of his narratives and with their scientific or philosophical explanations; and it is interesting to observe that his treatise was submitted for the Oxford degree of bachelor of science. As a result of his special method and purpose he brings the fairy material to the attention of a new public, and for those readers who were already acquainted with it he organizes it afresh and puts many things in a new light.

He presents his stories as a body of evidence; first collecting, in the chapters on the Living Fairy-Faith, the testimony of numerous witnesses in all the Celtic countries, and afterwards, in the chapters on the Recorded Fairy-Faith, expounding the fairy-mythology of old Celtic sagas and romances. In other chapters he deals with various attempts to explain the phenomena. Being firmly convinced himself that the experiences described are in many cases actual, he rejects what he calls the "naturalistic theory," that the fairy apparitions are all illusions due to natural and material causes. He likewise rejects, or dismisses as inadequate, the theories which attribute the belief in fairies to the folk-memory of an ancient pygmy population or of a vanished race of magicians. In place of such explanations he argues for what he names, with doubtful appropriateness, the "psychological theory." According to this doctrine, fairyland really exists as a super-normal state into which men may enter in dreams or trances, or after death; fairies are real beings who affect the world about us; and the children popularly supposed to be fairy changelings may be actually possessed by spirits of another world. Mr. Wentz even takes up the doctrine of rebirth or preëxistence, as it appears here and there in Celtic literature and tradition, elaborates it somewhat, and defends it as a rational explanation of conscious life.

Taken as a whole, the volume is unquestionably an important contribution to the study of Celtic folk-lore. The extensive collection of testimony from living Celts is one of the best existing accounts of the different phases of fairy beliefs among any people. Though no absolutely new features may be found there, the systematic survey of the subject is in itself of much service to scholarship. The chapters on the recorded faith, also, while they show more indebtedness to earlier treatises, such as the "Voyage of Bran," by Meyer and Nutt, or "La Légende de la Mort," by Anatole le Braz, and while they now and then betray lack of first-hand mastery of Celtic learning, are nevertheless of decided value as part of the exposition of the whole subject. Nowhere else, to our knowledge, have the parallels between the old fairy mythology and the beliefs of the present day been so fully worked out.

As to the value, therefore, of Mr. Wentz's collection of facts, there will be very little difference of opinion. But his inferences and explanations will naturally be received with the varying degrees of doubt usually accorded to investigations in psychical research. Readers of one type will dismiss his testimony with the feeling that the accumulation of ciphers never makes a digit, and others will conclude that where there is so much smoke there must be some fire. Unfortunately, a more precise and scientific estimate of the value of his evidence is hard to make. For even if we grant, as we may, the possibility of experiences like those Mr. Wentz describes, the fact remains that the testimony of his "percipients" is not as impressive as he himself regards it. Very little of it was obtained with any such care and precaution as is ordinarily employed in the investigations of the Society for Psychical Research. And, furthermore, if a residuum of the experiences recorded is admitted to be valid, which is all that Mr. Wentz contends for, there will still be plenty of room for doubt about the animistic hypothesis by which he explains them. It is safe to say that very few readers will follow him the whole length of his theory. But in view of the striking analogy between many so-called fairy phenomena and other supernatural or psychic occurrences, it is surely profitable to have both classes of events subjected to the same kind of analysis.

Forty-four years ago John Muir made up his mind to go to the north end of South America, make his way through the woods to the headquarters of the Amazon, and float down that river to the ocean. That he would have lived to tell the story of his adventures seems unlikely. Fortunately, there was no ship at hand and little money in his pocket, so he went to California to see its wonderful flora and the famous Yosemite Valley. In this valley and the mountains of which it is the chief ornament he has since that time spent many a year, winter as well as summer, and his experiences have been recorded in more than one book, notably "The Mountains of California." Now comes another book of nearly three hundred pages, with much that is new and quite as fascinating as his earlier writings. From these it differs chiefly in being cast in a practical mould, being, in fact, a guide-book frankly and undisguisedly.

It is, however, only in its general plan a guide-book in the ordinary sense of the word. A chapter on the approach to the valley is followed by sections on its wonders. The Appendix includes tables of distances and rates of transportation. There are, besides a number of beautiful pictures, three good maps, and special advice is given to tourists as to what they had best see in case their time is limited. This alone would make the book indispensable to the thousands of sightseers who now visit the valley every summer. But beyond these practical matters this monograph is a rich storehouse of observation by one who worships nature in all her moods. Personal experiences and narratives are mingled with scientific speculation as to the origin of the valley, and with remarks, now botanical, now æsthetic, on the trees and flowers peculiar to the region. Nowhere else could be found such masterly portraits as he gives, for instance, of the characteristic snow plant, the Washington lilies, and the manzanitas; nowhere such plastic sketches as he gives of the peaks encircling the valley; nowhere such graphic descriptions of the Yosemite in winter and at other times, when it is deserted by tourists. He has witnessed, and describes, the sublime spectacle of an earthquake in the valley and its effect on the Indians and the white who were present; he has seen the valley when a flood caused the waterfalls that tumbled into it to be multiplied into hundreds; he tells of hairbreadth escapes he has had; and in two final chapters he pays tribute to two other pioneers, Lamon and Galen Clark. The descriptions of snow-banners and diverse winter scenes may induce not a few to visit the Yosemite in winter. In summer it is uncomfortably overcrowded, and it is time to make the Hetch-Hetchy Valley (which also has a chapter here) more accessible to visitors. Their attention should also be specially called to the upper Tuolumne Valley, to which there is already a good road, and which, according to Mr. Muir, is "the widest, smoothest, most serenely spacious, and in every way most de-

lightful summer pleasure-park in all the High Sierra."

The Yosemite Valley is one of the three "Wonderlands" described in Thomas D. Murphy's book, the other two being the Yellowstone Park and the Grand Cañon. In his description of the valley Mr. Murphy confines himself to those parts which the great majority of tourists alone have time for, and he also takes them to the big trees of the Mariposa Grove. The Yellowstone and the Grand Cañon are treated in the same way; the ordinary visitor is told what he is likely to come across, and information is given as to hotels, camping, etc. To the eye, this volume is made extremely attractive by the inclusion of sixteen reproductions in color of admirable paintings by Thomas Moran and thirty-two duogravures from photographs. There are also maps of these three scenic wonders, the like of which Europe has not; and a final chapter considers briefly some other attractions of the Far West.

If Europe has nothing even remotely resembling the three wonders Mr. Murphy describes, neither does it offer vacation-takers such delightful opportunities for camping as this country does. Dillon Wallace enjoyed these advantages to the full in a trip he took from Holbrook, Arizona, up to Wyoming. Camping, however, was not his only object. He is interested particularly in the problem of game preservation, and the reports in the spring of 1910 of the appalling mortality among the elks of the National Forest Reserves in Montana induced him to make a trip to study at first hand the big-game conditions and to report on them. Everywhere, from Arizona through Utah and Colorado to the Yellowstone National Park region, he found the same conditions: the former abundance of deer, wild sheep, antelopes, elk, bears, reduced to a lamentable remnant, owing to reckless slaughter by hunters, aided by the ravages of sheep and the deadly work of jaguars and timber wolves. Particularly distressing were the scenes he witnessed and the facts he gathered at Jackson's Hole, a region in which are gathered in winter some 30,000 elk, most of them from Yellowstone Park. The mortality among these, from lack of food, has been horrible; one man told him he had walked half a mile on the bodies of dead elk. Mr. Wallace explains why the Federal Government is responsible for this deplorable condition of the elk to a large degree, as well as the State of Wyoming. He urges the newspapers of the East to take up the matter. His plans for improving the situation are sensible and could be easily carried out. Among the illustrations in this volume are some depicting the woful plight of the elk.

Arizona, whence Mr. Wallace started on his camping tour, is a State only about 5 per cent. of which is said to be adapted to agriculture. In the eyes of a man like George Wharton James this is no disadvantage. To him the desert is a paradise on earth, and certainly in this volume, in which he discourses lovingly on the surprises and charms of the desert, its rivers, mountains, animals, plants, its healing air, and a thousand other things, he makes out a strong case for his belief. We need not dwell on his interesting book, as it is simply a new edition, in one volume, of a work issued in two some six years ago.

Notes

Longmans, Green, & Co. have in press: "Essays in Radical Empiricism," by William James; "Poems Old and New," by A. H. Beesly; "Selected Addresses," by James Burrill Angell; "The History of the People of Israel," by May Sarson and Mabel Addison Phillips; "Introductory Philosophy: A Textbook for Colleges and High Schools," by Charles A. Dubray, and "The Mass: A Study of the Roman Liturgy," by Adrian Fortescue.

Putnam's list of forthcoming books includes: "Abbas Effendi: His Life and Teachings," by Myron H. Phelps, revised edition; "De Orbe Novo: The Eight Decades of Peter Martyr D'Anghera," translated from the Latin with notes and introduction by Francis Augustus MacNutt.

The same house, as representatives of the Cambridge University Press, announce "John Stuart, Earl of Bute," by J. A. Lovat-Fraser.

D. B. Updike of the Merrymount Press, Boston, announces the publication of a second group of books in the Humanists' Library, under the editorship of Lewis Einstein. It includes the correspondence of Hubert Languet and Sir Philip Sidney, edited with introduction by William Aspenwall Bradley; Pico della Mirandola's "A Platonic Discourse upon Love," translated by Thomas Stanley, and edited by Edmund G. Gardner, and Giovanni della Casa's "The Galateo—of Manners and Behaviour," edited by J. E. Spingarn. The first of these will be ready in October.

Among the books which Little Brown & Co. will issue this month are: "The Lighted Way," by E. Phillips Oppenheim; "My Demon Motor Boat," by George Fitch; "A Candidate for Truth," a novel by J. D. Beresford; "The Mainspring," a story of financial problems by Charles Agnew MacLean; "The Sunken Submarine," by Captain Danrit; "The Young Crusaders," by George P. Atwater, and "Pin-Money Suggestions," by Lilian W. Babcock.

E. P. Dutton & Co. will bring out shortly: "The Last Legitimate King of France," by Phœbe Allen; "English Philosophers and School of Philosophy," by Prof. James Seth; "Woman Adrift," a statement of the case against woman's suffrage, by Harold Owen; "The Quest of Glory," an historical novel based on the career of the Marquis de Vauvenargues, by Marjorie Bowen, and "The Romance of Words," by Prof. Ernest Weekly.

A. J. Balfour has been appointed Gifford lecturer for the two years 1913-14.

In the Edinburgh Vacation Course this summer A. A. Jack will lecture on American writers.

A Gaelic Academy is forming in Scotland, its object being to preserve the Gaelic language and literature.

The second annual volume of "Canada of To-day" is in the press of Stanley Paul & Co. It is made up of special articles and many illustrations.

A London journal places the total number of women students matriculated this year in the universities and high schools of France at 3,915, of whom 1,796 were foreigners. In Paris 36 Frenchwomen were trying for a degree in law, 211 in medicine, 30 in pharmacy, 596 in letters, and 143 in the natural sciences.

For the purpose of acquainting foreigners with the culture and progress of Spain, the Spanish Government has established a holiday lecture and travel course. The course is in two parts. The first part, which is under the management of Prof. Ramón Menéndez Pidal, will deal with general ideas of Spanish life. The second part will consist of excursions to public, historical, architectural, and art monuments, under the conduct of special scholars. The course will be held from June 15 to July 24, with Madrid as the headquarters. Those who enroll are expected to have some knowledge of Spanish. The lectures will pay special attention to the Spanish epic, to the lyric as developed in various provinces, to the picaresque and regional novel, and to Cervantes.

"Nineteenth Century Essays" (Putnam), essays by Carlyle, Macaulay, Bagehot, Newman, Ruskin, Arnold, Stevenson, edited by George Sampson, is an attractive little book that ought to be more welcome in the library than in the schoolroom, though it is doubtless intended for the latter. Macaulay's "Ranke's History of the Popes" and Ruskin's "Sir Joshua and Holbein," for instance, though of dubious feasibility in American schools, are too often omitted from selections of nineteenth century literature.

Two anthologies of patriotic interest are "Independence Day" and "Flag Day" (Moffat, Yard), by Robert Haven Schauffler. They are composed of abundant prose and verse selections from well-known and unknown American authors. A fifty-page section devoted to "The New Fourth," though it contains little that is of intrinsic merit, ought to prove a source of inspiration and information to those who earnestly desire a "sane" Fourth of July. "Flag Day" is equipped with appropriate school exercises. Both books will be of use to the teacher and the general reader.

"The Rise of Democracy" (Cassell), by Joseph Clayton, is a rapid sketch of the development of democracy, mainly in England, from Anselm and Langton to John Burns and Lloyd George. The narrative is readable, and derives additional interest from its emphasis upon the work and influence of political leaders and writers, including some of the present day. Ireland is not included, for the reason, as Mr.

Clayton points out, that the Nationalist movement is not necessarily democratic. A final chapter on the strength and weakness of modern democracy condenses a good deal of the wisdom of experience, albeit hopefully and without repining.

In the third and last volume of the series "Sea Kings of Britain" (Longmans), G. A. R. Callender of the Royal Naval College at Osborne gives stirring and cleancut little pen portraits of the five great admirals who fought for England in the half-century from the victory off Quiberon in 1759 to that off Cape Trafalgar in 1805. To the first of the five, Keppel, belongs the honor of the capture of Havana, the subsequent restoration of which, in 1763, compelled Spain to yield Florida to England and receive in return from France the vast territory from the Mississippi to the Rocky Mountains. Keppel kept high the honor of the navy in the jobbing days of Lord Sandwich and the corrupt "King's Friends." As a youth he had showed the kind of spirit that was in him in a mission to the piratical Dey of Algiers. The Dey felt insulted that the English had sent as negotiator a beardless boy, and told Keppel so; to which the future commander at the Ushant retorted: "Had my master supposed that wisdom was measured by the length of the beard, he would have sent to you a he-goat!" To Keppel also was due the general practice of sheathing warships with copper to defy barnacles and increase sailing speed. After describing Rodney, Howe, and Duncan, Mr. Callender devotes the last two-fifths of his little volume to an admirable sketch of Nelson. In each of the biographical sketches he makes the reader see the man as well as understand and admire the admiral. His book is free from pedantry and technicalities, is interestingly written, and is sufficiently illustrated with battle plans.

In his preface to "The Wisconsin Idea" (Macmillan), Charles McCarthy confesses that he has made his book "hurriedly, without due care as to literary standards." The reader is soon convinced of the accuracy of both parts of this statement. The purpose of the volume is to give information about the legislation of Wisconsin which has for some years been attracting the attention of the country, and about the philosophy upon which it is based. This purpose the book fulfils, but in a discursive and ill-ordered way. It is not possible to find out quickly what the State has done with reference to control of railways, for instance, or campaign expenses, or direct primaries, partly because the story is interrupted by ill-timed comment, and partly because it is told too largely by means of quotations from the statute books. What ought to have been a manual turns out something between an essay and a compilation. Lucid summaries would have more than doubled the value of the book. Nevertheless, if for no other reason than that its subject is important, and that it is the only volume of its kind, it is worthy of perusal and study. Its author's position as chief of the Wisconsin Legislative Reference Department, and his free use of the language of the acts passed by the Legislature, give it the weight of authority. Indeed, it is because of its merits that it ought to be rewritten in such a way as better to deserve Mr. Roosevelt's flattering introduction.

William Bayard Hale's "Woodrow Wilson" (Doubleday, Page) is not altogether free from over-intensity. The picture of the youthful lawyer as "he clenched his hand and took a silent oath" that a certain young lady "should one day be his wife," could well be omitted, along with such phrases as "a prophet inspired by a passionate sense of the majesty of the law of social justice." It is a grim fate that permits such expressions about a man whose own style is notable for its felicity. On the whole, however, this is a well-conceived and well-written narrative. It sounds like a story, and not like a campaign document—and is therefore all the better for campaign purposes. It cannot be criticised on the score of length, for its two hundred pages make a volume that attracts by its modest bulk. Nor does it commit the error of foreshortening everything in its subject's career preceding his nomination for a political office, although almost the last third of the book is occupied with what has happened since the early summer of 1910. It is a readable and apparently accurate life.

The Elm Tree Press of Woodstock, Vt., has brought out a beautiful edition on fine paper of the "Pervigilium Veneris," with an illuminated initial and two Byzantine ornaments. The text is followed by a translation in the same metre as the original, by Elizabeth Hickman du Bois. This is a real *tour de force*, as may be judged from the opening lines:

Love to-morrow, ye who ne'er loved; ye who have loved, love again!

Spring is new: the earth has wakened: all the woods with music ring!
Spring! and lovers are united. Spring! the mating robins sing.
While the grove unbinds her tresses from the gentle-dropping shower.
On the morrow sweet Desire builds a slender leafy bower
'Neath the shade of spreading branches, hangs her ropes of myrtle green.
On the morrow Venus ruleth, throned on high behold your queen!

Prof. Edward R. Turner's "The Negro in Pennsylvania," to which was awarded the Justin Winsor prize by the American Historical Association in 1910, is a first-rate piece of monographic work. Following the lead of Dr. Ballagh, whose works on slavery in Virginia were the first to show what could be done in this direction, Professor Turner traces in detail the development of slavery in Pennsylvania as a legal and social institution, with particular reference, in the earlier years, to the transition from servitude to slavery, and then through servitude to freedom. Of the material relating to the colonial period, quite the larger part is essentially new, and forms a contribution of importance. Not until 1780 did the negro attain civil equality, and even then the suffrage was withheld until the Fourteenth and Fifteenth Amendments assured political rights. The long struggle for social and economic advancement provoked, in the first half of the nineteenth century, much open discrimination, and even brutal treatment, with frequent riots, especially in Philadelphia. The account of the experiences of the free negroes, a phase of the negro question in this country which has not had its share of attention from historians, is admirable. Another important feature of Professor Turner's work is its sharp discrimination between the early movement for abolition and the later anti-slavery movement under Garrison; in the course of which the writer takes issue with the usual treatment of this question by previous writers, especially Professor Hart. He admits that the dispute is to some extent a matter of definition, but the contemporary use of terms to which he calls attention is significant. The volume shows the use of a great wealth of material, including manuscript records of value; but the text displays good judgment in the choice of incidents, and the narrative, though without literary pretensions, reads well. Not the least valuable feature is the bibliography, which is a mine of riches for the student.

From the hemisphere,

Ch' è contrapposto a quel che la gran secca Coperchia,

comes "The Divina Commedia, literally translated into English verse in the hendecasyllabic measure of the original Italian," by Sir Samuel Walker Griffith, Chief Justice of the High Court of Australia (Frowde). In the endeavor to imitate as exactly as possible the rhythm of Dante's line, Sir Samuel has used exclusively a line ending, as the Italian line does, with an unstressed syllable:

His mouth upraised from the repast inhuman
That sinner, wiping it upon the side-locks
O' the head that at the hack he had been wasting.

Unfortunately, English and Italian paroxytones are so different in sound value that the experiment was foredoomed to failure. The final atonic syllable, in Italian, always ends in a vowel. It is never lengthy, therefore, and serves as a pleasant descent for the voice—*loquentem cum quadam suavitate relinquit*, as Dante would say. In the English word, on the other hand, the voice, weakened for the cadence, usually finds beyond the vowel a consonant or a combination of consonants, for the enunciation of which a new effort is required. The cumulative effect of a series of such final efforts is most unpleasant. One gets the feeling that the line is strained out of balance as by a weight hung at the end. Moreover, a large proportion of the English stock of paroxytones consists of words formed with such derivative suffixes as *-ing*, *-ed*, and *-ment*, and their frequent use in verse endings results in an impression of monotony. The virtues of Sir Samuel's translation, therefore, are not metrical. In point of accuracy, his work leaves little to be desired. It is fully evident that his understanding of the text is minute and thorough, and teachers of Dante will find in his version many renderings notable for their concise clarity. Unfortunately, the best lines are too often followed by such as these:

Love, who on gentle breast hold quickly catches,
Caught him beside me by the form of beauty
They snatched from me: and still the way torments me.

The latest volume in the Original Narratives of Early American History (Scribner) contains the most important texts relating to early Pennsylvania, West New Jersey, and Delaware from 1630 to 1707. It is edited by Albert Cook Myers, in collaboration with the general editor, Dr. Jameson, and

in all that concerns the Swedish settlements on the Delaware has profited by the aid and advice of Dr. Amandus Johnson, whose recent work on New Sweden and its founders is a witness to his competency. The editorial responsibility lay, however, with Mr. Myers and he has performed his task with manifest care and thoroughness. The introductions are brief but sufficient, and the annotations full and scholarly. Few volumes of the series have presented greater difficulties in the way of obscure allusions, and none is more dependent than this on the skill and knowledge of the editor. The manner in which the difficulties have been met and the sobriety and good judgment displayed in illuminating the text by footnotes that are neither time-worn nor overlearned is worthy of all praise. The volume contains two narratives, by De Vries and Thomas Yong, of the Dutch on the Delaware; six of the Swedish settlement, by Acrelius, Printz, and Rising, and a sailor's tale, discovered by Dr. Johnson in Sweden and here printed in translation for the first time; two of West New Jersey, by Penn, Lawrie, and Lucas, and an unknown writer; and nine of Pennsylvania, among which are the account of Pennsylvania and West New Jersey by Gabriel Thomas and the accounts of Penn, Paschall, Frame, and Pastorius, and the letter of John Jones. Frame's "Short Description" is in verse, and, as the editor says, "falls far short of poetry." The letter of Jones is introduced by Dr. Jameson, but the footnotes are by Mr. Myers. It is difficult to see how this excellent selection of narratives could be bettered.

Nine new volumes in the Home University Library, numbers 30 to 38 (Holt), call for notice. What has been said in these columns concerning the merits of earlier volumes in this series still holds good. They are written by men who are plainly at ease in their subject, and who, almost without exception, write well; some of them write very well indeed. There is a free swing to the style which is pleasantly removed from the schoolmaster's tone and conveys the impression of one man discoursing without condescension to another, on a subject that he happens to know better than the second man. But the method has its dangers, too; and these are illustrated in more than one volume among the present nine. The swing at times becomes too free, the assumption of equality between the raconteur and his listener is carried to excess, and the reader finds himself longing for a little more system in treatment and a little more dogmatism in the statement of facts. When condensation must be carried to an extreme, as in these little manuals of 200-odd pages, there is no room for such overcautiousness as R. R. Marett practices in his "Anthropology," a book written with exceptional vigor and pungency of style, but a little too grown up, perhaps, for a series like the present. Of "Landmarks in French Literature," by G. L. Strachey, it may be said at once that it is a little masterpiece. Mr. Strachey wastes no time. In his first half-page he is already busy with the story of Roland and Oliver. He writes with fascinating simplicity and a fine love for his subject. His account of the age of Louis XIV, and especially of Pascal, Molière, and Racine, is admirable. At the end he has redeemed the promise of his title and given us a swift summary of the great figures in French literature, condensed and yet complete. At the other end of the scale we would put Bertrand Russell's "Problems of Philosophy," which is done in an obscure style and from altogether too arbitrary a point of view. It seems absurd in a book of this character to set one's self to the exposition of a personal philosophy, or to start out to refute Berkeley and Idealism in five pages. Mr. Russell, however, has the courage of his convictions, for in his bibliography he distinctly counsels the elementary student in philosophy to eschew the textbooks and to go directly to Plato, Descartes, Leibnitz, and Kant. W. Warde Fowler's "Rome" is clear-cut, concise, and thoroughly adequate. Excellent, too, is the "Peoples and Problems of India," by T. W. Holderness, who has succeeded in making the complicated subject of Indian caste and Indian religions intelligible by the simple means of confessing the truth that much of the subject is helplessly confused and unintelligible, and then seeing what can be saved from the wreck. A. F. Pollard, in "The History of England," writes as a modern historian of the radical-materialistic school, with a good show of scholarship. In his final chapter on English Democracy he makes no endeavor to conceal his views or to mince his words. "Canada," by A. C. Bradley, is in the accepted textbook form. The author's interest is with British Canada, and four-fifths of his book lies in the nineteenth century and after. W. R. Lethaby's "Architecture" lays perhaps disproportionate stress on the archaic phase of his subject. But his pages on the Gothic are well worth reading. J. J. Findlay's "The School," is narrower than its subject would indicate. It deals at bottom with the problems of educational policy and administration in England from the standpoint of a militant progressive. The implication against religious teachings in the schools is plain. But he has a valuable chapter on the functions of the school as the conciliator between tradition and freedom.

Miss Julia Harris May, whose death is reported from Auburn, Me., at the age of seventy-nine, was the author of "Songs from the Woods of Maine," "Looking for the Stars," and "Pictures Framed in Song."

The Bishop of Truro, the Right Rev. Charles William Stubbs, D.D., whose death was reported on Monday, was one of the most notable figures in the British Episcopacy, being distinguished as a scholar, a militant broad churchman, an historical and sociological writer, a pulpit orator, and an advocate of democratic principles. He was graduated from Cambridge in 1868. After two minor positions in the church, he was appointed in 1894 to the deanery of Ely on the recommendation of Mr. Gladstone. His love of this place is attested by his book, "Historic Memorials of Ely Cathedral." In 1883 he acted as commissioner of education in England to the Government of Siam. He became Bishop of Truro in 1906. The titles of many of his books indicate his interest in social questions: "Village Politics," "Christ and Democracy," "For Christ and City," "The Land and the Labourers," "God and the People," "Christ and Economics," "A Creed for Christian Socialists," and "The Social Teaching of the Lord's Prayer." To these must be added "Charles Kingsley and the Christian Social Movement," "In a Minster Garden," "Verba Christi," and one or two volumes of hymns and poems. In 1900, the Bishop, or, as he then was, Dean of Ely, visited this country as a lecturer, his subjects including "Shakespeare as a Religious Teacher," "Milton and the Puritans," "John Keble and the Anglican Revival," "Shelley," "Tennyson," "Mrs. Browning," "James Russell Lowell," "Frederick Maurice," "Florence Nightingale," and "Chivalry."

USES OF THE DIESEL ENGINE.

Dr. Rudolf Diesel, the inventor of the internal combustion motor that bears his name, was last week made an honorary member of the American Society of Mechanical Engineers. This was in acknowledgment of his services in devising a successful heat-motor in which controlled combustion replaces explosions, and which far exceeds in thermal efficiency any previous engine. The official recognition will bring the Diesel type of oil engine more prominently to public attention, and is sure to result in largely increased interest in the subject of economical power production throughout the engineering profession. The Diesel engine has passed through the period of probation which every radical innovation must undergo, and today is an unquestioned success. Its development has been so unusually rapid that the world is just beginning to realize its merits and its possibilities. Until recently engineers themselves knew surprisingly little of the progress it was making, and are continually astonished at the reports of its achievements that come to their notice.

The credit for the pioneer work in the internal combustion engine lies entirely with a few large European firms, but many others have taken up its manufacture, and American concerns are now following in their lead. The comparatively slow adoption of the Diesel engine on this side of the Atlantic is only another instance of the hesitation with which most of the important mechanical and electrical improvements making for increased efficiency have been received. The multiple-expansion steam engine was developed abroad, and later was taken up by American engine-builders. The same was true of the steam turbine, the gasolene motor, high-efficiency electric lights, such as the Nernst and tungsten, high-tension alternating current transmission of power. The Diesel engine goes along with the rest. Efficiency is the prime consideration in European countries, whereas in the United States that feature has been largely lost from view, in the attention given to low first-cost. Although this statement might be thought to imply

inferior technical ability in this country, such is not necessarily the case. The question is mainly commercial and economic. The high price of fuel abroad has done much to encourage economies in operation in all directions, while with us cheap fuel, cheap construction, and rapid production have permitted wasteful operation without destroying profits. However, it is merely a question of time before the inefficient devices will be unable to compete with those of higher efficiency and will be replaced by them.

The application of the Diesel engine to the locomotive, though now in its experimental stages only, bids fair to be of the greatest importance. It is unfortunate that no account of the performances of the experimental locomotive made in Switzerland is yet available; but whatever the results from the first trials, Dr. Diesel assures us that the internal combustion locomotive will soon be an accomplished fact. He declares that the application of his engine to the locomotive is by far the most difficult problem yet met with in engine construction, due to the many exacting requirements under which it must operate, such as large power at starting, and complete speed regulation. The chief point in favor of the Diesel locomotive is, of course, its great saving in fuel: a rough estimate indicates that this may amount to three-quarters of the fuel now required by the wasteful steam locomotive.

Ships equipped with Diesel engines have attracted considerable attention of late, and have many successful voyages to their credit. The motor ship is the most sensational of the present applications of the oil engine, and allows direct comparisons to be made with steam as a motive power. The East Asiatic Company, the owners of the Diesel liner Selandia, running between Denmark and Siam, have expressed their opinion of the motor ship very forcibly by ordering ten more of the same kind, making a fleet of eleven splendid vessels, all propelled by Diesel engines. These ships, which have no funnels, are of themselves a suggestion that the marine steam boiler may become a thing of the past. A recent editorial in *Engineering News* takes the ground that, although at present engineers are considering the use of the Diesel engine for marine work chiefly for the greater profits to be realized, yet in the long run the keen competition in ocean transportation may make it impossible to operate steam vessels profitably at all.

One is naturally led to ask whether this revolution in power will extend to the fields at present occupied so completely by the gasolene engine, namely, the automobile and the motor-boat. There is no doubt that an immense saving in running expenses could be effected in the case of each, but these are instances in which fuel cost does not enter so largely, and the higher cost of a Diesel motor, even with its great efficiency and trustworthiness, would tend to prevent any rapid change to oil power. Still, where moderately large powers are concerned, it seems reasonable to expect that the gasolene engine will not be able to compete with oil engines whose fuel charges will be only from one-quarter to one-sixth as great, and with which there will be virtually no fire risk.

Science books in the list of Longmans, Green & Co. include: "Modern Science and the Illusions of Professor Bergson," by Hugh S. R. Elliott; "Primary Malignant Growths of the Lungs and Bronchi: A Pathological and Clinical Study," by I. Adler; "Text-Book of Microscopic Anatomy," by Edward Albert Schäfer; "The Life of the Plant," by C. A. Timiriazeff, translated from the corrected seventh Russian edition by Miss Anna Chéréméteff; "The Energy System of Matter: A Deduction from Terrestrial Energy Phenomena," by James Weir; "The Science of Logic: An Inquiry Into the Principles of Accurate Thought and Scientific Method," by P. Coffey, and "The Evolution of Sea-Power," by P. A. Silburn.

The attractively printed "Story of the Five Elements" (Cassell), by E. W. Edmunds and J. B. Hoblyn, is written in a lucid, fresh style, and is not lacking in either comprehensive exposition, considering the field covered, or conventionalism. There are, however, some flagrant misstatements. For example, in speaking of the manufacture of glass among the Egyptians, on page 5, the authors say: "Soda . . . had to be obtained from salt." As a matter of fact, the Egyptians employed native hydrous sodium carbonate ("nitrum" or natron) or trona, and were unfamiliar with the preparation of sodium carbonate from sodium chloride. Further, on page 37, the word "gas" is stated to have originated in the German *Geist*, whereas it is derived from the German *gäscht*. "Dephlogisticated" is used instead of *phlogisticated* on pages 70 and 80; for Rutherford termed nitrogen "phlogisticated air," even though he found it to be incombustible. The book is, on the whole, novel and interesting, and should appeal to youths interested in science and to thoughtful general readers of more mature years.

A timely little book is "Making a Lawn" (McBride, Nast & Co.), by Luke J. Doogue, superintendent of Boston Public Grounds Department. Mr. Doogue extends his information from the choice of seeds for sowing to the care of the lawn-mower.

A good deal of poetic feeling has gone into the making of "A Book on Birds" (Winston), by A. W. Bomberger. The author yields easily to the spell of bird life, and here and there cannot refrain from breaking out into verse, some of which commands respect for the precision with which observations are phrased. He is filled with his subject, and while aiming mainly to furnish the reader with convenient data to identify the commoner species of our northern latitude, he studies birds with something more than scientific instinct. The grief of a robin over the death of its mate, the discipline of a tern supervising a sand-bath of its young, the meaning of various cries, are humanly phrased, but not too fancifully, and generally with particular experiences or illustrations for confirmation. The illustrations, which have been made from photographs taken by William L. Baily, are many of them charming.

Drama and Music

Anne A. T. Craig's book, "The Dramatic Festival," which Putnam will bring out this month, gives suggestions for performing school plays.

In the preface to his "Yankee Fantasies" (Duffield) Percy Mackaye, speaking in favor of the one-act play, says that "creative experiment in that form is more practical than in longer forms." It may be doubted whether this is more than partly true. Short plays, probably, would be commoner than they are, if it were easy to write them. Special faculties of construction, condensation, and arrangement are essential to their successful composition. But they are convenient vehicles for the conveyance of an idea or the illustration of an episode. All the five little pieces which make up the sum of these Fantasies are supposed to be inspired by certain phases of New England life, which Mr. Mackaye declares to be "full of human surprises, some lovely as flowers, others exotic, pagan, humorous, grotesque." The illustrations which he offers belong chiefly to the last category. In many ways they reflect their creator's varied ability, and they make excellent reading, especially for any one familiar with the regions referred to. Local customs are faithfully represented. There is no lack of atmosphere. But, unfortunately—perhaps because Mr. Mackaye is so much more imaginative than he is humorous—the naturalism of the scene is constantly destroyed or obscured by the excess of the fantasy. For this reason, none of them is well fitted for the stage, with the possible exception of "Gettysburg." This patriotic war sketch, in which an old, paralyzed veteran recovers the long-lost use of his legs in the fervor of reminiscence, is full of vigorous descriptive writing and fine martial spirit. Here the power of the poet is displayed, as it is in "The Catboat" (a fantasy for music), in which Nico, a Mount Desert lad, who reads the Odyssey while he builds boats, conjures up a vision, and learns at last how the gold of youthful dreams oft turns to sawdust. The allegory is somewhat intricate, but the story is embellished with much poetic art. "Chuck," with its blend of joyous rural paganism and Calvinistic bitterness, is admirably veracious in many of its details, and fragrant of the soil. There is something vital and attractive about the scapegrace hero, with his woodchuck philosophy and morality; but the tale is not altogether pleasant, in spite of its sylvan surroundings. "The Antick," if lifelike in some of its personages and incidents, is often unreal, and is none the less sordid for its hint of Pan worship. "Sam Average," a silhouette of 1814, shows how the spirit of the country (Uncle Sam) inspired a wavering patriot to new sacrifices. It breathes a noble spirit, but has no other special value. On

the whole, these plays are disappointing. They are clever, fanciful, poetic, and American, but they are not good examples of one-act drama.

Winthrop Ames will make a number of productions next season. Among them will be a new drama by Edward Sheldon, and a new comedy by Arnold Bennett, "The Great Adventure," a dramatization of his whimsical "Buried Alive." Three one-act plays by Maurice Maeterlinck are also scheduled for production at the Little Theatre.

"The Five Frankforters," a play which has had much success in Europe, and of which some account has been given already in this journal, will be seen before long in the Lyric Theatre, London, in an English version by Captain Basil Hood. It deals with the early days of the Rothschild family. Norman McKinnel will superintend the London production, and the cast will include Henry Ainley, Louis Calvert, C. W. Somerset, C. M. Lowne, Dawson Milward, Leon Quartermaine, Clarence Blakiston, Carlotta Addison, and Henrietta Watson, an uncommonly strong combination.

Macdonald Hastings's play, "The New Sin," which was favorably received at some special matinée performances, is to be produced in the London Criterion for a regular run, by Messrs. Vedrenne and Eadie. Mr. Hastings's new comedy, "Love—and What Then?" has just been produced in the London Playhouse.

Lillah McCarthy and Granville Barker are about to produce Maurice Baring's Russian anarchist play, "The Double Game," at the Kingsway Theatre in London.

E. Lyall Swete's comedy, "Pitch and Soap," recently played for a theatrical charity in London, seems to have opened well, and then fallen to pieces in the third act. One critic observes that the author's eagerness to escape from the rut of the commonplace landed him in the morass of the incredible.

The "Improper Peter" of Monckton Hoffe, which Arthur Bourchier has just produced, with some measure of success, at the London Garrick Theatre, tells a flagrantly impossible theatrical story, but seems to be cleverly written, and to contain some effective scenes. Peter is a rich middle-aged Britisher—with Parliamentary ambitions and a shrewish, jealous wife—who harbors on his yacht an innocent maiden, who has been lured from home by a lying young scapegrace. His wife surprises him with the fair one, and, spurning all protestations of innocence, begins divorce proceedings, creating a scandal which promptly extinguishes all hope of political advancement. So he ceases to defend himself, lets the divorce go against him by default, and then promptly marries the girl, whom he loves and who now wildly adores him. The reputation of the bride apparently is to him a matter of no moment.

"The Stories of the Russian Ballet," by Arthur Applin, is a sumptuous folio, richly illustrated, which has been issued by the John Lane Company as a souvenir of the Russian dancers, who for two years diverted the public's attention even from the great opera stars. A preface on the ballet in general is followed by the stories in detail of nine of the pantomimes danced by Anna Pavlowa and her companions, "Cléopâtre" and "Schéhérazade" being among these pieces.

The faculty of Oberlin College has passed a regulation by which all students are required to take a course in appreciation of art as a condition of graduation. They may select any course in archæology and art, appreciation of music, or æsthetics. This emphatic expression of the faculty's belief in the importance of the æsthetic element in education would have delighted Edward MacDowell, who tried to introduce such a regulation into Columbia University. One can easily imagine what it would mean for progress in the fine arts if the example of Oberlin were followed by our colleges and universities in general.

"Las Orientaciones del arte tonal moderno" is the title of a brochure of 157 pages prepared by Guillermo M. Tomás, director of the Banda Municipal in Havana. It contains not only the programmes of the concerts given by him last year, but short sketches of the careers of the composers whose works he produced. Some of the programmes are devoted to the works of one master, others to those of one nation. One of them is devoted to Inglaterra and the Estados Unidos; on this we find the names of Elgar, German, Scott, Coleridge-Taylor, Chadwick, Foote, MacDowell, De Koven, Nevin, Norris, Cadman, and Van der Stucken. Bibliographic notes following each biographic sketch add to the value of this volume.

The management of the Munich Künstlertheater—the unique establishment in the Exhibition Park—announces its plans for this year's performances, which begin this month. Encouraged by the success attending last summer's elaborate production of "La Belle Hélène," it will again pay special attention to bringing out comic operas. The first of these will be a new work by Oscar Strauss, entitled "Dichterliebe" (Artists' Love), which deals with three episodes in the life of Heinrich Heine. A ballet pantomime adapted from Gottfried Keller's "Das Tanzlegendchen" (The Little Dance Legend), with music by H. Bischoff, will be given at a series of matinées. Offenbach's fascinating opera-bouffe will, of course, again be performed, with Max Reinhardt's scenic arrangement. In all of these representations, soloists, chorus, and orchestra will be recruited from the best German and Austrian theatres.

A History of French Architecture from the Reign of Charles VIII till the Death of Mazarin. By Reginald Blomfield, A.R.A., M.A., F.S.A., Honorary Fellow of Exeter College, Oxford. With drawings by the author and other illustrations. 2 vols. Pp. xxxii +169, xii+176; 178 plates. New York: The Macmillan Co. $20 net.

Students of architectural history have not in the past been accustomed to look to England for adequate and sympathetic treatment of the architecture of the Renaissance outside of England. The influence of the Victorian Gothic revival, of Ruskin's critical animosities, and of Fergusson's unsympathetic attitude towards all the modern styles (which he slightingly characterized as the "imitative styles"), has long been potent to a singular degree in English architectural literature. Many in England who have written on the Renaissance have limited themselves to its British phases, with especial emphasis on its earlier developments under Elizabeth and James I, although the work of Inigo Jones and Wren has received a good deal of attention and some rather excessive laudation. Anderson's "Architecture of the Renaissance in Italy," published in 1896, was the first serious contribution of recent English scholarship to the history of the Renaissance on the Continent, and, though limited in its field, it displayed a refreshingly appreciative attitude towards its subject. During the past fifteen years there has been a noticeable broadening of outlook among English writers, one of whom, Reginald Blomfield, an architect of distinction in London, has made for himself an honorable place. His "History of the Renaissance in England," which appeared in 1897, and a little volume of spirited essays entitled "The Mistress Art," have given evidence not only of careful scholarship, but of a fine catholicity of taste and a rare breadth and sincerity of appreciation. These qualities are conspicuous in his latest work, "History of French Architecture, 1494-1661."

Mr. Blomfield is fortunate in his selection of a subject; for it is a singular fact that this book stands alone in its own field. With all the wealth of literature relating to the French Renaissance, there is no other work which covers upon an adequate scale the development of the French styles from the beginnings of the Renaissance under Louis XII and Francis I to the full culmination of the neo-classic architecture under Louis XIV. Such publications as Sauvageot's "Palais, châteaux et maisons de la France," and the "Motifs historiques" of César Daly are in no sense histories of the periods or styles to which the examples they illustrate and discuss belonged. Mr. Blomfield's work, therefore, occupies a place wholly its own; the English architect and scholar has performed an important task.

Mr. Blomfield approaches his subject mainly by way of the architects and builders. The first volume opens with a chapter on the Italians in France; discusses in the second chapter The Master Builders; then, after two chapters on the New Manner and the reign of Francis I, takes up successively the work of Philibert de l'Orme, Jean Bullant, Lescot and Goujon, the French sixteenth century sculptors, the Du Cerceau family, and neo-classic architecture in the

sixteenth century. The second volume is concerned with church building, the Jesuits, Henry IV and Marie de Médicis, Lemercier Le Muet, and François Mansart, and closes with a chapter on French architecture in 1600-1661. Thus the personal note predominates, though the builders and monarchs and architects are studied always through and for their works, and the monuments they erected are analyzed and discussed with the knowledge and experience possible only to the trained architect. Moreover, the discussions and critical judgments are based as far as possible on personal inspection, not mere literary erudition or even acquaintance through engravings and photographs: the author explains that he has "for several years endeavored to quarter the ground in France and to study on the spot the buildings referred to in the text." One may not always agree with the criticisms, but one feels always that the critic is expressing real convictions based on his own observation.

The author is a convinced admirer of neo-classic ideals in architecture. The measure of excellence in a building is, with him, the degree of its conformity to the principles, and embodiment of the qualities, of classic architecture, or rather of the revival of classic forms and of Roman ideals as exemplified in the masterpieces of Peruzzi, Vignola, and Palladio in Italy, and of the great masters who wrought for Louis XIV and XV in France. The qualities of stateliness, breadth, simplicity of composition, correct scale, refined detail, symmetry, nobility of mass and silhouette, go to make up the "grand manner" which he admires. Accordingly, he misprizes the architecture of the reign of Francis I, and refuses to its builders the credit of being architects at all. The charm of the picturesque mixture of details, of the very incoherence of the châteaux of the Loire valley, of the north wing of Blois, of the turrets and chimneys of Chambord, does not appeal to the author. Buildings before De l'Orme's day "do not show any real architectural treatment"; and "while there is much that is delightful in buildings such as the Manoir d'Angô, many of the most famous buildings of Francis I "are great agglomerations of building details, which, when sifted by critical analysis, resolve themselves into a few very commonplace motives strung together without serious thought of composition, without that anxious consideration of scale which alone justifies the claim of buildings to rank as architecture" (Vol. I, p. 26). The church of St. Eustache in Paris is treated as utterly without merit; the picturesque interior of St. Etienne du Mont, and particularly its much-admired choir-screen, fare no better, and the great court of the Louvre comes in for severe criticism and no admiration at all. In these judgments, which are so wide of the verdicts usually passed on these and many other buildings of their class, Mr. Blomfield shows courage and independence, no doubt; but one feels that his canon of appreciation is too rigid, or his application of it too narrow and unyielding, to allow of full justice. On the other hand, his treatment of the work of De l'Orme, Bullant, Goujon, Lemercier, and François Mansart deserves the fullest praise. It is appreciative but discriminating, judicial and yet sympathetic, and what he says of these men and their works ought to be read by every architect and critic of architecture. Whether he does justice to Pierre Lescot is open to question. He considers him a mere courtier-architect, all of whose work was done by proxy, largely by Jean Goujon. These assertions are not supported by very convincing evidence; indeed, it is rather the lack of evidence for Lescot's actual authorship than the existence of evidence against it, that seems to have brought him under the author's condemnation as a pretender.

The analysis of the relations of the French master-builders and masons to the Italians imported by Louis XII and Francis I, and of the real part played by the so-called "architects" who built the châteaux, palaces, and churches of those reigns, is thorough and scholarly, based on the published pay-rolls of the various building operations ascribed to them. Mr. Blomfield's conclusion is that there were no architects in France in those days; that the master-masons did not design the buildings they erected; and that the designs, so far as they had any coherence or composition at all, originated in the brains of the royal clients or of their chamberlains or stewards in charge of the operations. The reader must follow the steps of this reasoning in the original; the reviewer cannot attempt to reproduce or summarize it.

The fact that Mr. Blomfield stops on the very threshold of the period of the "grand manner" under Louis XIV and XV, encourages the hope and expectation of another volume from his pen in the near future.

In the matter of illustrations the two volumes are rich. Of the 178 plates, 42 are collotype prints from photographs, well chosen and admirably printed; 26 are reproductions of pencil sketches by the author; the remaining 110 plates are reproductions of engravings from Du Cerceau, Marot, Blondel, and other French sources. These engravings are invaluable, fully worthy of the high praise Mr. Blomfield accords them in his Introduction. They comprise plans and sections as well as elevations and perspectives, and should bring joy to every lover of good drawing as well as to every architect who can appreciate neo-classic art in any form. Mr. Blomfield's pencil sketches show the perception and touch of the artist, but it is not quite easy to understand why many of them were introduced. Several are mere summary sketches of details which hardly deserve the honor of a whole page, and do not in any degree elucidate or illustrate the text. A few are, however, quite admirable and helpful drawings, particularly plates xv, xvi, xl, xliv, cxl, and clv.

The book is always readable and often entertaining. It is unfortunate that the proof-reading should have been so negligent, particularly in the transcription of French names and quotations. Names are several times pluralized (*e. g.*, "Les Du Cerceaux") in violation of a fundamental rule of the language; "Grotes" for *grottes*, "des plusieurs" for *de plusieurs*, "La Musée" for *le Musée*, are a few of the many slips for which there is no excuse. On page 30 of Vol. I Trinqueau should evidently be substituted for Chambiges; on page 69 of Vol. II, "two" oblong bays should be *three* oblong bays; other errors of the same sort are too numerous. Yet these are minor blemishes on a work whose solid merits should earn for Mr. Blomfield the gratitude of every architect and of every lover of sound scholarship devoted to the history of art.

Art books in Putnam's list include: "South American Archæology," by T. Athol Joyce, and "Mesopotamian Archæology," by Percy S. P. Handcock.

Albrecht Dürer's "Journeys to Venice and to the Low Countries" is one of a group of books announced by D. B. Updike of the Merrymount Press, Boston.

Homer Calvin Davenport, who died a week ago at the age of forty-five, had virtually no schooling. He was once a jockey, a railway fireman, a clown in the circus. His skill as a cartoonist became evident a decade or more ago, especially in hitting off captains of industry, such as Mark Hanna in the $-suit of clothes. Two books, in addition to one containing his drawings, bear his name—"The Bell of Silverton, and Other Short Stories of Oregon" and "The Dollar or the Man?"

Finance

A STOCK MARKET REACTION.

About one month ago, Stock Exchange observers of the more conservative sort rather generally made up their minds that the rise in stocks had spent, for the time at any rate, its legitimate force. The rise in prices had begun at the end of February. It had proceeded rapidly in the face of the labor complications in England and in this country. It had been based on the visibly strong economic position of the United States, and on the belief that, with financial liquidation apparently completed, with politics shaping itself more reason-

ably, and with a satisfactory outlook for the crops, the prospect favored a year of rapid industrial recovery. On this basis, Stock Exchange prices had advanced from 10 to 20 points, and in the later stages of the movement the outside public had become an enthusiastic buyer.

As is usual under such circumstances, the pace of the advance was more rapid at the high prices than it had been around the lowest, and then—again in accordance with experience—things not expected in the market's calculation began to happen. The Titanic tragedy diverted the public's attention from the Stock Exchange. With Mr. Roosevelt's victories at several primary elections, politics took an unexpected turn. The early wheat crop, for which a highly favorable condition had been predicted as a result of the heavy winter snows, was discovered to be in a greatly impaired condition. Earnings of the Steel Corporation, for the first three months of 1912, were shown to have been below all expectations, leaving a $6,200,000 deficit after the quarter's dividends were paid. Finally, the coal miners, who had agreed to an amicable settlement of the wage dispute, suddenly rescinded their agreement and reopened the whole quarrel.

No doubt the normal response of the Stock Exchange to these new developments would have been a cautious and deliberate retreat, and the cessation of the excited rise in prices. But precisely at that time, it became apparent that a group of wealthy and reckless Wall Street operators, backed by their individual fortunes and their bank affiliations, were determined not to let the "bull movement" stop. Two active speculative stocks—shares of the Reading Railway and of the so-called Can Trust—were largely under the control of this group of people. In the teeth of the unfavorable news of the fortnight past, these stocks were put up 8 to 15 points, with a pretence of enormous buying and with plain signs of manipulation. This undertaking had in the end its natural result. People of sense at once abandoned such a market. Towards last week's close, a heavy break in prices began; it continued at this week's opening. Reading stock, which had risen 31 points in the three preceding months, fell 8½ within a week; United States Steel, which had risen 15, declined 9⅛; Union Pacific, after a rise of 15½, dropped back 8; St. Paul, having gained 9, lost 6¾. So ran the story pretty much throughout the list.

To what extent this tumultuous break in prices should be taken as a sign that the late'y favorable outlook has been changed, and to what extent it merely reflects a foolishly overdone speculation, is no doubt debatable. But whichever of these assumptions is correct, and whether the Stock Exchange reaction should properly be ascribed to the repudiation of their agreement by the coal miners, or to the week's previous accumulation of more or less disconcerting news, or to general principles, it should have served a valuable purpose. In any case, it is one of those useful intimations which serve to keep the public mind in a state of sanity and to remind those celebrities who regard the financial fortunes of the markets as under their personal charge that there are limits which they will be wise not to transgress.

The plain truth of the matter is, that for losing their heads, misreading a market, and persisting in a speculation when it ought to be plain to any observant man that the time for it has passed, the so-called "inside operator" of Wall Street is frequently almost as hopeless as the excited hundred-share speculator on a ten-point margin who sits before the blackboards. The chief difference between them seems at such times to be that the last-mentioned ornament of Wall Street employs and usually exhausts his own little stock of capital, whereas the operator who puts up Reading and "Can" their 15 points when the market's legitimate trend is visibly the other way, is apt to be backed by a bank or banking combination which will help him over the awkward places into which his rashness or foolishness leads him.

The panic of 1907 helped to rid us to some extent of this chronic nuisance of the American market. It was thought for a while that such finance as shattered confidence in American conservatism and racked the Stock Exchange and the money market, in the autumns of 1902 and 1905, would not be repeated very soon. But we had the exhibition of 1909, with the deplorable incidents in the financial policies of our largest industrial corporation, and, next, after a season of enforced and undoubtedly salutary retirement, followed the recent and very brazen attempt to resume the same sort of practices. That the conditions and circumstances surrounding the markets of two months ago were extremely favorable, every one should by this time be aware. But these people achieved the reputation, long ago, of spoiling the best of markets by their absurd experiments and complete misjudgment when a situation had changed. That is the sufficient reason for concluding that such reactions on the Stock Exchange as that of the past six days are on the whole beneficial in themselves.

People who look philosophically at the general situation—who smiled at the Wall Street oracles at the time, eight months ago, when it was fashionable to shed tears over the Anti-Trust law and to declare that the market could never rise again until the law was repealed—are entitled to suggest the wisdom of going slow at the present time. Prosperity will not necessarily be scared away permanently because Mr. Taft's campaign is being badly battered by Mr. Roosevelt, or because the Steel Corporation is paying six millions in unearned dividends for a quarter, or even because the winter-wheat acreage is heavily cut down by an inclement season and labor disturbances multiply.

Good times have persisted on other occasions, in the face of all such things. But there are unpleasant possibilities embodied in the present state of affairs. They may or may not control the industrial and financial destinies of the rest of the year. They may turn out not to have been at any time really troublesome obstacles. But they are nevertheless rocks in the course, and the prudent financial mariner will not drive his ship at full speed until he sees just how dangerous they are. The position of things just now is such that this cannot be determined immediately.

LATEST EDUCATIONAL PUBLICATIONS

SCIENCE

Atkinson's Botany for High Schools. New Edition. $1.25.
Nutrition, reproduction, and relation to man are made the dominant aspects of the subject: what plants are is made to appear in terms of what they do. Structures and processes are then interpreted from the point of view of both man and the plant.

Hall's Elements of Physics. (Ready soon.)
An entirely new work that takes account of the advances made both in the science itself and its presentation in the schools. The exercises, grouped together at the end of the book, include the "Harvard list."

Kimball's College Text-Book of Physics. $2.75.
A general course for all classes of students. Emphasizes the purely physical rather than the mathematical aspects of the subject, with "constant and strong appeal to the rational, wherein lies so much of the importance and value of physics as a cultural study."

Kellogg's The Animals and Man. $1.25.
A novel presentation of zoölogy, including a consideration of human structure and physiology.

Noyes's Qualitative Analysis. New Edition. $1.10.
Entirely rewritten. Fuller discussion of the modern theories of solution and of the laws of equilibrium to analytical reactions.

Salisbury, Barrows, and Tower's Elements of Geography.
While treating physiographic processes and features briefly, it develops at greater length the relations of earth, air, and water to life, and especially human affairs. **Ready soon.**

HISTORY

Shepherd's Historical Atlas. (American Historical Series.) $2.50.
Wide range of maps and charts, including several physical maps. Complete index. "This is the book for which we have long been waiting," says Professor Burr of Cornell University.

Muir's School Atlas of Modern History. $1.25.
Presents physical features without obscuring culture-details. 120 colored maps, 29 plans of battles, etc. Descriptive text.

Vincent's Historical Research. $2.00.
For the advanced student, but of great value also to the general reader. Full descriptive bibliography.

PSYCHOLOGY

Yerkes's Introduction to Psychology. $1.60.
Introduces the student to the subject by treating the subject-matter, aims, methods, and values of the science. An outline and not a compend of facts, it deals with the groundwork of the science and not especially with physiological, genetic, or comparative psychology.

TECHNOLOGY

Goodenough's Principles of Thermodynamics. (American Mechanical Engineering Series.) $3.50.
Emphasis on the theories rather than on the applications. Includes a discussion of the latest researches on saturated and superheated vapors.

Babbitt's Working Drawings. $1.00.
A practical introduction to mechanical drawing, leaving projection to a second year.

GRAMMAR AND THINKING

A Study of the Working Conceptions in Syntax

By Alfred Dwight Sheffield

Formerly Revision Editor for Grammar, Rhetoric, and Prosody on the Staff of Webster's New International Dictionary.

Cr. 8vo. $1.50 net. By mail, $1.65.

This book offers teachers and serious students of language an intensive review of the conceptions underlying syntax. The growing discussions over grammatical nomenclature have made it clear that questions of terminology must be approached by a fresh appraisal of the notions that our terms presuppose. Hitherto the thought of specialists in this field has been available only in very technical writings, but in this book it is lucidly set forth and followed into its background of psychology and logic. Teachers of English will find a special suggestiveness in what is here shown of the bearing of grammar upon composition work and upon the critical training too often left to formal logic.

THE STORY OF MUSIC

By W. J. HENDERSON. *Twelfth Edition, Revised, with additional matter.* Crown 8vo. Pp. xx+206. $1.00 *net;* by mail, $1.10.

". . . Mr. Henderson has accomplished, with rare judgment and skill, the task of telling the story of the growth of the art of music without encumbering his pages with excess of biographical material. He has aimed at a connected recital, and, for its sake, has treated of creative epochs and epoch-making works rather than groups of composers segregated by the accidents of time and space. . . . Admirable for its succinctness, clearness and gracefulness of statement."—*New York Tribune.*

JohnBrown: ABiography Fifty Years After

By OSWALD GARRISON VILLARD

SOME TRIBUTES TO THIS REMARKABLE HISTORICAL WORK.

Philadelphia PUBLIC LEDGER. "A tremendous book, more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesman Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with a great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

PORTLAND OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The NORTH CAROLINA REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy, and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able even to add anything of importance to Mr Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

Third Edition.

FOR LOVERS OF THE OUTDOOR LIFE

THE BACK LOG IDEA

is the working theory of a camp aiming to refute the tenderfoot's conviction that "roughing it" is essential to real camping. Its method is not to bring the luxuries of civilization into the wilderness, but to use the ingenuity of woodcraft in removing the discomforts which campers usually find, so that the guests can experience at first hand the pleasures of an outing in the Adirondack forest, with none of its hardship. Should any persons within the circle of *The Nation's* readers feel interested in this sort of camping, let them send for the booklet on the Back Log Idea. Address,

THE NEW DEMOCRACY

By WALTER E. WEYL, Ph.D.

POLITICAL AND ECONOMIC TENDENCIES IN THE UNITED STATES.

"The best and most comprehensive survey of the general social and political status and prospects that has been published of late years."—*The Pittsburgh Post.*

"A strong analysis of the whole subject. It will be read widely and will exercise a large influence."—*The Evening Mail.*

"Dr. Weyl has read the modern writing on the wall and interprets it to us more clearly than has yet been done."—*New York Globe.*

"A thoughtful volume—a big synthesis of the whole social problem in the country. A keen survey."—*Chicago Evening Post.*

"A searching and suggestive study of American life. . . . A book to make people think."—*Newark Evening News.*

"A complete and circumstantial statement of the whole case. . . . Our social and economic unrest is not to lead to a war of classes, but to a 'national readjustment.' "—*New York Tribune.*

"A masterly, scathing, and absolutely fearless arraignment of things that ought not to be in a republic, and of tendencies that no democracy ought to tolerate."—*Boston Herald.* **Cloth, $2.00 net; postpaid, $2.12.**

THE WISCONSIN IDEA By Charles McCarthy

Explains State regulations of railroads, public utilities, the referendum, the recall, primaries, etc., as identified with the famous "Wisconsin" development.

Professor MUZZEY'S AMERICAN HISTORY is to a sociologist the most interesting single volume of American history that has yet appeared. I heartily applaud his conception that the history of this country continually needs to be reconceived in order to provide background and interpretation for the interests and problems each generation has to solve. By daring to throw the historical facts into new perspectives, Dr. Muzzey has succeeded in producing not only a strong and illuminating textbook, but also a book of intense interest and significance to the general reader. JohnBrown: ABiography Fifty Years After

By OSWALD GARRISON VILLARD

SOME TRIBUTES TO THIS REMARKABLE HISTORICAL WORK.

Philadelphia PUBLIC LEDGER. "A tremendous book, more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesman Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with a great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

PORTLAND OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The NORTH CAROLINA REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy, and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able even to add anything of importance to Mr Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

Third Edition.

NEW YORK, THURSDAY, MAY 16, 1912.

The Week

President Taft's signing of the pension bill can be explained only as a yielding to strong political appeals. His advisers and campaign managers have no doubt pointed out to him the damaging use that would have been made of a veto in the critical Ohio primaries. It was very likely urged upon him also that the bill would be passed over his veto. Very likely it would. The log-rolling combination in Congress which favors this waste of public funds, this means of political corruption, is unquestionably powerful. But how is it even to be checked, how is it to be prevented from moving on to other successful raids upon the Treasury, unless the Executive shall make a stand against it? For the present, it has cut down its demands from $75,000,000 a year to $25,000,000 or $30,000,000—nobody knows how much money the increases of pension now granted will cost. But the next step and then the next will speedily be taken, and we shall soon have the dollar-a-day pension with charges of $100,000,000 additional.

This opportunity to do a great national service was before President Taft, but he has been dissuaded from attempting to render it. That he would have flung himself into the breach, had it not been for the exigent political situation, there is good reason for believing. He has been preaching economy and working for it, yet he consents to sign away $25,000,000 a year in needless gratuities. No one has a clearer understanding than he of the principle at stake. He knows perfectly that this huge pension fund, secretly distributed, has become the sinews of war for politicians, and that no more threatening scheme has ever been devised, not merely to bind new burdens upon the taxpayers, but to eat away political purity. President Taft's failure to rise to the occasion, however, only defers the fight which will have to be made against all this pension debauchery, and for leadership in which the American people will have to search out a man of the Grover Cleveland type, strong and unafraid.

The friends of direct primaries must take prompt action to limit the expenses attached thereto unless primaries, too, are to come into disrepute. Hard on the heels of the announcement that Roosevelt's New York managers spent $5 for every vote he received in the recent primary, come the astounding figures from Pennsylvania, where it appears that approximately $2,000,000 was paid out by the friends of Taft and Roosevelt. In Pittsburgh alone the outlay was $98,635, that stern reformer, William Flinn, who made his money out of the intimate connection between politics and city contracting, alone giving $22,700 to Roosevelt. On the Taft side we find the same old sinister corporation contributions to the Republican fund which were fully as characteristic of the campaigns in Roosevelt's day as in any other. It is serious enough that there should now be two campaigns antecedent to each election—in Louisiana there have been three in the last nine months, which have virtually exhausted all the various factions. To this disadvantage should not be added the raising and expenditure of lavish sums of money in order that the people may rule!

Senator Rayner has given an interview in regard to the approaching campaign, in which he points out that, in his opinion, the tariff must be the chief issue. In this he is wise. The Democrats ought never to forget that this has been their winning issue, and it can be made so again by a fearless, sincere demand for a tariff for revenue only. True, some of the Southern Democrats are either luke-warm in opposition to the high tariff or openly protectionists for their local industries. But this only emphasizes the more the necessity of putting this issue to the front by the party as a whole. Never was the country so ripe for a full discussion of the tariff; never have the evils it brings with it been so apparent to the public at large. The Lawrence mill-strike has once and for all exploded the argument that protection means the safeguarding of American labor from the competition of hordes of underpaid foreigners. Even in Pennsylvania they have learned that it does not do to make a fetich of the tariff. The Pennsylvania Democrats have spoken out strongly for tariff revision, and other States should follow suit.

A memorably long battle for an important change in the Federal Constitution virtually ended Monday when the Congressional deadlock of a year over the direct election of Senators was broken. Most gratifying of all is the fact that, as passed, the resolution contains Senator Bristow's amendment preserving to the Federal Government supervision of the time, place, and manner of holding Senatorial elections. This was of the utmost importance, for without it the direct mandate of the Constitution that the electoral rights of citizens shall not be abridged might have been nullified. In other words, it would virtually have insured indefinite negro disfranchisement. Recognizing this, thirty-nine of the Southern Congressmen fought violently against the Bristow amendment, which Congressman Underwood, Southerner that he is, bravely upheld, although the other members of the Alabama delegation were among the thirty-nine. We do not believe that Mr. Underwood will suffer for this display of political courage, or that there is much in the threat that the South will now refuse to ratify the amendment to the Constitution. The country's sentiment is all the other way.

It would manifestly be improper and unfair to express an opinion about the charges brought against Judge Archbald until his witnesses shall have been heard or he shall make his own defence. But it is well to point out the completeness of the remedy the country has in case it should appear that a Federal judge has been guilty of malfeasance. Impeachment has, happily, been very infrequently resorted to in our history—happily, because there has been no necessity for it. But the process can be made speedy and effective. We see this in the initial steps which have promptly been taken in this instance. A quiet investigation by the Department of Justice, then a turning over of the papers to the Judiciary Committee of the House, next an open inquiry, with full

taking of testimony and cross-examination of witnesses, then an orderly report on the matter to the House, with preparation of articles of impeachment following, if necessary. Such a procedure, long established and perfectly understood, is a much readier means of getting at judicial corruption than any haphazard system of "recall" could possibly be. In fact, the difficulties of working out any plan of recalling Federal judges by popular vote are so great that even the most enthusiastic recallites have shrunk from attacking that problem.

The action of the House in voting to abolish the Commerce Court looks more impetuous than considered. Advantage appears to have been taken of two or three decisions by that court which have given offence—and which will come for review before the Supreme Court—and also of the charges made against Judge Archbald. But the real question is whether the objects aimed at by the original establishment of the court are not still worth seeking to attain, and whether they have not in good part been already attained. They were, as all know, to bring questions affecting railway rates and so on directly before a single Federal court, so that a body of unified decisions might be built up, and also to expedite the hearing of such cases. As to the latter, we have the assertion of President Taft, based on the record, that the Court of Commerce has reduced the average delay in getting such cases to trial from nearly two years to about six months.

Honor is no monopoly of thieves—there is honor among murderers also. That sort of honor is the virtue of the citizens of Coatesville, Pa. Six of the twelve alleged leaders of the mob which last August burned the negro Zach Walker at the stake were acquitted in short order last year by Chester County juries. Last week another jury brought in a verdict of not guilty in favor of a seventh defendant, whereupon the State gave up in despair, and asked that the five remaining prisoners might be discharged.

Mr. McCormick's gift of twenty-five thousand dollars to last year's victorious football team at Princeton is a commendable step in the direction of putting athletics on a really sound commercial basis. Football finances have already enlisted some of the finest minds in our colleges, but the happy-go-lucky spirit of play has still been too prominent in the management of our leading intercollegiate interest. The elaborate system of recruiting material from the preparatory schools, the long and arduous period of training, the spirit that makes defeated teams walk weeping from the field, all these facts have gone far towards removing the silly notion that intercollegiate games are played just for the fun of the thing. Football is real, football is earnest, even if the grave sometimes lies beyond the goal. Spring practice and autumn practice, the enlistment of an army of expert coaches, the long blackboard drill in strategy, the dispatch of trained watchers for the purpose of studying the peculiarities of rival teams, all these things have happily contributed towards making football a business and not an amusement. What was needed was the prospect of a substantial money reward for the victorious team to free football contests from any intrusion of the play instinct.

Each year comes the season of one sport in which there is neither sensationalism, commercialism, nor danger. That season is upon us, and the sport is angling. The best thing about it is that it depends for complete enjoyment not upon a full creel or a record fish, but upon exercise and environment. Walton sounded this note when he wrote: "Doubt not but angling will prove to be so pleasant that it will prove to be, like virtue, a reward unto itself." This is not to decry the actual catching of fish nor the skill which is necessary to accomplish it. That in itself is an art, as the Compleat Angler again bears witness. "Angling is somewhat like poetry," it declares; "men are to be born so." But we know no sport in which success is so unnecessary to pleasure as in this gentle art. The close touch of nature, the dapple of sunlight on swift water or the limpid mirror of the quiet pool—these things are to be prized for themselves.

To place the lure daintily upon the stream, to watch the flashing rise of the fish, and then to play him to defeat and capture, these are the fascinations of this sport. But because of its simplicity and because it is incompatible with hurry and bustle and "push," angling is an antidote for many of the sicknesses of the present day. It cannot well be exploited. It does not gather jostling thousands in confined areas, and then raise their excitement to the point of hysteria. It offers little encouragement for individual display and modifies competition to a basis of friendly rivalry. Therefore, angling is healthy for mind as well as body, and offers at once a pleasant and a profitable escape from the feverish activity of modern business and the equally feverish whirl of modern pleasure. One of the safest hobbies for the man of to-day is that of rod and reel. Let him spend a day or a fortnight on a stream where the spotted trout lie snug and he "will find angling to be like the virtue of humility, which has a calmness of spirit and a world of other blessings attending upon it."

On February 23, 1910, Andrew Furseth, president of the International Seamen's Union of America, presented a petition to Congress. In connection therewith he made a statement to that body which contained the following prophecies, remarkable enough in the face of the Titanic disaster:

> Safety at sea! What a lot of rot has been written and spoken on this subject! Safety at sea is promoted, first, by a good vessel, stanch and well found; second, by good boats and *enough of them;* third, by a crew sufficient in number and skill to handle the vessel while she is afloat, to lower, man, and handle the boats when the vessel must be abandoned. . . . Now, let me entrust you with a very deep secret. There is not sailing to-day on any ocean *any passenger vessel* carrying the number of boats needed to take care of the passengers and crew, nor a sufficient number of skilled men to handle those boats which are carried.

Mr. Furseth added that "vessels that cannot sink and will not burn have not yet been built." If the public wished safety, it must insist, he declared, that there should be a standard of individual efficiency for the deck crew, and that there should be provided for these men "a decent place to live, eat, and sleep in." To do so, he concluded, would be to help save thousands of lives.

That the officers of steamships are underpaid and overstrained is pretty definitely understood; that the crews are in similar state, besides being improperly quartered in a place where it is

least easy to turn out in a hurry, bids fair to be proved equally true. At any rate, the Titanic's loss has made it clear that things are not going well among seamen. Despite the calmness of many of the crew, some of the facts that are coming out do not redound to the credit of the men of the sea. Like the captains of those near-by steamers that could have saved all, but refused, they have made us all ask whether the old ideal of the sailor as a man brave to rashness, ready at any time to risk his life for others, and characterized by many other noble attributes of character, has faded from the sea; whether the modern steel machine shop and hotel they call a liner has made of the crew an ignoble unseamanlike lot. If this is true even in slight degree, then let us begin at the bottom as well as at the top; let us have well-paid, well-lodged, and well-fed sailors and enough of them, trained to boats and drilled in their duties.

On all sides it is admitted now that a clean-cut victory has been won by Madero's forces in Chihuahua. The rebel army is in precipitate retreat northward, and it is doubtful whether even its intrenched positions at Rellano can hold out against the superior artillery strength of the Federalists. Apart from the principal scene of operations, Maderist successes are reported in several directions, and altogether the situation during the last week has dramatically changed. It may have been the feeling that one more defeat meant the ruin of their cause which spurred the Federalists on to desperate efforts. But there are indications also that long and careful preparations had been made for the battle and that an excellent strategist is at work in Madero's camp. The effective way in which Orozco's outflanking attempt was beaten back a few days ago, and the equally effective way in which the victory was followed up with an assault in front, show that the reported demoralization of the Federalist forces was a myth. If Orozco, instead of making an immediate attempt to retrieve his fortunes, decides to continue his retreat northward, this fact taken in conjunction with the Vasquez Gomez fiasco at Juarez will add enormously to Madero's prestige and administer a sharp check to intervention talk in this country.

The Home Rule bill passed its second reading in the House of Commons on Thursday of last week by a majority of 101, which is seven more than the majority on the first reading. Mr. Asquith in his closing speech declared that if the Irish vote in the House of Commons were eliminated, there would still be a majority of forty or fifty in favor of Home Rule, and forty is just what the actual vote indicated. If we subtract from the Government poll of 372 the 81 Irish Nationalist votes and from the Opposition poll the twenty-odd Ulster votes, the count would have stood 290 to 250. There thus exists within Great Britain a substantial majority in favor of ending the centuries-old quarrel with Ireland by rendering to the sister nation the rights she has so long and so persistently demanded. This circumstance Mr. Asquith turned to effective use in appealing to a sober, practical nation like the English. Respect for the established fact has been ingrained in the British temperament. And what more solid fact can be adduced than a people that has not ceased to clamor for self-government, year in, year out, in peaceful ways and through violence? Mr. Asquith argued that under democratic conditions this persistent claim must be satisfied. But no Government, whether democratic or not, could hope to hold out forever against such a campaign as Ireland has waged.

An amusing and somewhat instructive controversy was provoked by a remark of Lloyd George's in his speech on Welsh Disestablishment. Lord Hugh Cecil had protested that it was something like "sacrilege" to lay a hand upon the temporal possessions of the Church, and Lloyd George retorted that the Cecil family had not always objected to grants of Church property. The allusion was, of course, to gifts of priories and ecclesiastical manors to the Cecils in the sixteenth century. Both Lord Hugh and Lord Robert Cecil asserted that none of this property had descended to them, but they were promptly called to book by Professor Pollard of Oxford, with citations from the "Papers" of Henry VIII. As Lord Robert had observed that Pollard's views were "astonishing even in a professor," the professor was seemingly justified in retorting that Lord Robert's idea of evidence was "astonishing even for a lawyer." It was Lord Hugh, however, who had the last word, and displayed the family talent for controversy by declaring that it was absurd to hold that "remote descendants are precluded from censuring immoralities which resemble those by which their ancestors benefited." He wound up pungently:

> Suppose that Mr. Churchill denounced in the House of Commons some transaction as corrupt, would it be anything but childish and ill-mannered to reply that it was too late for him to talk about corruption because the great Duke of Marlborough made illicit profits on army contracts, and Lord Sunderland freely accepted bribes? I am surprised that a man in Professor Pollard's position should be so foolish. He might as well pick a pocket and then complain that the policeman who arrested him was descended from Robin Hood.

News of the sending to London of Germany's ablest diplomat in the person of Baron Marschall von Bieberstein, is a clear reminder of the fact that the decadence of the ambassadorial office has been a good deal exaggerated. The telegraph and the cable have undoubtedly restricted the scope and liberty of diplomatic representatives. Great issues are now handled directly from the seats of government, or else the policy of a nation's representative abroad is guided by daily instructions from home. The principal function of an ambassador has been taken to consist in the cultivation of pleasant social relations with the Government and the people to whom he is accredited, which, of course, is an indirect way of promoting the smooth functioning of diplomatic business. But recent events have shown that it still rests with an ambassador whether he is to be merely an exalted messenger boy or a personal factor. It is now recognized everywhere that in the late negotiations between France and the German Empire in regard to Morocco and the Congo, the French ambassador at Berlin, Jules Cambon, conducted his case with extraordinary ability. The history of diplomatic negotiations between Germany and Great Britain during the same difficult period also showed that a little less Prussian rigidity on the part of the retiring ambassador in London, Count Wolff-Metternich, might have saved a great deal of misunderstanding and heartburning. After all, even a messenger boy does not help things by whistling as he enters the office and slamming the door behind him.

THE PRESIDENTIAL TERM.

Monday's report by the Judiciary Committee of the Senate, strongly favoring a six-year term for the President, with ineligibility for reëlection, is in line with the Clayton resolution now before the House. Both are plainly born of the present agitation over the question of a third term. But for that, it is safe to say that the proposal would not now have been brought forward. Constitutional amendments, however, are even less than ordinary laws devised to advantage in a flurry. If the proposed one were adopted—which it could not be finally before 1914 or 1915—it would be powerless to affect Mr. Roosevelt's ambition to break all Presidential records. If he were elected again this year he would thereafter be eligible for another term—then six years. It is plain, therefore, that so far as concerns his individual case, we shall have to depend upon the unwritten law against a third term, with his specific pledge under no circumstances to accept another nomination.

There are, of course, independent arguments for the six-year term. The disturbance and turmoil of Presidential elections would not then fall every four years. The agony would be subdivided by six. It is also urged that the longer term would enable a President to mature his policies and carry out his plans better than in four, while the temptation to play to the galleries and make an improper use of patronage in order to win another election would be removed from him. It is an engaging picture that is presented to us of a Chief Magistrate devoting himself absorbingly to the duties of his high office, in a serene atmosphere above party politics and partisan bickerings, a calm and strong leader and exponent of the popular will. All this is appealing, and the reasons given for the change have a weight that everybody can perceive; but certain practical difficulties occur to those who look into the matter carefully.

First and foremost of these is the fact that the proposed alteration of our fundamental law does not sufficiently take into account the profound change which has come over the American conception of the Presidency. The President of the United States as the people have come to know him, or to desire that he should be, is no longer merely an Executive. He is something more than commander-in-chief of the army and navy. His functions are not exhausted with the duty of enforcing the law or taking charge of our foreign relations or making appointments to office. He has become, not only a great public official, but the leader of a party. Under our system of government by party—which has developed in a way that Washington and Hamilton and even Jefferson could not foresee—the President has more and more approached the office of a Prime Minister. He is the man, that is to say, who goes before the country with a programme of legislation and official achievement, and then, if power be given him, is expected to carry out his pledges through vigorous leading of his party following. That is why the President has become more and more the great national figure, the chief national voice. The people look to him both to propose and to execute. It is a party which has carried him into office, but he is looked to by the country to make use of the power of his party and his authority to put through measures for the general good. The Presidency has now a much greater emphasis of initiative and leadership than attached to it in the earlier history of the republic. It can all be summed up in saying that we now think of the President not simply as the head of the Government but the head of a party.

Granting this, a little reflection will show that the adoption of a single six-year term—or a single term of four years—might operate to deprive the President of a good deal of his power and his efficiency. His continuous vigor as leader of his party may depend not only upon harmonious working with its members, but upon the feeling which he is able to inspire that its future hopes are tied up with his policies and his personality. To make a party work well you have got to hold out prospects of achievement to it; to show that it is winning and may keep on winning. If you take away the rewards of success, you diminish the motive to strive for success. Now the great reward in the Presidency thus far has been popular approval expressed by party support and a second nomination. It is not wise to make an end of this in a hurry.

Concrete examples leap to mind to reinforce the abstract argument. What would the nation have been advantaged if Andrew Johnson's term had been six years? He had got so hopelessly out of touch with Congress, and so out of sympathy with the country, that his Administration became futile; and two years more of it would have been intolerable. Mr. Hayes was in many respects an excellent President. But the conditions under which he came to the office, together with his explicit promise not to seek a second term, made him a nullity as a party leader. The consequence was that his years in office were nearly barren in all matters of constructive legislation. Congress passed the Silver bill over his veto. He could not command party support. In no sense was he regarded as the man to get things done for the people. The very fact that all the politicians knew that he was not to be a candidate again robbed him of a part of his official authority; and two years more in the Presidency would only have made matters worse. Even the mighty Roosevelt became almost negligible in the last year of his Presidency. Congress would not even read his messages, much less give heed to them. The authority as party leader and fated nominee which he had in 1902 and 1903, was almost stripped from him in 1907.

We do not contend that such considerations are conclusive of the question. But they are surely worth taking into the reckoning. If the movement to change the length of the Presidential term is to be seriously pursued, the subject must be studied in all its aspects. And it will never do to go upon the theory of the Presidency as it exists on paper, while overlooking the development of the office in actual fact. Nor can there be any wisdom in going ahead with a plan which might result in giving us, not an active and ambitious President for four years, but a *roi fainéant* for six.

THE RIGHT OF POLITICAL ASYLUM.

It is plain that sentiment in Washington has changed rapidly since the Senate passed the Dillingham bill to limit immigration. The country, it appears, is not yet ready to put up the bars as high as some Senators would have it. And it is by no means ready to deny the right of political asylum, which here as in England has been one of the nation's glories ever since its foundation. Mr. Root would deport alien residents

who have been found guilty of conspiring against a friendly Power. That is, in the case of Russians who might be found giving money to overthrow a blind despotism he would turn them over to the tender mercies of the Czar's minions, to be immured in the dungeons of Peter and Paul, or banished to Siberia. That even one house of the American Congress could take such action is deplorable. For the other to do so would be to announce to the world that this country is no longer to be a refuge for the victims of tyranny in other lands.

But, it will be asked, does political liberty involve the right to plot against the safety of a friendly nation? Ought we to permit foreigners to conspire against their home governments? Was that what the Puritans had in mind? Should we to-day permit the open fomenting in New York of revolutions in this or that South American republic, say, in Mexico or Guatemala? Well, that is precisely what has always been done in this country or in England. When has there been a time when the foreign revolutionist was not welcome in this country without regard to whether he had been plotting or was about to conspire against his Government? New Yorkers went wild with enthusiasm over the efforts of the Greek revolutionists to throw off the Turkish yoke, and planned to aid them with ships, recruits, and guns. When Kossuth came it was as a triumphal hero; his whole visit here was part of his plotting to free his countrymen. Indeed, it was our own Congress which in 1851 passed a joint resolution offering a vessel of the United States Mediterranean squadron to Kossuth and his fellow-exiles who had surrendered to Turkey, if they desired thus to escape the threatened extradition to Russia. It was in accepting this American offer at Broussa, on March 27, 1851, that Kossuth wrote:

> May your great example, noble Americans, be to other nations a source of social virtue; your power be the terror of all tyrants, the protector of the distressed, and your free country ever continue to be the asylum of the oppressed of all nations.

It goes without saying that the invitation to Kossuth did not include an admonition to him to refrain from plotting against the Austrians as soon as he arrived in this country. He was free to do anything he chose to advance the cause of Hungary. No one at that time, we venture to assert, would have dreamed that a Senator of New York could ever solemnly rise in his place in the Senate to limit the right of political asylum solely to those who were willing to forget their fellows in distress at home and to refrain from any activity on their behalf.

Similarly, when, in 1850, Garibaldi came to this country, he plotted against the Austrian masters of Italy. It was no more possible for him to refrain than it would have been for him to deny himself food and drink and air. Yet when the freedom of Italy came about it was a source of national pride that Garibaldi during his exile had found a home among us. What would have happened in our own time to the Cuban Junta of 1898 had Mr. Root's amendment been our law then? But the clearest case of all is that afforded by England during the long struggle for Italian unity. Indeed, to her shores came English, French, and German refugees throughout the entire liberal convulsions of the middle of the nineteenth century. Mazzini, Orsini, Blanc, our own Carl Schurz, Kinkel—but to call the roll of the revolutionists who settled in London to agitate against their home Governments, would be to call up the whole story of those struggles. The English refused to stop the activities of Mazzini and his fellow-conspirators—the exiled Italian "reds"—although Napoleon the Third urged it. Others besides the Queen were at one time anxious to do much to please Napoleon. But no consideration could alter this historic English policy, not even though every issue of Mazzini's newspaper incited his compatriots to rise and in many cases to kill.

Curiously enough, four years ago it was Secretary Root who refused to turn over to Russia Ian Pouren, the young Lettish revolutionist about whose activities at home considerable doubt existed, for Russia insisted that he was not a patriot, but a murderer. Now he would please Russia beyond anything she could wish—now when the places of refuge are steadily being circumscribed in Europe, when even Switzerland is beginning to surrender political refugees precisely as Germany has done these many years. An overturn in Turkey or in Persia might send to this country many a plotter against tyranny at home. Already there are thousands of exiled Russians here who cannot live without working for free Russia. Are they to be driven out of America because they love liberty and abhor despotism? To ask the question is surely to answer it. This country is not yet ready to turn its back on its traditions; not yet ready to deny sympathy, comfort, and aid to refugees who plot for freedom.

WHERE PRINCETON STANDS.

President Hibben made the occasion of his inauguration on Saturday especially notable by the subject which he chose for his address. Regardless of the position he intended to take with reference to the issues involved, he could not have selected a more timely or more important topic than "The Essentials of Liberal Education," and the attitude he actually assumed adds to the significance of his utterances. That attitude was really announced in the word "liberal." For the battle that has now for some time been waging in the educational world may be not unfairly defined as centring upon the question: Shall education be liberal or narrow? The answer of Princeton's new president was given in no uncertain tones. "The University," he said, "is not specifically designed for the purpose of fitting a man directly for the daily duties of his future work in life. It should attempt to develop the whole man." And again: "Make a man and he will find his work." What President Hibben desires from the four years of training is "a transformation of the schooboy into a man of the world—a man who can move more freely and familiarly in the midst of the world's varied activities, who speaks its language, who is conversant with its manners, and who can interpret its thought." The line of cleavage between this ideal and that of the man who can go directly from the exercises of his graduation to a high-salaried place in business or industry, is clear. Princeton, we understand, does not scorn the possibility or the desirability of the high salary, but she does refuse to make it the goal of her courses, or the test of their value.

The mere making of such a statement by a university president is sufficient indication of the distance we have come since learning got its second wind. What was formerly axiomatic must now be defended. The truth is that we care tremendously nowadays for some sorts of ideas, little or nothing for other sorts,

and hardly know what it is to be interested in ideas as such and for themselves; so that one would not slander us overmuch who should declare that we know things, but are willing strangers to thoughts. Sinister emphasis would be given to such a criticism by the very arguments that are put forward by many of those who suppose themselves to be standing up for liberal education. These defenders begin by replying to the charge that "liberal" is here synonymous with "loose and inexact." They insist on the fact that a liberal education is no less disciplinary than any that one gets in a laboratory.

Then they proceed to descant upon the practical value of general ideas, taking their cue from those who see in such an argument a means of slurring over the distinction between humanistic and scientific studies. "What is known in mathematics under the name of limit," says Prof. C. J. Keyser, for instance, in a recent address printed in *Science*, "is everywhere present in life in the guise of some ideal, some excellence high-dwelling among the rocks, an 'ever-flying perfect,' as Emerson calls it, unto which we may approximate nearer and nearer, but which we can never quite attain, save in aspiration." Higher, or, more accurately, the highest mathematics is thus apparently allied with ethics, if not with theology. Doubtless equal pretensions could be put forward by partisans of physics, biology, and electrical engineering. But one finally becomes doubtful over the quality of the culture that is so widely distributed, however one may admire the sureness that selects an Emersonian phrase to describe it. What one feels like asking is why the cultural quality of a great science should need to be defined in terms that are drawn from another field.

All these things that are credited to culture are good, but the striking circumstance is that those who present them omit the highest considerations entirely. President Hibben put his finger upon this lack when he spoke of coming "to delight in the tasks of the intellect." We seem actually afraid "to rejoice in the labors of the mind." No one is ashamed to spend money and time in going to see a football game, and no one pretends that the compelling attraction in it for the teams is anything but the delight of the struggle and the ambition to win, and yet we hesitate to advance as a reason for becoming familiar with the greatest books that have ever been written, the sheer pleasure of their perusal, or at least, the development of such an enjoyment. This is at the top of the list of motives for devotion to anything that makes for culture. President Hibben spoke of "training in the accurate and facile mode of giving expression to knowledge," and the ability to understand one's own language "with some appreciation of its power and beauty." Not the efficiency of a machine, but the appreciation that is human, is the final goal of liberal education. Whatever our achievements in gold and silver and brass and iron, we are but twentieth-century Goths if we fail to respond to the beauty and sublimity of great ideas, or are unable fittingly to express our own.

MEASURING THE MIND.

As a man thinketh, so much doth he also weigh. This, or something like it, is the new standard which is soon to be used in education. To state, says Prof. E. L. Thorndike, that a pupil's knowledge of German "is about equivalent to that required for passing intermediate German," is much as though one were to describe the length of an object by saying: "It is about as long as a man can jump." Education has become scientific, and apparatus is making to register ability as accurately as we weigh butter and cheese. To those who have children in school the proposal may seem startling, but that is because they have not kept up with the times. Another expert in the new science, Mr. Leonard P. Ayres, director of the division of education on the Russell Sage Foundation, speaks of the cause as virtually won. The "old guard" of conservatives have been driven (by the progressives, of course) into their "final citadel" where they are now about to capitulate. What else can they do when "they scan the history of science and remember that through the development of measurements astronomy grew out of astrology, chemistry emerged from alchemy, and physics developed from mystery?" The quotations in both instances are made from papers in the *School Review* for May.

Professor Thorndike is perfectly clear in what he proposes. The educational product must be weighed by definite units. But a unit implies a zero starting-point and zero, therefore, is the first thing to determine, that is, "just barely not any originality" in mathematics, English composition, etc. Here is the sample taken "as zero of merit for writing by young people in their teens":

> Dear Sir: I write to say that it aint a square deal Schools is I say they is I went to a school. red and gree green and brown aint it hito bit I say he don't know his business not today nor yesterday and you know it and I want Jennie to get me out.

It matters not that most persons would let this pass as crazy. Forty "experts" have expressed their judgment that it is absolute zero. Six other compositions are furnished, written by pupils of high school age. These are found by two hundred experts to differ by approximately equal steps. Agree on your units and samples, and any tyro can do the rest.

Much of the reasoning urged in behalf of this new system is by analogy. To offset the objection that the personal work of education is not in the domain of exact science, we are reminded that "mothers do not love their babies less who weigh them." Yet they would love them less if they thought of them purely in terms of pounds and ounces. "We have ceased exalting the machinery," says Mr. Ayres, "and have commenced to examine the product." And he proceeds to explain what marvels scientific management has wrought in bricklaying. But bricks is bricks! It is only within a few years, he goes on, that schools have kept a record of students who failed to complete the course. Fancy a stage-manager not knowing it if only 125 out of 1,000 in an audience remained to see the last act of a play! If properly wrenched, it is true, any analogy is useful. There is just enough truth in all this propaganda to create a following. Every teacher knows, for instance, that students can often be grouped under a few fairly definite types. Within a given type processes of thought remain pretty constant. Much truth can also be got from percentages. If half of a large class fails to pass the examination, it is right to suppose that the test is too hard, etc. Figures, however, must always wait upon common sense, which would never be the case if such a formula as Professor Thorndike's

$$Y = Pe^{\frac{-x^2}{2upq}}$$

were introduced. The game of finding a meaning for these cabalistic signs

would be fascinating if it were not so tragic. Y, we will say, represents the youngster, x his unknown capacity (for judgment is to be beautifully suspended), P the price to the taxpayer, e the exercises, n the noon-hour, p the product, and q its quality. The answer will be in dollars and cents.

This, we infer, is quite as it should be. A superintendent of schools in Massachusetts is worried because "it is costing $269.77 to put a boy and $281.63 to put a girl through the technical course." Now, he says, if by Professor Thorndike's exact measurements educational values can be fixed, what thorns will be plucked from the administrator's flesh! In one high school the cost of instruction in history per pupil is $10.20, in another $11.80. "Is the product in one school worth 15 per cent. more than that in the other?" No one can say until the product is put to the rule. Meanwhile it is perfectly clear what teachers are busied with these days. The amount of mere bookkeeping required of them is appalling. The recitations of individual pupils have to be squared to certain formulæ and elaborate percentages have to be figured. With the system upon her a teacher hesitates to hand in figures which differ from the norm. The inference drawn by the superintendent would be that she had erred in the reckoning, not that she had a number of unusual pupils. All this cannot fail to rob her teaching of life and personality, and to make her think of her wards as little sheep.

Our youth are indeed to be pitied if the fad of scientific management ever has full sway in the schools. As it is, the matter has been carried far, even in colleges. Owing to the tyranny of the grade system young men have learned to think in terms of percentage. Not what good they have got from a course, but the mark is paramount. If they are in any doubt about the progress they are making, the college records, all beautifully kept, are open for their inspection, and the authority of black and white convinces even their young rebellious minds. When the work of the professor of pedagogy has finally been reduced to the quality of ledgers and card-catalogues, then common sense will perish from our schools—unless we are saved by a sense of humor.

NATIONAL TYPES.

The large number of Americans who will set foot in Europe for the first time in the course of next summer will be the recipients of a double impression. They will find the land and the cities very much like what they expected them to be, and the people utterly different. This will hold good for every country to which chance or Mr. Cook may bring them. The photograph, the panorama, and, in later days, the picture post-card have gone far towards robbing nature and art in the Old World of the first fine flower of surprise for the transatlantic pilgrim. But Man, the oldest of mysteries, has managed to elude all the efforts of guide-book men. The Louvre, the Vatican, and the Milan Cathedral are very much like their pictures, but the men who have built these monuments or now dwell about them are not at all like the stock national types which have been foisted upon the world by unscrupulous comic artists and unobservant travellers.

If, then, those Americans who are still to discover the Old World will make up their mind to see *Homo Europæus* as he is, they will not only add to the general stock of truth, but make their journey a succession of glad surprises. They will find the Englishman in London an affable, free-spoken, hustling type of man and not a slat-like Phileas Fogg in a peaked-cap. They will see him dash across the slippery pavement of Oxford Street at the imminent risk of his life and clamber up the omnibus steps with an alacrity that is popularly supposed to be a purely American faculty. They will hear him speak with an animation, a musical coloring to the voice, and not infrequently an accompaniment of gesture, that we associate with the emotional Gaul. True, he will be often discovered in the act of drinking tea, but that is an external factor. Cross the Channel and the traveller will find that the average Parisian looks like a German and frequently has a German-sounding name. Where are the peg trousers, the tight-hipped frock coat, and narrow-brimmed silk-hat which are the inalienable prerogatives of the comic Frenchman? Where are the whiskers and the frantic play of gesture? They are rare on the Boulevard. The modern Parisian is clean-shaven, full-fed, florid, and mustachioed. Leave him and cross into Germany, and the traveller will find millions of men who do not wear spectacles.

Is there then no such thing as a national type? There is. But the casual traveller will hardly discover him. The national type is the embodiment of age-long tradition. He is the composite figure of a thousand photographs, supplemented and intensified by the pencil of the satirist. And it takes two relays of satirists fully to evolve the national type for international circulation. First comes the typical Englishman or Frenchman as the English or French satirist sees him. Then come the French artist's improvements on the English comic type and the Englishman's improvements on the French comic type. Sometimes, it must be admitted, the foreign improvements are such as to change the original beyond recognition. Sometimes there is a change in spirit rather than in the body. Good-natured Uncle Sam, as we know him, grows more angular, more hawk-like, and quite sinister. Orotund John Bull retains his figure only in the political cartoons. For social purposes the Continental mind visualizes the Englishman as an elongated human being with big teeth and accompanied by a very tall, thin daughter with large feet, a veil, and an umbrella. The sturdy and stolid Michel, whom the Germans use to describe themselves, is transformed into the equally stolid but physically quite different pot-bellied German professor with a pipe. The Frenchman has no reluctance to think of himself as Tartarin, but the malicious pencil of the foreigner makes him brother to Alphonse and Gaston.

At the present moment the French press is taking high delight in the work of the Alsatian caricaturist and satirical writer, Hansi, who single-handed has been carrying on a campaign against the German Empire. In the person of Hansi's Professor Knatschke some French commentators find a type worthy to be set by the side of Pickwick and Tartarin. But the obvious rejoinder is that Pickwick and Tartarin are creatures of a kindly, a loving imagination, whereas Knatschke is the German type as the hostile eye sees it:

> Tall, eyes flashing behind gold-rimmed spectacles, features of a pure German type, framed in a large blond beard, Professor Doctor Wilhelm Siegfried Knatschke has won the admiration of his fellow-countrymen by his masterly writings on the superiority of German culture. He was still a student at the gymnasium of

Königsberg, when he produced an historical dissertation in which he demonstrated that the frontiers of the German empire should be pushed still further to the west and that, for instance, the region of Moempelgard (now corrupted into Montbéllard) and Virten (now Verdun) belong historically and rightfully to the German Empire.

This is satire of no mean order. But it would be unsafe to form one's opinion of Germany and the spirit of its people on the basis of the adventures of Professor Knatschke and his daughter Elsa.

A REVOLUTION IN CLOTHES.

Recent telegraphic advices from Tibet, of all places, show once more that the triumph of democratic institutions goes hand in hand with the triumph of the silk hat. In the forbidden city of Lhassa, where only a little while ago reincarnated Buddhas held sway over a nation of monks and taxpayers, the after-effects of the Chinese revolution have been felt in full force, and the partisans of the republic are now wearing black frock coats and shiny headgear. The unchanging East, stirring from its immemorial sleep, has reached out with one hand for constitutional government and with the other for the stove-pipe hat. What happened in Japan when Western civilization came in is now repeated in China. Progress does not stop short with queue-cutting. Having rid themselves of the crowning glory of their hair, the men of China are now putting in its place the highly polished cylinder which has so long been the badge of Western statesmanship. The Oriental mind has puzzled much over the secret of the white man's ascendency. It could not be explained by any superiority in humanitarian ideals, or morals, or unselfishness. Hence the reason must be largely in the kind of clothes he wears.

So the world grows smaller every day, and the levelling hand of the Bond Street tailor and the milliner in the Rue de la Paix smoothes out all visible differences of race and creed. The artist may deplore the steady disappearance of local color under a pall of uniform ugliness, but the interests of civilization are above æsthetic considerations. Carlyle was by no means the first to point out that civilization is clothes and that differences in civilization are differences in clothes. If Asia's men were in the habit of wearing trousers and a starched collar, there would have been an entirely different cast to Mr. Kipling's race philosophy. The wily Oriental owes his reputation for guile chiefly to his habit of wearing felt slippers or no shoes at all. "Gum-shoe" statesmen are unpopular in every Western country. To make no noise when you walk, to be soft-spoken in conversation as Orientals are, to be deferential in manner—all this betokens a snakelike cast of soul that arouses a very natural feeling of repugnance in the European mind with its strong predilection for creaking military boots and a straightforward way of speaking out—to one who is weaker than you are. Very well, the Oriental mind has said to itself. We will also put on squeaky boots, purchase cannon and powder, speak in a loud voice to our inferiors, and in other ways demonstrate our manhood by making a noise in the world.

At heart this difference of clothes is one that the Western world subscribes to, even as far as the peoples of the East are concerned. When a magazine writer wishes to prove how rapidly China is becoming modernized, he shows us a photograph of the Chinese commander-in-chief and his staff in close-fitting military jacket, trousers, and boots, and a photograph of the provisional President and his Cabinet in frock coats and silk hats. When a nation has once grown habituated to the patent-leather shoe and the four-in-hand, it should find no trouble in mastering the intricacies of parliamentary government. There has been much ill-considered criticism of the common practice among missionaries in the Far East and Africa of putting their converts into European dress. People have indignantly contrasted the ugliness and discomfort of Manchester's shoddy cotton gowns and Brockton's footgear with the ease and the innate beauty of the discarded native costume. But such critics have wholly failed to grasp the truth which to the worker in the field is quite obvious. In no more emphatic way can the individual cut himself off from his past than by changing his clothes. At least, in no other way can the change be so emphatically and at the same time so easily indicated. To cast one's garments from one's self has always been a sign of regeneration. To put on other garments in their place, in every way as ugly and uncomfortable as the garments worn by the superior race, leaves little more to be desired.

To the unquestioned fact that it embodies within itself so completely the modern ideals of ugliness and discomfort, we must attribute the extraordinary appeal which the silk hat holds for all savage and semi-civilized peoples. Next after whiskey, it is the one gift of the white man that finds universal acceptance. It seems impossible to question the essential unity of the human race when we find the Parisian man of fashion and the Zulu chieftain exhibiting the same æsthetic standards. It is true that the African chieftain too frequently staves in the top of the hat and wears it as an ornament around his ankle, but that is only a matter of detail. To both men the silk hat is a thing that takes a high polish and creates discomfort and looks like nothing in nature, and as such it serves admirably as a symbol of civilization.

THE JUBILEE AND INTERNATIONAL CONGRESS.

ATHENS, April 16.

The celebration of the seventy-fifth anniversary of the founding of the new University of Athens, combined with the sixteenth International Congress of Orientalists, brought a remarkably large number of distinguished scholars from all parts of the world to the city. Above a hundred universities and learned societies were represented. The line between the Jubilee and the Congress was not sharply marked, and critics were not wanting who felt that the scientific purpose of the Congress was obscured by the Jubilee. It was, in fact, a Jubilee Congress, the joyous spirit of which was further heightened by the holiday mood of Easter Week—the holiday season *par excellence* in the East. But how could even gray-bearded scholars be expected to resist the allurements of the awaking of Nature in Greece—and in Athens of all places? To wake up in the morning and see Hymettus in a purple glow, the distant sea glistening in the brilliant sunshine, and the Acropolis standing out against the bluest of skies, was surely sufficient to crowd out of one's thoughts for the time being the learned communications that had been announced in the programme.

The formal opening of the Jubilee and of the Congress took place on Easter Sunday afternoon in the Parthenon. It was a happy inspiration to select this place for the first gathering. The students of the University formed the guard of honor along the ascent to the Acropolis—saluting the delegates as they marched in their official and aca-

demic robes to the great temple. One of the old stones of the edifice was used as a *podium*—placed on almost the very spot where the famous chryselephantine statue of Athene stood. The picture of the brilliant assemblage standing within the great nave of the temple was as beautiful as it was impressive. All Athens had come to witness the ceremony.

The exercises were opened by a brief address from the Crown Prince of Greece, who, as the honorary president of the Congress, gave a welcome to the guests and emphasized the significance of the occasion. The Minister of Public Instruction, M. Alexandris, as president of the Congress, followed with a summary of the part played by the University in the history and life of the people and enlarged on the serious functions of a university. The burden of Prof. S. P. Lambros, on whom, as Rector of the University and secretary of the Congress, the main responsibility for both Jubilee and Congress rested, was an appreciation of the inspiration given to Athens University by the sympathy and direct aid of the sister institutions and of savants in all parts of the world. Responses to these addresses were made on behalf of the delegates by Prof. J. P. Mahaffy, Hans Delbrück (Leipzig), Maxime Colignon (Paris), and the Count Angelo de Gubernatis, one of the few survivors of the First International Congress of Orientalists held in 1874.

The scientific sessions of the Congress began on Tuesday and lasted till Friday. Three of the sessions were held in the aula of the University, at which papers of a more general character or such as required lantern illustrations were read before the whole Congress, while for the remaining sessions the Congress broke up into eleven sections, beginning with comparative philology and ending with Byzantine literature and archæology. Several of the sections found it more practical to combine. Thus, *e.g.*, the Greek section joined hands with the Semitic section, which also included folk-lore and mythology. Islamism, as on previous occasions, formed a section by itself, as did the Indo-Iranian languages and Egyptology. It should appear that the Semitic, the Indo-Iranian, and the Islamic sections were the most active. To give an account of these papers is manifestly impossible. Two features may, however, be mentioned, viz., the large participation of native Greek scholars, most of whom naturally read their papers in modern Greek, and in the Islamic section the preponderance in point of numbers (though not of scientific value) of the communications presented by the native Egyptian scholars of whom there was a large delegation present, headed by Prince Fu'ad Pascha, the rector of the Egyptian University at Cairo. A second feature of general interest was the considerable number of papers in various sections that, directly or indirectly, bore on the relations in antiquity between the Greek and Roman world and the more distant Orient. So Prof. Franz Boll of Heidelberg traced relations between Greece in the Hellenistic period and China, through the Greek origin of the Chinese Zodiac. Prof. Felix von Luschan's paper on the "Anthropology of Asia Minor," summarizing the results of extended investigations, pointed likewise to an ethical and cultural admixture at a still earlier period. The paper of Prof. Theophilos Boreas traced Oriental influences in the Greek doctrine of the transmigration of souls, while in my own paper on the "Historical Significance of Babylonian-Assyrian Birth-Omens" I tried to show a sphere of influence, emanating from the Euphrates Valley and extending both to the distant East up to China, and in the West through the Etruscans and Hittites to Greece and Rome.

At the closing session of the Congress various scientific projects were brought forward, including the desirability of a complete collection of the folk-lore of modern Greece, which would undoubtedly throw much light upon the myths and beliefs prevalent in antiquity and still surviving in a modified form despite Christianity.

The question of the seat of the next Congress aroused considerable discussion at this closing meeting. An invitation had been received from the Egyptian Government to meet in Cairo in 1915, but the prevailing sentiment among the delegates was to convene in a more accessible place. Leipzig, Brussels, Edinburgh, Oxford, and Cambridge were brought forward, and the question was left to an international committee appointed to consider some changes in the statutes of the Congress, with a view to obtaining a more satisfactory permanent organization.

In connection with the Jubilee, honorary degrees were conferred upon a large number of scholars, though in view of the fact that the University of Athens has no chair for Oriental languages (outside of comparative philology), it was decided not to include Orientalists among the recipients. American scholarship was recognized in the person of President Wheeler of the University of California, Prof. E. W. Hopkins of Yale, and Prof. Carl D. Buck of Chicago. The American delegation to the Jubilee consisted of representatives of Harvard, Yale, Columbia, University of Pennsylvania, University of Minnesota, Princeton, University of Illinois, the Catholic University of Washington, Smithsonian Institution, the American Philosophical Society, and the Oriental Club of Philadelphia. Among the American members who read papers, mention may be made of Prof. Paul Haupt of the Johns Hopkins University, who had no less than four papers; Professor Hopkins, and A. T Clay of Yale University, and Professor Jastrow of the University of Pennsylvania. Professor Gulick of Harvard University was chosen by the American delegates to represent American universities at the presentation of the congratulatory addresses.

A few words remain to be said of the unbounded hospitality of the Athenians and of the varied entertainment offered to the delegates and to the members of the Congress. The festivities began with a brilliant reception on Sunday evening in the great aula of the University, at which the King and Queen of Greece, the Crown Prince, and almost the entire royal family were present, as well as the members of the Cabinet, including the Prime Minister, M. Benizalos, the most popular man in Greece at present, as a result of his overwhelming victory at the recent elections. The King and Queen moved among the guests in a most informal and gracious manner.

On one of the evenings of the Jubilee week the Acropolis was illuminated with red lights, which on the whole gave to the ruins a rather weird appearance, though at times the effect was made impressive through the delusion created by the red glow of a restored Parthenon—a momentary flash of what it must have been in its full glory. Of unusual interest was a performance of "Œdipus Rex" at the Royal Theatre. A modern Greek version was used, copies of which wer generously sent to all the members. The acting was good without being particularly striking, but the chief interest centred upon the interpretation given by native actors to an ancient classic. The depth of the tragedy, with its peculiar Greek emphasis on relentless Fate, was, on the whole, well conveyed, and such characters as Tiresias and the two shepherds gave one a realizing sense of what acting must have been in ancient Greece.

Most impressive of all, however, was a ceremony which had only a loose connection with the Jubilee or the Congress programme. Through the kind hospitality of Athenian citizens, the windows and balconies around the large square in front of the cathedral were placed at the disposal of the delegates and their wives, on Saturday night, to witness the welcoming of Easter at midnight. In front of the cathedral a large stand had been erected, with an altar and the accessories of a Greek Orthodox service. Shortly before midnight the patriarch and four bishops headed a procession from the cathedral to take their places in the stand, where, after the arrival of the royal family in state carriages, the ceremony began. A short service was read, and on a given signal at about the midnight hour, the thousands of men, women, and children

gathered in the open square, lighted their candles; at the same time at all the windows and on the terraces around the place candles were also lighted, and the churches throughout the city tolled their bells to announce that "Christ had risen." One understood more clearly than ever before how close was the association of the "Resurrection" rite—as the ceremony was styled—with the old nature festival heralding the approach of the spring and the triumph of the young sun-god. As in the case of the religious rites of ancient Greece, this ceremony to which a Christian form has been given was celebrated in the open air. The lights clearly symbolize the sun that in the spring seems to celebrate a new birth and to be kindled anew; and one felt that the Eastern church has remained closer to the more primitive aspects of religion in using the candles at Easter instead of transferring them to Christmas, the old winter festival, as the Western church has done.

As the thousands of flames suddenly burst forth and the bells rang out joyously, with the stars shining overhead and the gentle spring breezes carrying the message of reawakened nature, the conviction grew upon one that the ancient Greeks must have welcomed the spring much in the same way thousands of years ago.

NEWS FOR BIBLIOPHILES.

One of the most interesting historical mystifications which has hitherto awaited a solution is the precise origin of a group of English books published on the Continent between 1528 and 1535, purporting to come from the press of "Hans Luft at Marburg." Hans Luft was one of the leading printers at Wittenberg; for this reason and others it has long been recognized by scholars that the books in question, most, if not all, of which are by Tyndale, could have been printed neither by Hans Luft nor at Marburg, but until very recently no successful efforts have been made to ascertain the actual place in which the works were published. R. Steele has lately, on admittedly very slight evidence, endeavored to connect the books with the colony of English reformers at Antwerp. (*The Library*, VI, No. 2, 1911, and in the *Transactions of the Bibliographical Society*, 1911, pp. 189ff.) A. W. Pollard is inclined to credit Fox's statement that one of these books, Tyndale's translation of the Pentateuch, was published at Hamburg, whither he thinks the types might have been shipped from Antwerp. ("Records of the English Bible," p. 10 note). There is, I think, good reason, hitherto unnoticed, to believe that at least three of the Hans Luft books were printed at Cologne. The titles of the books are:

(1.) The obedience of a Christen man and how Christen rulers ought to governe . . . [Colophon:] At Marlborow in the lande of Hesse The seconde daye of October. Anno MC©CCC. xxvlij by me Hans luft.

(2.) An Exhortation to the diligent studye of scripture made by Erasmus Roterodamus and translated into inglissh. An Exposition in to the seventh chaptre of the first pistle to the Corinthians. [Colophon:] At Marlborow in the londe of Hesse. MDXXIX xx daye Junii. By my Hans Luft.

(3.) A pistle to the Christian reader. The Revelation of Antichrist. Antithesis wherein are compared togeder Christes actes and our holye father the Popes. [Colophon:] [At Marl]borow in the land of Hesse. xij day of Julye Anno MCCCCCxxix. Hans luft.

All of these books have a striking compartment woodcut on the title page, showing four groups of three women each, representing the three Graces, as is made plain by the word χάριτες. This work of art was produced by Anton Wönsam von Worms, who worked at Cologne from 1518 until his death in 1541. (See J. J. Merlo: *Kölnische Kunstler*, 1895, p. 1046, No. 435.) As far as known, it was first used in "Johan Dytenbergii theologi contra Martini Lutheri de votis monasticis iudicium," published by Cervicorn at Cologne in 1523. It was also used, in a slightly different form, showing that it had been recut, by an Antwerp printer in 1529. In the original form it was also used in the following works:

A Gellii. . . . Noctes Atticæ. Coloniæ. Opera et Impensa Joannis Soteris. 1526.

G. Budæi altera æditio annotationum in Pandectas. Coloniæ. J. Soter. Mense Februario. 1527.

G. Budæi Annotationes priores in Pandectas. J. Soter. Mense Aprile. 1527.

In view of these facts, it is highly probable that the books in question were printed at Cologne, and by Soter. Corroborative evidence of this opinion may be found by an examination of the contents of the second of the works in the light of contemporary history. It is a translation of two separate pamphlets, of Erasmus's "Paraclesis id est adhortatio ad christianæ philosophiæ studium," first published in 1516, and frequently reprinted, and of Luther's "Das siebend Capitel S. Pauli zu den Corinthern ausgelegt," Wittenberg, 1523. This work attracted so much attention at Cologne that in 1528 the University ordered one of its professors, Conrad Köllin, to answer it. The first part of the reply was printed by Quentel at Cologne in 1527, under the title "Eversio Lutherani Epithalamii"; the second part came out at Tübingen in 1530, as "Adversus caninas Martini Lutheri nuptias." It may have been this that called the attention of the translator to Luther's Exposition, and at the same time the hostile environment of Cologne led him to suppress the reformer's name.

Another argument for Cologne against Antwerp may be found in the consideration that at Antwerp the Reformation movement had been virtually stamped out after the Diet of Worms by the inquisitors who arrested its leaders, Probst and Grapheus; whereas at Cologne there was a strong Protestant party, preparing for the adoption of Lutheranism a few years later, and this party included several printers, as, for example, the one who began printing Tyndale's New Testament in 1525.

The three English books in question repay a closer study. The first is known to be by William Tyndale, and is so thoroughly Lutheran in its thought that it reads like a translation of the reformer's own words, though I have not been able to find the original. The third is also by Tyndale, being an adaptation of Luther's "Passional Christi et Antichristi" (1521). The translator of the second of the books commonly called on its appearance "Tyndale's Matrimony," has been sometimes identified with the English reformer's assistant, Friar Roy, on the ground of a very vague reference by Thomas More ("That work hath no name of maker, but some wene it was Friar Roy." More's "Workes," 1557, p. 342A), but internal evidence makes it far more likely that he was Tyndale himself.

If the conclusions here presented are correct, they throw much light on the dark quarter of Tyndale's life, the time he spent in Germany. It is plain that during part of the years 1528-1529 he was at Cologne, engaged in the deep study of Luther's works. Though sufficient materials for reconstructing this period of the Englishman's life do not yet exist, a nearly exhaustive study of the sources has convinced the present writer that the often repeated statement that he was ever either at Wittenberg or at Marburg, is an error. The proof of this position would, however, be beyond the scope of the present article.

Correspondence

ANALYZING ROOSEVELT.

TO THE EDITOR OF THE NATION:

SIR: In the *Atlantic* for May appears an article entitled "Mr. Roosevelt," and signed E. S. The standard of morality therein set up is so clearly of a kind which prevails among a large number of good and worthy people at present, that I beg room for an examination of the statements of E. S.

I quote: (a) "A man may be as helpful to his fellows by seeming to be virtuous as by being so." (b) "Details of the past are as vague to him [Mr. Roosevelt] as promises for the future." (c) "In his [Mr. Roosevelt's] ample ambition cause and personal advantage are blended into something one and indivisible." (d) "To him, truth is truth not more naturally than he is truth's exponent." (e) "His continued denial of statements attributed by reputable witnesses has made all good men his enemies."

The conclusions of E. S. are as follows: "And yet, such faults as these have not their roots in the baser depths of human nature"; and again, "He has been a mighty teacher of morals"; also, "They [our children] will read how he lived and preached a clean and wholesome life. Surely these are lessons good for boys to learn." If the statements quoted above do not spell (a) hypocrisy, (b) perfidy, (c), demagoguery, (d) egotism, (e) lying, then is there no meaning in words.

E. S., in his presentation of Mr. Roosevelt as the hero of moral action, remarks that our children's children are to "mark how, born to ease and a pleasant life, he sympathized with the unfortunate and fought their battles against prejudice and inequality." The implications in this picture are even more striking than the facts. The life of ease and pleasure sacrificed! That means experience; that means the

heights and depths of life. Battles fought for the unfortunate! That means risking one's life and fortune, daring defeat, enduring hardships and suffering sacrifices, but E. S. informs us immediately as follows: "Here it is that we come on one of the most serious of Mr. Roosevelt's limitations. In terms of the depths of human experience, his education has been but a shallow one. He has touched life at innumerable points of its surface, but he has never climbed its heights, and its depths he has never fathomed. He has never brooded in quiet, nor has his support of a cause ever been to his own hindrance. For him, every success has been the gateway of a victory. . . . Fortune would have been more just to Mr. Roosevelt had she been less generous." So this martyr to a great cause, this hero of many battles for the poor and oppressed, according to his panegyrist, has never supported a cause to his own hurt, and upon his path of sacrifice of ease and pleasure every success has been the gateway of a new victory. "He follows the great adventure with a mind as free from care and an enjoyment as irresponsible as ever marked a man whose shoulders have been weighted with the burdens of a nation." It will be seen that Mr. Roosevelt has had a pretty good time. "Irresponsible enjoyment" is not, however, the condition of "a mighty teacher of morals," and when it characterizes the discharge of a great office it is usually thought open to criticism, and by many regarded as immoral.

E. S. himself really discloses the secret of Mr. Roosevelt's marvellous activities. He is right in saying that the love of money has left him untouched. He is equally right, however, in finding in Mr. Roosevelt's indulgence of his tastes and characteristics a complete explanation of his career. He may not love money, but he loves the theatre of the world's action, its great official prizes, and still more the applause of the multitude. He may not love money, but it has always come to him. He may not love money, but out of a full indulgence of his tastes and pursuit of his pleasures he has for years reaped a prodigious reward and bids fair to do so for some time to come.

"Stains there are," E. S. says, "which history will not wash away." "The appropriation of the Panama zone which in material consequence may well outweigh any other act of his Administration is fairly typical of means which Mr. Roosevelt has felt obliged to use when, in his opinion, the end has justified them."

Has any great moral teacher ever yet successfully demonstrated that in a moral sense the end justifies the means? If the principle has been availed of, it has been either by that kind of a man who did not preach morality and who in virile honesty declined to be looked to as a moral example, or by that other kind—a species of hypocritical "mollycoddle" (to use Mr. Roosevelt's word), which has been described as a saintly character with four aces up his sleeve.

The Panama episode fairly typical of means which Mr. Roosevelt has felt obliged to use when in his opinion the end justified it! It was a brilliant stroke of statesmanship, even if it were essentially immoral. A great and signal advantage was acquired for the people of this country at the cost merely of a little moral self-respect, the loss of a small part of our moral dignity, and the injury of a very small competitor in the world of empire. But, so it is stated as to the Standard Oil Company—that its operations were a great and signal advantage to the people. What if the originators of the enterprise had sacrificed a little of self-respect and moral dignity and had accomplished the ruin of a number of obscure rivals? The people of the United States had procured the great bargain of cheap oil.

Mr. Roosevelt's advent into the political arena came at the end of that period so well designated by E. S. as the "opulent days of Mr. McKinley." We remember the legislation that created privileges, established a high tariff for protection, and held the vast home market for the exploitation of the manufacturer. We remember the unwise immigration laws that stimulated enterprise and production by supplying at one stroke an ever-increasing army of laborers and an ever-increasing army of consumers for a high-tariff market. We remember how the corporate form of enterprise and ownership grew to vast monopolies like the Standard Oil Trust, the United States Steel Company, the Northern Securities Company, etc., etc. The end came only with the discovery that the pace could not be maintained and that a day of reckoning was at hand.

Now, the truth is that responsibility for the reckless course which ended in bringing the country into the state thus described rests with the plain people. It was the people who had made the laws. It was they who set up the "golden calf" and demanded that it should be worshipped. Theirs is the responsibility alike, whether it be the result of immoral standards, indifference to political duties, or disloyalty to institutions. But alas! who shall tell them so? They are taught that, so far from being the cause of all these evils, they are the innocent victims exploited by "the classes"—the "criminal rich" and by the political bosses. Eliminate this from popular consciousness, and much of popular interest in the present movement and its chief representative expires. "The classes" and "the masses"! Where are they in this country? Who are the "criminal rich"? An examination of existing colossal fortunes will show that they were acquired by a ferryman, a vender of mouse-traps, a telegraph operator, a miner, a grocer's clerk, a butcher, a broker's clerk. Again, are the so-called bosses of "the masses" or of "the classes"? Any one familiar with American life knows that they are peculiarly of the proletariat in their origin, in their associations, and in their support. The truth is, "classes" have no existence in the United States.

Our national vice is the belief that success justifies. Our essential evil is the will and purpose to have what we want and to have it at any cost. If there were "a mighty teacher of morals" among us, this is the spirit he would rebuke. Mr. Roosevelt has not rebuked it. He has distinctly encouraged and he personifies it. "For him," says E. S., "the moral world and the world of successful men sum up the universe." A strange universe surely, and it is well that it has no existence outside of the psychology of Mr. Roosevelt.

Lastly, E. S. presents a tableau illustrating the achievements of his subject. "Some years ago," he says, "I saw him [a workingman] seated in front of me in a trolley car. The creases in his red neck and wrinkled face were soiled with sweat and dirt, and in his hand he held a newspaper close to his eyes as though the look of print puzzled them while, as his lips murmured the unaccustomed syllables, I saw him trace line by line, with a grimy forefinger, the words of one of Mr. Roosevelt's exhortations to be decent, to live clean, to play the game hard." It is possible that Boston differs in the tableaux of her trolley cars from the streets of New York, but if E. S. would come over to New York, the trolley cars, subway, and elevated trains, and all the crowded ways of life would disclose to him the workingman, not quite so dirty as E. S. paints his, engaged in reading in Hearst's papers exhortations to be decent and to live clean, etc. Yet in New York we do not necessarily point to the source of such moral emanations as "one who has sought the Grail," the bearer of "the White Shield," the "mighty teacher of morals."

I concede the striking personality and the brilliant genius and have a due appreciation of the charm of one who in the most exalted of positions is characterized by "irresponsible enjoyment," and who, at the zenith of a great career, "fears not to match with destiny for beers," but there is no reason in all this why such a one should be presented as "a mighty teacher of morals" and an exemplar for youth—no reason in all this why our moral ideas should be cast in the mud—no reason why we should not pass such a one by, waiting for and believing in a real moral leader.

THE LESSON OF THE TITANIC.

TO THE EDITOR OF THE NATION:

SIR: Under date of August 31, 1773, James Boswell, in his "Journal of a Tour to the Hebrides," records Dr. Johnson's memorable dictum: "Being in a ship is being in a gaol, with the chance of being drowned."

That modern navigation has not invalidated the burly lexicographer's dictum, is more than evidenced in the fate of the Titanic. Having crossed the Atlantic a good many times in the Inman, Guion, Cunard, Bremen, and Hamburg Lines, I admit freely that two ideas have always been uppermost in my mind: the idea that I was in truth "jailed," and the idea that I might be in for a drowning.

Out of the mass of harrowing details in the loss of the Titanic two facts stand out with lurid significance. First, the ship was pushed at three times the speed proper in the presence of known danger. Secondly, the lookout was inadequate. How is it, then that any company can be—through its officers—guilty of such recklessness? Well, to my way of thinking, it is foolish injustice to cast the blame on any one man or any one company. Each one of us is in honor bound to lay his hand upon his heart and ejaculate: *Mea culpa!* We are all children of the age, trying to ignore the fundamental fact that a ship will always be a jail with a chance of drowning. We pick out fast boats for our money, we gamble on the day's run, we contribute our quota of silver plate in commemoration of a new "record."

We have lost sight of the inevitable seriousness of every ocean voyage, and are doing our best to turn it into a sport, a combination of auto-race and German cotillion. Comfort, of course, we all desire, even in a jail. Even the private bath, to such as can afford it, is good and legitimate. But why this parade of extravaganec, these restaurants à la carte, private decks, swimming pools, and squash courts, this dining in dress suit and evening gown, to the accompaniment of pearls and diamonds? Truly, it is high time to recognize the fact that an ocean steamship is neither the Waldorf-Astoria nor Palm Beach, but a mighty serious, even dangerous affair, and that we as passengers should lay aside the fripperies of life.

Marine danger is of two kinds. There is the danger from weather. This has been virtually eliminated for our present-day boats, with their huge bulk, water-tight compartments, double and triple screws. It is scarcely conceivable that a modern liner should succumb to mere wind and wave. The other danger, however, that from collision, whether with shore, or ice, or another ship, can never be wholly eliminated. This danger can only be avoided, and—to be avoided—it must be *seen in time.*

Here we touch the vital point at issue. Are our great passenger lines doing all in their power to procure this promptness and accuracy of vision? Granted that the eyesight of the lookouts, men and officers, has been officially tested, have those tests been exhaustive, especially have they been conducted with due regard to the difference between day vision and night vision? In my own limited experience, I have known intimately one man whose day vision was keen and true, yet whose night vision was so defective that he could not follow comfortably a country road in a clear, starlit night. Further, should not every lookout be provided with the best marine glasses that can be made? True, the sailor has usually a prejudice against glasses; he usually protests that he can see as well without as with them. Here, again, is room for wholesome skepticism. The old-fashioned binocular, we may admit, is somewhat perplexing: but the new binocular, made of Jena glass and especially adapted to marine needs, is a very different article. I am persuaded that it would distinguish an iceberg from the surrounding water in clear starlight at a distance of, say, two miles. In this matter of glasses there is nothing exclusive: one is not forced to choose between glasses and naked vision, one can employ both. Lastly, there is the searchlight. It is now part of the equipment of men-of-war, yet it has never been used in the merchant service. Even the searchlight will not do everything. Yet we need not hesitate to believe that a powerful light, fitted with the right kind of reflector and moving to and fro through an arc of twenty or thirty degrees, will—except in case of fog—reveal every object of any considerable size for several miles ahead.

As matters now stand, we are in danger of wandering from the true line of safety. Clamor has arisen for a sufficient provision of lifeboats. Far be it from me to abate in the least this popular clamor. Yet, after we have got our lifeboats, will they prevent collision? They are merely a partial and imperfect remedy for the consequences of a collision. But what we should persistently clamor for is *the prevention of collision.* And to that end we must develop far beyond our present standard the *power of vision.*

AERONAUTICS.

To the Editor of The Nation:

Sir: Having read nothing in the *Nation* of this week in honor of Robert Browning's centenary, I send these stanzas to supply the deficiency.

See the lad in the parachute up aloft there,
His life on the wind-puff chancing?
Some day he will drop like a rotten pear
In August, a mile through the hissing air,
The zest of the "meet" enhancing
Vastly—for us who gape upward and stare.

Does he hold his life cheap? *En revanche* I enquire,
Does the steeplejack value each minute
O' the neck-risking, giddy, and danger-fringed spire
At less than the ditcher secure i' the mire?
He'd realize all there is in it—
Yon lad—in best mart, and he has to go higher.

His soul's wine is common and vapid, he knows,
Until, like a pearl, he throws death in it:
While he shoots with sheathed pinions, it shimmers and glows,
And the sweet of it, spice of it, costlier grows
Till that parasol-thing gets a breath in it,
And he pours the lees out—great God, there he goes!

. . . . . .

Admit that I'm shaken a bit? Why deny?
I prefer the hot brains i' the mazzard.
Yet the lad's quaffed his drink 'twixt the earth and the sky,
Tho' he's upset his cup, God approveth, I cry,
Not the goal, but the game and the hazard,
When men play the limit, do their damn'dest, and die.

IN RE BABBITT VS. SAINTSBURY.

To the Editor of The Nation:

Sir: Professor Babbitt's interesting essay, "Are the English Critical?" (*Nation,* March 21 and 28), has raised several questions in my mind. I am far from agreeing entirely with Professor Saintsbury, whose criticism often strikes me as erratic and confused. Professor Babbitt, however, seems to have done something less than justice to Saintsbury's defence of English criticism. The vortex of his essay is a sort of *ignoratio elenchi.* Saintsbury, as I understand him, contends not that the English as a race are especially critical, but merely that English critical writing does not deserve the reproach of inferiority to French. If we admit all of Professor Babbitt's main conclusions, the conclusion to which they point clearly that the English as a race are not fundamentally critical. It by no means necessarily follows that English criticism is not at all inferior to French criticism. Professor Babbitt, in fact, seems to me to come dangerously near begging the whole question. Assuming that English criticism is inferior he proceeds to find reasons for the supposed inferiority; but this last is the real point at issue. His reasoning is almost entirely *a priori;* he proves at most that we might expect to find English literature weak in criticism, not that it really is weak.

Aside from this general objection to Professor Babbitt's argument, two of his main points seem especially open to attack. I refer to the paragraphs in the second part of the essay, which deal with English insularity (p. 310), and with taste (p. 309). In support of the contention that English criticism is insular, Professor Babbitt quotes Dr. Johnson and an unnamed Englishman, and refers to Scott. Now Scott was not a critic, and, a caviller might add, not an Englishman. Dr. Johnson's insularity is easily shown; but surely he is not a fair representative of English criticism in this respect. Moreover, Professor Babbitt himself has told us in the first part of the essay (pp. 282-283) that "English criticism is largely a history of foreign influences." Is this consistent with the charge of insularity?

The discussion of "taste" begins with a definition from Voltaire, whose point of view is of course intensely French. Professor Babbitt's definition, based on Voltaire's, and on the analogy of physical taste, implies that literary taste is primarily the power to make fine distinctions. Here again the invaluable Dr. Johnson is invoked as a representative of English criticism, and compared unfavorably with Boileau. On Professor Babbitt's own showing, this comparison is hardly fair, because Boileau "probably made fewer mistakes in his actual verdicts than any other critic of whom we have record," whereas Johnson notoriously made more blunders than any other English critic of his rank. Furthermore, is it quite fair to judge of a critic's taste, as Professor Babbitt does, solely by his mistakes? We do not judge of a poet's or of a novelist's creative power by his failures. If we were to compare Johnson's best pieces of criticism, his "Life of Dryden," for instance, or his account of the "metaphysical" poets, or his preface to Shakespeare, with the best of Boileau, might not the result be different? And should not Johnson's greater range be taken into account?

Instead of beginning with a French definition of taste, suppose we should begin with an English one, say Hazlitt's:

> Taste is nothing but sensibility to the different kinds and degrees of excellence in the works of art and Nature. . . . The highest taste is shown in habitual sensibility to the greatest beauties; the most general taste is shown in a perception of the greatest varieties of excellence.

This puts the emphasis not upon fineness of distinction, but upon range and keenness of appreciation. If English and French criticism were to be judged by this test, what would be the result? Could French criticism, with its constant tendency to place Virgil and Horace above Homer and Pindar, lay claim to the highest taste? Unless my memory deceives me, I have heard Professor Babbitt himself say that even Sainte-Beuve "had no sense of the sublime." Could French criticism, with its constant tendency to condemn the irregular, the eccentric, the un-French, lay claim to the most general taste?

These considerations suggest that in the matter of bias there is not much to choose between Professor Babbitt and Professor Saintsbury. Professor Babbitt appears to be quite as strongly prejudiced in one di-

rection as Professor Saintsbury is in the other. HOMER E. WOODBRIDGE.

Colorado Springs, Col., April 28.

TO THE EDITOR OF THE NATION:

SIR: Most of my essay, it might be well to explain, is taken from the "general survey" chapter of a volume I am preparing on English criticism, where it will receive the abundant concrete illustration it now lacks. One must, of course, take many things for granted in a paper of this kind (the greater number of things the French critic may take for granted as compared with the critic in England or America is often cited, by the way, as proof of the critical superiority of the French). Thus I took it as self-evident that a critic may undergo foreign influence and at the same time remain insular ("the invaluable Dr. Johnson" is only one instance of many).

To rank a critic by his occasional happy hits rather than by the general correctness or incorrectness of his verdicts, is to confuse his rôle with that of the creator, a confusion encouraged by various moderns from Madame de Staël to Signor Croce. Dr. Johnson's "Preface" is admirable, yet his total judgment of Shakespeare illustrates, as does that of Dryden, what I have termed the unreconciled antinomy between the neo-classic creed and the spontaneous products of the English imagination. If Johnson decides that Shakespeare is not at home in tragedy, if he prefers Tate's rewriting of "Lear" to the original, if he is not merely wrong but grotesquely wrong in his comment on such phrases as "peep through the blanket of the dark" in "Macbeth," he is not erring casually but in consequence of neo-classic conceptions of poetic justice, "lowness," etc.

The cult of Virgil and Horace is not, of course, specifically French, but is an article of the neo-classical creed that derives from the Italian Renaissance. Perhaps the first protest of international significance against the over-estimate of Virgil was by a French critic, Saint-Evremond ("Réflexions sur nos traducteurs," 1675). "It is true," says Dryden of Saint-Evremond, "that as I am a religious admirer of Virgil, I could wish that he had not discovered our father's nakedness."

It can scarcely be claimed that the strongest point of the Frenchman is his sense of the sublime; yet even here it is needful to make distinctions. Boileau not only gave European currency to the treatise "On the Sublime," by his translation (1674), but felt more truly the sublime in the Longinian sense, I should not hesitate to affirm, than Professor Saintsbury, who lauds Longinus so extravagantly. Furthermore, at the very time Coleridge was denouncing the French as monkeys in human shape because of their supposed lack of sublimity, France had in Joubert a critic who was his equal in Platonic elevation and imaginative insight. Moreover these virtues were not obscured in Joubert as they were in Coleridge by opium and German metaphysics.

Mr. Woodbridge's quotation from Hazlitt suggests that I have failed to make clear one of the main points of my essay. "Range and keenness of appreciation" do not by themselves give taste, but merely romantic gusto or perceptiveness. In order that gusto may be elevated to taste it needs to be disciplined and selective. To this end it must come under the control of an entirely different order of intuitions, of what I have called "the back pull towards the centre." The romantic one-sidedness that is already so manifest in Hazlitt's conception of taste has, as I maintain, gone to seed in Professor Saintsbury.

STRINDBERG MSS.

TO THE EDITOR OF THE NATION:

SIR: The committee in charge of the Strindberg celebration in Stockholm last January is collecting material for a memorial volume which shall contain portraits of August Strindberg at different periods of his life, reproductions of paintings by him, an extensive bibliography, etc. A special division of the work will be devoted to an account of manuscripts by Strindberg and letters from him, in private or public collections. It is not probable that many such manuscripts or letters have found their way to America; but if any one who sees this note should have such manuscripts or letters in his possession, or should know of the whereabouts of any, the undersigned would be greatly obliged for as full information concerning them as possible. Literature

A LIFE OF PEACOCK.

Thomas Love Peacock. By Carl Van Doren. London: J. M. Dent & Sons, Ltd.; New York: E. P. Dutton & Co. $2.50 net.

The Madeira-quaffing Doctor Opimian seems to have voiced a whim of his creator's when he declared himself ill-pleased at the prospect of an Atlantic cable connecting him with the Americans: "If we could apply the power of electric repulsion to preserve us from ever hearing anything more of them," said that rubicund rector, "I should think we had for once derived a benefit from science." That the first substantial biography of the author of "Gryll Grange" should have come from an American is one of the ironical revenges brought in by the whirligig of time—a revenge which the general excellence of Mr. Van Doren's work should render palatable to all concerned.

Whatever industry could do to restore the footprints of Peacock's quiet passage through his four score years and one, we imagine, has been pretty completely accomplished. Mr. Van Doren has followed him through the files of obsolete periodicals, examined his unpublished manuscript in the British Museum, investigated his relations with the India House, and enjoyed the coöperation of his granddaughter, Mrs. Clarke, in gaining access to the extant relics and reminiscences. By the correction of old errors and the addition of considerable new detail he has superseded the fragmentary sketches of his predecessors. If the account of Peacock's career is still not entirely continuous and is far from minute, we need feel no great regret. With the best will in the world and much more abundant materials than were available, it would have been difficult to make of this man's external history a highly important or very stirring narrative.

The life of Peacock is indeed so devoid of those romantic allurements which send the biographers flocking to his contemporaries that one feels grateful to the destiny which made him the friend of Shelley and the father-in-law of George Meredith. Born in 1785 on the eve of a revolution which had spent its first irresistible force before he was old enough to be affected by it, he maintained through the long subsequent era of political and social upheaval the even tenor of a very private life, and passed out of the world in 1866 without ever having attracted much attention. While other young men of his time were imbruing their souls in mediævalism and German metaphysics, he was quietly making his way into the civilizations of Greece and Rome. While they were dreaming of purple Edens and pantisocracies, he was establishing permanent connections with a great commercial house. While they in Switzerland, Italy, and the Orient were fleeing from social opprobrium, he was getting himself decently married and settling down in cheerful domestic regularity. While they were portraying their Don Juans and Thalabas, their Christabels and Prometheuses, he was portraying his Cypresses and Sackbuts, his Floskies and Scythrops. While they were exploring "the great mystery" in Italian seas or dying fever-stricken for the liberties of Greece, he was sitting in his study sipping old port and nibbling at Petronius. When at length he departed full of years, the only place that he left conspicuously vacant was his easy-chair.

It is not surprising that a contemporary so well informed as Lord Broughton should have taken this man for a mere respectable Tory with an amateur's taste for letters. The obvious temptation to the reader of the novels is loosely to identify him with the long series of smug, well-fed clergymen, old-fashioned scholars, and country-gentlemen whose joy in red trout and ripe wine he sets forth with such manifest gusto. If you read with one eye shut, it is easy enough to fall into this trap. Does he not prefer the ancients to the moderns, deny the reality of progress, scout the hope of reforming the world, detest America and machinery and science, ridicule liberal and radical poets like Byron and Shelley, pour out the vials of laughter upon Malthus and the Utilitarians, and refuse to dine any

more with Mill because the guests are always economists?

When, however, you have transferred to the canvas these outlines of a stubborn reactionary, you observe with dismay that the sitter has undergone a peculiar transformation. That person with the leonine head still confronts you, sedate, imperturbable; but he is now uttering the most unimpeachably liberal sentiments: cursing Burke for a traitor to liberty, deriding Wordsworth, Southey, and Coleridge as pensioned renegades, exposing the absurdities of the pocket borough system, lamenting slavery in America as a blot on democracy, and alluding in far from reverential manner to his late majesty George III. How to make a coherent portrait of this mass of crotchets and contradictions? Has the man any mind or character of his own?

Any doubt of this nature should be dispelled by a glance at the excellent photogravure which is the frontispiece in Mr. Van Doren's book. A rather august head, this of Peacock's—firm and massive in all its parts: resolute chin, lips tightly shut, a long straight nose, eyes wide apart, reflective, overhung by shaggy brows, the forehead full and broad, and the whole face framed by a noble mane of snow-white waving hair. You cannot ask whether a man who bears a head like that at seventy-two possesses character. You are more inclined to exclaim, *Ultimus Romanorum;* it is a face of senatorial distinction and antique steadfastness. You observe perhaps that there is no wrinkle on his brow and that his thoughtful eyes are looking rather through than at you. The unruffled exterior you may explain by saying that he preserved a position of intellectual detachment from the life of his times. The light of internal serenity which emanates from his countenance you can explain only by assuming that he had built up a simple and well-ordered world within.

In seizing and fixing the somewhat evasive personality which concealed itself in business and lurked behind the dramatic masks of the novels, Mr. Van Doren has accomplished with notable success the crucial task of Peacock's biographer. In the last analysis, as he perceives, Peacock's isolation is not due to the eccentricity but to the centrality of his position. He is not the crotchety novelist but the novelist of crotchets. In the conduct of life he plants his feet squarely upon common sense. When he enters the field of speculation, he continues to show his respect for common sense by laying aside his convictions and becoming a skeptic. Always master of his sensibilities, in a time of violent partisanship he does not become a partisan. When he most resembles a Tory, he is really nearer to a cynical conservative. When he talks most like a democrat, he really feels more like an aristocratic republican. For a man of his principles there was no appropriate party in the days of spasmodic progressive revolutions and spasmodic reactionary Holy Alliances.

In such a crisis a man of sense and learning performs a most useful function by becoming a critic and philosopher. A man of Carlyle's temperament and modern German culture becomes an angry critic. A man of Peacock's temperament and ancient classical culture becomes a laughing philosopher. He, far more justly than nine out of ten of his Hellenizing contemporaries, may be described as a blithe pagan diverting himself with modern ideas. He sits at the head of his board like an amused Athenian of the Periclean age presiding over a delegation of barbarians. We have heard in our time of nervous young men enough who fancied they could be pagans by theatrically renouncing Christianity. The neo-Hellene usually betrays his restless Christian blood by becoming instead that eminently unpagan thing, an æsthete. Peacock proves his legitimate classical derivation by developing into a thoroughly respectable epicurean of the old school. He relishes the pleasures of the mind and also those of the palate; but he never mistakes the one for the other. When he finds the controversy which he has set on foot growing too warm for comfort, he is glad to hear the French cook announcing luncheon. To him may fairly be brought home what his biographer says of Dr. Folliott: "An Epicurean love of peace lies at the root of his conservatism"—at the root, also, it might be added, of his common sense. It is the repose and even balance of his temperament, his intellectual security, his steady pulses, and his head full of dry light that give the special quality to his learned and brain-clarifying laughter.

We have no difficulty in agreeing with the Peacockians that there is no one quite like Peacock; yet it is possible to overemphasize the solitariness of his position. Mr. Van Doren, whose critical comments are for the most part admirably dispassionate and just, tells us that he "belongs to a class which he exhausts, standing alone in laughter as Landor stands in wrath." As a matter of fact, Peacock was not without English predecessors, though he has eclipsed most of them. The tradition of the anti-romantic satirical novel in which he writes seems to have had its origin in the sharp reaction against revolutionary ideas which took place in England almost immediately after the execution of Louis XVI. Mr. Van Doren, after a somewhat cursory consideration of Jane Austen's title to predecessorship on the ground that her "Northanger Abbey" appeared early in 1818, the year in which "Nightmare Abbey" was published, dismisses her claim with the observation that "there seems to be no ground for connecting them, unless it be the suspicion itself." In justice to the lady's originality, we should remember that three of her best novels were published by 1814, two years before Peacock's first appearance in fiction, and that the first drafts of "Pride and Prejudice" and that consistent anti-romance, "Sense and Sensibility," were completed as early as 1797. This fact brought into connection with Mr. Van Doren's passing mention of Isaac Disraeli's "Vaurien," 1797, and George Walker's uproarious anti-Godwinian "Vagabond," 1799, becomes significant. Add to these the two peculiarly interesting burlesque novels of William Beckford, both almost utterly forgotten, "The Elegant Enthusiast," 1796, and "Azemia." 1797, and one begins to recognize that in the formative but biographically almost blank period of Peacock's youth there already existed in England a little school of satirical fiction protesting in the name of common sense against the enthusiastic absurdities of the day.

CURRENT FICTION.

The Drunkard. By Guy Thorne. New York: Sturgis & Walton Co.

It has often been remarked that the modern novel offers an almost unlimited opportunity for the confusion of *genres.* In this book we have an extraordinary compound of sermon, scientific treatise, and story. The sermon, on the two texts, "The fathers have eaten sour grapes and the children's teeth are set on edge" and "Look not upon the wine when it is red," is of the old-fashioned hell-fire variety. "There are deeper hells yet," promises the author with relish, "blacknesses more profound in which we shall see this unhappy soul!" The style of the sermon suggests now the evangelist of a former day, now the yellow journalist, his successor. The thesis of the scientific treatise is that alcoholism is an hereditary disease, and that the only effective remedy is to make it a crime for drunkards to beget children. The obvious practical difficulties are impatiently waved aside; for instance, who is to decide, and by what test, whether a man is a drunkard? Various learned works on alcoholism—medical, psychological, and legal—are quoted and referred to; technical phrases like "the amnesic dream-phase" abound; and the "foreword" assures us that in chapter vi of book three we have the real diary of an inebriate man of letters. "Serious students of the psychology of the Inebriate may use the document, certain that it is genuine."

The story, which exists only to furnish a series of illustrations for the sermon and the treatise, might be described as a sort of "Drunkard's Progress." It narrates in a prologue, three books,

and an epilogue the disintegration through alcohol and the ultimate salvation through religion of Gilbert Lothian, a poet who has sprung into sudden fame. The prologue anticipates the plot by showing how Lothian's illegitimate half-brother, as a result of alcoholism and infatuation with a woman, murders his wife and pays the death penalty. The process by which Lothian reaches this depth is minutely described; for a time the author records every drink, so that the story resembles a chronicle, not indeed of small beer, but of gin, whiskey, and champagne. In the epilogue, under the influence of Christianity, the murderer makes public confession and gives himself up to the law.

Aside from the scientific jargon, the style is at times curiously bookish. The author's mind is saturated with decadent literature; he has Wilde, Dowson, and Baudelaire at his tongue's end. Having assured us that Lothian is a great poet, he makes the mistake of quoting some of his verses, which are sad stuff—all except a fine line stolen from Francis Thompson. Alcoholism, it seems, leads to plagiarism as well as to murder. The element of decadence in the author's make-up may be illustrated by his profane application to an old church of the Horatian line which Dowson used as a title to one of his most morbid poems. " 'Non sum qualis eram,' the lorn interior seemed to say, 'bonæ sub regno Ecclesiæ.' " There is something hectic and unwholesome about this religio-scientific morality.

The Butterfly House. By Mary E. Wilkins Freeman. New York: Dodd, Mead & Co.

As happens with so many short-story writers, Mrs. Freeman's talent seems to have pretty thoroughly "petered out." It has never been strongly evident in her longer stories. Indeed, none of her novels can show themselves to be anything more than short stories padded and expanded to the publisher's requirement. In the present instance a single situation and episode, such as the writer might have handled effectively in a few thousand words, is strung out into book form, and enfeebled in the process. It is not very clear what the title means, but we suppose the butterfly is Margaret Edes. She is a youngish married woman whose husband does business in New York successfully, but not successfully enough to permit of living in the city. Mrs. Edes's ambition, therefore, has to content itself with the ruling of Fairbridge. The picture of that select suburban town and its self-absorbed inhabitants is drawn with grim humor. Fairbridge was in New Jersey. It contained no bridge, and was not remarkably fair. "There was something fairly uncanny about Fairbridge's influence upon people after they had lived there even a few years. The influence held good, too, in the cases of men who went daily to business or professions in New York. Even Wall Street was no sinecure [*sic*]. Back they would come at night, and the terrible, narrow maelstrom of pettiness sucked them in." So Mr. Wilbur Edes came back nightly to his Margaret, and she seemed to him a great lady. She was the best-dressed woman in Fairbridge, and the most dainty in manner, and she had only one rival in the domination of the Zenith Club, which nourished culture among the ladies of Fairbridge. All this—all the descriptive and introductory part of the story—is excellent. But the story itself is nothing, or next to nothing. The means by which Margaret Edes tries to clinch her supremacy once for all are fairly grotesque. Her victim and worshipper, Annie Eustace, is an impossible person; and the other figures are coarsely drawn.

Red Eve. By H. Rider Haggard. New York: Doubleday, Page & Co.

A hero irresistible in combat; a beautiful and spirited heroine, his distant relative; a villain cowardly and treacherous, rich and powerful, assisted by a wily priest; an archer in comparison with whom Robin Hood and William Tell were novices; such characters we must expect in a fourteenth-century romance. We find also the expected incidents: fights on the lonely moor, a contest in archery before the court, a tournament, the desperate defence of a fortress. In general, the romance may be described as about half-way between Scott and Henty. Mr. Haggard's machinery creaks a good deal in the process of getting started; once under way it moves easily and rapidly. The hero is of the regulation Ivanhoe type; of the heroine we feel that she might be interesting if only we could learn more about her. The story is partly redeemed from conventionality by the striking figure of Murgh, a supernatural personage from the Orient, who is at once a personification of the Black Death and a sort of guardian angel to the hero and heroine. This grotesque and terrible being appears at crises as a *deus ex machina*, and makes his presence constantly felt in the background of the action. In style the dialogue walks on conventional romantic stilts, with occasional tumbles into modern colloquialism. The illustrations in color are attractive and appropriate.

Carnival. By Compton Mackenzie. New York: D. Appleton & Co.

The work of this British author, who is little known in this country, will start in the reader's mind certain echoes of greatness. He has caught the inevitableness of tragic situations, known to the author of "Tess," and like Meredith, he feels the poetry of even sordid surroundings. Withal, he is at times strangely amateurish, notably in sounding the urgency of passion. In accordance with a growing fashion, and in a way which reminds us of "Jean-Christophe" and Richard Price's "Christopher," he has chosen to give a chronicle rather than a more organized novel, the thread of the story beginning with the birth of the central character. Jenny Raeburn is the daughter of a woman who had married a joiner, though herself the daughter of a prosperous butcher and the granddaughter of a chemist. Oh, what a fall was that, even in her own eyes! This is really the theme of the whole record—the fatality of momentary weakness. Jenny is not long in the world before she, too, feels the call of better conditions and in her begins anew the progress interrupted by the mother's act. She becomes a professional dancer, and, still in her teens, has a London engagement, and a circle of friends at least one of whom is a man of wealth and anxious to marry her. But in her, too, is a streak of whimsy. From Maurice, to whom she is devoted, her instincts hold her back; to the libertine Danby she gives herself almost uninvited, and hardly less unexpectedly becomes the wife of a clumsy Cornwall farmer. Yet such, the reader realizes, can never be the solution of her complex spirit. She is bored, sees her former lover, though honorably, and for her pains is shot by the jealous husband. Exit. With Jenny the reader feels a genuine acquaintance, and is sometimes oppressed by the author's method, a little too hard to be true, of pursuing his thesis to the logical end.

RELIGIOUS PSYCHOLOGY.

The Psychology of the Religious Life. By George Malcolm Stratton. New York: The Macmillan Co. $2.75 net.

One of the most crucial questions confronting the psychology of religion concerns the source from which it shall draw its material. Starbuck gathered his data by means of a questionnaire, James gained his from biographies, Leuba and several other investigators have made use of both of these sources. Professor Stratton, in attacking the problem of the psychology of the religious life, makes no attempt to gather material in either of these ways, regarding such material as somewhat untrustworthy, or at least dangerous to handle, and as necessarily limited and provincial:

> The persons most easily reached by such means are, for the most part, adherents of one and the same religion, they are of the Occident, and naturally show a preponderance of that special type of character that is ready to grant to a stranger an access to the secret places of personality. To escape some of these difficulties one ought to observe from the standpoint of psychology

the religious life of a wide variety of peoples, even those most reticent, and when they are off their guard and without self-consciousness. The prayer, the hymn, the sacred prophecy—these, I believe, still furnish to the psychologist the best means of examining the full nature of religion in its diverse forms.

In thus turning to anthropology and history for his material, our author is, of course, doing nothing new. He is, however, unique in confining himself to these relatively objective sources, and unique in the way in which he makes use of them. Individual experiences he nowhere studies, but only general tendencies, general influences, general ideas, etc., in their collective and rather abstract form. His book is therefore of especial interest to the psychologist of religion as a test of the method here so carefully isolated and so consistently and learnedly applied. For at the present stage of this young science the question of method is more important than any particular results could be. And Professor Stratton is admirably equipped to give the method a trial. Already a psychologist of repute, he has studied very widely in the Sacred Books of various religions and in the works of historians and anthropologists. Both his scholarship and his sound judgment are apparent on every page. Hence the reader may well start in with a good deal of pleasurable expectation.

What one learns is, in substance, the following: Individuals differ considerably in their ways of feeling, acting, and thinking. Different peoples differ quite as much. These differences are reflected in the varied aspects of religious feeling, activity, and thought to be observed in different parts of the world. Some religions magnify the self, some repress it; some accept the good things of this life, some reject them; some are cheerful, some gloomy; some urge to activity, some encourage passivity; some favor thought, some seek to quench it; some represent God sensuously, some imaginatively, some conceptually; some have many gods, some have only one; some favor a god far off, some prefer him near at hand; some religions are warm, some religions cold; some like the new, some like the old, etc., etc. To each of these "conflicts," and to several others like them, one chapter at the least is given, and the thesis in each case proved elaborately by citations of myths, quotations from the Sacred Books, and references to Tylor and Frazer, so that not even the most determined skeptic can any longer doubt the conclusions set forth. The influences favoring each tendency are also analyzed with care and with skill. And here, indeed, there is opportunity for some psychological insight and psychological explanation—an opportunity which our author never fails to embrace in ways that are always interesting and sometimes instructive. The one conclusion, however, that stands out in the reader's mind, and the one dominating thesis of the book, is that in religion you find both extreme points of view about most things—and, for that matter, almost all of the intervening stages also—in short, that the religions of different peoples and of different individuals differ considerably.

It seems almost unkind to write thus of a book in which one finds nothing with which to disagree. But that, after all, is just the difficulty with it. One looks in vain for any statement of psychological fact with which one could disagree, and comes away wondering why so much learning was necessary to demonstrate the obvious. In many respects the book is excellent. It is charmingly written, always clear, almost always interesting, and its analyses of the causes of certain religious phenomena are sometimes suggestive. Its incidentals are often admirable, and it abounds in wise reflections upon religious matters or present conditions—as when, for example, in speaking of our American disregard for religious ritual, the author remarks:

> But, after all, some violence has evidently been done to human nature, that will be avenged. For the love of noble ceremony, cheated at its rightful place, appears in the tawdry ritualism of "fraternal" bodies, which in America have such an unparalleled popularity. Here the staunch republican, renouncing the bauble crown and pageantry of kings, can again rejoice in regalia and stilted phrase. The ceremonial side of these organizations shows an almost pathetic attempt to appease the natural craving for action unhindered, orderly, and gracious—a craving which in other countries finds its satisfaction in the scenes that go with military pomp, with royalty, and the service of great cathedrals.

A review of this book which left unmentioned the final chapter would be unfair and misleading; for though this makes no pretentions to being psychological, it is by all odds the best thing the book contains. Its title, Standards of Religion, indicates its purpose—to assist one in judging between religions and to point out the way in which a sane and normal development should be sought. The chapter closes with a philosophical argument to show that religion as well as science "is justified in taking part in the discovery of the truth."

It is questionable whether any one could have done much better with the method Professor Stratton has followed and the material he has used. The study of impersonal and collective expressions and of religious concepts of a general nature can give us only general and objective facts; and the general and objective facts about religion were known long before the psychologist entered the field. It is the particular and subjective facts, in their detail and exactness, that he must seek if he is really to add to our knowledge. It must not be forgotten that psychology, though it seeks to be "scientific," must forever be concerned with the subjective and must always fall back ultimately on the individual. Anthropology and history, and especially the sacred literatures of the past, may indeed be of considerable service to religious psychology, provided they be studied with an eye to the subjective. But they are far too poor in data of a definite and exact subjective nature to add much to our knowledge of psychology when unsupplemented by other material.

Meroe, the City of the Ethiopians. Being an Account of a First Season's Excavations on the Site, 1909-1910, by John Garstang, A. H. Sayce, and F. Ll. Griffith. New York: Henry Frowde; Clarendon Press.

That the capital of the classic Ethiopia should have remained so long unexcavated is perhaps due to its inaccessibility, and to the outbreak of the Mahdi which made the region unsafe for twenty years. In former notices in these columns your reviewer has given some account of the relations of the Upper Nile region with Egypt at a very remote date. The detachment of this southernmost territory of the Pharaohs, which they had controlled for two thousand years, was complete by the early eighth century, B. C. It had then become the land of Homer's "blameless (?) Ethiopians" whither the gods went to feast every year; the land where the cranes found winter sunshine by "the streams of Okeanos." Its southern capital, Meroe (the earlier capital had been further north at Napata), was the seat of that line of kings who also absorbed Egypt in the days of Assyrian expansion, and it was to them in the age when Sennacherib was devastating Judæa that Isaiah, or the men of his time, applied the scathing epithet "a broken reed." Here lived in Christian times that line of queens of whom several bore the name Candace and one figures in the New Testament. The historical connection of the city with Asia, however, is perhaps best indicated by recalling that the line of Ethiopian rulers who lived here were the futile opponents of Sennacherib and the Assyrian emperors of his age in their endeavor to absorb Egypt in the eighth and seventh centuries, B. C.

In modern times, as Professor Sayce notices, Bruce was probably the first to see the ruins of the city, in 1772, as he came down the Nile from Abyssinia. Bruce's casual remark suggesting the identification of the ruins with Meroe was forgotten, and indeed he afterward discarded it himself for another site further south. The able Frenchman Cailliaud, who followed the army of the Egyptian viceroy southward in 1820-21, while he recognized at once

that the imposing pyramids on the eastern heights formed the cemetery of the ancient city of Meroe, failed to identify the mounds and ruins on their west as those of the city itself.

Referring to Cailliaud's failure to identify the ruins, Mr. Sayce says:

It is still more strange that Lepsius, who spent so many days copying the sculptures and inscriptions in the pyramid chapels, and who was looking out for the site of the city to which the pyramids belonged, should have equally failed to identify it. In his "Letters" he has much to say about the pyramids, but the only mounds he seems to have visited were those near the modern station of Mutmir. [Lepsius says] "We returned but little satisfied amidst the noon-day heat, and arrived with our bark only just before sunset in Begarauie, in the neighborhood of which are situated the pyramids of Meroe. It is remarkable that this place is not mentioned by Cailliaud. He only speaks of the pyramids of Assur, *i. e., Sûr* or *e'Sûr*. The whole plain in which the ruins of the city and the pyramids lie, bears the same name, and, besides this, a portion of Begerauie, which, probably by a slip of the pen, is called Begromi by Hoskins."

Mr. Sayce continues:

Lepsius, however, refrains from identifying the city, in which Ferlini had already vainly searched for treasure, with the ancient Meroe, and when Dr. Wallis Budge published his comprehensive work on the Sudan he could still say that its site was uncertain, while John Ward, writing in 1905, was obliged to pronounce that "where the metropolis of Meroe was is still a mystery." It was the identification of the great temple of Amon [by Garstang's present expedition] which finally settled the question (pp. 6-7).

That the ponderous oracle of the British Museum in his "comprehensive work on the Sudan" could still say that the site of Meroe was uncertain is quite credible. We have yet to examine one of the many volumes which we owe to the same fountain of wisdom in which many equally interesting statements may not be found. As the work of a layman it is perhaps not surprising that John Ward's Sudan book, which antedates Budge's volumes, should aver that the whereabouts of ancient Meroe "is still a mystery." But from Professor Sayce, who in this volume displays his customary easy familiarity with the Oriental field, it would be an affront to say that we should expect any such statement, especially in view of Lepsius's work. An examination of the very passage from Lepsius's "Letters," quoted by Sayce above, in spite of the rather bad translation (not due to Sayce), discloses the fact that Lepsius recognized Meroe in the ruins on the plain by the pyramids, for he refers explicitly to the plain, "in which the ruins of the city [of course Meroe] and the pyramids lie." All doubt regarding the matter is finally set at rest, however, by the fact that Lepsius surveyed the city together with the neighboring pyramid fields and published the survey in his great "Denkmäler" (Abtheilung I, Blatt 132), with the superscription, "Situationsplan der Ruinen der Stadt Meroe, nebst den dazugehörigen Pyramidenfeldern." Most of the buildings excavated by the Garstang expedition will be found indicated on this plan. There is no ground whatever for Professor Sayce's statement: "It was the identification of the great temple of Amon which finally settled the question." As to the identity of the city of Meroe there was no question for us to settle. It was settled by Lepsius seventy years ago. While we need hardly say that the strange error is an unintentional oversight, it is regrettable that the first report on modern excavations at Meroe should place the work of the great Prussian in a light so misleading.

The excavations disclosed the temple of Amon as a long narrow structure, with a colonnaded forecourt some two hundred feet in length, behind which three successive halls led to the adytum. It was built of sun-dried brick with stone doorways. Three other sanctuaries were cleared, one of which was noticed by the University of Chicago Expedition as especially worthy of further investigation. The Liverpool Expedition would make this temple out to be the "table of the Sun" described by Herodotus. In the course of the clearances effected a mass of gold was discovered of such bulk as to be of considerable intrinsic value. It was divided among the institutions contributing to the support of the excavations, and it has been currently reported that Brussels, for example, received enough gold to recompense her for the contribution made. For some reason the volume makes no reference whatever to this find, which certainly possessed more than ensational importance. The most valuable section of the work is a treatment of the Meroitic inscriptions discovered by Griffith, in which the progress he is making in the decipherment of the lost tongue is evident. Professor Sayce also contributes an interesting discussion of Meroitic hieroglyphs.

The Life of Teresa of Jesus of the Order of Our Lady of Carmel. Embracing the Life, Relations, Maxims, and Foundations Written by the Saint. Also a History of St. Teresa's Journeys and Foundations, with Map and Illustrations. Edited by John J. Burke, C.S.P. New York: The Columbus Press.

In 1870 David Lewis, a convert to Catholicism, published an English translation, with elaborate preface and abundant annotations, of "The Life of Teresa, Written by Herself," and in the year following he performed the same service for her "Book of the Foundations." As these books are now out of print, Father John J. Burke has been well advised in editing and republishing them in a single volume. An introduction, contributed by Father Walter Elliott, gives some account of the personality and work of the Saint, and of her place in the long hierarchy of mystics. "Not meditation," he observes, "but contemplation is St. Teresa's peculiar field of instruction. What St. Ignatius was to the active-minded prayer of meditation, that was St. Teresa to the quiet-minded prayer of contemplation." Those not already initiated in this mystical literature will find the full doctrine of this prayer of contemplation unfolded in the eleventh and following chapters of the "Life," where the Saint speaks "of those who begin to be the servants of love":

A beginner must look upon himself as making a garden, wherein our Lord may take His delight, but in a soil unfruitful, and abounding in weeds. His Majesty roots up the weeds, and has to plant good herbs. Let us, then, take for granted that this is already done when a soul is determined to give itself to prayer, and has begun the practice of it. We have, then, as good gardeners, by the help of God, to see that the plants grow, to water them carefully, that they may not die, but produce blossoms, which shall send forth much fragrance, refreshing to our Lord, so that He may come often for His pleasure into this garden, and delight Himself in the midst of these virtues.

Let us now see how this garden is to be watered, that we may understand what we have to do: how much trouble it will cost us, whether the gain be greater than the trouble, or how long a time it will take us. It seems to me that the garden may be watered in four ways: by water taken out of a well, which is very laborious; or with water raised by means of an engine and buckets, drawn by a windlass—I have drawn it this way sometimes—it is a less troublesome way than the first, and gives more water; or by a stream or brook, whereby the garden is watered in a much better way—for the soil is more thoroughly saturated, and there is no necessity to water it so often, and the labor of the gardener is much less; or by showers of rain, when our Lord Himself waters it, without labor on our part—and this way is incomparably better than all the others of which I have spoken.

The long allegory which follows is one of the *loci classici* for the mystic practice. Its imagery, as indeed the whole of St. Teresa's writings, will affect different readers according to their temper and training. To some, as to the present reviewer, these passages will exude a certain odor of unconscious eroticism which is not altogether pleasant. Somehow this feeling comes out more strongly in the English than in the Spanish, owing no doubt to the fact that our harsher language has never been trained to the expression of these religious symbols. It should not be forgotten, however, that St. Teresa,

like many another mystic, was remarkably efficient in practical affairs.

A novel feature of the present edition is the reproduction of a series of excellent plates which first appeared in "L'Espagne Thérésienne, ou Pélérinage d'un flamand à toutes les fondations de Ste. Thérèse," a diary of Hye Hoys, a native of Ghent, who at the cost of great labor and privation, made a pilgrimage to the shrines of the Saint in 1866. His engravings of monasteries and relics are valuable and very interesting. But where is the translation of the Diary itself, which the title-page and introduction announce? We have failed to find it, unless it lies concealed in the notes on the engravings printed as an appendix to the volume. As a compensation there is an excellent index.

Acts of the Privy Council of England. Colonial Series. Vol. V, 1766-1783. Edited through the direction of the Lord President of the Council by James Munro, M.A., under the general supervision of Sir Almeric W. Fitz Roy, Clerk of the Privy Council. London: H. M. Stationery Office.

With the exception of a final and supplemental volume to be issued next year, which will contain matter from the uncalendared papers in the Privy Council Office, this series is now finished and forms a noteworthy work of permanent value. The undertaking has been pushed with exceptional celerity, having been planned in 1906 and the first volume issued in 1908. The present instalment, which covers the period from 1766 to 1783, has a peculiar interest, in that it discloses the machinery of the British administration at work during a time when attention is usually absorbed by the activities in Parliament, where lay the real agency of control in all that concerned the wider relations with the colonies. Yet during these years the Council Committee and the Board of Trade (to 1782) were not inactive bodies and played no inconsiderable part in directing the routine of administration in America. Strangely enough, however, neither body seemed aware of the serious nature of the colonial unrest and was apparently oblivious to the fact that great issues were at stake. The traditional policy of the British Government was maintained, if anything, more rigidly than before, and even under the shadow of rebellion against the royal authority, the Council, the crown lawyers, the Board of Trade, and its legal advisers insisted to the full on the authority of the Crown, the validity of the instructions to the governors, and the integrity of the British policy. Such insistence on the entire letter of the law was a clear case of administrative bureaucracy. One meets with no evidence of statesmanship in these pages, and the list of councillors shows no men of statesmanlike rank, a rank indeed all too empty in those days.

Sir Almeric Fitz Roy, in his admirable preface, calls attention with approval to the fact that if a clerk of the council of the seventeenth or eighteenth century could reënter upon the work of today, he would find the practice as to reference, reports, and orders in all important respects unaltered, and he notes that in British history changes in the spirit and intention of policy have thus been masked to those who witnessed its development. That this is a characteristic of British method we all know, but we must at the same time believe that the British departmental system, at certain periods of its career, would have promoted a truer progress and have relieved the Government and people of defeat and humiliation, had it shown itself more open to the conditions that confronted it and less tenacious of many of its time-worn prepossessions. The events of the American Revolution are a sufficient proof of this assertion.

Notes

Richard Washburn Child's new novel, "The Blue Wall," will be issued by Houghton Mifflin Co. next month. The same house has contracted with Henry S. Harrison for a new novel whose title is not yet announced.

Among the books which Small, Maynard & Co. have in hand are: "The Campaign of Gettysburg," by "Miles," the pen-name of an English army officer; "Tripoli the Mysterious," by Mabel Loomis Todd; "White Mountain Trails," by Winthrop Packard; "The Story of Evolution," by Joseph McCabe; "In Forbidden China," by Viscount D'Ollone, leader of the French Exploration party of 1909, translated by Bernard Miall; "The Isle of Strife," by George C. Shedd, and "Wilhelmina Changes Her Mind," by Florence Morse Kingsley.

Henry Holt & Co. will add this month several new volumes to their Home University Library of Modern Knowledge, among them: "Mediæval English Literature," by W. P. Ker; "The English Language," by L. Pearsall Smith; "English Sects, a History of Nonconformity," by W. B. Selbie, and "Buddhism," by Mrs. Rhys David.

Smith & Elder are bringing out "The Church in the Pages of *Punch*." The author, the Rev. D. Wallace Duthie, has sketched the esteem in which *Punch* has held the clergy for the past seventy years.

In "War and the Private Citizen," which will be published by P. S. King & Son, Dr. A. Pearce Higgins discusses several questions which were left unsolved by the Naval Conference of London.

Announcement is made of the publication, for private circulation only, of John Muir's memorial to Edward H. Harriman, under the title of "E. H. Harriman." The book cannot be bought, but a copy will be sent free to any librarian who will make application to the publishers, Doubleday, Page & Co.

Samuel Merwin's new novel, "The Citadel," will be brought out this month by the Century Co.

In "The Great Taxicab Robbery," shortly to be issued by John Lane Co., the author, James H. Collins, has described minutely the incident which startled New York a few months ago.

The same house announces "The Children of Alsace," by René Bazin, a member of the French Academy and of the committee who brought Rodin's bust, La France, to this country.

In the April number of *The American Journal of International Law*, just issued, Ernest Nys, the accomplished Belgian jurist and diplomat, concludes his learned paper on "The Development and Formation of International Law." A fundamental question is, To what extent has custom influenced this branch of the law? (for many take exception to Austin's dictum that what is designated "Law" is only international morality). Citing Revier, "the intention of contracting States is specifically to legislate in international matters, irrespective of whether they propose to create one or more new principles or whether they decide to develop new principles already in existence," he remarks, "These treaties, these declarations, these general acts, are the sources of International Law." M. Nys is especially eulogistic when commenting on the attitude and acts of our representatives at the 1907 Hague Conference and on Secretary Root's instructions to them. Secretary Knox also comes in for praise, in M. Nys's paper, for his identical note "to the Powers, inviting their approval of a plan to broaden the jurisdiction of the International Prize Court of Appeal, thus anticipating the court proposed by Mr. Root, without slackening the efforts to obtain such a court, at the next Conference." Professor Hershey discusses the "International Law of Aerial Space" briefly but comprehensively. The Editorial Comment considers Italy's use of balloons for discharging bombs and destructive missiles upon undefended towns in North Africa, in the light of her assent to the Convention of the Second Hague Conference respecting the laws and customs of War on Land. She had not assented—though Turkey had—to the Declaration of the 1899 Hague Conference against the launching of projectiles and explosives from balloons, or by other new methods; but had, to the other Convention, prohibiting the attack or bombardment, *by whatever means*, of towns, villages, dwellings, or buildings which are undefended. This was Article 25; and Article 27 further provided that in sieges and bombardments all necessary steps should be taken to spare historic monuments, hospitals, and places where sick and wounded were collected, unless they were at the time used for military purposes. In another paper Thomas Willing Balch concludes that Hudson Bay has in the past been, and that it is to the interest of all nations that it should remain, an open sea. Clement L. Bouvé examines Russia's liability in tort for Persia's breach of contract. He does not contend that the United States was authorized to take action against the exercise of Rus-

sian authority in Persia, even though such exercise might result in the deposing of Mr. Schuster as Treasurer-General, but that we were entitled to insist that Mr. Schuster should be protected in his rights of person and property, including the right accruing from his contract with the Persian Government.

E. P. Dutton & Co. offer a new edition of Charles Whibley's "Book of Scoundrels." For those not familiar with this pleasant bit of mock heroic writing, we may say that, besides an elaborately witty introduction on the glories of scoundrelism in general, there are chapters on Capt. Hind, Moll Cutpurse and Jonathan Wild, Ralph Briscoe, Sixteen-String Jack, George Barrington, Sheppard and Cartouche, Deacon Brodie, and other genial despisers of artificial distinctions between *meum* and *tuum*.

Hilaire Belloc has put forth another little volume called "First and Last," containing some forty small essays treating of such themes as cheese, St. Patrick, and the end of the world (Dutton). They are written with his customary briskness, and they are not without a palatable flavor of history and travel. Two or three are even mildly clever: for example, the account of the Battle of Hastings, "related in the manner of Oxford and dedicated to that University." First and last, however, there is an immense deal of beating of the bushes for the number of hares started.

A dozen years ago when everyone was still reading "Rudder Grange," Frank R. Stockton asked Mrs. Frederick Gotthold which of his stories she liked best. Her choice of the fairy tale, "Old Pipes and the Dryad," pleased him, and some time later, when the publishers were preparing a new edition of his stories, she had them print for her a copy of the fairy tale, each page being on a leaf of vellum, which she illuminated and decorated and sent to him. In return she received a small book of manuscript, the title-page bearing the words: "The Lost Dryad. By Frank R. Stockton. Only Copy." Its recipient's interest in the Eastern Branch of the United Workers of Greenwich, Conn., has now prompted her to give the story to them for publication. The magazine rights have been sold, and with the money thus obtained an edition of one thousand copies of the tale has been printed. The proceeds are to go to the construction of a children's clubhouse and playground in "a very poor little village, where some of the little ones wander through childhood almost as forlornly as the Lost Dryad bereft of her oak-tree."

To the numerous translations of the "Pilgrim's Progress" is now to be added one into the language of Uganda, according to a recent announcement of the Religious Tract Society which has it in press. Considering the remarkable popularity of the book—after the Bible "the most widely read in England," says Taine in his "History of English Literature"—it is interesting to note that all the early editions were evidently meant only for the cottage and the servants' hall. The paper, the printing, the plates were all of the meanest description. It is perhaps the only instance in which the educated minority has come over to the opinion of the common people.

"Journals of the House of Burgesses of Virginia" (Richmond: Virginia State Library), edited by H. R. McIlwaine, have now been issued covering the following periods: 1712-1714, 1715, 1718, 1720-1722, 1723-1726. The text of these journals has been obtained from transcripts of the manuscript copies in the Public Record Office, London, there being, so far as is known, no originals or early copies in America; the records have never before been printed. The list of the Burgesses for each of the five Assemblies is given, together with a short preface containing the historical setting, and a synopsis of each session. Studied in conjunction with certain other works, these records are most valuable for reconstructing the early history of Virginia. They supplement the official letters of Gov. Spotswood, in the first two volumes of the Collections of the Virginia Historical Society, and the corresponding volumes (chiefly Vol. IV.) of Hening's Statutes. For special students and for old residents of Virginia, the present work will not be dry reading. Race disputes between the Governor and the Assembly were numerous, with altercations over the tobacco laws forming a not unfitting burden. We can mention here only a few of the more significant incidents. In 1715 Peter Beverley was elected to the House from William and Mary College, but the House decided that the College, being still under the control of the trustees, was not entitled to representation. The second session of 1718, beginning November 11, proved to be one of the most exciting that had occurred in colonial history. An effort was made to remove Gov. Spotswood, who replied hotly, and was strong enough to hold his seat, though the strife was waged well into 1720. In this year two new counties were created, Spotsylvania and Brunswick, to secure the northern and southern passes of the Blue Ridge, and it was requested of the King that each should be held by a garrison of English troops. After much agitation of the matter, Spotswood was permitted, in 1722, to go to Albany to negotiate a treaty with the Five Nations. At the same time, his incumbency of office ended. His administration extended from 1710 to 1722, and, though stormy, is acknowledged to have been beneficial to the colony. He was superseded by Col. Hugh Drysdale.

To obtain ample revenue for all the needs of the colony, an act was passed to lay a duty on liquors and slaves, the duties to be paid by the importers. This caused violent opposition by the English merchants, especially the Royal African Company, and the act was repealed. The act for the better regulation of the militia required that "all free white male persons in the colony between the ages of twenty-one and sixty should be liable to military duty, that arms and ammunition should be provided by each militiaman, that county musters should be held at least once a year and company drills at least four times a year, with penalties for failure to attend. In 1726 Gov. Drysdale announced that the state of his health made a voyage to England necessary. But he promised that while there he should be glad to "serve so loyal, peaceable, and kind" a people as he had found the colony of Virginia to be. This was a strong contrast to language often adopted by Gov. Spotswood. The voyage oversea, however, was never undertaken; Gov. Drysdale died in Virginia on July 22 of that year.

"A Manual of Heraldry" (Lippincott), by Gale Pedrick, F. R. Hist. Soc., is a book of digressions at once delightful and annoying. Of "armorial instances" both British and Continental, it presents great store; but of principles of heraldry it offers little. It is a catalogue of armorial charges and their occurrence, mitigated with anecdotes more or less apocryphal, and supplemented with six general chapters. Of the latter, that on the influence of heraldry upon "poetry *and literature*" considers only the heraldic passages in Scott. Without glossary, without index, perverse in its chapter-division and in its paragraphing, Mr. Pedrick's manual, although intended to be popular, is at times more tedious than volumes far more technical. Indeed, for major incoherence, it is comparable only with the "Accedens of Armory" of that garrulous Elizabethan, Gerard Legh. Most praiseworthy, however, is the author's condemnation of the heraldic laxities of the present day; if conditions in England merit this reproof, what must we think of those prevailing in America?

"The Full Recognition of Japan," by Robert P. Porter (Frowde), is a portly volume of nearly eight hundred pages, excellently equipped with maps, and is an attempt to sum up the Japan of to-day as a political and industrial factor in the international world. The writer, a capable journalist, is naturally more at home in the present than in the past, but his preliminary remarks on early history and ethnology are inexcusably crude. In the chapter on the Tokugawa Shogunate he betrays little or no acquaintance with first-hand authorities on the subject. He is fond of quoting Dr. David Murray, whose Japan in the Story of the Nations series is an excellent compendium, but now nearly twenty years old. Mr. Porter's more cursory sketch of mediæval Japan is annoyingly out of drawing. He speaks of the daimio of Satsuma as if that nobleman played the leading rôle in western Japan at the time of Xavier's visit; as if it were a case of Xavier vis-à-vis Prince Shimadzu. But Otomo Yoshishige of Bungo, who became a convert and warm personal friend of the saintly Jesuit, was perhaps the greatest potentate in the Island of Kyushu. It is a pity that Mr. Porter could not have followed his favorite Murray in the manner of his quotations from Xavier's letters; Murray's excerpts are couched in good English, but Mr. Porter serves up the modern French of Léon Pagès on page 47 (of course, without acknowledgment), and evidently supposes that he is quoting directly from the saint's correspondence!

As the reader proceeds further he discovers how sadly inadequate are the writer's qualifications for the heavy task he has undertaken. At page 697 he refers in passing to the Agricultural College of Sapporo, of which Nitobe is a graduate, without suspecting that this College is at present the most important part of the University of the Northeast or Tohoku; the other colleges being located at Sendai. The College of Medicine at Fukuoka will form the nucleus of the fourth, or Southwest, University. It is at present attached to the University of Kyoto, which has its own

College of Medicine; the College of Medicine of the University of Tokio being naturally in Tokio. There are other misstatements in this extraordinary paragraph. The chapter on Hokkaido (xliii) pays no attention to the Ainus or Zezos (*sic?*), who are pitchforked into chapter ii, and Japanese Literature (xxix) does not mention Dr. Nitobe, the accomplished author of "Bushido." Errors like Deshiman-island, Asama-yan, Wakasam, scattered throughout the book, *may* be regarded as printer's errors, but are greatly to be regretted in a work that pretends to be authoritative; they do *not* occur in similar works that have appeared from the London press in recent years.

J. J. Houben's "Jungdeutscher Sturm und Drang" (imported by G. E. Stechert & Co.) is a work covering one of the most interesting periods in the history of German literature. The group of writers who, stimulated by the revolutionary current of thought that swept into Germany from across the Rhine and animated the stagnant atmosphere of the post-Napoleonic period, has become of late the subject of serious research. The present tendency is towards a thorough revision of the conclusions reached by a previous generation of critics and historians. The present study follows the group from those early controversies of Börne and Heine with the authorities which gave the young generation its cue, and recounts with judicious insight the outbreak of hostilities between the leaders of the new school and Wolfgang Menzel—then the infallible authority on literary matters in Prussia—as well as the disputes which were carried into the official camp and resulted in prosecution by the Government. The proceedings admirably served the purpose of bringing into prominence writers who under normal conditions would have had some trouble in attracting attention, even though some of these men were of indisputable gifts and strong personalities. That Laube and Gutzkow survived their comrades in the cause was due to their more liberal endowment and their activity in the field of the drama, which assured them a permanent place in German letters. But the book of Dr. Houben derives its main interest from those chapters in which he discusses the less known members of that curious group of dissenters. He quotes a letter from Börne to Gustave Kühne, containing this characteristic passage:

> We are all concerned in this, all Germany, all the youth of the country is being wronged, abused, and crucified in those five men, and we all, who still have a drop of youthful blood in us, must join them, that the league of Young Germany may reach farther and farther.

The five men referred to were Heine, Gutzkow, Wienharg, Mundt, and Laube. Dr. Houben has thoroughly investigated the ambiguous part played by Wolfgang Menzel, and does not hesitate to say that Heine's charge of denunciation was not unfounded. The book is full of comparatively new information; its statements are backed with documentary evidence, and its clear and animated style makes it very agreeable reading. Its value as a book of reference is enhanced by a complete glossary and index.

"The Aristoxenian Theory of Musical Rhythm" (Putnam), by C. F. Abdy Williams, is not easy to characterize fairly. The author makes no claim to original views, either on Aristoxenos or on musical rhythm. He wishes simply to make accessible to English musicians the substance of a book no longer new, R. Westphal's "Allgemeine Theorie der musikalischen Rhythmik." He carries out his plan on the whole pretty well. In the absence of English books treating of rhythm in any broad or general way, little is imparted to students of music beyond what is fairly obvious in our musical notation. Aristoxenos can teach us something more; and for that part of the Aristoxenian theory which is rightly here made prominent Westphal was a good guide, though something has been learned since his day. But, not being acquainted with even Westphal's own later work, Mr. Williams did not recognize what was due to him in Laloy's little treatise, which he praises for one of Westphal's ideas. Worse than that, Mr. Williams is not sufficiently at home in his Latin and Greek authorities to avoid serious errors in detail. Strange translations will puzzle the reader. Terentianus Maurus appears as Terentius Marius (p. 5); surprising statements are made, with no note of uncertainty, about Greek tragedy—as that the chorus in Sophocles took no part in the dramatic action (p. 17), and that in form comedy was the same as tragedy, or that "the dialogue was carried on in melody, accompanied by the instruments" (p. 18). Even in some fundamental definitions there is confusion. In the brief preface, rhythm is not properly differentiated from expression, or expressiveness. Yet these things mostly concern either minutiæ which the musician already understands, or matters which as musician he does not care for. On the other hand, the analysis of the musical examples on Aristoxenian principles is mostly well made. So that we have a book which is unscholarly, from the classical student's point of view, while it may be instructive and useful to some who would like to know more of the principles of rhythmical structure which composers have instinctively followed.

The Rev. Dr. Willis Judson Beecher, formerly a member of the faculty of the Auburn Theological Seminary, died on Friday, aged seventy-four. He was the author of several treatises on Biblical subjects.

Miss Agnes Deans Cameron, who died on Monday in Victoria, B. C., was the author of "Journeys Through Unknown Canada," being an account of her explorations in the summer of 1908.

We record with regret the death, at the age of sixty-seven, of Dr. Henry Sweet, who since 1901 has been university reader in phonetics at Oxford. Students on this side of the water, quite as much as those in England, have long consulted with respect his "Primer," "Reader," and "Student's Dictionary" of Anglo-Saxon. His other publications are too numerous to be listed here, but we may call attention to his works on phonetics and to his brief "History of Language."

The Rev. Alfred John Church, whose death is reported at the age of eighty-three, was professor of Latin at the University College, London, and the author of several translations and popularizations of the classics.

Stability in Aviation. By G. H. Bryan. New York: The Macmillan Co. $2 net.

The general conclusions show that there should be no difficulty in securing inherent stability, both longitudinal and lateral, in an aeroplane, by means of suitably placed auxiliary surfaces rigidly attached to the machine; but in order to achieve success the conditions of stability must be very carefully studied, and account must be taken of the effects of the inclination of the flight path to the horizon and other causes which may affect the result seriously.

With so much hopefulness does the author, who is professor of pure and applied mathematics in University College, North Wales, approach this difficult subject. The problem of how to keep aeroplanes stable, can, he believes, be solved if only enough students are enlisted to work at its manifold and perplexing details.

The main portion of the book is devoted to a mathematical discussion, which should, however, be comprehensible to many practical engineers; for the author is well known for his concise and simple treatment of mechanics. The numerous formulæ given have been checked independently by H. E. Harper, a familiar name in aeronautics, who in other ways, also, has been of assistance to Professor Bryan. An idea of the nature and scope of the work can be had from some of the questions considered, among which are the following: The effect of shifting the centre of pressure; the case where the centre of propeller thrust does not pass through the centre of gravity; effect of inclination of propeller axis, and the effect of friction. The mathematical treatment is extended to many other practical matters. Professor Bryan concludes that the stability of the aeroplane having "bent up wings," like the Antoinette type, is dependent upon the position of the centre of gravity. This design is that having a great dihedral angle of the supporting planes. The subject is considered with reference to "sudden gusts of wind which quickly subside," "permanent change in wind velocity," and "periodic gusts of wind." Professor Bryan's opinion of automatic auxiliary devices to steady the aeroplane in its flight is seen in the following paragraph:

> Quite recently, much has been written regarding so-called "automatic stability," depending on the use of gyrostats, pendulums, or other movable parts. Apart from the fact that movable parts are liable to get out of order, it must be remembered that they increase the number of degrees of freedom of the machine, thus further adding to the number of conditions which have to be satisfied for stability—a number quite large enough already. I anticipate that the successful aeroplane of the future will possess inherent, not "auto-

matic" stability, movable parts being used only for purposes of steering.

The final pages of the book contain a comparison of the author's theories with those of Bryan-Williams, Ferber, Lanchester, Brillouin, Reissner, Crocco, Soreau, and Lecornu, all of whom have published theoretical discussions on the problem of stability. The concise abstracts of the papers of the foregoing investigators, which are here given, provide the student of the subject with a convenient history of opinion.

At the end a few pages are given up to problems and notes, and a nomenclature. The volume is a valuable addition to the series of Macmillan's Science Monographs.

Henry Holt & Co. have almost ready "The Illustrated Key to the Wild and Commonly Cultivated Trees," by J. Franklin Collins and Howard W. Preston, and a revised edition of "Botany for High Schools," by Prof. George F. Atkinson.

Additions to the Home University Library of Modern Knowledge, promised shortly by Henry Holt & Co., include: "Psychology," by W. McDougall; "Physiology," by J. G. McKendrick, and "Matter and Energy," by F. Soddy.

E. P. Dutton & Co. have in press a book on "Auction Bridge," by Francis Johnstone Hopson.

The menace of a potato famine in this country is discussed by Eugene H. Grubb and W. S. Guilford in a book, called "The Potato," which Doubleday, Page & Co. will publish.

The Second National Conference on Industrial Diseases, as announced by the American Association for Labor Legislation, will take place June 3-5 at Atlantic City. One session will be held jointly with the American Medical Association.

To the mass of nature books Mrs. Ellen Robertson-Miller adds the "Moth and Butterfly Book" (Scribner). The thirty-six chapters, well written and profusely illustrated, are mainly a record of personal observations and experiences in rearing our common moths and butterflies. The pictures are largely from photographs, some of which are excellent while more are lacking in sharpness, a fault shared by most of the current photographs of living insects. The book is the outgrowth of ten years of enthusiastic study, but as this study was undertaken solely for relaxation, the result should not be judged from too technical a point of view. It will be welcomed by many whose interests have already been aroused in out-of-door life, and it may also, as the author most of all desires, "reach some one weary and overtaxed, and help him find the rest, relaxation, and enjoyment in the fairyland of Natural Science that the little mother and I found when the moths and butterflies showed us the way."

J. de Bruyn Kops, architect and civil engineer of Savannah, Ga., publishes in the *Monthly Weather Review* his charts representing the chief climatic elements of that city. From many years of study Mr. Kops has become thoroughly acquainted with its climatic conditions, and he designs his buildings accordingly. The charts give the daily fluctuations of temperature and precipitation for the period from 1874 to 1910 from Weather Bureau records, and other data, such as the mean monthly relative humidity, average, and extreme periods of frost, the whole being presented in compact and convenient form, based on that known to geometers as the method of polar coördinates.

Bryn Mawr College has suffered a great loss in the death, on May 4, of Dr. Nettie Maria Stevens, associate in experimental morphology. She was one of the few women really eminent in science. Her chief interest was in the study of regeneration and in the connection of the germ cells with the problems of heredity. She had studied in Naples and in Germany, and had written many monographs on her special topics.

Drama and Music

Edwin Björkman, whose translations of three of Strindberg's plays were recently published by Scribners, will bring out this summer, through the same house, an English rendering of Strindberg's "There Are Crimes and Crimes," a drama dealing with modern life in Paris.

Five of Prof. C. H. Page's translations of Molière have been brought out by the Putnams in four attractive individual volumes. They are "Tartuffe, or The Hypocrite," "Le Bourgeois gentilhomme (The Tradesman Turned Gentleman)," "Les Précieuses ridicules (The Affected Misses) and Le Médecin malgré lui (The Doctor by Compulsion)," and "Les Femmes Savantes (The Learned Ladies)."

"The War God," of Israel Zangwill, which was produced experimentally in London by Sir Herbert Tree, and received with moderate enthusiasm, is now published in book form (Macmillan). Described as a tragedy in five acts, it has none of the inevitableness or impetus of true drama, but is a thesis in theatrical form, with tragic illustrations, arbitrarily contrived to give point to the arguments with which the action is constantly impeded. On the literary side it is an ingenious and occasionally impressive piece of work. It has some notable poetic passages, although the blank verse is often feeble and frequently marred by curious verbal affectations. In construction it is utterly artificial, and in its final outcome—after endless debates—inconclusive and insignificant. But the characterization is vigorously done, and the debates between the typical personages are admirable summaries of the social and other views which they are supposed to represent. Thus the Count Torgrim, the embodiment of the rule of blood and iron, a somewhat fantastic exaggeration of Bismarck; the King of Gothia, who believes in the divine right of kings and is modelled in part upon the German Emperor; the Duke of Pomberg, a foolish, bombastic, military sycophant; Count Frithiof, the apostle of love, who is Tolstoy with an added touch of divinity; Baron Konrad, the philosophic, and the Lady Norna, the militant anarchist, are all vividly and consistently, if somewhat extravagantly, drawn, are thrown into effective contrast with one another, and proclaim their several views with comprehensive precision. The arrangement and the exposition are clever, but do not constitute drama. Even the most impressive scene in the play, that in which Frithiof is killed by Norna in the revolutionary camp—because his gospel is antagonistic to her creed—is weakened by its transparent artifice. Oratorically the piece is an impassioned manifesto against the evils of the imperial and militant idea and a forecast of the millennium under the law of universal love and liberty. Actually, in the final development, the autocratic Torgrim is overthrown, not by the spirit of modern enlightenment, but by a melodramatic trick, and the empire he has built falls under the rule of the contemptible Pomberg and his besotted Emperor. The work has brilliant qualities, but they are those of the pamphleteer, not the dramatist.

Charles Frohman has obtained the American rights of a new comedy, "The Heart Decides," now running at the Athenée Theatre, Paris, under the title of "Le Cœur dispose." The piece is by Francis de Croisset, author of "Arsène Lupin." It is a comedy in three acts, and will be adapted for the English-speaking stage by Cosmo Gordon Lennox.

According to the latest reports, arrangements of Sir Herbert Tree's professional visit to Paris have been virtually completed. He is going to show the Frenchmen, who have been exhibiting a good deal of interest in Shakespeare lately, how the Bard of Avon ought to be interpreted. His performances will be given at the Châtelet, beginning on June 20, and will include the plays to be presented at the forthcoming annual Shakespearean festival at His Majesty's Theatre in London—"Henry VIII," "Twelfth Night," "The Merry Wives of Windsor," "The Merchant of Venice," and "Othello." Doubtless he will be accepted as the representative Shakespearean actor of Great Britain, as few Frenchmen have heard of F. R. Benson, H. B. Irving, or Oscar Asche. In the more distant future Sir Herbert will produce a new version, by W. S. Maugham, of "Le Bourgeois gentilhomme," with a prologue. In this introduction Sir Herbert will be seen in the character of Molière at the court of Louis XIV, where the King will suggest to him the subject of the comedy. This will help to identify him with Molière in the character of M. Jourdain. The idea is ingenious. The autumn production at His Majesty's will be "The Daughter of Heaven" of Pierre Loti and Judith Gautier.

The latest production of Messrs. Vedrenne and Eadie, at the London Royalty, is a play by the Hon. Mrs. Alfred Lyttelton called "Peter's Chance." It is a love story of the slums.

"The Jew of Prague" is the name of a romantic drama in four acts, of which Alfred Wilson Barrett, son of the late well-known actor, is the author. It is to have a provincial trial, with Ben Webster as the hero.

Charles Maude has an option on "Panthea," a new play on which Monckton Hoffe is engaged, and of which high expectations are said to be entertained. It is a tale of illicit love, with a tragic ending, the erring lovers both committing suicide. Lily Elsie is spoken of as the probable heroine.

The report comes to us, as we go to press,

of the death of Auguste Strindberg, Sweden's most prominent author. He was born in Stockholm in 1849, the son of a small tradesman and a former barmaid. He attended the University of Upsala, but left without taking a degree, and turned to a number of interests, among them medicine, before deciding to make writing his vocation. Even after he was an established author, it was hard for him to confine his great intellectual energy to literature. At one time he threw himself heart and soul into experimentation in chemistry, hoping to revolutionize the subject; he emerged with his mind temporarily unbalanced. Every sphere of human knowledge attracted him, and nothing did he care to accept at second hand. The same spirit is evident in his writings. His works include treatises on psychology, history, economics, besides romances, poems, and plays. As a playwright he is, of course, best known. Of his numerous dramas, "The Link" recounts faithfully the heart-burnings of one of his three unsuccessful marriages; "The Dream Play" is a phantasy, in form not unlike "The Bluebird"; "The Dance of Death," in two parts, is a domestic tragedy, and is sometimes called Strindberg's most notable performance; "The Father" has recently been seen in New York, and "Miss Julia," a tragedy of illicit love, was to have been brought to this side, but was delayed. A batch of his plays, the three first mentioned, have recently appeared from the Scribner press in a translation by Edwin Björkman. The *Nation* will discuss Strindberg's work at greater length next week.

Karl Friese, the popular German actor, is dead in Dresden, where for nineteen years he was leading comedian and stage manager of the Royal Theatre. He was seen first in New York at the Thalia Theatre in 1886, and was very successful in comic opera with Marie Geistinger. He played in this city for three years, and then travelled as far West as San Francisco. In 1890 he returned to Europe, and after a short stay in Hanover removed to Dresden. He was fifty-six years old.

Breitkopf & Härtel are about to publish the earlier operas of Wagner, faithfully in accordance with the original scores. Included are "Die Hochzeit," "Die Feen," and "Das Liebesverbot." Hitherto the full scores of these works have never been issued, and, indeed, only "Die Feen" of the three operas has been seen upon the modern stage; it was sung in 1888, at Munich. The third, called in English "The Novice of Palermo," is described as a "great comic opera," and is in two acts. Its libretto is based upon "Measure for Measure"; the opera was produced at Magdeburg seventy-six years ago. "Die Hochzeit" is a mere fragment, consisting of an introduction, a chorus, and a septet. The autograph copy of the score is only thirty-six pages long.

Concert-goers in Berlin had opportunities, not long ago, to compare in a single week the interpretative art of five famous conductors — Arthur Nikisch, Richard Strauss, Fritz Steinbach Max Reger, and Siegmund von Hausegger.

The German critics praised Busoni's opera, "Die Brautwahl," which had its first hearing at Hamburg on April 15. The audience, according to one observer, appeared considerably puzzled by the novelty of the style and hardly able to appreciate either its humor or its poetry. Signs of hostility became more and more pronounced as the evening went on; but the majority were favorable, and the composer and the conductor and singers were heartily cheered at the end. The plot is based on one of E. T. A. Hoffmann's fantastic tales.

The Ideals of Indian Art. By E. B. Havell. With 33 plates. New York: E. P. Dutton & Co. $5 net.

Until very recent years there has been virtually no study of any of the Indian fine arts, except architecture, that has evinced real sympathy with its subject; some of the treatises, notably Sir George Birdwood's "Industrial Arts of India" (one of the Handbooks of the Victoria and Albert Museum), have systematically depreciated all Indian art; and other works, such as Maindron's "Art indien," have been too brief to be just. There are, however, indications of a revolt against this narrow spirit. Four years ago Mr. Havell, who was formerly principal of the Government School of Arts at Calcutta, published a very handsome volume, entitled "Indian Sculpture and Painting," and containing magnificent pieces of color printing. In his latest work he seeks to supplement his former treatise with special references to the idealistic aims of the painting and sculpture of India. He constantly pleads that Indian art must be judged according to Indian, not English, canons—a plea which ought to be needless, yet which, as a matter of fact, is only too necessary. He is right, moreover, in comparing the deep religious spirit of India's art to that of the Christian Middle Ages, and in emphasizing its oneness with all great manifestations of the spirit.

A quotation will make the author's position perfectly clear:

> Beauty, says the Indian philosopher, is subjective, not objective. It is not inherent in form or matter; it belongs only to spirit, and can only be apprehended by spiritual vision. There is no beauty in a tree, or flower, or in man or woman, as such. All are perfectly fitted to fulfil their part in the cosmos; yet the beauty does not lie in the fitness itself, but in the divine idea which is impressed upon those human minds which are tuned to receive it. The more perfectly our minds are tuned to this divine harmony the more clearly do we perceive the beauty, and the more capable we become, as artists, of revealing it to others. . . . Therefore it is, as the sage Sukracharya says, that, in making images of the gods, the artist should depend upon spiritual visions only, and not upon the appearance of objects perceived by human senses. . . . The whole spirit of Indian thought is symbolized in the conception of the Buddha sitting on his lotus-throne, calm, impassive, his thoughts freed from all worldly passions and desires, and with both mind and body raised above all intellectual and physical strife; yet filled with more than human power, derived from perfect communion with the source of all truth, all knowledge, and all strength (pp. 23-24, 32).

Thus we see why absolute fidelity to nature is not essential to Indian art. The physical emaciation of the Buddha after his fasting is not what is emphasized; his spiritual beauty is the aspect in which the artist sees him. To us the representation of a god with four arms seems ridiculous; but if a god is more mighty than a man, this can be symbolized only by some such attribute, and the effect to the sympathetic observer—who alone can judge art—is no more bizarre than is the halo in Christian art, which in its turn is foolishness to the materialist. Polycephaly is superficially a blemish; but by the reviewer's desk hangs an Indian painting of the four-armed, four-headed Brahma, whose four faces simply quadruple the one divine majesty of the countenance of the god and give not the slightest impression of deformity.

The symbolism of Indian art is repeatedly considered by Mr. Havell, particularly for Brahma, Vishnu, Çiva, and Ganesha, although sometimes his explanations seem rather fanciful, and he presses the allegorical interpretation of Indian mythology probably too far. Nor is it certain that the legend of the churning of the ocean by the gods and demons to gain the draught of immortality is to be explained as a rain-myth. Again, the author is carried away by his enthusiasm when he says (p. 36) that the Hindu Olympus has no sensuous delights, for he seems to forget Indra's heaven, which is on a moral plane with Mohammed's paradise.

This brings us to the chief blemish in the work. It is the author's intentional disregard of modern archæological conclusions and of the data afforded by Sanskrit literature. Through it he has been led into one rather serious error. He says (pp. 25, 86) that idols were unknown before the entrance of Græco-Roman influence into India early in our era. Yet he himself refers to mentions of idols in the great Indian epic of the "Mahabharata" (p. 125), and there are allusions to images of the gods also in the "Adbhutabrahmana" and the "Kauçikasutra," whose date, like that of the epic, is far anterior to the beginning of the Christian era. It may also be questioned whether Mr. Havell does not stress too strongly the influence of Vedic ideals throughout Indian art, for with the migration of the Aryans from the Panjab, their whole outlook on life seems to have changed, partly through the infiltration of aboriginal, non-Aryan blood and religion.

Mr. Havell is correct in saying (p. 15) that in the initial period of the so-called "early Buddhist" art "the prevailing

influence is not the idealism of Aryan thought, but the naturalism of the non-Aryan races which were converted to Buddhism," among the elements of this art being the Central and East Asian and the Helleno-Persian. On the other hand, Indian art profoundly affected that of China, and—what is not so generally recognized—that of the Mohammedans, so that in the Moghul period, when under Muslim dominion the religious themes of Indian art perforce gave way to secular, the miniature painting then developed so perfectly "was not entirely an importation into India from Persia, but largely a revival of the art of the Buddhist and Hindu court painters" (p. 133). It was, however, during this same period, particularly during the long reign of Aurangzib (1658-1707), that virtually all Indian paintings, except those in the Ajanta caves, were destroyed. This is especially regrettable since in India painting has always been considered inferior to sculpture, for the reason that, in accordance with the doctrine of salvation by works (*karma-marga*), sculpture, being more laborious and costly, is superior to painting as a means of acquiring merit. Besides this, much painting has doubtless been destroyed by time, just as the wooden archetypes of India's stone architecture have vanished. Despite all this, one feels, both in this volume and in the "Indian Sculpture and Painting," that Mr. Havell has not given to the Hindu painting of the Moghul and post-Moghul periods the attention which it deserves.

Two clever remarks of the author call for special mention: that the inferiority of the Jains to both Buddhists and Hindus in iconography is due to their extreme ascetecism, scanty mythology and hagiology, and general contempt for worldly affairs (pp. 128-129); and that the reason for the relative paucity of epic themes in Hindu sculpture is the fact that "the temples were held to be dwelling-places of the *devas* [gods], and consequently the figures of human beings could only be appropriately represented on the exterior. Thus the principal sculptures within the sacred precincts related exclusively to the divinities who were worshipped therein, and generally to events which took place in the paradise of the gods" (p. 138).

CONFLICTING INDICATIONS.

It is not often that a single week comprises two news developments, in the domain of trade and industry, so diametrically opposite to each other that the Stock Exchange, which is supposed to interpret what is happening, sits in bewildered uncertainty and merely gazes alternately in the two directions. This, however, is precisely what has occurred on the present occasion. Along with official confirmation of a distinctly bad start to the crops and a very unusual loss to the most valuable of our staples, last week produced evidence of equally unmistakable improvement in the basic steel trade.

The Government's monthly crop report showed that out of the 32,213,000 acres sown to wheat in this country last autumn, 6,469,000 acres, or 20 per cent., had been abandoned because the severe winter weather had killed the plant; this being the largest "winter-killing" in the Department of Agriculture's record. It showed the condition of what was left to be the lowest May average since 1904, and its estimate of the indicated yield of winter wheat was the smallest, except for 1904 and 1900, in a dozen years. But in quick sequence to that discouraging estimate came reports of a very different character from the iron and steel trade.

They showed that in this country iron production is increasing steadily, in the face of outside news which has been classed as unfavorable; that the daily rate of output at the opening of May was the largest since this time in 1910; that the Steel Corporation, despite an unusually large production and shipment of finished steel in April, had on its books unfinished orders, when the month was ended, greater than in any month since December, 1909—a larger amount of unfilled contracts, indeed, than has ever been reported at this time of year, except in the abnormally active spring business of 1906 and 1907. The *Iron Age* is authority for the estimate that twelve months of steel production, at the April rate, would make up a total larger by 3,000,000 tons, or 11½ per cent., than the highest record of any other calendar year.

Now the harvest outcome in the United States is commonly looked upon as a fundamental influence in prosperity; yet on the other hand, the steel and iron industry is by tradition called the "barometer" of trade activity in general. It will doubtless be said of both these present indications that they are not conclusive—that the losses in winter wheat may be more than offset by a full yield of spring wheat, corn and cotton, or, on the other hand, that the steel trade's activity may reflect only temporary conditions, subject to reversal in case of really bad luck at harvest-time.

Yet the situation of the steel and iron trade is highly interesting, and deserves some closer study. Taken by itself, the picture drawn by last week's reports in that industry might almost seem to fulfil the prediction ascribed last December to Mr. Frick, that 1912 was to be the greatest "boom year" in the steel trade's history. But it is certainly not that yet, and in fact the comparison by "annual rate of output during the month" is very apt to be misleading. April was not itself a month of high-record steel and iron production, nor a month of high-record "unfilled orders." It is tendencies rather than actual achievements which count at such times. Thus far, the tendency is clearly towards continued expansion, and it is significant that the increase in orders booked for steel last month came in spite of a rather general advance in prices. But the advances have thus far been small; the Steel Trust's recent quarterly report showed how narrow the margin of profit was, before the advance was made; and that brings up another question.

During the great revival of industry after 1897, the rapid advance of prices, in response to the urgent and willing bids of consumers, was the noteworthy incident of the period. In 1906, a similar advance in prices of commodities was made by the brute force of concentrated capital and the consumer was dragged along with it. A short-lived imitation of that second process occurred in 1909. This season, however, advances in prices, in such industries as steel and cotton manufacture, are made slowly and laboriously; the consumer watches them suspiciously, and at the start, the effect of them seems to be to curtail demand. It is an interesting question, therefore, whether this somewhat novel state of things means only that the community is slow in accustoming itself to a rising market again, after the period of prolonged depression, or means that the markets themselves are on a permanently different footing from what they occupied in the "boom times" of half a dozen years ago.

That is not a question to be answered offhand on general principles; for one of the teachings of the past is, that when certain spectacular tendencies of a given period in finance and industry have brought on a great financial panic, the subsequent chapter of economic readjustment rarely shows the old methods and practices to be again in control of things. It was as true after 1893 as it was after 1873, and as true after 1873 as it was after 1857, that the panic break-down had marked the end of one economic era and the beginning of another, whose fundamental characteristics were to be very different. The nature of the change in character of the new era in finance would rarely be discovered until the after-panic liquidation was completed and the forward movement of prosperity resumed. The boom which came next after 1857 was not based on bank inflation, as was the one before. The boom after 1873 had none of the impetus given to its predecessor by depreciated Government paper and outright thievery of corporation managers.

Our last great boom lacked the stim-

ulus of enormous expansion in speculative railway-building which marked its predecessor, and it is evident already that no coming boom can possibly repeat the prodigious stock-watering exploits, the unbridled movement of combination, and the strangling of industrial competition, for which the period from 1899 to 1906, inclusive, will be remembered. How far the character and phenomena of the next great movement of expansion will be affected by these inevitable changes, it is still too early to determine. What is certain, at any rate, is that we have shaken off some monstrous abuses of American finance, as we did on all previous occasions of similar financial reconstruction. The authors and beneficiaries of these abuses of a by-gone era are slow to recognize the change; they have always been so on similar ocasions, and they have always had to submit to some rude reminders. But the public at large has usually been found to have learned the lesson quickly, and the character of the economic period now ahead of us will be determined very largely by the attitude of the purchasing and consuming public.

DEPARTMENT OF POLITICAL ECONOMY THE UNIVERSITY OF WISCONSIN MADISON, April 9, 1912.

Professor MUZZEY'S AMERICAN HISTORY is to a sociologist the most interesting single volume of American history that has yet appeared. I heartily applaud his conception that the history of this country continually needs to be reconceived in order to provide background and interpretation for the interests and problems each generation has to solve. By daring to throw the historical facts into new perspectives, Dr. Muzzey has succeeded in producing not only a strong and illuminating textbook, but also a book of intense interest and significance to the general reader. The Week

There is no blinking the truth that the Ohio primary dealt President Taft yesterday the rudest blow he has yet received. To lose his own State after making such an unprecedented fight for it, is not only a bitter personal humiliation, it is such a damaging of his political prestige as would ordinarily be fatal. The popular majority for Roosevelt in Ohio appears to be more than 20,000. Taft will seemingly have no more than 10 out of the State's 48 delegates. There is no denying that this is a great defeat for the President. The vote was light, but he had as good an opportunity as his opponents to get a majority of it. Though the campaign began late and confused, the issues were made clear enough before it was over. And even if it be contended that the test was rough and unfair, the President submitted to it, he expressed the opinion that it would be conclusive—his words were: "The vote in Ohio, my home State, will be the decisive one and will settle the question of the nomination"—and now, having put it to the touch and lost, there is nothing to do but to accept the facts without any attempt to twist them.

Pity the poor candidate. Take the case of Gov. Wilson, for instance. It has long been stated *sub rosa* that the Catholic Church was wholly opposed to him because somewhere in his writings there was a tiny reflection, direct or indirect, upon either the Pope or the Church. Now, there comes to us from the South a copy of a Tom Watson broadside, which, we are informed, was widely circulated in Georgia prior to the recent primary. Lo, in this Woodrow Wilson appears as being a mere tool of the Catholic Church—Woodrow Wilson, a former president of Presbyterian Princeton! That he appointed an alleged Jesuit as his private secretary, is said to be a damning proof. But more than that, he has been deliberately and openly conspiring with the whole Catholic hierarchy. What could be plainer? Hence the appeal to all those who sympathize with A. P. A. methods to oppose Woodrow Wilson. Similarly, Mr. Taft is portrayed as merely putty in the hands of the priests, all because, at the behest of Roosevelt, he carried out the successful negotiations for the purchase of the Philippine friars' lands, while some other churches are still after him because he is a Unitarian.

Party lines are broken in the two Lorimer reports to the Senate. It is not as Republicans or Democrats that the majority and minority divide, but as those who take a narrow legalistic view of the case, and those who look at it in a broad, common-sense way. The majority report starts off by considering the matter as *res adjudicata*. The Senate has once affirmed Lorimer's title to his seat to be valid. That decision must not be reopened unless evidence be forthcoming which is not only "new" but "substantial." The majority denies that the long hearings have developed any such evidence. Upon this the minority report comments illuminatingly. It is true that no witness has been produced who saw Lorimer actually bribing. But the proof is overwhelming that at least ten members of the Illinois Legislature were bribed to vote for Lorimer. The details are not now traceable, but the total effect is undisputed. There was, as President Taft expressed it, a "mass and mess of corruption" connected with the election of Lorimer sufficient to taint it. All that remains for the Senate is to say whether its sense of smell is less acute than that of the country.

The spirit of picayune economy that led the House to cut off the appropriation of $94,000 for the work of the State Department in extending our foreign trade, should be rebuked in the Senate by restoration of the items cancelled. It would be interesting to hear any reason that could be offered for the proposed abolition of the new Bureau of Trade Relations, as also of the four Divisions of Latin-American, Far Eastern, Near Eastern, and European Affairs. These enlargements of the Department, and the reorganization that they have brought about in it, constitute nothing less than a modernization of it. There is no apparent reason for questioning the statement of responsible officers of the Department that "such legislation would put the United States in the rear rank of all governments in the matter of legitimate and effective support to worthy American enterprises and to foreign commerce, and would do all this at the very epoch in our history when our foreign relations and our foreign trade have become vastly more important than ever before and are plainly seen to be on the way to an importance which will be every year greater."

That the movement for international arbitration still has many difficulties to encounter was frankly recognized in President Butler's address last week at Lake Mohonk. At the time of the last meeting of the Conference one year ago, the signs were apparently pointing to a great step, if not indeed to a series of great steps, in the direction in which we seem so painfully crawling. Then came the tension between Germany and England, the outbreak of actual war between Italy and Turkey, and the lame and impotent conclusion to the consideration of the general arbitration treaties by the Senate. Dr. Butler's linking of national with international political sanity was especially timely. As he well said, all political progress "must depend upon trust in the better instincts of the people, and cannot rest upon their appetites and their passions, their envies and their animosities." Accustom a people to acting in their own politics in accordance with their prejudices rather than their reason, and how else can they be expected to act with reference to other nations? If this view appears somewhat discouraging as apparently increasing the difficulties already in the way of international good will, it is in reality heartening, since it means that every blow struck for decency and fair play in our relations abroad will react upon our politics at home, which are sadly in need of all the "uplift" that can be given them—and *vice-versa*.

The sudden shifting of the real political capital of Pennsylvania from Philadelphia to Pittsburgh is focussing attention upon leaders and conditions in the Smoky City. Much more has been heard

of Flinn as the new Republican boss than of his associate, Mayor Magee, but Magee's power rests upon a much so'lder base than the popularity of a Presidential candidate. Roosevelt may rise or fall, dragging Flinn with him, but unless Pittsburgh turns Democratic, any aspirant for Republican leadership in the State must sooner or later "see" Magee. This fact is the sinister element in the outcome of the recent primaries, for the Pittsburgh Mayor makes no such professions of reform as does his colleague. With reference to any proposal, the question uppermost in his mind is: How will this affect Pittsburgh —and Magee? Observers are wondering how long the two men can work together. Interest in this is sharpened by a demand for the impeachment of three officials under Magee, and a crusade planned against vice in Pittsburgh. On the Democratic side, Guffey has been succeeded by leaders rather than bosses. If Pennsylvania voters really wish to rid themselves of boss rule, it looks as if they would have to resort once more to their final argument: the election of a Democratic Governor who practices what the Republican platform preaches.

In ratifying the agreement drawn up by their representatives in conference with the mine owners, the anthracite coal workers have done a service to themselves as well as the public. In deciding to stand by their leaders and by such acts as these leaders, acting within their authority, have subscribed to, the mine workers have given an example of discipline which augurs well for their future as a labor organization. On a smaller scale we have here a repetition of what happened in the convention of British miners called to decide upon the cessation of the strike after the passage of the minimum-wage bill. In that convention the sentiment against peace was probably in the majority, but the delegates had to face the fact that most of their leaders advocated peace, and they followed. If organized labor hopes to attain its ultimate aims, it must endeavor to make itself a disciplined army. A mob may gain a temporary advantage, but that is all. The repudiation of union leaders and duly formulated agreements which is so common in industrial disputes, can only militate against the best interests of labor.

Another important result of the Titanic disaster is the sending of the cruiser Birmingham to patrol the ice-fields south of the Grand Banks, to give warning by wireless of the position of icebergs, and to make a scientific study of this unprecedented ice-drift. It is safe to say that no captain will fail to give prompt heed to these messages. For this practical action the world is indebted primarily to the commercial organizations and some public-spirited citizens of New York city in laying the proposal before the Navy Department, which, much to its credit, has responded favorably to their representations. When such an international patrol of the danger zone shall have been accomplished, we shall see something comparable to the beating of swords into ploughshares, in the turning of instruments devised for the most terrible destruction into means of preventing loss of life and property.

Urban congestion is admittedly one of the most difficult problems arising out of immigration. Advocates of the restriction of immigration lay great stress on the point that not only was the immigration into this country before 1880 different in racial character from what it is now, but that the earlier immigrants passed through our ports of entry to distribute themselves over the wide and empty spaces of the West. The newer immigrants swarm in the cities. Hence any scheme that would further a more even geographical distribution of our alien population would serve the double purpose of relieving congestion in the East and testing at the same time the perennial plaint that comes out of the West regarding the scarcity of labor on the farms. To make this experiment the American Immigration and Distribution League was organized in this city last month. Among the chairmen of its various committees are the Governors of Delaware, Iowa, Maryland, Massachusetts, New Hampshire, North Dakota, South Dakota, Vermont, West Virginia, and Wyoming.

In their recent primaries the people of Southern California rallied in overwhelming numbers to the support of the candidate whose platform is the defence of human rights against property rights. On Wednesday of last week the citizens of San Diego kidnapped a man from his room in a hotel, took him outside of the city limits, tarred and feathered and branded him, and made a half-hearted attempt to set him on fire. Apparently there are certain human beings whose human rights are not deserving of consideration in Southern California. Hence an act of unspeakable barbarity that makes entirely irrelevant the original issues at stake.

A telegram of Gen. U. S. Grant of great historical importance was put up at auction this week. It is dated at City Point, Virginia, October 12, 1864, is addressed to Gen. Sherman, and reads in part as follows:

> On reflection I think better of your proposition. It will be much better to go South than to be forced to come North. You will no doubt clean the country where you go of railroad tracks and supplies. I would also move every wagon, horse, mule, and hoof of stock, as well as the negroes. As far as arms can be supplied . . . I would put them in the hands of the negro men. Give them such organization as you can. They will be of some use.
>
> U. S. Grant, Lt.-Gen.

Now, the significance of this is that Gen. Sherman's commander deliberately ordered that policy of laying waste the country which Gen. Sherman followed in his march. For this policy of ruining the territory in which he operated, Gen. Sherman has ever since been severely criticised, partly because of the operations of the "bummers" who followed his troops. It is still the custom in many sections of the South to lay at his door any and all loss of property. What Sherman did on his march to the sea, Sheridan did in the Shenandoah, ravaging that wonderful granary from which Lee's armies drew so large a portion of their food each year until Sheridan made good his threat that a crow flying over it would have to carry his rations on his back. In Grant's telegram, cited above, we have the clearest proof that, after three and one-half years of warfare, he, too, had come to the conclusion that the most humane method of conducting war was so completely to impoverish and wreck the enemy's country as to make a long-drawn-out resistance impossible.

"Baby-Saving Show" is not the most dignified title that can be imagined, but it is the name that has been given to something that is expected to be a milestone in the advancement of Philadel-

phia. All of next week there will be in the Quaker City a demonstration, by means of educational exhibits, lectures, and moving-pictures, of what can be done, and of what therefore ought to be done, to reduce infant mortality. Those who have made a study of the subject estimate that half of those who die can be saved. But this is only one side of the picture. The object of those who are promoting the Philadelphia exhibition is not merely to keep more children alive; it is no less the intention to make life worth more to them by seeing that they have a fair start.

There is one advantage about high prices: they swell the totals of statistics. Here, for instance, are the figures on our imports of luxuries for the nine months ending with March. If prices were lower, could we be sure of the satisfaction that goes with the breaking of records? For in many of the articles, and especially in the more important ones, the imports of this fiscal year will exceed in value those of any year previous. The whole amount is estimated at $200,000,000. Art works show an increase of 50 per cent. over the highest value reached heretofore; they will approximate $40,000,000 for the year. Much of this, presumably, is to be credited to the transfer of the Morgan treasures. But diamonds and other precious stones, although they will not break the records of 1907 and 1910, will probably exceed works of art in value. The largest item, however, is laces and embroideries, which are expected to go beyond diamonds by about $3,000,000. This is an increase of 50 per cent. during the decade. Tobacco and manufactures thereof will add up to more than $30,000,000, and we shall have received nine million dollars' wortn of toys. If the larger European countries sent us as much in proportion as some of the smallest, our luxuries would swamp us. Switzerland supplies about one-third of the leading group of imports, the laces and embroideries, and Belgium and the Netherlands provide the bulk of our cut diamonds.

English Catholics are undoubtedly deriving a vast amount of quiet satisfaction out of the debates in the House of Commons over the Welsh Disestablishment bill. The cause of it all is Lloyd George's charge, flung forth more as a taunt than as an argument, that some of the men who are vehemently denouncing the disestablishment of the Church in Wales as spoliation, are now the owners and occupiers of lands seized from the Church at the time of the Reformation. Goaded to fury by the personal invective hurled at him by the Opposition, Lloyd George returned to the attack:

> What was the story of the pillage at the Reformation? They robbed the Catholic Church, they robbed the monasteries, they robbed the almshouses, they robbed the poor, and they robbed the dead. Then they come here, and when we try to recover some part of the pillage for the poor they accuse us of theft, these people whose hands are dripping with the fat of sacrilege.

Catholic historians have always explained the Reformation as largely a movement on the part of the ruling classes to enrich themselves at the expense of the Church, in England as in Germany. But there must be few Catholic historians who have put the case as forcefully as the great representative of English Nonconformity did last week. If we remember, furthermore, that English Nonconformity regards itself as the true continuator of the Reformation as against the Catholicizing tendencies in the Established Church, there is a full measure of irony in the spectacle of the Chapel to-day trying to redress the wrongs done to the Church of Rome four hundred years ago.

If Thomas Carlyle had been alive to-day and preparing a new edition of "Sartor Resartus," he would have found excellent material for a foot-note in the story of the elderly gentleman in a sack-suit who was found dead in the streets of Hamburg and removed to the morgue:

> Often in my atrabiliar moods [says Carlyle], when I read of pompous ceremonials, Frankfort Coronations, Royal Drawing-rooms, Levees, Couchees; and how the ushers and macers and pursuivants are all in waiting; how Duke This is presented by Archduke That, and Colonel A by General B, and innumerable Bishops, Admirals, and miscellaneous Functionaries, are advancing gallantly to the Anointed Presence; and I strive, in my remote privacy, to form a clear picture of that solemnity—on a sudden, as by some enchanter's wand, the—shall I speak it?—the Clothes fly-off the whole dramatic corps; and Dukes, Grandees, Bishops, Generals, Anointed Presence itself, every mother's son, stand straddling there, not a shirt on them; and I know not whether to laugh or weep.

But what would Carlyle have said of Anointed Presence reduced to the anonymity of the cold marble slab and that ultimate garment, the common winding sheet, which wipes out all the differences and distinctions that all preceding Clothes create?

All Socialists are bad enough, but a clever Socialist is positively beyond the pale. What, for instance, could be worse than this utterance of the German Socialist, Philip Scheidemann, in commenting upon the recent threat of the Kaiser that he would incorporate Alsace-Lorraine into Prussia if it did not behave itself and do what he wished:

> We regard it as a momentous confession, when from a competent source incorporation into Prussia is threatened as the most severe punishment that can be inflicted upon a people—a punishment like imprisonment and the forfeiture of civil rights.

Now, instead of ignoring this remark the Chancellor played directly into the hands of Herr Scheidemann by walking out of the Reichstag together with the other members of the Government. Later, however, the Chancellor thought it wise to come back and defend the Kaiser, declaring that the Emperor was "naturally angry" at the recent conduct of Alsace-Lorraine, but that he had not meant to trespass upon the rights of the Bundesrath or the Reichstag, which alone have the power to revoke the Constitution of Alsace-Lorraine. It was only the other day that that Constitution was granted and hailed as proof that the captured provinces were now once more wholly German. But having autonomy, it likes to do things its own way; hence the Emperor's tactful remark, "I'll smash your Constitution to fragments."

A force of four thousand men, eager, anxious, and determined, has been reported by a Chinese newspaper to be marching upon Peking. The announcement has caused no alarm in the capital, however, because their only weapons are Chinese pens, ink-slabs, and such things, and they are seeking not lives, but offices. Reformers may think that the new Government will make short work of many of the sinecures maintained by the old, says the *Celestial Empire* of Shanghai, but it will do nothing of the kind, for the simple reason that it cannot. "For every needed man in China there are five at least to do the work." Supernumeraries are a part of the Chinese method of doing business.

OUR ENSLAVED CITIZENSHIP.

In Ohio last Friday Theodore Roosevelt defined his principles and his platform in a single compact sentence: "I am for a representative government absolutely, so far as it represents, but when the representative government does not represent, then I want the people to have a chance themselves." Like so many other definitions from the same source, this sentence lends itself to at last two interpretations. Mr. Roosevelt may have meant that he favors representative government as a theory, but that the theory has broken down among us in practice, and must therefore be discarded. Or he may have meant that representative government should be retained where it functions well, but must be supplemented or replaced by the direct rule of the people where it fails to work well. The second interpretation, because it is the safest, is probably the one Mr. Roosevelt would give to his own words. But whichever meaning we lend to his formal statement of creed, it will be noticed that one thing is taken for granted in both—the existence of a free people in these United States. But this free people is caught in the wheels of our vicious political machinery. What "we progressives" are trying to do is to replace this system with a more efficient system of machinery which will neither deflect nor frustrate the will of this free agent, the American people.

But there are progressives who apparently conceive their task as much more thoroughgoing than a mere overhauling of the machinery of government. They see in vision not only a political, but a social, revolution. Mr. Ray Stannard Baker, in the *American Magazine*, sums up the differences between conservatives and progressives as follows:

> Now the conservatives of to-day—Taft, Harmon, and others—are willing to tinker the tariff, and thus redistribute in small measure a few material benefits. But the proposal of the progressives goes deeper. They would let in as sharers of government, *with the business men and property owners who have so long dominated the country, an immense class of people further down in the scale, men who, though nominally voters, have in reality had nothing to say about their government.*

The italics are ours. But we would finish our quotation with a sentence from a preceding paragraph which Mr. Baker has himself italicized:

> *Every political revolution is caused by the effort of a new class of people to get into the democracy.*

We are here evidently speaking of a far different thing from what Mr. Roosevelt means when he speaks of the People. When Mr. Baker speaks of "an immense class of people further down in the scale," who are to wrest a share of power from "the business men and property owners who have so long dominated the country," he is evidently referring to what the Socialists describe as the proletariat, the great unpropertied classes, the hewers of wood and drawers of water. Mr. Roosevelt takes the People we all think of, millionaire and mill-hand, big business man and small business man, big farmer and small farmer. And he finds that all that is necessary is to free this People from the domination of the Bosses, and the will of the People will be done. But Mr. Baker feels that, after we are rid of the Bosses, there will remain the essential task of vindicating the rights of the factory worker and the farm hand against the business man, large and small, and the farmer, large and small. There is no way of getting around the fact—it is the "lower" classes against the "middle" class.

Which view is the dominant one among "we progressives," Mr. Roosevelt's view or Mr. Baker's, there is no means of ascertaining. But one thing is clear—the two are not reconcilable. Mr. Baker charges that the government is monopolized by those very classes—our American business men and property owners—whose cause Mr. Roosevelt has pleaded more than that of any other section of the community. What Mr. Roosevelt and Mr. Baker have in common is that certain alterations in the political machinery will remedy existing wrongs; and in this matter Mr. Roosevelt holds much the better ground of the two. For the wrongs Mr. Baker has in mind are so deep-seated and so bound up with the entire economic structure of our society that to imagine them curable by a few political reforms is absurd. Just how have the propertied classes so deprived the proletariat of its proper share in the government? Surely, these millions and millions of farmers, manufacturers, shop-keepers, and professional men have not been actually buying up the Legislatures and the judges, as Big Business is supposed to do. Then it must mean that by class prestige alone, by their higher position in the economic scale, the property owners have managed to reduce the propertyless to the point where "they have in reality had nothing to say about the government." If middle-class prestige has hitherto induced the workingman to use his ballot on election day against his own interests, why should it fail to do the same on primary day?

Common to all the progressive schools is the assumption that there is a people that must be freed. Mr. Baker's People is enslaved by the propertied classes, and Mr. Roosevelt's is enslaved by the Bosses. The fact remains that there is an enslaved citizenship among us and that representative government furnishes the shackles that bind the serf. What is needed is a political revolution. Progressivism stands for the popular election of Senators; it does not matter that under representative government we have virtually attained the popular election of Senators. Progressivism stands for direct primaries: it does not matter that in virtually half a dozen years representative government has insured the triumph of the direct primary system. Progressivism stands for the commission form of government: in half a dozen years under the pall of representative government the commission form of government has spread over the country. No revolutions have been necessary to conquer these rights. People had only to make up their minds as to what they wanted, and representative government did not stand in the way of their getting it.

It is not an enslaved citizenship that we have had, but in the largest measure an independent people. A nation is not saved by machinery, though the machine may help. A resolute people will be free under representative government, and an indifferent people will be enslaved despite all primaries and referendums.

THE SUIT AGAINST THE "COFFEE TRUST."

Some novel and peculiarly interesting questions are involved in the suit, begun by the Federal Government on Saturday, against the agents of the much-discussed "coffee valorization" plan. Considered merely as an avowed attempt to hold up the price of coffee, in America as elsewhere, through buying up huge quantities and keeping them from the market, it can scarcely be regarded as anything but restraint of

trade. That the price would have gone lower but for these forestalling operations, is not denied by the authors of the plan; it is even asserted as their original purpose. That the holding back from market of more than 10,000,000 bags of coffee, while the world's annual crop has ranged from 14,500,000 to 23,800,000 bags, has given the bankers' committee almost absolute control of the market, is an accepted fact in the coffee trade.

Furthermore, that the price of coffee has advanced at a rapid rate since 1906, when the operations of the bankers began, is fully admitted. The Government's petition sets forth that this advance has amounted to 100 per cent., and it is matter of public record that a minimum selling price for the coffee thus acquired was stipulated in the contract of the bankers. That the committee's practice is to sell their holdings only in such quantities that the price will not be affected by the sales, and that they "require an express contract from purchasers that they will not resell the coffee purchased, on the Coffee Exchange," the Government positively alleges. All this, if applied to a domestic industry, would appear to constitute a pretty clear case of violation of the Anti-Trust law.

The unusual aspect of the so-called "coffee valorization plan," however, is that it does not apply to a domestic product, and that the plan was initiated under the auspices and at the behest of a foreign Government. Brazil, which raises about three-fourths of the world's supply of coffee, produced in 1906 a crop larger by nearly 40 per cent. than in any previous year. The natural course of the market, in response to this prospect of an unprecedented increase in supplies, caused a commotion in Brazilian business circles much like the excitement which prevailed in our Southern States when last year's 16,000,000-bale cotton crop was being harvested. There was talk in Brazil in 1906, as there was at New Orleans in 1911, of the impending ruin of planters and growers. It resulted in legislation by the Brazilian state of Sao Paulo, subsequently followed by legislation on the part of the Brazilian Federal Government, which led to the contract with the bankers.

The Brazilian state borrowed $75,000,000 on its bonds from an international banking syndicate. With the proceeds of the loan, the Government bought great amounts of coffee from its own producers, and placed this coffee in the hands of a committee in which the Government, the international bankers, and certain foreign coffee merchants were represented. It stipulated with great precision, in that contract, how the coffee market should be handled in the sale of these holdings, and as security for its foreign loan it pledged the public credit, the coffee itself, and the proceeds of a Brazilian export tax on coffee—which tax was to increase after exports had passed a given total.

It will readily be seen, therefore, that some novel considerations enter into the present case. The contention of the syndicate, voiced by one of its members, Mr. Herman Sielcken of New York, in his testimony before the "Money Trust committee" last week, was that the whole operation was an affair of the Brazilian Government, with which our Government had no business to interfere. The Department of Justice, in its petition of Saturday, answers that acts and agreements in American trade, which are unlawful under our statutes, cannot be made lawful by the fact that they "were not unlawful in Brazil and were participated in by a foreign state." It points out that the United States consumes 40 per cent. of all the coffee used in the world, and insists that no approval or participation, on the part of a foreign state, can "serve as a protection to defendants as to any acts committed thereunder in the United States." The petition therefore asks that the entire valorization scheme, in so far as it affects our own interstate or foreign commerce, be declared illegal; that the syndicate be perpetually enjoined from holding its coffee accumulations off the market, or from selling with the condition that the purchaser shall not resell, and that a Federal receiver be appointed to take charge of the coffee holdings, under authority of the courts.

The situation created, or which may be created later on, is interesting and unusual. It is not clear, for instance, just how far even the granting of the Government petition would affect the "valorization plan," since only a part of the syndicate's coffee holdings are stored in this country. Nor is it easy to foresee in just what spirit the Brazilian Government will meet this action of our own Federal authorities towards the plan which Brazil itself devised. These considerations, it should be observed, do not affect the intrinsic merits of the valorization scheme itself. We have believed from the first that the project embodied thoroughly unsound finance, from the standpoint alike of the Brazilian Government and of the coffee market. It is one of the most dangerous applications which our time has witnessed of the attempt to meddle with the normal processes of trade through lavish use of credit.

THE COLOR LINE AT THE BAR.

In their efforts to drop from its membership the able and attractive Assistant Attorney-General of the United States, Mr. William H. Lewis, the officials of the American Bar Association are more and more shaming themselves and the body for which they speak. Mr. Lewis, it will be remembered, is a man of color, a graduate of Amherst and Harvard, for years in the Federal District Attorney's office in Boston, and now a trusted assistant of Mr. Wickersham. He was invited to join the Bar Association by a committee of its Boston members, urged to recruit its ranks. Had he not become conspicuous by reason of his appointment to office in Washington, he would to-day be peacefully a member of the Association. When opposition to his confirmation developed, somebody noticed that he was a member, and then the trouble began. The President of the Bar Association, Mr. Stephen S. Gregory, suddenly discovered that the Association was a social body, with whose pleasures at its annual convention Mr. Lewis might interfere, if he should happen to attend. He then set up the remarkable plea that Mr. Lewis was elected under false pretences, that is, "misapprehension," because there was not written all over his nomination papers the word "colored."

Of course, the Boston committee knew who Mr. Lewis was when they certified him to the executive committee for election as a desirable member. For six months he exercised his membership; then he was asked voluntarily to retire and give up something "obtained under a misapprehension." Indeed, it speedily appeared that he had actually committed a crime, for he was "insisting on retaining the advantages of an election thus obtained"—obtained by invitation of the Boston membership committee and duly ratified by the execu-

tive committee. This, of course, added to the heinousness of the original offence of having a dark skin. The executive committee then revoked his election. What the Attorney-General, Mr. Wickersham, thought of this action appears from these his words:

> Now—six months later—an executive committee, one-third of whose membership has changed since Mr. Lewis was elected, without the faintest shadow of authority in the constitution or by-laws of the Association, assumes by its vote to cancel the election and to place Mr. Lewis's name on the list of persons proposed for membership. This action is taken at the instance of certain of your members who object to the membership of a colored man in the Association. There being nothing in the constitution or by-laws of the Association to limit its membership to white persons, they, nevertheless, arrogate to themselves the power to cancel a previous election had in conformity with the organic law of the Association, because the person so elected is not white, and to remit any discussion of the question to the next annual meeting of the Association next summer, meantime depriving Mr. Lewis of all rights as a member.

Truly an extraordinary action for a body which presumes in its membership to represent more than any other the majesty and dignity of the law; which assumes to enhance public respect for the profession and to resent with all its power lawlessness in every form!

In the course of their astounding and indefensible actions the officials of the Bar Association declared that this case was exceptional, as Mr. Lewis was the only colored man on its rolls. "No person whatever of another race has been elected to membership," wrote that amazing person, Mr. George Whitelock, the Secretary of the Association, who has recently been compelled to notify Mr. Wickersham that if that able gentleman continued to write him such vigorous (and, he might have added, unanswerable) letters, he should be obliged to refuse to acknowledge or reply to them. Then it promptly appeared that two other colored men, Butler Wilson of Boston and William R. Morris of Minneapolis, were members, and —horror of horrors—Mr. Wilson was actually a member of the local *entertainment* committee which welcomed the Association on its visit to Boston, while Mr. Morris has been a member for some years. That made a quandary for two such enlightened men as Messrs. Gregory and Whitelock, who had represented, with Alice-through-the-Looking Glass logic, that in the case of Mr. Lewis the executive committee made "no declaration . . . of ineligibility of colored men to membership in the Association, but only a recision of the particular election by the committee, which had occurred without knowledge on its part of the candidato's race—*regarded as a material consideration in electing!*" But Messrs. Gregory and Whitelock have grasped the bull by the horns; to prove that there is really no caste or color feeling in the Association, they have merely notified Messrs. Wilson and Morris that their cases will be brought before the executive committee, and that this notice is given them to "avoid any imputation of laches" and that they "may have an opportunity, should [they] so desire, of retiring from the Association before any action is taken, and without any publicity."

To this Mr. Morris has replied in a letter which should stir every lawyer who reads it to fresh protests against this deliberate degrading of the Bar Association, and would of itself, we are certain, insure the liveliest annual meeting which this body of lawyers has known, perhaps, in its history. Messrs. Gregory and Whitelock have already been deluged with protests from all over the United States. Men of standing in no wise connected with the legal profession have protested against this outrage. As one lawyer of national standing writes us:

> The issue having been made, there will be presented to an association of five thousand American lawyers the question whether they propose to go on record as excluding from their numbers members of their own profession, of approved character, both as individuals and as lawyers, on account of their color. I cannot doubt what the result of that issue will be, nor the impossibility of flinching from it, although it may, and probably will, result in splitting the Association into two parts.

By all means, let the Association be split apart if need be in order that the country may know that at least a part of the legal profession will not stand for such lawlessness, injustice, and narrow prejudice as seem to actuate the present officers of the Association.

THE ART OF GREAT FICTION.

There have been frequent attempts within the past few years to bring back into serious fiction something of its mid-Victorian spirit. The movement, if that word is not too formal, began with the first novel of De Morgan. A sense of the fulness of life surrounding even a single career, which Dickens and Thackeray knew so well how to create, was given in "Joseph Vance." Leisureliness again came into fiction. Many were appalled at the size of De Morgan's volume and prophesied failure for it. The reading of a novel had come to be thought of as the work of one sitting, preferably on a short journey. But De Morgan's books did succeed amazingly. It was seen that he had turned his back on the ingenuity and other artificial cleverness which went into the making of the ordinary novel, and had his eye on real life. If amusement could be got by the way, well and good, but for his appeal the author relied most upon the cumulative effect of a career looked at from many angles. Life *en bloc* had to be represented. Following De Morgan, writers in Great Britain and on the Continent, not so much in this country, have been striving for similar large effects. Arnold Bennett is perhaps the most notable instance, but several others could be cited, notably A. E. W. Mason, Birmingham, Richard Pryce, and the author of "Jean-Christophe."

The feeling will not down, however, that the work of such men, with the possible exception of De Morgan, lacks some vital element of the older spirit. Is this want perhaps due to a change of method in manipulating individual scenes? Despite the care given by Dickens and George Eliot to the impression of a work as a whole, in each of their stories a few separate scenes contrive to stand out indelibly. A rehearsal of them here is not necessary; every one will recall them for himself. Both writers, in a word, did a great deal of editing of material, and then committed to a small number of scenes, highly elaborated, the most significant moments. Not that their books could be reduced at once to scenarios. There is much necessary description and narration, but these usually prepare the way for animated scenes full of dialogue. That it is preparation is obvious after a little analysis. The ancestry and previous activity of characters are sketched at length, to give them a running start for the real scenes in which they are to figure. But the scenes themselves assume the main importance. So it is plain that the plan of a story, thus managed, is dependent upon certain fundamental laws of art. Not actual life, but the impression of actual life, is given. How to select and

seemingly not omit, and, above all, how to present vividly, are the problems with which Dickens, let us say, was concerned. He placed his emphasis upon the scene, giving sense of life by much use of conversation, and trusted largely to the principle of suggestion to bridge the gaps.

The method of our moderns is very different. "Jean-Christophe" and Mr. Pryce's "Christopher" may serve for a moment as examples. In each case the hero is followed from birth until well on in life; his outer and inner being is set forth, and he is looked at from innumerable angles. And yet there is scarcely one scene of any length in either book. Scraps of conversation are recounted in order to furnish settings for extended analysis of the hero's several stages of development. The analysis is often brilliant, and especially in the case of "Jean-Christophe" the most transitory, intangible feelings are crystallized with amazing insight and power of expression. Fulness of life there is, too; only it is not edited and selected after the manner of the older writers. The result is a vague recollection, on the part of the reader, of a story collectively or in parts.

The way of Mr. Bennett differs somewhat from that of his two contemporaries. Scenes he has, sometimes of monumental length. Yet he, too, usually gives the impression of being a chronicler rather than a novelist. His distrust of the Victorian art shows itself not by his readiness to turn with undue haste from an outward situation to an interpretation of inward broodings. He dwells lovingly on external details. Little men and women, in his most conscientious works, wend their ways through a scrupulously accurate world. Yet, for all that, his scenes more often than not lack the Victorian objectivity, because his emendation of the old artistic doctrine of *multum in parvo* to *multum in multo* has not yet proved to be true art or true psychology. It is again a case of refusing to edit properly.

That the Victorian scene, so excellent as it usually is, has been discredited by serious workmen, seems strange, especially at a time when the common run of novels are so closely related to the stage. Good sellers of this class are quickly dramatized and popular plays are "novelized." One would think that the older pattern would strongly recommend itself. Perhaps it would if the stories which are put upon the stage were better than they are. But the artificiality of their scenes and their trivial purpose have caused the more thoughtful writers to suspect that all scenes so fashioned are not true to life. The Victorian model has suffered in consequence. It has appeared to them to be in structure and method of a piece with recent trash. So it has come about that writers who started out somewhat consciously to reinstate the Victorian spirit have neglected one of its most important elements; or rather have tried to replace it by something better. We suspect, however, that the broad outlines of the many notable scenes which come to mind from the older day are still worthy of careful imitation.

THROUGH THE OUTLOOKING GLASS

At the sight of the dear old lady in a pannier gown, Alice could not help uttering a little cry of delight.

"Do let me introduce you," she said to the Red Knight, and she ran forward, pulling his steed along by the rein. "The Red Knight, Mrs. Malaprop," she said, and beamed upon both of them.

"Not *the* Mrs. Malaprop," said the Red Knight, holding out one hand and clinging to the saddle with the other.

"The same," said the old lady; "may I facilitate you upon the results in Illinois and Pennsylvania?"

"I thank you," said the Red Knight. "I have often heard you spoken of as one of our leading simplified spellers. If I am not mistaken, your grandfather was Col. Lapsus Linguæ of Faux Pas."

"He was," said the old lady. "And on my mother's side I am related to the Bulls of Ireland and the Hiatuses of Prattling Common. If an old woman's good wishes count for anything——"

"Madam," said the Red Knight, "after California, I freely recognize the extraordinary mental and moral qualities of our women voters."

"I have long wished to tell you," said the old woman, "how I admire the victorious career of one whom I regard as the most Perkinacious of all our candidates."

"Pert, not Perk," hinted Alice, gently.

"Perk or Pert, what difference does it make?" said the old lady. "We live not by the letter of the law, but by its spirituous consultation. I have known candidates who have fought hard for their own ends, but none whose motives are so absolutely Flinnathropic."

"Philanthropic," suggested Alice, in a whisper.

"Please don't interrogate so much," said the old lady, but still without losing her temper. "When I meet a public man who is so ready to capitalize his own interests to those of his country——"

"Sacri——" Alice started to say, but caught herself in time.

"Why, then," went on the old lady, "he ought to have as many terms as he likes. If two are not enough he should have a third term, if only by Hannalogy. Now I hope I got *that* right," she said, turning defiantly to Alice.

But Alice's feelings were hurt, and she said nothing.

"And so," concluded the old lady, "I hope that you will succeed in keeping up your spontaneous consumption of public interest and that you won't let them take away your Southern renegades——"

"Delega——" said Alice before she could stop herself.

But the old lady only glared at her and went on addressing the Red Knight: "And may all your enemies be like that English duke who was drowned in a barrel of Munsey."

"Malmsey," shouted Alice, no longer able to control herself. But the Red Knight turned to her and chided her gently, "The question, my dear Alice, is who shall make the rules of language, the plain people or the bosses who write the grammars."

NEWS FOR BIBLIOPHILES.

In the invaluable ninth edition of Bartlett's Familiar Quotations, the following is credited to Sir Walter Raleigh:

> Go, Soul, the body's guest,
> Upon a thankless arrant;
> Fear not to touch the best,
> The truth shall be thy warrant:
> Go, since I needs must die,
> And give the world the lie.

It is also, with a dozen other sextains of similar form, found in several poetical anthologies with the same credit. In other collections it is attributed to Joshua Sylvester, whose death occurred a few weeks before that of Sir Walter. It should seem desirable at present to examine the grounds on which the credit ought to be based.

In the second folio edition of Sylvester's collected works, printed in 1633, the foregoing stanza appears, with slight differences, as the first of twenty, together entitled "The Soul's Errand." All following the first are quatrains, having close relationship with the stanza at the beginning. In the neighborhood of a hundred and fifty years afterwards Thomas Percy published a poem entitled "The Lie," beginning with the lines reproduced above, and followed immediately by six of Sylvester's quatrains. Each quatrain had attached as a sort of refrain, however, a couplet to the effect that if the parties should presume to "make reply, then give them all the lie!" There were also some negligible verbal changes, and half a dozen stanzas not in Sylvester's version were added, giving to the revision a more finished look than the original could show. Percy's well-known propensity to alter verses coming within his editorial purview being considered, together with the fact that no copy of his rendering of this poem exists of a date earlier than that for which he was plainly responsible, makes it very probable that "The Lie," as it now stands, was aptly entitled, and was constructed by him on the foundation of "The Soul's Errand" in the folio of 1633.

After considering all the arguments attainable in favor of Raleigh's authorship of the revised verses, I cannot perceive that there is even one of any real weight. No predecessor of Bishop Percy ever attributed

them to Raleigh, so far as is known, and no trustworthy author since his era has professed to have seen any evidence tending to prove that Raleigh ever had anything to do with them. Charles Sprague, a meritorious minor American poet, did the best, probably, that could be done for the contention in Sir Walter's favor, without falsification, in the *Atlantic Monthly* for November, 1867. He frankly confessed at the outset that he was strongly prejudiced against Sylvester's claims, and desired to feel that the Elizabethan courtier "had left behind him as the offspring of his great brain one of the most impressive poems of . . . any time." Yet he was compelled to admit: "It is true I am not able to prove it; but I think I prove it was not written by Sylvester." It certainly cannot be reasonably claimed that Sylvester was the architect of that particular structure of verse generally called "The Lie," seeing that there is no authentic record of its existence in that form for a hundred and fifty years after the death of that writer; but I see no good reason to doubt that the original from which the later version was shaped was Sylvester's work. It has the rugged earnestness which is so noticeable in many other productions of the old puritan, and it was placed publicly to his credit within fifteen years from his death, and never questioned by his contemporaries so far as there is any record.

If Sylvester's poem had been adapted from that given out by Percy, the spelling "arrant" would not have been changed to "errand," since the rhyme is more evident with the former orthography than with the latter, while both forms of the word are found, for instance, in the Shakespeare Folio of 1623. And it is difficult to imagine Sir Walter saying (as is said in some of the lines common to the two versions), that the royal court "glows and shines like rotten wood," that the Church "doth no good," that potentates "are not loved unless they give," and, in one of the added couplets, "If potentates reply, give potentates the lie." J. Payne Collier, the notorious brown-paint amender of the Second Folio of Shakespeare, reproduces Percy's version nearly, and brazenly cites as his authority an alleged manuscript entitled "Sir Walter Wrawly his Lye." There is no evidence that anybody else ever saw the manuscript, and I have never heard that the name "Wrawly" was to be found elsewhere in that form. It seems fairly certain that Sylvester wrote the poem from which six of the strongest stanzas were taken for use in the construction of "The Lie," and that the latter was the work either of Bishop Percy or of some acquaintance of his.

UNCONSCIOUS HUMOR OR A NICE DISTINCTION?

TO THE EDITOR OF THE NATION:

SIR: Outside the legal profession the only man who will not smile when he reads the Illinois Supreme Court decision, in the case against George Clark, charged with operating a confidence game, is John Dembinski, the victim of the game.

The decision in question reverses a verdict which provided a term in the penitentiary for Clark, and furnished, substantially, the only satisfaction Dembinski got out of the matter. As it was among a large number of opinions handed down when the court adjourned, it escaped the attention of the press, or, if seen, presented so small an element of news value that the mere title of the case was published without comment.

The original arraignment charged that Clark "did unlawfully and feloniously obtain from John Dembinski his money by means and by use of the confidence game." He was tried, and after a petit jury had declared him guilty, a sentence of ten years' imprisonment in the penitentiary was imposed upon him. The case was appealed to the Supreme Court, Clark's counsel setting up the usual charges of irregularity in the process by which he was brought to justice, insisting that the indictment was faulty, that the trial was improperly held, and that the finding was not justified. Particular emphasis was placed upon the form of the indictment, and upon this phase of the proceedings the decision of the higher court rests.

The opinion declares that the presentment was indefinite inasmuch as it failed to point out whose money Clark acquired from Dembinski! As indicated, the indictment says that Clark obtained "from Dembinski his money," and the court is of the idea that this statement may have misled some one, being subject to misconstruction. The pronoun "his," it maintains, might as correctly refer to the defendant as to Dembinski: "It would be as easy to say that the defendant obtained his own money from Dembinski, as that he obtained the money of Dembinski." That the opinion rendered in the case might be made still clearer, the court adds: "A conclusion that the pronoun referred to Dembinski rather than the defendant could only be sustained on the ground that the grand jury intended to charge the defendant with a crime." Since, in the opinion of the court, so violent an assumption would be contrary to all rules of criminal pleading, it is wholly out of the question to figure that the grand jury was endeavoring to accuse Clark of doing something criminal when it indicted him. And since it has no other means of determining, from the indictment, whether the grand jury was trying to bring Clark to trial for getting Dembinski's money in an unlawful manner, or was simply recording the unusual circumstance of a man "unlawfully and feloniously" obtaining his own money, the trial is irregular and the case must be reversed.

Occurrences of this character, of course, are to be regretted, but they are likely to continue so long as carelessness obtains in the drawing of court papers and the uncertainties of the English language are ignored in their preparation—the preparation of court papers.

Perhaps we should add that Chief Justice Carter filed a dissenting opinion in this case, holding that it "seems clear to me that the pronoun 'his' referred to Dembinski and not to Clark."

A SPANISH SUMMER SCHOOL.

TO THE EDITOR OF THE NATION:

SIR: For several years the various universities of France have had summer schools for foreigners and have advertised, by means of brilliant posters, their attractions—picturesque, historical, and intellectual. Many Americans have spent summers at these schools with much enjoyment and profit. Few, however, know of the existence of a Spanish summer school which has been conducted very successfully the last four years at Burgos. It is part of the large work done by the eminent Spanish scholar, M. Ernest Mérimée of the University of Toulouse. To his efforts are due exchanges of professors among French, Spanish, and Portuguese universities, as well as spring courses at Madrid and summer courses at Burgos for French students. The courses at Madrid last from Easter to June and are intended primarily for the candidates for the *agrégation*. These are advanced courses in literature and philology: some of which are given by no less an authority than D. Ramón Menéndez Pidal himself. There are also classes affording practice in the spoken language. These courses are of interest to such of our scholars as are fortunate enough to have a year abroad. To those who have merely a summer to spend in Spain, the courses at Burgos are more important.

The *Instituto francés en España*, or the *Unión de estudiantes franceses y españoles*, holds its classes in the building of the *Instituto provincial* of Burgos. The school begins the first Monda in August, and lasts six weeks. Although supported primarily by the universities of Toulouse and Bordeaux, the courses are free to all Frenchmen. Persons not French or Spanish are also allowed to attend, but pay a fee of 50 pesetas. As yet, few such have attended the school—not more than two or three in a summer. The courses, which are given by professors of the Instituto of Burgos or from Madrid, are divided into two sections, elementary and advanced. A student must enroll in one of these, but he is allowed to attend the other as a listener. The classes come in the morning or late afternoon, and occupy about twelve hours a week. The books studied are those of the French official programme for that year. In the summer of 1911 the courses were somewhat as follows—Elementary: grammar, composition, oral and written practice, translation from Le Sage and Galdós; Advanced: reading, comment, and translation based on Bruno's "Francinet," La Fontaine's "Fables," the "Romancero Caballeresco," the "Marcos de Obregón," with lectures on Spanish literature.

In addition to the Spanish courses there are French courses for the natives of Burgos. These also are open to the foreigner, but many of our students would find them rather elementary. In these, however, as in the Spanish courses, one gets practice in both languages. The Spanish courses are taken by about eighty French students of both sexes, and of varying ages and attainments. The majority come from southern France, and one hears a good deal of the resonant French of that district. There is always a number from northern France as well. Inasmuch as many of the students are studying English and eager to practice it, one would have no difficulty in arranging

an exchange of lessons, despite the European prejudice against American English. Examinations are held at the end of the session and diplomas awarded; certificates of attendance are given to those obliged to leave before the close.

The teachers and officers of the Instituto are eager to make one's stay pleasant and profitable. Board in Spanish *casas de huéspedes* costs from three pesetas a day. A kindly and efficient physician looks out for the health of the school. The people of Burgos are interested in the undertaking and most hospitably open the doors of their comfortable clubhouse—the *Salón de Recreo*—with its reading rooms and library. Thursdays are devoted to excursions, visiting the beautiful cathedral and other local monuments, or in longer trips to neighboring points interesting for historical or artistic reasons.

Burgos was chosen on account of its nearness to France and because of the excellent Spanish spoken there. Situated 2,785 feet above the sea, the climate is better than that of many places in Spain. In the hot summer of 1911, Burgos was among the six or seven coolest places out of a list of some thirty given in the daily weather reports. It was usually 8 degrees to 10 degrees cooler than Madrid.

The school has been recognized by both Governments, and its officers have received decorations. Further information may be found in the files of the *Bulletin Hispanique* or by writing to the Instituto at Burgos.

THE PRIVY COUNCIL.

TO THE EDITOR OF THE NATION:

SIR: In your discussion of the home-rule question (*Nation*, April 25), you appear to have fallen into the mistake of believing that the power conferred on the Privy Council, or, to be more accurate, the Judicial Committee of the Privy Council, to pass upon the validity of acts of the Irish Parliament marks the introduction of a new principle into the English Constitution. You further declare that the Privy Council does not possess such power in respect to the legislation of the self-governing colonies.

The mistake, I believe, is due to confusing the Privy Council as a political body with the Privy Council in its judicial capacity or the Judicial Committee of the Privy Council. The political Privy Council, or the King in Council, or the Cabinet, has the right of veto on all colonial legislation. The Judicial Committee of the Privy Council is also capable of passing on the validity of all colonial legislation which is carried on appeal as of right or of grace to the King. The Parliaments of the self-governing colonies are not sovereign bodies as is the case with the Imperial Parliament. As non-sovereign bodies their legislation is subject to the same judicial control as are the by-laws of any municipal corporation. The Judicial Committee frequently has occasion to set aside the legislation of the Parliaments of Canada and Australia just as our Supreme Court does the legislation of the States or Congress.

There is, of course, a higher regard for an act of the legislature in an English or Colonial court than in an American court, but nevertheless neither an English nor colonial court would hesitate to declare a colonial act unconstitutional in case it were in flagrant violation of the terms of the Constitution. That English and colonial courts do not so frequently set aside colonial acts as do American courts is largely owing to the fact that the principle of the separation of powers between legislative, executive, and judiciary does not find the same acceptance in English and colonial law as in the United States; and still further to the fact that the principle of constitutional guarantees of individual rights of person and property is not to be found to any extent in colonial Constitutions. The new Irish Constitution, however, contains such guarantees, so that we may find the Judicial Committee assuming a new jurisdiction in respect to this class of cases. But acts abridging personal or religious freedom would undoubtedly be vetoed by the Lord Lieutenant, and not be left to the subsequent determination of the judiciary.

In view of the recent agitation for the recall of judicial decisions it may be of some interest to your readers to know that a proposal was made in the convention which drew up the Australian Commonwealth Constitution that when a law of the Commonwealth Parliament was declared unconstitutional by the High Court of Australia, the Governor-General in Council might, upon the adoption of a resolution by absolute majorities in both houses or, as was also suggested, in one house, refer the law to the electors for their approval:

> In the event of any law passed by the Federal Parliament being declared by any decision of the High Court to be *ultra vires* of this Constitution, the Executive may upon the adoption by absolute majorities in both houses of the legislature, within six months after the decision of the High Court of resolution thereto directing, refer the law to the electors under Section 121, and if approved or therein provided the Constitution shall be deemed to have been enlarged and the law shall have been conclusively deemed to have been *intra vires* of this Constitution from the passing thereof.

It will be observed that this proposal carried with it a formal amendment of the Constitution and was designed to introduce greater flexibility into the Constitution rather than to curtail the powers of the judiciary. But the proposal was so severely criticised by Messrs. Symon, Isaacs, and Barton, that the mover, Mr. Holder, withdrew it.

The fact that the American public are now being urged to accept a proposal very similar in character to that which the makers of the Australian Constitution summarily rejected may well cause the electorate to pause and consider carefully the important constitutional principles involved in its determination.

POSTAGE ON BOOKS.

TO THE EDITOR OF THE NATION:

SIR: I should like to supplement the letter of Professor Holt (*Nation*, May 2) on the "Exorbitant Price of Books" by a note calling attention to the custom of publishers of adding to the list price of books the cost of carriage by mail. This custom is without justification, and has the particularly irritating effect on the mind of the purchaser which such exactions always have. To a student residing in the country the custom adds greatly to the total cost of his library.

It is unjustifiable, as a book can be purchased at any first-class book store at the list price, and the increasing of this price by the cost of carriage by the publisher cannot be to protect the legitimate book trade, as this would be done amply were the publisher to furnish the book carriage free at list price.

If a booksellers' agreement compels the custom, it should be abrogated, as it is a short-sighted policy, the irritation it leaves is far beyond any value it can have for the trade.

CLEVELAND ON THE COURTS.

TO THE EDITOR OF THE NATION:

SIR: In reading recently Geo. F. Parker's "Recollections of Grover Cleveland" I came upon the following words spoken by Mr. Cleveland to the author a few months before his death. They are emphasized by the times:

> The most serious difficulty confronting this country is that of maintaining the supremacy of the law, and this can only be done by inspiring respect for the judgments of our courts. All the enemies of our society and institutions, and of the dominance in them of the civil power, recognize, as if by instinct, that if they would break them down or undermine them, it can only be done by reducing our courts to impotence. If their decrees are not respected, or their judges who preside over them are not men of the highest reputation for ability and fairness, then all the forces of discontent will unite in an assault upon them.
>
> To me, nothing can be more deplorable than that open criticism of the decisions of courts which, all at once, has become fashionable on the part of executive officers, whether Presidents, Governors, Mayors, or whatever the rank or position. They are danger signals, and failure to see them may introduce practices which will threaten the independence of the courts.

A GREAT ENGLISH DIPLOMAT.

Memoirs and Letters of the Right Hon. Sir Robert Morier, G.C.B., from 1826 *to* 1876. By his Daughter, Mrs. Rosslyn Wemyss. 2 vols. New York: Longmans, Green, & Co. $8.75 net.

Although the English resent foreign criticism to a degree that is often amusing, they sometimes criticise themselves not only very frankly, but quite accurately. Thus at the time of the Boer War they admitted that it was too much their habit to trust to "muddling through" a difficulty. Since the Crimean War, which they drifted into without calculation and emerged from without glory, their military operations have been mostly "muddled," but in no department has this characteristic been more marked than in their diplomacy. From the Restoration on, the British

Foreign Office acted upon the theory that it need not trouble itself to know or care much about foreign peoples or governments: for, of course, none of them could hope to rise into the sphere which Providence had assigned to Englishmen.

As a result, the diplomats who represented England abroad possessed usually many excellent qualities except those which were indispensable to success in diplomacy. Among the earlier Foreign Secretaries not even Palmerston was adequately equipped. Lord John Russell, his superior in many ways, was still unable to see international relations steadily, much less to think out beforehand the policy to be adopted in any emergency. In 1859, with laudable enthusiasm, he made "Italy for the Italians" his motto; but, only two years later he so far misread the *Zeitgeist's* intimations as to be ready to support the South against the North in the American Civil War. The quality which British diplomats and Foreign Secretaries have too often lacked has been a sympathetic knowledge of the policy and aspirations of the countries with which they had to deal.

These facts are impressed upon us, through contrast, in reading Sir Robert Morier's "Memoirs": for he was, with Sir James Hudson in Italy, the British diplomatist of the last generation who knew his field through and through. Moreover, that field was Germany, and it would have been well for England if she had been willing to listen to Morier in the days before the rise of Prussia. What not merely the average Englishman, but official and university circles, thought of the Germans in the late fifties and early sixties of the last century can be learned from the pages of *Punch*. The German was supposed to be a fat, ponderous, rubicund fellow, who smoked huge pipes a yard long and drank gallons of beer. If he were a *Gelehrter*, he added to this equipment a pair of goggles.

No Englishman pretended to bother himself over the internal affairs of the forty or more German States; and, indeed, that was a tangle which even the historian finds it hard to unravel. Lord John Russell said, with a touch of pride, that only himself and one other man understood the Schleswig-Holstein affair, and that the other man was dead; but we question whether Lord John did not overrate his own competence on this occasion. And yet by 1864 Morier had been expounding German politics to the Foreign Office for seven or eight years.

Robert Morier was born in 1826, of Huguenot ancestry. His father had been consul-general for France and minister to Switzerland, and one of his uncles wrote "The Adventures of Hajji Baba," a book which had considerable vogue. More important as a formative influence was the fact that this uncle, and other members of the family besides his father, held diplomatic or other positions: so that he was born into the environment of a cosmopolite. But he had the education of the traditional Englishman, and he never wavered in his loyalty to the best English ideals. At Balliol College, he formed with Jowett, nine years his senior, a friendship which lasted through life.

Leaving Oxford in 1849, Morier filled a small post in the Privy Council Office, in the hope of receiving a diplomatic appointment. This came in 1853 when he went as unpaid attaché to Vienna. Six years later he was transferred to Berlin, and a small salary was assigned him. In 1866, he went to Frankfurt just as the Confederation ceased to exist; and for the next ten years he served at Darmstadt, Stuttgart, and Munich, until at last, in 1876, at the age of fifty, he was promoted to be minister at Lisbon. The mere list of his posts shows what unusual opportunities he had for studying Germany on all sides. In addition, he travelled much in Italy and the Orient, and served on several special missions. He also possessed certain personal qualities which caused his fellow diplomats, statesmen, and even sovereigns to confide in him.

Morier's daughter has edited his "Memoirs" with a view to presenting as much political and historical material as possible. This is well, for it is no exaggeration to say that her volumes contain more new sidelights on the unification of Germany than can be found in any other English work. Morier had a passion for thoroughness which, coupled with a marked historic sense, led him to prepare for the Foreign Office papers which, though probably seldom read by his superiors, have a lasting importance for the historian. We cannot imagine, for instance, that Lord Palmerston, whom he describes capitally as "half-hornet, half-butterfly," spent laborious evenings over Morier's monographs on the "History of Prussia" (1859), and on the "Constitutional Conflict in Electoral Hesse." But the Foreign Office soon discovered that Morier was more than a routine man, and it resented, rather than welcomed, his activity. "Above all, not too much zeal," was the instruction his chief, quoting Talleyrand, solemnly gave him.

The enthusiastic and conscientious diplomat, however, continued to furnish the information which he deemed it essential for the Foreign Office to know: and if the occupants of Downing Street did not listen attentively, personages not less important knew his value. For he was the friend of the Prussian Crown Prince and of Princess Victoria, and he served with equal loyalty to spread a knowledge of Prussia among the English, and of England among the Prussians. Sympathizing heartily with the German Liberals, he hoped, at the outset, that the resurgence of Prussia would result in the formation of a free and united Germany: but, from the moment when Bismarck took the helm in 1862, Morier began to fear that freedom would be sacrificed. In the German nature two spirits—the Spirit of Liberty, and the Spirit of Authority—have been at war for centuries. Had the German empire-builder been a Cavour, devoted to Liberty, he would have rallied those forces and found them sufficient; but Fate assigned the task to Bismarck, who organized Authority to a degree of perfection that no German before him, not even Frederick, had attained.

Although Morier seems to have had no personal clash with Bismarck, he early incurred the Chancellor's hostility. This was inevitable. Morier did not disguise his Liberalism, and in his letters he criticised the brutal methods by which the new Prussian policy was driven through. On his side, Bismarck naturally hated a man who was the friend of his enemies and the confidant of the Crown Prince and Princess. To rid Prussia of the English influence which Princess Victoria only too evidently and very indiscreetly worked to establish, became almost a Bismarckian obsession. He feared that, in spite of his Titanic efforts for Authority, constitutional Liberty of the English sort might win the day in Berlin: then farewell to the hoped-for German Empire dominated by Prussia. He feared not only the effects of example and propaganda, but also, when the Danish imbroglio loomed up, of physical force. Being a man of few words and decisive acts, he assumed that the threatening dispatches from London would be followed by British ships. When he found, however, as Morier remarks, that the British energy was purely "literary," he uttered the scathing comment that he "had wasted several years of his political life by the belief that England was a great nation."

It is the direct and indirect testimony that Morier gives concerning the rise of Prussia, and especially his criticisms and revelations of Bismarck that constitute for historians the weightiest part of these memoirs. Although he was undoubtedly a hostile critic, yet he was no carper. He tried, above all, to see things as they were, and to report them to the Foreign Office. The wonder is that English official circles, having his inside reports, should have been taken by surprise at each of Prussia's victorious advances. Perhaps his frank criticism of England's "parochial" foreign policy, may have caused his superiors to undervalue his soundness. Nevertheless, Lord John admitted that, if Morier's advice had been taken promptly, the Danish Question would have been settled without a war.

We are not positively informed that

Bismarck's campaign of calumnies and spies, actually drove Morier from Berlin, but we infer that he found his stay at Darmstadt and Munich less tormented. Most important are his chapters on the Franco-Prussian War. He deplored the amazing indecision of Lord Granville at the opening of hostilities. "To feel that England is for the future but as a bit of wet blotting-paper among the nations," he wrote, "does upset one's serenity and makes one almost wish to be a Maori or a Turco, both of whom have some kind of individuality and self-assertion left." Morier sympathized with the Germans, because he disliked the truculence of the French Imperialists, but when France was beaten he regarded it as a tactical mistake for Germany to annex Alsace and Lorraine, and he had a foreboding that their colossal success would convert the Germans into a domineering nation. To his infinite regret, he soon saw that German unity, instead of bringing to pass a millennium of peace, as he had dreamed, systematized militarism on a scale unapproached even by Napoleon I.

At Munich he had a venerated friend in Dr. Döllinger, who had striven manfully to check the tide of Catholic reaction before it promulgated the dogma of papal infallibility. There is a curious and very enlightening report of an interview in 1872 between Morier and Arnim, when the latter was returning from a mission to Rome, where he had sounded the Vatican as to coming to more enlightened terms with Prussia. Arnim told him:

> that in judging the court at Rome it was before all things necessary to get rid of two widespread misconceptions: the one that it was an intelligent body, the other that it was invulnerable. It was the least intelligent of existing political powers, it was highly vulnerable the moment people ceased to believe in its invulnerability. That to obtain the clearest conception of what the Court of Rome really was one had to imagine three old Fakirs [Pius, Antonelli, and the Cardinal Vicar], who, for upwards of a quarter of a century . . . had used the same phrases, spoken the same thoughts, mumbled the same anathemas, and who never held communion with any person but those who came to worship at their shrine.

Arnim added that the tactics of the Ultramontanes were not elaborated at Rome, but by the Jesuits in concert with the Committee of Geneva, to whom the "three Fakirs" bowed their heads in assent. "The attitude of the Pope," he said, "was that of a man who owes no man anything, but to whom the whole world is enormously in debt. Anything given to him, therefore, however valuable, was regarded but as a small instalment of that which was his due." With the Papalists in this frame of mind, Arnim's mission of conciliation failed, and Bismarck soon embarked on the *Kulturkampf;* although it appears that Bismarck had not scrupled a little earlier to offer his alliance to the Pope against the Italians if the Pope, in return, would guarantee the submission of the German Catholics.

One further disclosure ought not to be passed over. Thiers, as French President, had urged Pius to transfer the Holy See to France: first, in order to supersede Italy, which Thiers hated; next, to make France "the Defender of the Faith"; and, finally, to constitute France as a kind of Catholic Holy Land which it would be sacrilege for any one, especially for German Catholics, to touch. We have no space to cite the salient points in the remaining chapters: but we must call particular attention to the account of the war scare of 1875, in which Bismarck's Mephistophelian methods are again revealed. Morier had an honorable part in circumventing them. The next year he was appointed Minister to Lisbon. So tardily was his unusual talent recognized.

Although the "Memoirs" deal chiefly with political affairs, there are strewn through them many passing references to the personages of his time, and occasionally good stories. Here, for instance, is Metternich's reply to a frightened Archduke who asked, when the revolutionists were roaring round the Chancery of State, what it meant. "The old fellow, with a grim and rather triumphant smile, observed, 'Monseigneur, c'est ce que messieurs les Républicains appellent la voix de Dieu.'" Morier found Gortschakoff "one of the vainest of the bigger statesmen, Beust always excepted, with whom I have ever had to deal." "It is not our vocation," he wrote in 1864, "to compete with the Emperor Napoleon in his professional pursuits of surgeon accoucheur to the ideas of the nineteenth century." In his more intimate letters—to his father, to Jowett, to Layard, and other friends—we get glimpses of other sides of his strong and sympathetic character. We hope that his daughter will carry the memoirs to the end of his life, for his great service as ambassador to St. Petersburg deserves to be fully recorded—including his repulse of Bismarck's vindictive attempt to blast him even at that distance.

CURRENT FICTION.

Counsel for the Defense. By Leroy Scott. New York: Doubleday, Page & Co.

We are used to novels in which the hero by unlimited patience, keen-wittedness and courage surmounts all obstacles, while the heroine either remains passive or makes a few well-intentioned efforts which only add to the hero's labors. It is refreshing therefore to come across a first-rate story in which the hero does the well-meant blundering, and the heroine, pitying him and making allowance for him, accomplishes the great task. At the beginning of the book the overgrown village of Westville, Indiana, is about to celebrate the completion of the new waterworks, built and owned by the city. The celebration is almost a personal triumph for Dr. David West, an old man who has spent his fortune and the years since his wife's death in studying the means of conquering typhoid fever. His only daughter Katherine, a graduate of Vassar and a member of the bar, who is engaged in work for a "municipal league," in an Eastern city, comes home for the celebration. Meanwhile her father has been accused by the committee having the work in charge of receiving a bribe from the Acme Filter Company, and the story has been published with a savage attack on West by Arnold Bruce, the radical young editor of the *Express*. The evidence against Dr. West is apparently conclusive, and when no reputable lawyer will take his case Katherine horrifies Westville by assuming the defense herself. Her father, nevertheless, is found guilty and imprisoned. Meanwhile Arnold Bruce has become convinced that the defense is right. He falls in love with Katherine. The story relates how his bungling gets him into serious trouble, from which he is extricated only by Katherine's brilliant success. The rather involved plot is carried forward rapidly and skilfully to an effective climax, and suggests a well constructed play. Considering the large demands of his plot, the author has been remarkably successful in characterization. The style has a colloquial vigor which often makes the descriptions memorable.

A Knight in Denim. By Ramsey Benson. New York: Charles Scribner's Sons.

A half-witted farm-hand is not at first sight a very promising hero for a novel. Yet we venture a guess that Bill Harbaugh, the "knight" of this story, will be remembered when some of his more pretentious contemporaries are forgotten The book exists purely for the sake of Bill; there is not much story, and what there is is curiously vague as to place, time, and minor characters. Bill, a big, strong, simple-minded fellow, drifts into the farming country near Atro City, Nebraska, from no one knows where. Having proved himself a first-rate farm-hand, he hires himself out by the unusual method of pretending to buy his prospective employer's farm. After the fictitious bargain is struck, he works faithfully for the real owner, expecting in return only the satisfaction of his simple wants and the pleasure of keeping up the pretence. Defective mentally as he is in some ways, in others he is quick enough; he has the intuitive keenness of sympathy and the occasional resourcefulness that some-

times go with weakness in practical matters. In character he is a natural gentleman, and it is as a protector of the weak that he appears in the story. His devotion to the ill-used wife of his quasi-employer is like that of a splendid dog. His good nature, his "festivity of temper," is infectious. When he is called a "natural-born idiot" he only replies, "Oh, come now. What if everybody was to be called by their right name, slap out like that?" The unreality of the setting and some of the other characters seems only to make his sturdy figure more solid and real.

The Sentence of Silence. By Reginald Wright Kauffman. New York: Moffat, Yard & Co.

Mr. Kauffman sets himself a serious problem, and he approaches it with respect. His "Sentence" is the one imposed on children by well-meaning parents who strive to bring them up in ignorance of everything pertaining to sex, on the assumption that ignorance is the equivalent of innocence. To prove the contrary, Mr. Kauffman conducts the object of his study through a number of unsavory experiences. The evident honesty of the author's purpose does not altogether make amends for a crudity of incident verging at times on coarseness, nor does he entirely convince us that all the misdeeds of Daniel Barnes are the result of his parents' failure to enlighten him in boyhood. Some trouble might have resulted, but seduction, adultery, and embezzlement, to mention only his major sins, make up a total for which somebody should be blamed besides his parents, who were good and simple country folk. It would be interesting to know how familiar Mr. Kauffman is with the "new psychology" and its tracing of childhood influences on later life.

Blinds Down. By H. A. Vachell. New York: George H. Doran Co.

The closed blinds belong to a house fronting on an unsavory village street by the name of Hog Lane, and behind them, in wilful ignorance of the actualities of life, sit the three poor daughters of an earl whose estate has gone by entail to a male cousin. The youngest of the three, a half-sister only of the two elder spinsters, is driven by family pride into a disastrous marriage, and her daughter is saved from a somewhat similar fate only by her intervention and her hardly-won experience of life.

So much for the plot. The theme of the book is really an impassioned plea against the narrow and conventional ideas of society in a village lying outside of the world's movement. The thesis is well presented, but the book leaves rather an acrid taste in the mouth and suggests a re-reading of "Cranford" or "Lady Ludlow." It would be a pretty question to argue whether Mrs. Gaskell's pictures of quaint charm or Mr. Vachell's arraignment of everything stationary as rotten conveyed the truest impression of life.

ROYCE'S PHILOSOPHY OF RELIGION.

The Sources of Religious Insight. By Josiah Royce. The Bross Lectures for 1911. New York: Charles Scribner's Sons. $1.25 net.

To those who, on the one hand, are unable any longer to accept the authority of Scriptures or of Church as the source of religious strength and insight, and who cannot even follow James and other recent writers in their confidence in the significance and trustworthiness of the mystic revelation, Royce's latest work, on the sources of religious insight, will appeal as worthy of profound consideration. To many, in fact, it should bring new faith in the spiritual and new courage in the service of the ideal. For this book, though from the hand of a master of technical metaphysics, is no mere logical analysis of concepts, no coldly theoretical presentation of epistemological considerations. It is evidently intended as a real gospel — almost as a religious appeal — and though clearly reasoned and never "emotional," it is suffused with a fervor and a warmth commonly deemed impossible for a technical philosopher. It is not the philosophy of religion that he gives us here; it is the religion of philosophy. The student of Royce's previous works will find nothing new in this little volume—nothing new, indeed, unless it be the synthesis of all his works. It is as though the philosopher were purposely calling our attention to the fact that the one unifying and controlling interest of all his intellectual life has been religion.

Religion for Professor Royce is inseparable from the idea of salvation; and salvation, as he understands it, is itself constituted of two simpler ideas:

> The first is the idea that there is some end or aim of human life which is more important than all other aims, so that, by comparison with this aim, all else is secondary and subsidiary, and perhaps relatively unimportant, or even vain and empty. The other is this: That man as he now is, or as he naturally is, is in great danger of so missing this highest aim as to render his whole life a senseless failure by virtue of thus coming short of his true goal.

The religious insight is concerned both with the realization of the need of salvation and with the way in which it may be attained. The realization of the need is, of course, fundamental, and it is this that is furnished by the first source of religious insight, namely, the experience of the individual. On this point the individual may be trusted—alas, only too well! To all who reflect upon their own experience it is plain enough that there is something wrong with the natural man as he stands alone. But except for this recognition of need, Professor Royce does not rate the individual's experience as very trustworthy; and if we would find not only the need but the way of salvation, we must have recourse to other sources of insight. Social experience is here of some assistance, to keep individual experience sane and steady. But the two great sources are what Professor Royce calls reason and loyalty. In his treatment of reason as a source of religious insight, he falls back upon his own previously published treatment of truth (and incidentally of pragmatism), and he repeats in popular form the arguments for the Absolute technically expounded in "The Religious Aspect of Philosophy" and "The Conception of God." But this philosophical view Royce admits would be insufficient as a source of religious life if it were not brought into touch with our activities and interests by the "Religion of Loyalty." Loyalty is the essence of all morality and the very condition of an individual, personal life. But loyalty to any cause logically thought out necessarily points to the one great cause, which is "loyalty to loyalty," and thus it presupposes a reality that transcends any merely human experience. And "however far you go in loyalty, you will never regard your loyalty as a mere morality. It will also be in essence a religion. . . . It supplies in its unity the way to define, in harmonious fashion, the ideal of what your individual experience seeks in its need, of what your social world, groaning and travailing in pain together, longs for as our common salvation, of what the reason conceives as the divine unity of the world's meaning, of what the rational will requires you to serve as God's will. Through loyalty, then, not only the absolute moral insight, but the absolute religious insight, as you grow in grace and persist in service, may be and will be gradually and truthfully revealed to you." Such loyalty can never fail. He who has set his will upon loyalty to the Eternal has found the way of salvation. "From out the lonely and darkened depths of his personal finitude, from out the chaos of his social promptings and of his worldly ambitions, amid all the storms of fortune, 'midst of hell's laughter and noises appalling,' he has heard the voice of the Spirit. He has heard, and—however unlearned—he has understood. His own lamp is burning, and through his deed the eternal light shines in the darkness of this world."

But though the supreme kind of loyalty makes failure impossible, it not only is consistent with but even presupposes the possibility—and the actuality—of sorrow. Yet sorrow, far from being a refutation of the religious view,

is itself a further source of the religious insight, for there are sufferings which, with all their pain, we yet would not erase from our world, because they are a necessary constituent of much that is noblest and best in life. And from them we may gain at least a hint of the way in which all suffering is an essential part of the joy of the Lord. The Eternal is made perfect through suffering. That we cannot see just how this is need not surprise us, for our finitude limits us to a momentary glance, or an abstract guess, at the Real. But this very fact involves the necessity of an eternal and embracing experience in which we live and move and have our being. And the true Church—which is the final source of religious insight—consists of all those who in their great or humble way are strenuously and endlessly loyal to the supreme cause of Loyalty, and thus, though unwittingly, point to the Eternal.

Many, of course, will not agree with Professor Royce's conclusions; and several of his arguments are certainly open to serious criticism. But this is not the place for a technical analysis of his philosophy. And not even the most strenuous pragmatist and pluralist can fail to recognize the moral and religious value of this earnest and eloquent book.

The Promised Land. By Mary Antin. Boston: Houghton Mifflin Co. $1.75 net.

The candid American will read this book with mingled pride and humiliation, and place it on the shelf where it belongs by virtue of its direct and vivid style and the importance of its message —with the "Autobiography" of Franklin, Jacob Riis's "The Making of an American," the "Reminiscences" of Carl Schurz, and Booker Washington's "Story of My Life." It is a tale told with glowing enthusiasm of the transformation under the influence of new surroundings of a benighted Russian-Jewish girl into an enlightened and public-spirited American. "Although I have written a genuine personal memoir," says the author, "I believe its chief interest lies in the fact that it is illustrative of scores of unwritten lives." What the descendants of the Pilgrim Fathers ought to do for the destitute, illiterate multitudes crushed out of Europe and cast upon our shores, continues to be a subject for troubled thought among legislators. Meanwhile, some of these men and women have already turned the tables, and found something to do for the offspring of the Pilgrim Fathers. To the anxious and skeptical among us they are proving our own opportunities and powers, pointing out the path of peace among racial antipathies, and strengthening our somewhat languid faith in our own democratic institutions.

Mary Antin's book should cause the sociologist to reconsider what are the decisive elements in "environment." For the first half of her thirty years her lot was cast in one of the most unpromising spots in the world for the production of American citizens. Born in the ancient town of Polotzk, one of the "concentration camps" of the Jews in Russia, she was cradled in a kind of mediæval terror of the Gentiles, and was experienced from childhood in contempt and persecution. From one point of view, her most illuminating chapters are those in which she describes the duplex character developed by a despised people in the land of their oppressors. In response to the grinding pressure of Christian Russia, the Jew of Polotzk assumed in the presence of his Gentile neighbors the self-preserving vices of external abjectness, hypocrisy, and double-dealing. On the other hand, reaction against the same pressure tried and hardened his special Jewish virtues. Bowed as he was beneath the impositions of an alien law, he accepted the yoke of a rigorous domestic discipline, subjected himself with pride to the scourge of his own schoolmasters, and bore in the pettiest acts of his life the scrupulous exactions of the Mosaic code. Jealously excluded from participation in national affairs and the intellectual progress of his times, he was driven to seek his spiritual nourishment in the hoary culture of the rabbis and the immemorial traditions of his race. All the forces of circumstance conspired to establish his objectionable habits, and to intensify his racial peculiarities. When Russia had left to Mary Antin and her family only their ancestral fortitude and the deep hunger of a starved heart and brain, she exposed them as unprofitable waifs in America.

Now, what impresses one in the history of this family after its arrival in the Promised Land is that in most material circumstances they were quite as badly situated in Boston as in Polotzk. They had exchanged Russian wool for American cotton, and a low house in a provincial town for a third-story city tenement; but they were not better housed or clothed or fed or neighbored. Laws not entered on the books drove them as remorselessly as Russian statutes into those squalid quarters of the city where Jews and Chinamen and negroes are segregated from the children of light. The father's training for Hebrew scholarship gave him no advantage over his competitors in selling kerosene and potatoes in an Arlington Street basement, or in dispensing peanuts and lemonade on Crescent Beach, or in serving as night-watchman after he had gravitated down towards the slums of Harrison Avenue. The world, as Teufelsdröckh says, was his oyster, and he had not wherewith to open it. He had hoped, like many another immigrant, to make his fortune in this land of equal opportunity and exhaustless resources. He lacked the *unum necessarium.* His mission was accomplished when he had led his children to the one door that he found wide open and free to all—the door of the public school.

Mary Antin went in at that door and began at once to blot out the distinctions between the Jew and the Gentile. Her account of this period is a notable tribute to the stimulating powers of our primary school teachers and to their eye for latent talent. Later she went to the Latin School and to Barnard College. In a marvellously brief time she accomplished her exodus from Russia, Polotzk, the Ghetto, and the spiritual Middle Ages, and emerged in the twentieth century, an ardent American, differing from the native-born mainly in the uncommon gratitude with which she has availed herself of common opportunities, and in the keenness of her hunger and thirst for light. "When taste is diffused through all classes," asks John Ruskin, "what will become of your classes?" If ten years of American education will obliterate thirty centuries of racial differences, what will become of your races? Mary Antin's narrative terminates at the point where she feels that her Americanization was complete. There is every reason to expect that a woman so young and so happily endowed, so resolute and so kindled with faith, will give us occasion again in the years to come to take heart concerning the foster children of the Republic.

The French Ideal. Pascal, Fénelon, and other Essays. By Madame Duclaux (A. Mary F. Robinson). New York: E. P. Dutton & Co. $2.50 net.

An acute psychologist, a well-read and sympathetic interpreter of the French genius and ideal, and a graceful and delicate stylist, Madame Duclaux is one of the most delightful essayists of our day. She is, perhaps, less happy in the two long studies, "Pascal" and "Fénelon and his Flock," which fill fully two-thirds of the present volume, than in the briefer appreciations of her preceding volume, "The French Procession" (1909), or in two short articles on "Buffon and his Garden" and "Lamartine and Elvire," which round out "The French Ideal." Her rather minute verbal craft shows to better advantage on the smaller scale, and the effort after concision throws her thought into clearer relief and conduces to the complete crystallization of her style. Particularly in the "Fénelon" there is felt a certain redundancy due to the temptation to quote too freely from a favorite writer, to a certain repetitiousness, and to indulgence in a vein of elegiac sentimentality which occasionally approaches the border line of bathos.

Yet, with all their defects, these two long studies, nourished, as they are, in the French phrase, with all that has been discovered and written in France in recent years concerning Pascal and Fénelon, constitute a remarkable achievement. There is nothing else of equal importance about either of these great writers in English. Perhaps the reason for this neglect is that they exemplify so profoundly the French ideal. This ideal Mme. Duclaux does not attempt to define, nor does she make any very systematic effort to establish a close relationship among her four subjects under this ideal aspect. A Fénelon may be, as she remarks, merely the complement or the reverse of a Pascal, but she also understands that in their religious views they were poles apart. All that they had in common was their intense spirituality, their ardent thirst for the infinite. But this in itself is enough to set them side by side as representatives of a race whose principal preoccupation has always been with the things of the spirit. Even Buffon, although the antinomy of a Pascal, is one with him in philosophic force and purity of conception. His ideal, too, was a religious ideal, and "Buffon, the Naturalist," is needed to complete this study of French idealism.

It is noteworthy that the revival of interest in these men is synchronous with a renewal of the idealistic element in French thought to-day; and it is not the least of Mme. Duclaux's services that she indicates clearly the precise lines along which these old influences have once more begun to make themselves felt. By a strange paradox, it is perhaps the narrow and illuminated Pascal that is most present to us to-day. Who ever would have thought, fifty years ago, that the author of the "Provinciales," with his spiritual agonies and doctrine of predestination, could become the spokesman of the twentieth century? But wherever the individual soul has reawakened to a sense of its own destiny, it is Pascal who supplies the language and the discipline for the expansion of the inner life. It is only in the sense that Christianity is itself the religion of the inner life, that Pascal is necessarily Christian. Maurice Barrès has demonstrated how little of what Pascal called "grace" is the effulgence from any particular idea of divinity, and how independent "salvation" may be of the Christian conception of survival and the Christian scheme of rewards and punishments. The drama of the soul is more self-contained to-day than it was for Pascal and his contemporaries, but the sequence of its scenes and of its crises is the same *sous l'œil des barbares* as under the eyes of the unregenerate.

But just as egoism has in a measure already had its day in modern thought, so perhaps the influence of Pascal will wane again in favor of other poets, thinkers, saints, and mystics, whose teachings will, turn by turn, accord with the movements of ever-shifting modern sensibility. More recent is the revival of Fénelon, with his patience, his passivity, his "sainte indifférence," even his hatred of warfare, his response to human misery, and his conception of God as accessible, not merely to an élite, but to all, thus breaking down the walls and barriers between man and man with a gush of sympathy, and thus, perhaps, for the second time preparing the way for a great social revolution. The influence of Buffon is most deeply felt in the strictly intellectual domain where the value of classifications in natural science and the validity of general laws come up for debate. His scientific knowledge, it might be remarked, is much more akin to the intuitive knowledge of Novalis and the German Romanticists than it is to the positive science of to-day. The cult which supports this, writes Mme. Duclaux apropos of Lamartine, the poet of intuition, in one of her eloquent and suggestive passages,

> may even now be doomed, in the hour of its triumph. In France at least M. Bergson, M. Le Roy, M. Péguy, and their followers expect and prepare a reaction; and it is a sign of the times that so great a savant as M. H. Poincaré lends an ear indulgent, perhaps amused, and a sort of skeptical support to these underminers of the scientific position. These anti-intellectualists are seers and soothsayers who gaze beyond the regions of immediate fact. The tests of experience produce in them a mood of skepticism. Some of them, indeed, are inclined to suggest that experimental knowledge is a system of organized conventions, so neatly dovetailed into each other as to produce an effect of apparent certitude, yet with no more real relation to the hidden sources of genius, attraction, life, and death, than the elaborate mystifications of a conjurer or the artificial sequences in a game of cards. They whisper that scientific laws are the half-conscious invention of their contrivers or discoverers; that natural science, incapable of approaching ideal truth, can never be the moral guide of man nor take the leading place in his education. The human mind (they say) deforms and alters everything it touches, giving (to what is in reality without form and void) a false aspect of a system and order; even as sea water, collected in a transparent vase, may appear a shining cube, or globe, or hexagon—but the form is the form of the vessel, eternally distinct from the vast essence of the ocean, of which it contains but a drop. In fact, the mind manipulates Truth and makes it over in a mortal image, and therefore the reality of Truth remains undiscoverable to human reason. Happily man (they continue) is a medium for other forces than his intelligence—he is inspired by feeling, instinct, faith, ecstasy, and by those blind intuitions which emanate obscurely from a subliminal self. So, right or wrong, reason these idealists; and if, as it appears sufficiently probable, the generation born during the 'eighties and the 'nineties should adopt them for leaders, Lamartine, like Pascal, may yet have his revenge and his apotheosis, and appear to our children as a guide, philosopher, and friend.

The President's Cabinet: Studies in the Origin, Formation and Structure of an American Institution. By Henry Barrett Learned. New Haven: Yale University Press. $2.50 net.

Mr. Learned's book is almost exclusively a study of the formal development of the Cabinet, as exhibited in the origin and functions of the several executive departments. The suggestion of heads of departments, with some sort of joint action as advisers or executive council, occurs early in the history of the Confederation, before a revised Constitution was thought of; and the whole experience of the Confederation was a commentary on the weakness and inefficiency of a national government without an executive head. In the discussions which led up to the Federal Convention of 1787, as well as in the debates of the Convention itself, the idea of departmental organization was further developed; but the Convention went no further than a bare recognition of executive departments whose heads might be required to give opinions in writing on the duties of their respective offices, and might enjoy some power of appointment. The creation of additional departments was left to the discretion of Congress; while the question of meeting the heads of departments as a body, or consulting them on matters of general policy, was left to the President without constitutional direction of any sort.

In the examination of these formal questions, Mr. Learned has ransacked documentary and other sources with admirable thoroughness, and brought together an imposing array of facts. So far as the legislative history of the several departments is concerned, the work of investigation will not need to be done over again. Incidentally, the inquiry sheds a favorable light on the political acumen of Pelatiah Webster, around whom the strife of historical criticism wages with some vigor; directs attention to the almost forgotten careers of Augustus B. Woodward of Virginia and Charles B. Calvert of Maryland; and recovers the interesting story of the United States Agricultural Society.

On the larger political or constitutional aspects of his subject Mr. Learned does not dwell, nor is he concerned with Cabinet practices or personnel. He does, of course, point out, as others have done before him, that the term Cabinet, in so far as it suggests its British namesake, is a misnomer; and that while a President may not with safety ignore the opinion of his Cabinet, he is not constitutionally bound to ask

it or be governed by it. If the members of the Cabinet are, as Hamilton and others have described them, "constitutional advisers" of the executive, it is clearly not in any functionally binding sense. It is just at this point, however, that the need of more light is greatest. What we most need to have pointed out is not the legislative steps by which Congress, always tardy in its recognition of administrative necessities, has created the various departments, useful for certain purposes as such information is; but rather such matters as the historical dependence of the President upon, or his independence of, his Cabinet or its individual members; the influence of the Cabinet in shaping executive policies, its relation to public or party opinion, its share in forming legislation, its responsibility for the frequent collisions between the executive and the other branches of the government; in short, its function as a group in the peculiarly organized American federal system. From the standpoint of political science, the problem of the Cabinet is not so much one of the working of administrative machinery under a single executive head whose will must prevail, as of political leadership, in Congress and in the country, under a governmental system of executive independence. We cannot pursue the question further, but we venture to add to our commendation of Mr. Learned's laborious work the hope that he may before long follow his attractive subject into broader fields.

Notes

Among Putnam's forthcoming books are: "Paul the Minstrel, and Other Stories," by Arthur Christopher Benson; "The American Occupation of the Philippines," by James H. Blount; "The Promise of the Christ Age in Recent Literature," by William Eugene Mosher, and "The Forty Martyrs of the Sinai Desert and the Story of Eulogios." The last named, a Cambridge University Press issue, is a transcription of a Palestinian-Syriac and Arabic palimpsest, made by Agnes Smith Lewis.

On the occasion of the Browning centenary Henry James delivered an address before the Academic Committee of the Royal Society of Literature in London on "The Novel in 'The Ring and the Book.'" It will be printed shortly.

Houghton Mifflin Co. will have ready Saturday week: "The White Hills in Poetry," edited by Eugene R. Musgrove, with an introduction by Samuel M. Crothers; "The Story of Christopher Columbus," by Charles W. Moores; "The English People Overseas," by A. Wyatt Tilby; "Charles Dickens: His Life and Work," by Edwin Percy Whipple, with an introduction by Arlo Bates; "A History of the United States for Grammar Schools," by Reuben G. Thwaites and C. N. Kendall; "The Classical Psychologists," edited by Benjamin Rand, and "A Catalogue of the Collection of Historical Material at Simmons College, Boston."

J. D. Beresford's new story, "A Candidate for Truth," is in the press of Little, Brown & Co.

The Scribners have just imported "Social Insurance in Germany, 1883-1911: Its History, Operation, Results, Together with a Comparison with the National Insurance Act of 1911," by W. Harbutt Dawson, and "Rose Bertin: The Creator of Fashion at the Court of Mary Antoinette," by Emile Landlade, adapted from the French by Dr. Angelo S. Rappoport.

The cultivation of wheat in North America is treated very suggestively by Dr. J. F. Unstead in the *Geographical Journal* for April and May. From a careful study of the climatic conditions, the temperatures and rainfall, he believes there will be an enormous extension of the wheat area, especially in Canada, and that the nine hundred million bushels obtained in 1909 will be increased to nearly two thousand million in the future. Other subjects treated are the Sir Sandford Glacier by H. Palmer, the Antarctic expeditions of 1911-12 by Dr. H. R. Mill, and the island-names in Melanesia by Dr. W. H. R. Rivers. Most of these islands have two names, one of European origin given by an early discoverer, another used by the natives themselves, which is often the one by which it is known to officials, missionaries, and traders. A map accompanies the article.

The New International Year Book for 1912 comes to us reduced in bulk almost by half through the use of thin paper, but counting its regular 800 and odd large pages. Much may be told of a year's happenings in the space of a million words or thereabouts, and this latest volume lives up to the high merits of its predecessors. There is an excellent article on Aeronautics. The year's record in the pure sciences is given under separate heads; and as always there are the highly useful summaries of the political history of the year for every country and for every State in the Union (Dodd, Mead & Co.).

"The Russian Year Book" (Macmillan), by Howard P. Kennard, is an exhaustive volume obviously intended for the merchant and investor. There are elaborate accounts of Russian commercial law, the rights of foreigners, fifty-five pages dealing with the natural resources of the country supplemented by thirty pages on mining and minerals, forty pages on ports, shipping, and foreign trade, sixty-five pages on customs, including a complete translation of the Russian customs tariff, and thirty pages on finance; altogether a wealth of economic detail on Russia that is not accessible elsewhere within the compass of a single volume.

"Leaflets from Italy" (Putnam), by M. Nataline Crumpton, is chiefly made up of a long essay on the Empress Galla Placidia. Two brief studies of St. Monica and of the City of Genoa are added for good measure. It is virtually a memorial volume to one who loved her Italy and sought to know it well. Agreeably written, the essays hardly rise above a gentle and well-bred mediocrity.

The text of Francis Bickley's "Where Dorset Meets Devon" (Dutton) is pretty thin reading. The author has tried to extend to the surrounding country the factitious interest that attaches to Lyme Regis from Louisa's fall, but he has succeeded only indifferently well. The illustrations are pretty.

Do not pick up Percival Pollard's "Vagabond Journeys" (Neale Publ. Co.) to look for guidance in your own journeyings or to learn any important facts concerning European countries. It is frankly declared to consist of impressionistic sketches of "the human comedy at home and abroad," but chiefly abroad. Says the author: "I would ask the reader to explore—myself." So he chatters in expansive fashion of the manufacture of antiques in modern Florence, the secession painters in Munich today, the glittering café life of Paris, the unpredictable pronunciation of the English language in England—in short, of anything that engages his wandering fancy. On all topics he pours forth reminiscence and "enlightened" comment with unfailing diffuseness. Indeed, we might almost conclude there is a conscientious endeavor to make the exploration to which we are invited peculiarly wearisome.

It is pleasant to see that Mrs. William Sharp has undertaken to edit a series of volumes containing a selection of the works which her husband published under his own name. The books are to be similar in make-up to the "Fiona Macleod," which was issued by the same publishers (Duffield & Co.), and which was reviewed at length in the *Nation* of February 16, 1911. Of the new series one volume, containing "Poems," has already appeared. It will be time to write more fully of Sharp's acknowledged works when the present publication has progressed further.

"War-Pictures From Clarendon" (Frowde), edited by R. J. Mackenzie, is, as the title indicates, a selection of passages from Clarendon's history of the Rebellion, so arranged as to give a fairly complete story of the military operations. But some of Clarendon's memorable character-sketches are included, and the book ought to find many readers among those who are frightened away by the bulk of the complete work.

A selection of "Southey's Letters" has been made by M. H. Fitzgerald, and published with sufficient notes. The book, though a handy-sized volume in the Oxford green and gold series, contains material enough to bring the reader into happy familiarity with one of the finest characters of English literature. As a motto for the letters the editor quotes the beautiful words of Thackeray:

> We have left his old political landmarks miles and miles behind; we protest against his dogmatism; nay, we begin to forget it and his politics; but I hope his life will not be forgotten, for it is sublime in its simplicity, its energy, its honor, its affection! In the combat between Time and Thalaba, I suspect the former destroyer has conquered; Kehama's curse frightens very few readers now; but Southey's private letters are worth piles of epics, and are sure to last among us as long as kind hearts like to sympathize with goodness and purity, and love and upright life.

Just why the letters which Major Anderson of Fort Sumter fame wrote when he was a captain in Gen. Scott's army in 1847 are printed as a separate volume ("An Artillery Officer in the Mexican War," Put-

nam) will perhaps become evident when his "Journals and Correspondence" are also published. At the present moment there is a certain timeliness in these letters addressed to his wife by a very fond husband, while he was engaged in the campaign which forced the Mexicans to accept the conditions of peace dictated from Washington. Capt. Anderson was a remarkable example of the professional Christian soldier, trained to observe carefully and to present his ideas clearly. Very little escaped his notice, and he confidently trusted his wife to be interested in everything that interested him. The Mexican war produced rather more books than its importance, in the opinion of two generations later, called for, but Capt. Anderson's contribution is worth much more than most of what has been printed on the subject. There is no better description of the country between Vera Cruz and the Valley of Mexico, as it was in 1847. How closely this description fits Mexico in 1912 is not easy to say. Scarcely a resemblance except in the larger physical features, and the intimate life of the lower classes, was to be noticed a year ago. The events of the past ten months have placed Mexico much nearer where she was in 1845.

The nature of Prof. John Bassett Moore's lectures, "Four Phases of American Development: Federalism, Democracy, Imperialism, Expansion" (The Johns Hopkins Press), which were delivered in Johns Hopkins University, is indicated by their titles. Professor Moore traces briefly the growth of federalism which led to the adoption of the Constitution; the decline of this doctrine, and the growth of democracy, which mean individualism and political particularism. To the military necessities growing out of the Civil War he attributes the growth of what he calls "imperialism," in which he includes both the tendency to increase the power of the Federal Government in domestic affairs, the transformation and growth of the Monroe Doctrine, and the policy relating to the interoceanic canal. In the last lecture he reviews the various wars and treaties which resulted in the acquisition of new territory by the United States. As might be expected from his training and experience, such discussion and analysis show him at his best.

From two of the views expressed by the author we must dissent—in the first place, from the contention that the contest between the North and South as to slavery could have been originally settled "in half-an-hour by any three intelligent and disinterested men whose minds were not biassed by partisanship," but that it became an irreconcilable conflict merely on account of the fanaticism of the abolitionists on the one hand and of the Dred Scott decision on the other hand. This is taking too rosy a view of the willingness of the South to abolish the "peculiar institution." Nor do we agree with the view that the annexation of the Philippines was merely the following of a habit which had characterized the entire national existence. The difference between acquiring territory with the intent of making it an integral part of the national domain, or the exercise of a protectorate for the purpose of guarding American interests, and the acquisition of a colony peopled by an alien race, is fundamental. The fact that, when the question of the status of our insular possessions came before the Supreme Court, no two judges could be found who agreed even as to fundamental principles, shows that the condition is anomalous and at variance with the previous conduct and policy of this country.

"Auvergne and Its People" (Macmillan), by Frances M. Gostling, is the latest of many forlorn attempts to improve upon R. L. Stevenson's "Travels with a Donkey." It might better have been called "A Writer in Auvergne." For, while Auvergne provides a background, the chief excuse for the book's existence is its naïve self-revelation of the present-day upper-middle-class Englishwoman, with means, the love of travel, and literary aspirations. We learn that the author is still young, that she has a nice automobile, and a husband who is a dear and a doctor, as well as amateur photographer and chauffeur; how he tells her that she always has her own way and what else he said to her and she to him as they motored through Auvergne. She tells us, not perhaps intentionally, how proud she is of being able to talk about "my next book," and how she always means that each chapter shall be the best—and is rather inclined to think it is—and how well the peasantry knew their place when patronized by the "gentry"—and so on and so forth. Also she has read up the legendry of the Puy de Dôme and the exploits of Vercingetorix, which make useful padding when the doctor is silent. If not very valuable as a book, "Auvergne and Its People" must have given great pleasure in the writing.

Of the English versions of Kant's writings hitherto available, that of the "Kritik der Urteilskraft," by Bernard, is certainly the most execrable. J. C. Meredith has therefore rendered a needed service in preparing a fresh translation of about two-thirds of that treatise—the Introduction and First Part, dealing with æsthetics—under the title, "Kant's Critique of Æsthetic Judgment" (The Clarendon Press). He has, save for some neo-British provincialisms which occasionally mar his English, performed this task with great success; the new version is in some respects the best example we have of the difficult art of Kant-translation. It is the more to be regretted, therefore, that Mr. Meredith has seen fit to omit from his rendering the whole of the "Critique of Teleological Judgment." For students of the Kantian æsthetics alone, the serviceableness of the volume is increased by a number of introductory essays of an expository and critical character, and by some hundred pages of notes, devoted largely to a comparison of Kant's opinions concerning the beautiful with those of English writers of the eighteenth century.

To the public which has enjoyed J. A. Spender's "The Comments of Bagshot" is now offered a second series under the same title (Holt). Though not a thinker to cause a conflagration on the Thames, "Bagshot" has a well-balanced head and a certain gift at keeping his feet on the bottom in the turbid shallows of current discussion. Among the fragmentary essays and jottings in which his thought is rather unimpressively presented, one comes here and there upon a moral or political aphorism well-pointed and serviceable for pricking the bubbles of folly as they pass.

The house of E. P. Dutton & Co. is to be congratulated on having published a new edition of "The Life or Legend of Guadama, the Buddha of the Burmese," two volumes, by the Right Rev. P. Bigandet, sometime Bisop of Ramatha *in partibus*, and Vicar Apostolic of Ava and Pegu. This standard book first appeared at Rangoon in 1858, and was greatly enlarged in the second edition, also published at Rangoon, in 1866. From this the third (1879) and the present edition have been reprinted. The body of the work is a translation of the Burmese version of the Pāli, "Mallalinkaravatthu," the original text of which is still inedited, although the Burmese rendering was completed in 1773 A. D.; and the data of this treatise have been supplemented by a translation of the "Tathāgata-udāna," an eighteenth century Burmese life of the Buddha. The account of the Buddha as here set forth is essentially the familiar story common to the Southern, or orthodox, school of Buddhism; its value has too long been recognized to require further emphasis. Another work is a translation of the Burmese version of a Siamese work on "The Seven Ways to Neibban [Nirvāna]," which is of interest as a specimen of the later school of Hīnayāna Buddhist metaphysics. While portions of Bishop Bigandet's volumes are now only of historical interest, such as his "Remarks on the Sites and Names of the Principal Places Mentioned in the Legend," and his summaries of five of the "Dzats" ("Jātakas," or stories of the former incarnations of the historical Buddha), real value still attaches to his description of the "Phongyies" (Buddhist monks of Burma), and he rightly emphasizes a point too often overlooked even to-day—that Buddhism, to be correctly studied, must be investigated, not as an independent religion, but as the outworking of processes already operative in Brahmanism, which, indeed, in India was destined to reabsorb it. The work as it stands has but one small blemish, which may easily be rectified in a subsequent reissue. The majority of students of Buddhism approach their theme with no knowledge of Burmese, but with at least a working acquaintance with Pāli, many words of which appear in corrupted forms in Burmese. A list of such equivalents (and a good index) would make the book far more convenient for reference and study. Even simple terms like *dzedi* (*chetiya*, "shrine"), *dzan* (*jhāna*, "religious contemplation"), *tsekiawaday* (*chakkavattin*, "universal monarch"), and *pounha* ("Brahman") look somewhat strange at first, and many of the proper names become almost unintelligible to the ordinary Pāli scholar in their Burmese guise.

"Why the World Laughs" (Harper), by Charles Johnston, is not a psychological dissection of the sense of comedy. It is merely a compilation, an entertaining one, to be sure, of the witty sayings and humorous stories of mankind, "from China to Peru." The intermittent effort to point out the distinctive quality of the racial sense of humor in each country does not add to the value of the collection. We may add that two natives of Turkey now attending Columbia University read the chapters on Ottoman proverbs and tales, but found therein nothing characteristic of their comic literature. The concluding chapter, indeed, "The Essence of American Humor," is a serious

attempt to distinguish between wit and humor, and to prove that "the best American humor stands preëminent throughout the world and through all time," because it is unconscious of racial differences. The distinction is familiar. The thesis is far from convincingly upheld. But the chapter does illustrate how difficult is the analysis which seeks to discover the individual and the distinctive in national humor. As a fund of pithy sayings and amusing stories the book should furnish a *vade mecum* for the after-dinner speaker and the professional lecturer. Mr. Johnston plies a facile pen, tells his tale cleverly, and coins or captures many a neatly turned phrase.

The Missouri Historical Society of St. Louis has just published No. 4 of Volume III of its Collections, which contains two contributions of general interest. The first is Auguste Chouteau's "Journal of the Founding of St. Louis," printed here in French and translation for the first time. The Journal is only a fragment of the original, which was loaned by Col. Chouteau to Jean N. Nicollet, and was partially destroyed while in his possession. The account of events commences with the year 1762 and ends some time in 1764, when the first houses had been erected in the new village, the site of which Laclede, the founder, had chosen because he believed it would become a great commercial centre. The second contribution is a continuation of Judge Douglas's "Life of Manuel Lisa," who was one of the first and most daring of the fur traders on the Missouri River. The narrative is interwoven with many letters and documents, hitherto unprinted, and must be regarded as a most important contribution to the early history of the fur trade.

Clifford Stevens Walton, an international lawyer, author, and for several years Consul-General for Paraguay in the United States, died last week at his home in Washington, aged fifty-one. He studied law at the University of Madrid, and wrote two books on legal subjects: "The Civil Law in Spain and Spanish America" and "Leyes Commerciales Maritimas de la America Latina."

James Henry Haynie, for many years foreign correspondent of American newspapers, died a week ago at his home near Boston, in his seventy-first year. He was decorated with the crosses of the French Legion of Honor and the Greek Royal Order of the Saviour. Two books bear his name—"Paris, Past and Present" and "The Captains and the Kings."

Capt. Lionel James Trotter, once a member of the English army, whose death in his eighty-fifth year is reported, wrote biographies of several soldiers and statesmen, among them John Nicholson, Warren Hastings, Dalhousie, and Lord Auckland. He was also the author of a "History of India," in which country he served many years.

Louis Henry Aymé, Consul-General for the United States at Lisbon, died last week in that city, at the age of fifty-seven. He early entered the consular service, and represented his country in several lands. Among his wide interests were archæology and certain branches of science, upon which he has written monographs. He was also the author of "Notes on Mitla."

Science

"Waterways Versus Railways," by Harold G. Moulton, and "The Laws of Supply and Demand, with Special Reference to Their Influences on Overproduction and Unemployment," by George Binney Dibblee, are announced by Houghton Mifflin Co.

A timely little manual on "Making a Tennis Court" is published by McBride, Nast & Co. The author is George E. Walsh.

To celebrate the sixtieth anniversary of its founding, the American Geographical Society of New York plans this summer to conduct a transcontinental excursion, under the direction of Prof. W. M. Davis of Harvard. Though the list of participants is not yet completed, it now includes above forty geographers from sixteen different countries. Among the foreigners are: Partsch, Drygalski, Merzbacher, and Jaeger of Germany; Gallois, Margerie, and Vacher of France; Chisholm, Beckit, and Falconer of Great Britain; Niermeyer and Oestreich of Holland; Lecointe of Belgium; Beltrán of Spain, Silva-Telles of Portugal, Brückner and Oberhummer of Austria, Cholnoky and Teleki of Hungary, Cvijic of Servia, Doubiansky and Schokalsky of Russia, Andersson of Sweden, Olufsen of Denmark, Brunhes, Chaix, and Nussbaum of Switzerland, and Calciati, Marinelli, and Vinceguerra of Italy. The excursion train will leave New York about August 22, and will touch at Niagara, Detroit, Chicago, Madison, St. Paul—probably Duluth and the iron region—the Yellowstone Park, Spokane, Seattle, Tacoma, Portland, and probably San Francisco, and several other important cities. It will return in the early part of October. Proficient geographers who would like to join the party should address the director, care of the Society's new quarters, Broadway and One Hundred and Fifty-sixth Street. A large reception, the date of which is to be announced later, will be given in New York.

"Gardens and Their Meaning" (Ginn), by Dora Williams, is the misleading title of a little book that would have been named more appropriately "A Plea for the School Garden." A fervent plea it is indeed, but not an altogether wise one. The great interests of the twentieth century, in the opinion of Miss Williams, are science—"The vertebræ of civilized life to-day"—and coöperation, or brotherhood, which, as the author treats it, is a hitherto neglected phase of science. Her argument begins with an unlimited acceptance of the Rousseauistic "education by actualities." According to Charles W. Eliot, "the most workable laboratory is the school garden," and since we need laboratories more than books, let us institute the school garden, not as an annex to the school, but as an integral part of it. In this garden, the pupils will develop spontaneously, like corn and pumpkins, and coöperation will replace competition. Instead of marks, we shall hear of edibility and saleability; indeed, "one begins to wish that all the products of a school were of such a nature that they might be carried to market." The joy of service will enable even a half-witted boy, the dunce of the class, to attain results in gardening that will place him with the "brightest" pupils. Two words, science and coöperation, recur insistently in this study of the true meaning of gardens; but, although what Miss Williams has to say of science is usually accurate and sensible, what she says of coöperation is often absurd. "The very ones," she writes, "who are hot for science training in the schools are sometimes lukewarm in the matter of training for coöperation." Miss Williams is indeed extremely "hot" for both.

The first edition of Prof. Charles S. Myers's "Text-Book of Experimental Psychology" met with wide approval. The second, which now comes from the Cambridge Press (Longmans, Green, in this country), ought to become much more popular among teachers. It surpasses its predecessor in arrangement, scope, and form. There are now two volumes, instead of one. The first contains the treatise, the second the laboratory exercises.

The free use of stencils and patterns has long been the plague of psychological textbooks. So closely have such works followed a few stock designs in arrangement and content that a person familiar with two or three specimens might almost write off the complete table of contents and some sample pages of twenty other volumes which he had never seen. In the past five years, however, there has been a sharp reaction. And, as ever, the other extreme is approached. Prof. Robert M. Yerkes's "Introduction to Psychology" (Holt) resembles a number of other recent works only in that it is unlike all others. To begin with, its preface is put into the first chapter, "because it is intended to be read." This trick is not whimsical, but indicative of a serious purpose; namely, that of teaching first of all the status and ideals of psychology. The second peculiarity is the total absence of physics and nervous physiology. The author believes these subjects must be studied independently, which is another way of saying that they have long since become too technical and too important to be passed out dilute, as in so many psychological textbooks. A third peculiarity is the elimination of nearly all experimental work requiring apparatus. What remains is a pretty full summary of established results. Description is first given of most conspicuous psychical types. Then follows a brief history of mental development—the least satisfactory section in the book—and after that an excellent recapitulation of mental laws. The so-called psycho-physical and motor problems receive separate consideration, and there is a suggestive closing chapter on the control of mental life, wherein is set forth the assistance the science ought to render to education and eugenics. Professor Yerkes offers an almost too great wealth of information throughout, and occasionally grazes upon interests far beyond the beginner's ken. But the clear, well-accentuated order, and the sharp distinctions everywhere drawn, amply offset this virtuous defect.

There appears to be nothing distinctly original in the "Notes on Qualitative Analysis" (Van Nostrand), by Horace G. Byers and Henry G. Knight. Relatively to the size of the book, a disproportionate amount of space has been devoted to the detailed development of the mass action law and ionic theory. These matters are more satisfactorily treated in a good course in general

chemistry, which should precede. Under the heading Qualitative Illustration (pp. 31-56) are given detailed explanations, in terms of the law of mass action and the theory of electrolytic dissociation, of the fairly large number of qualitative facts utilized in the classification of the metals into groups, as well as the separation of the component members of each group. These the student is expected to follow and understand before he has become experimentally acquainted with the facts. It would be pedagogically better to supply this information in connection with the laboratory work it is intended to explain. In part ii, which deals with the practical work of analysis, we find scarcely a reference to the principles which the authors have been at great pains to explain in the fifty-six preceding pages. The schemes of analysis are open to objection in that they do not provide in the form of additional notes the necessary supplementary information intended to explain results other than those mentioned in the scheme, results which are only obtainable under ideal conditions. The quantitative feature in qualitative work is completely ignored in this book; students are expected to prepare their first unknown mixtures from directions which do not include the question of quantity; this is a serious blunder. There are a few misstatements of fa ts and a number of minor typographical errors.

Thomas Muir's "Theory of Determinants," Vol. II (Macmillan) presents the history of the subject in the order of its development, embracing the period from 1841 to 1860, just as the previous volume covered the long period from the discovery of determinants (by Leibniz in 1693) to 1841. The work presupposes in the reader a good knowledge of the doctrine of determinants and is not a suitable textbook for a beginner in the subject, but it may be profitably used side by side with such a book.

J. H. Walsh's "Practical Methods in Arithmetic" (Heath), J. H. Van Huyl's "Complete Business Arithmetic" (American Book Co.), and G. S. Kimball's "Commercial Arithmetic" (Putnam) are all of them intelligent attempts to meet the demand for arithmetical instruction adapted to the needs and uses of the modern world of industry. A like attempt, on a somewhat higher scientific level, is that of Messrs. Wentworth and Smith in their "Vocational Algebra" (Ginn), in which simple explanations are given of elementary processes and formulæ that in various guises are employed in trade and industry.

Drama

AUGUST STRINDBERG.

By a happy chance, public attention in this country was directed to the personality and works of Sweden's most eminent writer at least a few months before his death, which was recorded in the *Nation* of last week. Not that he was unknown here before. But recently the newspapers and periodicals had printed much about him; one of his plays, "The Father," was performed the past season in New York, and plans were making to bring out others. Still others have just been published in an excellent English translation.*

One glance at the portrait of Strindberg which forms the frontispiece of this volume is almost enough to reveal the secret of his life—his wild energy, both of intellect and imagination. From the start his career has shown the spirit of unremitting, defiant curiosity. The son of a former barmaid, by whom his father, a tradesman of respectable origin, had previously had two illegitimate children, the boy August despised the conventional groove. At the University of Upsala he read with the tremendous earnestness of one destined to fashion his own fortune. In rapid succession, after quitting the university (he was too impatient of the curriculum to take a degree), he plunged into a study of medicine, tried to be an actor, gained some knowledge of the Chinese language, taught school, and experimented in several types of literature, among which were attempts to reform current views on Swedish history and on the conditions of marriage.

Strindberg married three times, yet knew no peace, separating even from his last wife. He looked for the solution of life's riddle in a study of alchemy, but found instead temporary insanity. When restored to health, he characteristically made use of his terrible experience to write a treatise on abnormal psychology. Latterly he had cut himself off from the world and devoted much time to sacred reading. He has been called variously a realist and a mystic, and in the latter capacity likened to Maeterlinck, from whom, it is true, he got some suggestions. In Maeterlinck, however, there has never been such fierce intellectual energy. A fairer comparison, to my thinking, is with that stalwart, tragic Elizabethan, John Donne. Donne applied his mind as bravely and almost as widely to cosmic forces as the Swede. Like him, he deemed practicable life utterly material, having curiously a similar cynicism towards women; and, beaten by his purely rational searchings, turned for help, but with little avail, to as wild an imagination as Strindberg's; his final years were likewise spent in religious meditation.

It is little wonder that Strindberg has made a profound impression upon Sweden. The breadth of his mental adventure has gone with little disguise into his writings. Not for a long time have the works of a notable author borne so unmistakably the mark of himself. His development is too complex to be traced in a short paper, and his writings are too numerous and varied to receive individual mention. They include, besides his many dramas, poems, stories, satires, and historical and scientific treatises—in all, enough volumes to fill a good-sized shelf. His judgment of life, however, remained pretty constant and can be illustrated fully enough by reference to a very few of his works as dramatist, which, after all, was his most significant rôle. His judgment is always twofold—society is condemned by reason and by imagination. So far as I can observe, his metaphysical speculations were compounded of these two elements only.

I.

The two portions of his criticism are, naturally, not always fused. In dealing, for instance, with his *bête noire*, marriage, the imaginative usually serves only as final confirmation standing somewhat apart; or at most enters periodically in the form of a yearning sigh for the things that are not. No better example of this method can be found than the play which he himself admitted describes his own feelings on the occasion of the first divorce—"The Link," written in 1897. Its structure is of the slightest, the action being confined to the courtroom. There there is presented the ugly spectacle of a couple with whom wrangling has become the first instinct. Braced by a previous agreement against the chance of their breaking out upon each other in public, they are led by the prodding of the judge with whom rests the disposal of their child, from mild recriminations to the most shameless revelation of their past life together. As might be inferred, the woman provokes the whole series of disgraceful outbursts; the man is, for the most part, strictly logical, and answers back in self-defence. The climax is deferred by the reader's uncertainty as to what their genuine affection for the child will at length induce them to do. Recollection of it, the link, in turn stills and aggravates their rancor. They decide to begin all over again, only to have the bitterness of their relation sweep the resolve aside as impossible. With the utmost ingenuity they play upon each other's weaknesses and upon the hideousness of past moments. As Strindberg manipulates it, the man's course of action is made to seem perfectly reasonable. Yet it is the reason of the mind, not at all of the heart, and suggests not infrequently Bernard Shaw's similar ratiocination. One never gets the impression of great generous impulses lurking behind the word. Marriage, logically examined, is seen to be full of lies, wretched compromises, and diabolical meanness. The final words of the play buttress this conclusion by the test of the imagination:

Baroness: I shall never go back to my mother. Never! I shall go out on the highroads and into the woods so that I may

find a hidingplace where I can scream—scream myself tired against God, who has put this infernal love into the world as a torment for us human creatures—and when night comes, I shall seek shelter in the Pastor's barn, so that I may sleep near my child.

Baron: You hope to sleep to-night—you?

Marriage is anathema from God and is a central injustice of our existence. For what else can it be called when placed beside that ideal of which it is impossible not to dream? The reality tortures by its suggestion of what might and ought to be. Strindberg searches marriage in similar fashion in other plays, among them "The Father" (1887) wherein he relates how a wife drives her husband insane by the false implication that he is not the parent of their child; and, much more elaborately, in "The Dance of Death" (1901). Here the disillusions of a poor captain, mated to a high-strung woman, reach to a sweeping horror. The theme, it must be admitted, is powerfully worked out, though analysis on the part of the reader again reveals the author's denial that magnanimous feelings can exist and direct in marriage. The method of his judgment here foreshadows the form it was soon to take.

II.

For though his outlook continued the same, he learned to apply it in subtle fashion, imagination and reason working in close conjunction. On that account many have jumped to the conclusion that he turned mystic. He was never strictly that, as we shall see. Fortunately, he has given the world in a single work a full reflection of this side of himself in typical operation, namely, in "The Dream Play" (1902). A careful study of this drama, of its form as well as of its thought, is necessary before one shall try to estimate the worth and effect of his philosophy.

Looked at superficially, "The Dream Play" appears to be nothing more formidable than a phantasy, like "Peter Pan." Indra's Daughter, who may stand for a sister of Christ, for Astræa, or for any other embodiment of divine justice, descends to earth, and, after living here for some indefinite period during which she marries a poor lawyer and sees much suffering and confusion all about her, reveals the secret of life. "In the morning of the ages, before the sun was shining, Brahma, the divine primal force, let himself be persuaded by Maya, the world-mother, to propagate himself. This meeting of the divine primal matter with the earth-matter was the fall of heaven into sin. Thus the world, existence, mankind, are nothing but a phantom, an appearance, a dream-image." Life's complications are explained by the Daughter as meaning that, "in order to free themselves from the earth-matter, the offspring of Brahma seek privation and suffering. There you have suffering as a liberator." Yet craving for suffering is brought into conflict with craving for enjoyment, or love. "Do you now understand what love is, with its utmost joys merged into its utmost sufferings, with its mixture of what is most sweet and most bitter? Can you now grasp what woman is? Woman, through whom sin and death found their way into life?" And the end of it all? "Conflict between the pain of enjoyment and the pleasure of suffering—between the pangs of the penitent and the joys of the prodigal." This is sufficiently paradoxical even for a phantasy.

Other features of the play equally keep pace with a dream's quick fancy. There is excellent variety, both of setting and character. With the castle of life in the background to give a certain stability, scenes in the foreground shift amazingly before your very eyes. The following direction is not an exaggerated instance of the sudden transformations that are required:

Without lowering the curtain, the stage changes to a lawyer's office, and in this manner. The gate remains, but as a wicket in the railing running clear across the stage. The gate-keeper's lodge turns into the private enclosure of the lawyer, and it is now entirely open to the front. The linden, leafless, becomes a hat tree. The billboard is covered with legal notices, and court decisions. The door with the four-leaved clover hole forms part of a document chest.

The scene ranges from the North to the Mediterranean. All classes of people are represented, and life in the large is aptly caught by vistas of whole communities, now in squalor, again bright with color and motion. To keep all this material from disintegrating—for the play has no particular plot, being simply a series of animated pictures—some half-a-dozen themes periodically recur. The continual expectation that a certain room of the castle will be unlocked which holds the secret of life; the frequent return of the officer to see if his beloved Victoria has come out from the opera; the refrain chanted by the Daughter, "Men are to be pitied," are just definite enough to keep one from concluding hastily that the play is altogether a wild-goose chase. Some of the fancy, of a childish sort and employed merely to add strangeness to a grown-up world, is handled as surely as the rest and bespeaks the author's versatility.

III.

Reckoned as a phantasy, pure and simple, "The Dream Play" is highly diverting, in spite of its melancholy exhibit of wretchedness. But it is much more. Strindberg had used this form more than once where it was evident that he had a serious purpose. It is unquestionably best suited to his strange blend of realistic and subversive mind. Nor are his well-known views greatly hidden. After the marriage of the Daughter to the Lawyer there is a scene which might do duty in "The Link." The hopeless round of daily life where two beings rasp each other, the degradation of unrelieved poverty, the inability to escape with honor, and the slender chance that their child may effect a reconciliation, are described in the usual manner.

The flings in "The Dream Play" at conventional ideas are also quite sincere. Many of them are found in a series of his satires on society. "Who is it," asks the Daughter—"I have forgotten—that crucified Him?" "All the right-minded," answers the Poet. And again:

The Daughter. Why don't men do something to improve their lot?

The Lawyer. Oh, they try, of course, but all the improvers end in prison or in the madhouse——

The Daughter. Who puts them in prison?

The Lawyer. All the right-minded, all the respectable——

The Daughter. Who sends them to the madhouse?

The Lawyer. Their own despair when they grasp the hopelessness of their efforts.

In the light of Strindberg's own reformative failures, ending in mental breakdown, it is not fanciful to regard the above comments as genuinely his. Scene after scene drives home life's injustice and wrongheadedness. The audience is taken for the nonce to the shores of the Mediterranean. A deep-blue sea, orange trees with ripe fruit, and Italian villas fill the prospect with delight. "This is paradise!" the Daughter exclaims. It is until she notices two coal-heavers on the shore. Though they are black to the waist with dust, they may not have a swim because even the waterfront is private property. A gentleman passes by who says he is taking a walk so that he can eat something. "So that he *can* eat something!" yells the first heaver. Children entering cry with horror at sight of the grimy workers—at them who are the foundation of society! In another scene music is heard on a hill, and it appears that the fatted calf is to be slain to honor the return of Lena's sister, who went astray in the city; "but Lena, who stayed at home, has to carry slop pails and feed the pigs."

If these are only apparent wrongs, it is easy for Strindberg to prove the topsy-turviness fundamental. Take the four university faculties—theology, philosophy, medicine, jurisprudence—and what agreement can you wring from them on any subject whatsoever? The four appear on the stage wrangling about the contents of the secret room which has been opened. "Four heads," says the Daughter, "four minds, and one body. Who made that monster?" Some will recall Strindberg's similar satire on legal procedure in "The Link."

Truth, upon which society should build, will never be guessed by those in whose keeping it is usually placed. The poet is the only competent judge. But what is poetry? "Not reality, but more than reality—not dreaming, but daylight dreams—":

The Poet. And tho man children think that we poets are only playing—that we invent and make believe.

The Daughter. And fortunate it is, my friend, for otherwise the world would lie fallow for lack of ministration. . . . Nobody would be touching plough or spade, hammer or plane.

In a word, the poet's and Strindberg's truth—real truth—is destructive of society in anything like its present form. Which does not make society any the better or more tolerable. Every human relation contains uncompensated cruelty; no joy can be felt by one without pain given to another.

Apart from their settings these are no more than sharp instances gathered by a mind on the look-out for logical flaws in life. Within the play, they are elevated by the imagination and seem for the moment to have general, symbolic values. I can scarcely illustrate by short examples how his imagination produces its large effect. It is, above all, insinuating, all the more so because it ranges lightly. By his touch a stage-setting becomes gently permeated with the situation it enfolds. With more humor than Ibsen he catches the bigger bearings of a theme without letting it become over-ominous or sultry. The dead-weight atmosphere of "Ghosts" and "Rosmersholm" is replaced in "The Dream Play," which, considering its subject, might easily have degenerated into a nightmare, by airiness and diversion. He creates ulterior meanings by attaching mundane situations, for the moment, to the paradoxes lying at the heart of existence. The method is vague, but not ineffective. Yet, when operating on a small scale, his imagination is as precise as his chop-logic. The Lawyer, unhappily married to the Daughter, comes upon her in company with the Officer and discovers some tell-tale hairpins:

Look at this one. You see two prongs, but it is only one pin. It is two, yet only one. If I bend it open, it is a single pieee. If I bend it back, there are two, but they remain one for all that. It means: these two are one. But if I break—like this!—then they become two.

The conceit, perfectly in character, suggests not a little the speech of Othello: "Put out the light, and then put out the light," etc. At times his imagination is as startling as a stab. When the meanness of man has been exposed, the Daughter asks suddenly, "You have seen a brain—what roundabout and sneaking paths——" Continually he gives the impression of getting below the surface even when talking nonsense. A ship is seen wrecked, the whole crew being lost. "And lo, the life-buoy—which saved itself and let distressed men perish!"

Such precision and shrewdness in managing details bestow a certain *a priori* force upon his imagination in more ambitious attempts. The Daughter picks up a shell in Fingal's Cave and, placing it to her ear, interprets the silent voices of the air by a haunting melancholy lyric. Upon analysis, what passes at first glance for imaginative purpose is often merely his zest for the whimsical, which he paints so thoroughly and with such seeming belief in it as to be disarming. On nothing does his fancy play more subtly than on the notion that men are but impotent shadow-shapes. He illustrates it in a dozen different pictures, no one of which is quite cogent, but each of which has at least the effect of an insistent motif, especially when reinforced by the refrain, "Men are to be pitied," All roads lead to the conviction that life is a wretched image of some beyond. "Do you know," asks the Daughter, "what I see in this mirror? The world turned the right way! —Yes, indeed, for naturally we see it upside down." "You have said it!" exclaims the Lawyer, ". . . The copy—I have always had the feeling that it was a spoiled copy."

IV.

One cannot follow Strindberg's gropings for truth without feeling keenly the man's tragedy. High ideals he certainly had, too high, alas! For, like Donne, he could never reconcile them with life. He scanned human existence with a passionate desire to know what it means and to help mankind; he found it to be only a brutal joke. That he was doomed to failure there can be no question. His mind never attained to a thoroughgoing system, or control. Skill in gathering and managing individual moments of life led him to generalize too hastily. What he might have achieved, especially as a dramatist, if he had got a more largely rational outlook, one can only surmise. His close observation and quick, sympathetic fancy furnish a rare conjunction; if properly directed, they are the stuff that masterpieces are made of. But taken as it is, even at its best, his work is instinct with futility. His predilection, considering his limitations, for the spectacular phantasy as a vehicle of serious thought, is in itself a sign of weakness. It is the form which offers the readiest escape from defeat whenever one's purpose becomes embarrassed. If you are not quite clear how to proceed, introduce an airy ballet, or fall into intangible lyrics, or hide behind some other *divertissement.*

Many, however, have called "The Dream Play" acceptable symbolism, even while they reject its central teachings, in much the same way that persons who are not romanticists may chance to be moved by "Chantecler." The point is important for one attempting to place Strindberg's best work as literature. Rostand in "Chantecler" made much use, it is true, of symbolism. His universal goddess, Light, reflects with very various *nuances* the illuminating genius of poetic art, and the whole surface of the barnyard throws off a rainbow of subtle meanings. But Rostand had first constructed a definite framework, well articulated, to give the more transitory moods of the situation position and point. The underlying fable, or allegory, is applied with great niceness and leads step by step to a preconceived vision and outlook. The result is a perfectly intelligible microcosm, which one may cherish or discard. In "The Dream Play" there is no such structure. Though more thrilling, the piece is hardly more vital than the several dramatic spectacles which have been presented this year on the English and American stage. Gorgeous details of fancy, glimpses into a beyond, and all the other devices seek to convey the impression that the unusual atmosphere is symbolic of something which it is desirable to feel and surrender to, even though it is too fleeting and wayward to be entirely deciphered.

I do not, of course, presume to say that all of Strindberg's dramatic output is good for nought. Certain abuses he powerfully lampooned. Yet the effect is vitiated by the constant recollection that the reforms are founded upon a mistaken view of life. If Strindberg were now living and a young man there would be hope that he would outgrow his anomalous point of view. In youth it might easily be set down as the result of fearless curiosity exerted in many directions without enough time given to assimilate and unify.

Fred Terry and Julia Neilson, who are still finding profit in "Sweet Nell of Old Drury," have a new play which they will try in the English provinces this autumn, and hope to produce in London next spring.

"Kismet" is to be produced soon in Berlin, at the Künstler Theater. Herr Stern, Max Reinhardt's stage manager, will be the director and Max Pallenberg will play Hajj. There is a probability of the piece being played in Paris with Guitry as the beggar.

The Stage Society of London has given with notable success, "The Bias of the World," a translation of "Los Intereses Creados," of the Spanish dramatist, Beneventes.

"The Crisis" is the name of a new play by Paul Bourget and André Beaunier, which has just been produced at the Porte St. Martin in Paris. The theme of it is the degrading effect of politics upon character, and certainly the picture which it draws of a supposed French statesman is not a flattering one. Gisèle Prieurs, a charming widow, who has been the innocent victim of a scandal, has become the mistress of M. Rivardin, a man of lofty political ambitions and brilliant prospects. She has a

salon and admiring friends, is moderately respected, and tolerably happy, but is not so young as she was, and longs for marriage. This Laurent Bernard, a Socialistic Deputy, offers her, but Rivardin refuses, on the ground he is Prime Minister now—that such an alliance would be fatal to his Administration. But he does not wish to lose Gisèle, and sees in Bernard a dangerous rival. So he offers him a Cabinet position on the sole condition that he shall see no more of Gisèle, or, at least, that he shall promise not to marry her. When Bernard refuses the bargain, Rivardin tells him the old scandal about Gisèle, declaring her to have been a false wife before she was a kept woman. A bloodless duel follows, and then comes a scene in which the two men are confronted with Gisèle. Rivardin now proposes marriage, but she gives her hand to the more high-minded Bernard. The play contains some strong scenes, and much brilliant dialogue, but it is criticised as untrue, and Rivardin is called a travesty. Madame Réjane acted admirably as Gisèle.

Seventeen volumes of Wagner's letters have been printed, and there are more to come. A uniform edition of those so far published is announced by Breitkopf & Härtel. The first two volumes contain those addressed to his first wife, the third those written to other members of his family. To Uhlig, Fischer, and Heine, those in Vol. IV are addressed. Mathilde and Otto Wesendonck were the recipients of the letters printed in Vols. V and VI. Those to the publishers, Brietkopf & Härtel, and Schotts Söhne, add two more volumes, and one is taken up with the correspondence with Liszt (including Liszt's replies). Volumes X to XIII bear the names of Theodor Apel, August Röckel, F. Prager, and Eliza Wille as the persons addressed, while in Vols. XIV to XVI are miscellaneous missives to many persons who were concerned with the Bayreuth festivals in an artistic or business capacity, Vol. XVII contains a sort of aftermath, letters addressed to friends and contemporaries from the earliest years to the last period of his career.

Verdi and Wagner were born the same year (1813), and while the Germans are preparing to celebrate Wagner with an *éclat* surpassing even the Liszt festivities of the season just ended, the Italians will show appreciation of their greatest musical genius in many ways. One of these will be the publication of his correspondence. A few weeks ago, at the Villa Sant' Agata, which Verdi occupied to the end of his life, Boito and a number of other eminent Italians opened the box containing the literary remains and were, as the Milan *Perseveranza* reports, astonished at the rich find. Five folios were filled with Verdi's correspondence with publishers, extending from 1830 to 1890. The letters to his librettist, Ghislanzoni, will make a large volume. There were found many operatic sketches, both musical and poetic; some of the unused melodies were adjudged equal to the best that Verdi has given to the world, and of special interest is his own sketch, partly in prose, partly in verse, of the "King Lear" he had intended to compose. There are also fragments of a "History of the Popes," which Verdi started to write.

The complete correspondence of Verdi has been placed by his heir, Mme. Marla Carara, into the hands of an editor, Signor Scherillo. It will be published shortly.

Humperdinck left Berlin some weeks ago to recuperate at Meran. During the summer he will be an inmate of the Villa Falconieri, near Rome, which the German Emperor procured as a home for invalid artists.

One of the scenic surprises of the Berlin production of Mozart's "Magic Flute" was the use of motion pictures on a larger scale than had been seen before. It was in representing a waterfall, and the "transparent" reached the unprecedented height of ten yards. The films had been exposed in Switzerland and the Tyrol. In the revival of "The Magic Flute" at the Metropolitan next season, the Berlin setting will be used as a model.

The plan of attempting to soften the hearts of culprits in prison by means of music is being tried in England. An orchestra has been engaged for a special prison *tournée*. The beginning was made at Maidstone, where the programme included Gounod's "Queen of Sheba" march, Mendelssohn's "Hebrides" overture, "Two Elegiac Melodies" by Grieg, and the same composer's "Peer Gynt" suite, Schubert's Unfinished Symphony, and Meyerbeer's "Coronation March." The deepest impression was obviously made by the Schubert and the Grieg music, which seemed "like a message from heaven."

Art

In "Rambles in the Pyrences," which Murray of London is publishing, Hamilton Jackson has much to say about the architecture of the country visited.

A handsome volume containing "A Descriptive Bibliography of the Most Important Books in the English Language Relating to the Art and History of Engraving and the Collecting of Prints," is promised shortly by Ellis of London. The volume, which is the work of Howard C. Levis, is limited to 350 numbered copies (325 only for sale), and the price to subscribers, which will be raised after publication, is £2 12s. 6d. net.

A summer session of the School of American Archæology will be held in Santa Fé and at the ruins in El Rito de los Frijoles near by, August 1-30, inclusive. Lectures will be given and research work conducted by the school's regular staff.

A few miles from Vicovaro, on the presumed site of Horace's Sabine farm, a Roman villa of the second century A. D. has been found, with interesting baths; but nothing has as yet come to light which can be held contemporary with the poet. At Sorrento some fine fragments of statuary have been unearthed, which belong, probably, to the pediment of a temple, and at Pæstum a fine statue of Claudius and various buildings of the Roman period have been discovered. Important excavations are carried on at Terranova Pausania, the ancient Olbia, in the northwest corner of Sardinia, where portions of the city wall, with a postern gate and towers, have been found. These must have been constructed to fortify the town soon after the island had passed into the hands of the Romans at the end of the third century B. C.

In a lecture at the Continental Hotel in Cairo, Prof. Flinders Petrie gave a preliminary account of his recent discoveries in Egypt. Excavations were carried on at different sites, so that the results are of varied character. An extensive cemetery was found about thirty-five miles south of Cairo, which dates from the earliest historic age down to the Pyramid period. Among the most interesting objects brought to light are pieces of clothing and coffins made of wood, basket-work, reeds, or withies, all in a remarkable state of preservation; also, bed-frames, sometimes retaining the rush-work webbing or decorative plaiting of palm fibre, with beautifully tapered poles and carved bulls' legs to support them. Of less perishable material were about 300 alabaster vases and dishes and a great quantity of pottery. In one tomb were found pottery jars, with drawings of the fore part and the hind part of a zebra. In another were impressions of four sealings of King Narmer-Mena, not hitherto known. At Heliopolis some surprising discoveries have been made, traces of another obelisk having come to light, beside the well-known obelisk on that site. At Memphis, work is progressing rapidly, and an alabaster sphinx, weighing about eighty tons, has been unearthed. The annual exhibition of antiquities will be held at University College, London, in June and July.

In general characterization of "The Book of Decorative Furniture, its Form, Color, and History" (Putnam), by Edwin Foley, a copiously illustrated work, now completed with the appearance of the second volume, there is not much to add to the review of Volume I which appeared in the *Nation* of June 8, 1911. The book is decidedly interesting to the student of the historical development of furniture. Mr. Foley continues to indulge in divagations, interspersed with regrets over the lack of space to deal properly with certain details of his subject. Such desultoriness is accented by the manner in which the descriptive text of two pages before each color-plate is set, being continuous with the general reading matter. Thus, from page 4, for example, you pass on to page 7. Nor are the plates necessarily concerned with the matter of the adjacent text: Georgian furniture is sandwiched into mediæval, and in the midst of an array of British art you get not unpleasant surprises in the shape of a plate each of Asiatic furniture and the "naïve charm" of Austro-Hungarian peasant art.

The consideration of the influence of surroundings as well as of material is wisely adhered to, and is underscored in references, such as the one (p. 362) to Georgian furniture as "a distinctly English interpretation of home life." In the second chapter, on our Colonial Furniture, appreciation is shown in the statement regarding the "fanback" chair used by Thomas Jefferson: "apart from historical associations, its lines are so convenient, comfortable, and inexpensive, that one marvels at the scarcity of the pattern in England." Statements concerning Chinese

influence before Chambers (p. 10), or the ante-Empire occurrence of classical motifs in the Louis XVI period (p. 270), or the indebtedness of Adam to Pergolesi, "more marked" than that to Piranesi (p. 97), will help to revise some general conceptions. The usefulness of the book is increased by tables of designers and periods, plates of typical details of decoration and color reproductions of woods, a classified bibliography indicating periods dealt with in each one of the books mentioned, a glossary of terms which might have been extended, and an index which is apparently the result of an honest effort to furnish a key to all details.

"Art, Artists, and Landscape Painting" (Longmans), by William J. Laidlay, is an odd confessional book and by no means uninteresting. Mr. Laidlay treats the painters' profession from many aspects. He is ready to advise on colors and sketching kits and on the relation of the artist to society. Much of this advice is sensible, a certain portion naturally represents idiosyncrasy. It certainly is good counsel not to sketch too long every year at the expense of picture-making. There is something to be said, too, for adding *premier coup* and bravura after the picture has first been carefully painted. Mr. Laidlay holds that artists, being hopeless individualists, might as well give up trying to improve their condition through organization. All the same, he concludes his book with a petition to the King of England to reform away the favoritism of the Royal Academy. The book contains considerable matter of an anecdotal sort and is fully illustrated.

Finance

NEW POINTS OF VIEW.

Of the two especially interesting movements which have occurred in the recent markets, it may be said that each has a particular significance of its own. Both the price of wheat and the price of stocks have declined simultaneously with considerable rapidity, just as their price advanced simultaneously six or eight weeks ago. Ordinarily, one might expect the stock market to advance when the grain market declines, and *vice versa;* for a decline in wheat should mean better prospects for the crops and therefore brighter outlook for railway and industrial enterprises, while a violent rise in wheat, foreshadowing short crops, would usually be interpreted as a bad sign for general business. But the past week's simultaneous decline in stocks and in wheat may perhaps be most fairly characterized by saying that the one reaction resulted from premature expectations of good in the general investment field, while the other resulted from premature expectations of evil in the season's agriculture.

The wheat market's case is particularly interesting. Between April 1, when dispatches began to come in of damage to the winter wheat crop, and the second week of May, when the Government's unfavorable crop report was published, the price of wheat at Chicago rose from $1.01 to $1.18½ per bushel; between May 10 and Monday of this week, it declined from $1.18½ to $1.11½. In other words, it has lost nearly half of the season's earlier advance, and this was clearly attributable to the fact that the grain trade's ideas of two or three weeks ago, regarding the actual damage to the crop, now appear to have been very greatly exaggerated.

The grain crop outlook is by no means all that one might wish it to be; but this is one of the incidents which brings sharply to mind what an exceptional country this is, in geographical area as in variety of climate and capacity for production. In Europe, it is customary to hear that crops have run short in France and England, but are offset by excellent yields in Germany and the Balkans, or that Eastern Europe has not produced enough, but that Russia has filled the bag. But the stretch of the United States from East to West and from North to South is not much less than Europe's, and it would require a very remarkable series of misfortunes to spoil all the harvests of the country. Even when the corn crops of 1894 and 1901 ran disastrously short, we had handsome wheat yields; the deficient wheat crop of 1904 was offset by a bumper yield of cotton, and we all know what happened with the South's agricultural staple when the Northern grain yield was cut down last year.

But the country, like Europe as a whole, is also large enough to admit of disaster to a single crop in one part of it, while the same crop in another section will come through the season in better shape than usual, and it is just this possibility that the wheat trade has discovered this present week. The grain trade speculators had concluded that, since the Central Western States had lost half of the wheat which was planted in the autumn, therefore the same thing must have happened to the fertile region beyond the Mississippi. It is now beginning to hear that the trans-Missouri district, up to date, has fared as much better than usual as the section to the east of it had fared worse. We shall have plenty of agricultural vicissitudes between now and harvest time, but we have already had the not unfamiliar lesson read to us that it is not the habit of Nature to kill the country's harvests before the middle of May. That is only the habit of the Chicago Board of Trade.

How far the rapid decline on the Stock Exchange, from the high prices of a few weeks ago, was caused by the agricultural uncertainty, and how far by the very much greater confusion of Presidential politics, is an open question. That sober financial sentiment had been adversely affected by Mr. Roosevelt's radical campaign and by his unexpected victories in the Eastern primaries, could not be doubted. It was not easy to say how dominant an influence this was—first, because the actual bearing of any political situation on investment values is always hard to manage, but also for the reason that no one has been able to foresee the result of the fight for the nomination.

The tendency has lately been to await the Ohio primaries of last Tuesday, with the idea that they should give some definite indication as to the actual trend of things. The earlier votes had caused very mixed emotions. In fact, the community had been so sated and surfeited with the absurd working-out of the Presidential primary experiment—it is much as if the old-time uproar over the "October States" had in those days been repeated six or eight times in advance of the national election—that each new "primary crisis" in another State, each new exchange of epithets on the hustings, each new reference to "what I did" or to the rat in a corner, each new mix-up about the ballots, each new suspicion that voters of one party are helping along the vote at the other party's primaries, and each new subsequent batch of claims and explanations, had begun to pall on the taste. But all experienced observers recognized that Ohio was a different matter, and when the decisive victory of Roosevelt over Taft, in the primaries of the President's own State, became known on Wednesday morning, it was felt that the Roosevelt movement must be faced by the financial community in a somewhat different spirit.

It is likely, therefore to be a study in Stock Exchange psychology, how the market takes the later developments in this remarkable episode. Wall Street is able to change its mind on such matters with entire shamelessness. Its opinion on events is notoriously influenced by smooth and oracular hints from high financial quarters, and when Presidential campaigns are personally underwritten by Wall Street celebrities, it is to be expected that such hints and intimations will not be lacking, any more than they would be if the undertaking were the conversion of a company's share capital into bonds or the listing of its stock in Paris.

Besides, it is usually the preference of high finance to back the winner as soon as it knows who the winner is to be. Just now, it is extremely puzzled over the question; hence, perhaps, its discreet and dignified reticence as to the bearing of politics on the markets. All this will make it interesting to observe what happens to "Wall Street sentiment," in the light of any of the various political possibilities which the next few

weeks, and next week in particular, may bring to light.

A Mysterious and Absorbing Human Document.

These memoirs are interesting not merely as a brilliant and beautiful woman's *apologia* and autobiography. They are also enthralling as a picture of the elegant, daring, cynical, and cultivated Parisian society in which she moved, and they introduce familiarly many people of distinction in the social, artistic, and literary life of the French capital. Her relations with Pres. Faure throw strange sidelights upon contemporary French history.

John Brown: A Biography Fifty Years After

By OSWALD GARRISON VILLARD

SOME TRIBUTES TO THIS REMARKABLE HISTORICAL WORK.

Philadelphia PUBLIC LEDGER. "A tremendous book, more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesman Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with a great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

PORTLAND OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The NORTH CAROLINA REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy, and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able even to add anything of importance to Mr Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

School Advertising in The Nation

THE NATION stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading rooms, and into thousands of families.

The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions.

A WIDELY DISCUSSED ART BOOK

THE ART OF THE BERLIN GALLERIES

By DAVID C. PREYER

Author of "The Art of the Metropolitan Museum of New York," etc.

What the leading PRESS of the country think of the book:

From THE DIAL:

"Mr. David C. Preyer's volume on THE ART OF THE BERLIN GALLERIES is sure of the warm welcome that it deserves. It is entertainingly and sympathetically written, and its forty-seven illustrations are well chosen and well executed. . . . Both in its method and its matter, the book deserves a place in the admirable series of which it forms the twelfth volume."

From the BOSTON TRANSCRIPT:

"This is an interesting contribution to the series on the art galleries of Europe and is the third from the pen of the author. It can be read by art lovers who have seen all the works of art described with as much interest as by the prospective visitors to the galleries who seek, in condensed form, just the information necessary for a reasonable enjoyment of the art. . . . Mr. Preyer's keen discriminating judgment is a delight to the art lover."

From the BOOK NEWS MONTHLY:

"A handsomely illustrated guide of the type that is of immense use to tourists. There are forty-eight reproductions of famous paintings, and the text-matter is at once sound in informing detail and of itself interesting."

From the BROOKLYN EAGLE:

"A valuable and attractive account of the Art Galleries of the German capital by David C. Preyer, the expert writer in that field."

From the Chicago INTER-OCEAN:

"It does not take a connoisseur of sorts to derive entertainment from the volume we are speaking of—because the author's comments on, descriptions of, the various pictures are so simply and so graphically worded as to have us gain a very good idea of their worth; even their coloring and grouping."

What the reviewing editor of the New York EVENING POST and THE NATION wrote of the work:

"'The Art of the Berlin Galleries,' by David C. Preyer, may be described as an odd gallimaufry of discursive scholarship, vigorous taste, and cheap and inaccurate English. It contains most of the facts that a tourist would need, and with all its defects has a personal tang unusual in such compilations. But it is full of small errors and misleading statements, and has had no proper revision either from the author or the proof-reader. Fra Angelico is a *piagnone*. Art history learns for the first time that 'Masaccio was murdered in a Roman street.' Ridolfi's absurd story that Giorgione died of love-sick jealousy receives credence. There is no mention of the general belief among critics that the altar-piece of the Virgin, ascribed to Van der Weyden, is merely an old copy, nor yet that only two of the Berlin Botticellis are generally accepted. The Raphael tapestries are called carpets, a cathedral is a Dom. The critic Thoré appears as Thoreau, a reminder that the book is made in Boston."

What is your opinion of the book? The publishers would be glad to know.

What the author of the book thinks of THE EVENING POST'S and THE NATION'S review of the book, as expressed in a letter to the editor of THE EVENING POST which that paper has not as yet seen fit to print:

"Although I am aware that there is rarely allowed a 'come-back' to the observations of a book reviewer, yet since the erudite critic who reviewed my ART OF THE BERLIN GALLERIES for once seems to have nodded—even as Homer did—justice demands a protest against the 'small errors and misleading statements' of which he is guilty, while imputing these to me.

"With caustic incredulity he exclaims: 'Fra Angelico is a *piagnone*.' So he was, a spiritual leader in the Savonarola movement. Vasari's description of him as such has impressed itself upon the minds of twelve generations of readers; and Langton Douglas well says: 'Owing, then, to a variety of cases, the *piagnone* view of Fra Angelico still holds the field.'

"I cannot lay claim to being the first to mention that 'Masaccio was murdered in a Roman street.' Six years ago Dr. Paul Shubring, of Berlin, published this detail.

"The story that Giorgione died from grief at the desertion of a fickle beauty is not so absurd as it is to call it so. Anyway, it does not 'receive credence' in the text, but is bracketed: 'it is said.'

"The reviewer apparently confuses Van der Weyden's altarpiece of the Virgin with the 'Descent of the Cross,' which is a copy, as stated. The Mary altarpiece has even been identified as one ordered by Pope Martin V, and carried by the Emperor Charles V on many of his travels.

"The number of genuine Botticellis in the Berlin Museum is of course an open question of critical opinion, as much so as the number of Raphaels in the Louvre.

"The Raphael tapestries are intentionally also called carpets, to indicate the primary use to which these fabrics were put—a fact often overlooked by, or unknown to, art writers

"A Cathedral is a *Dom*, in German—too many italics are such a nuisance.

"Thanks for the Thoré correction—a lamentable lapse, but Boston was not to blame.

"And now as to the sumptuous summary of the whole book as an 'odd gallimaufry.' 'Discursive scholarship'—that sounds good; 'vigorous taste'—better yet; 'cheap and inaccurate English'—oh me, oh my! I know I have never been able to acquire schoolmaster English, but might that 'personal tang unusual in such compilations' not cover some of my stylistic sins? Not all people like George Meredith. Very truly yours, D. C. PREYER."

Studies in Contemporary Society

CHANGING AMERICA

By Edward Alsworth Ross, Ph.D., LL.D.

Author of "Social Control," "Social Psychology," "Sin and Society," "The Changing Chinese."

A notable volume in which Professor Ross analyzes the tendencies of our new democracy with the same keen insight, and in the same trenchant, readable style that popularized "The Changing Chinese," discussing the social and industrial problems that are close to our homes and our hearts in these days of unrest.

Special attention is given to a comparison of social, political and economic conditions in the Middle West and the East.

A brilliant and suggestive interpretation of sub-surface tendencies in modern society.

The Nation

NEW YORK, THURSDAY, MAY 30, 1912.

The Week

After Ohio, no cool observer doubted that Roosevelt would carry the New Jersey primaries, though the clean sweep which he made on Tuesday was beyond the hopes of his most ardent supporters. They had privately conceded Taft six or eight of the twenty-eight delegates, but it now appears that he will have not more than two, if, indeed, the complete returns give him any. It is a most impressive series of popular victories which Roosevelt has now scored. Since Illinois, the whole card-house has fallen in a heap for him. With the exception of New Hampshire, and the drawn battle in Massachusetts, he has won every State primary, marching on from triumph to triumph. We suppose that no one will now question that if the New York primaries were to be held over again, he would be easily victorious in this State also. Such is the effect of political psychology, success breeding success. On the face of things, the opponents of Roosevelt still have more delegates in the Chicago Convention than he has; but they can be under no delusion regarding the nature of the assault which he will now make upon the delegations from the Southern States, or the high probability that he will soon be loading up his band wagon with them.

As the only way to fight Roosevelt is to fight him, and not run away when he makes threats, the decision of Senator Root to accept the offer of the temporary chairmanship at Chicago is good tactics. If the other side desires to join battle on that preliminary issue, well and good. It will be noted that Mr. Roosevelt has not yet ventured to attack Mr. Root personally. Upon nearly every other leading Republican opposed to him he has poured out his vitriol, but Root has so far been spared, though the intimation has been given that he has hurt the Colonel's feelings. Of course, if Mr. Roosevelt decides to make a fight upon Root, the latter will at once be described as one who has been consistently a corrupt tool of the corporations and the bosses—except at the times when he was working with and for Theodore Roosevelt, when he was, by definition, one of our ablest and most patriotic citizens. But we imagine that the Colonel will do a bit of thinking before he gives the signal for war upon Root as temporary chairman. He would scarcely like to begin by advertising it to the country that his campaign involves proscription of the men of brains whom he and his party have hitherto delighted to honor.

You never can tell about what charge the Colonel will show himself sensitive. The other day he grew quite excited, for one ordinarily so calm, at the assertion that his seven years in the Presidency had been a time of such extravagance that he left a Treasury deficit behind him. This is singular. He passed over attacks upon his honor, upon his truthfulness, upon his fair dealing, in order to resent with indignation the charge that during his Administration public expenditures had been lavish. But this is the one subject about which Mr. Roosevelt has never seemed to care a straw. The facts are of record. One has only to look at the Government's own "Statistical Abstract" to see how enormously the budget grew while Roosevelt was President. Moreover, during all that time no urgent plea for prudence in appropriating money ever came from him. Cleveland was always hammering away on the duty of economizing, but Roosevelt never did. Taft has again and again written messages and suggested schemes in behalf of saving the people's funds, but this was certainly not carrying out a Roosevelt policy, for there never was a Roosevelt policy on this subject. Indeed, the most significant utterance about it which Roosevelt ever made as President was his assertion, even when the Treasury was embarrassed, that this Government had never found any difficulty in getting all the money it really wanted to spend. That was the characteristic flush and hang-the-expense attitude which he maintained throughout, yet now the man is pained at being told that he was extravagant!

Friends of Woodrow Wilson have reason to be encouraged by recent gains. In Ohio, the vote for the New Jersey Governor was surprisingly large, all things considered, and gave him a quarter of the delegates. They, however, under the unit rule, will all be for Harmon on the first ballot. But the demonstration of Wilson's strength with the Ohio Democrats remains impressive. Even more marked was the favor shown him in the Virginia Convention last week. Though that State's delegates go to Baltimore uninstructed, it is known that most of them are for Wilson. These additions to his list are not numerically great, but they indicate a significant change in the course of the campaign developments. For one thing, they show that the quiet combination of all the other candidates against Wilson is no longer working effectively. In spite of it he is making headway. Another point to fix attention upon is the checking of the drift to Champ Clark. The movement for the Speaker was helped along at first by many who did not delude themselves with the idea that Clark was either a fit nominee or could possibly win in the Convention, but who thought of him as a convenient means of heading off Wilson. But now they are alarmed at their own success. They are getting a clearer notion of the great emergency which will confront the Democrats at Baltimore, and are well aware that Champ Clark would be ridiculous as the man put forward to meet it. This feeling, growing more intense every day, partly accounts for the slowing up of the Clark boom. Wilson is at least a candidate to be seriously considered by his party.

Senator Crane's announcement of his retirement is not unexpected. It has been evident for some time past that there would be the strongest kind of opposition to his reëlection. We do not, however, believe that this fact alone dictated his withdrawal from the Senate. The truth is that he has not been happy in his position for some time past. Many of his most intimate friends in the Senate have retired, and he has found little in the new trend of our political life to sympathize with. The changed attitude towards him of public opinion in Massachusetts is significant of the altered political conditions throughout the coun-

try. Mr. Crane was admittedly one of the very best Governors Massachusetts ever had. This is conceded by friends and foes alike. When he was first elected to the Senate, the entire State was satisfied and pleased with his selection. Now, however, he appears to thousands as a reactionary, an ally of "big business," one who is not progressive, and, therefore, there would have been a tremendous effort to defeat him for re-election. That he is one of the ablest Senators and one of the most influential goes without saying. Yet he never makes a speech, and has always done his work chiefly behind the scenes.

What effect the withdrawal of Senator Crane will have upon Senator Lodge is one of the questions which will from now on be much discussed in Massachusetts. That Senator Lodge ought to be retired is obvious; his present ridiculous position astride the fence has made him the butt of many jokes. That he could not win in a State-wide primary is also plain. In this era of machine-smashing, his machinery would be a shining mark. Should Mr. Roosevelt be reëlected and Senator Lodge be forgiven for his failure to enter the lists for the Colonel, there are those who believe that he would be Secretary of State to Mr. Roosevelt, which fate may Heaven forfend.

Complications developed by the Presidential primaries in various States show how difficult it is to frame efficient machinery for executing the popular will under our elaborate system of nominating and electing Presidents. Unless an exacter method can be devised, we are in danger of seeing the people's will reversed at times, in spite of endeavors to induce them to record it with their own hands. After the primaries have passed into history, however, the popular vote must still run the gantlet of interpretation in the electoral colleges. It is well known that in Wisconsin the electors in 1901 signed a certificate in which the State's vote was given for Garret A. Hobart, then already dead, for Vice-President, a not too intelligent copyist having transferred it literally from a certificate of 1897 which had been given him as a guide to the form of the new document. Fortunately, the error was discovered before it was too late. This incident recalls an earlier one which might have changed the whole current of our political history. In 1832 the Democrats of Pennsylvania pledged their candidates for electors to vote for William Wilkins for Vice-President, but sent a delegation to the Baltimore Convention who voted for Van Buren and helped to nominate him. The electors stood true to their pledge, although theirs were the only votes cast on the decisive ballot for their candidate. Had the Clay Presidential ticket mustered the strength at the polls which its supporters predicted for it, the thirty votes of Pennsylvania's electors might have defeated Van Buren for Vice-President and prevented his promotion to the Presidency four years later.

Senator Lorimer, it is reported, will fight. Ajax will defy the lightning. All the blandishments of "Sunny Jim" have failed to make the Illinois politician see the beauty of surrendering a seat that has apparently been bought and paid for, and he will force his colleagues to perform the distasteful task of declaring his title to it invalid. This they seem to have made up their minds to do. Why not escape the thunderbolt by resigning? Because, it is to be supposed, resignation would be confession. But it would be open to the unhappy Senator to plead the uselessness of continuing a struggle to the bitter end, and to make moving speeches about the impossibility of obtaining justice in the highest legislative body that man has ever, etc. Besides, this course would be appreciated most profoundly, we are sure, by many of his colleagues. Does the Senator not owe a duty to the men who have stood by him as long as it is safe to do so? But perhaps he is distressed over the want of a precedent. This, fortunately for his peace of mind, it is possible to supply. In the great State of New York a Senator was once accused of misconduct. He, too, fought vigorously for a while, but at last succumbed to the inevitable. Allds resigned. Why not Lorimer?

Last Thursday's vote by the House, 147 to 126, in favor of making the Panama Canal free to American ships, is not likely to be the final expression of the will of Congress. If it were, it would be a national disgrace. For we are firmly bound by treaty never to discriminate against foreign shipping in the regulations for the use of the Canal. It is stated that the leading men in the Senate are saying that, whatever the House may do, the Senate at least will show that it knows what is the obligation of a treaty. In the House debate it was clearly pointed out that the passage of the bill making the Canal free to American vessels "engaged in the coasting trade"—which are virtually the only ones that would cross the Isthmus—would be in effect a subsidy to American shipowners to the tune of $5,000,000 a year. If we are going to have ship-subsidies, let us have them open and undisguised, not hidden away in a bill for another purpose, in a way to cheat the people without their knowing it.

Cities keep on going into business. This has sometimes been done through the mayor or other civic officer, as in the case of Mayor Shank of Indianapolis. In other instances, municipalities themselves have undertaken enterprises, as when Detroit a few months ago made plans for a municipal coal mine to be worked under the city park. The latest evidence of this tendency comes from Oklahoma City. This thriving town is already pocketing, in imagination, the $40,000 a year profit which it contemplates from a municipal farm. The plan is to cultivate the city land beside an automobile highway twenty-nine miles long, which was recently completed at a cost of $400,000. The sponsors of the scheme believe that the city will be skilful enough as a farmer to make a profit of at least $100 an acre. Alfalfa, wheat, and oats will be planted and the hope is that too many political tares will not be found growing in the wheat, and that the oats will not prove to be wild.

That an American architect, Mr. Walter B. Griffin of Chicago, has carried off the first prize of $8,750 in the international competition for a new capital of Australia is surely a cause for national satisfaction. A number of American and Australian architects, as well as men from other countries, competed. The opportunity was quite unusual, in that it called for the designing of an entire city. Australia has acquired a Federal territory four miles square, 165 miles southwest of Sydney, in New South Wales, which is to be made into another District of Columbia. An ele-

vated plateau, it is partly surrounded by hills 200 feet high, with a stream running through it which is to be dammed, thus making possible unusual water effects. The task of the competitors was not, of course, to present designs for each of the many Federal buildings—the national museum, theatre, library, the Parliament group, etc.—but to indicate on the plan the precise sites for these and many other monumental structures. It was to accomplish for Australia what Major L'Enfant did for the United States, that the architects entered into competition, and it may be thought fitting that, as France aided the United States to plan its capital, this older federation of States should perform a similar service for the new Australian federation.

We owe a vote of thanks to Signor Gatti-Casazza for dispelling an unfortunate impression that has prevailed about us in foreign operatic circles. Salaries for artists at the Metropolitan Opera House, the impresario assures his questioners, are "only a little more" than those that the best performers can command in Russia, Italy, Spain, Portugal, or even Egypt and the Argentine. There may be much in that "only a little more." One can fancy a tempted singer murmuring:

Oh, the little more, and how much it is!
And the little less, and what worlds away!

But we prefer to believe that it is as the Metropolitan leader intimates. One can earn more money in Germany, if not in Egypt and the Argentine, but for the pure love of art and America one chooses to cross the deep, and sing and act for the appreciative audiences of the land of the free and the home of the brave.

The first Cuban newspapers to come to hand since the breaking out of the rebellion make clear the suddenness with which the blow fell. Havana was in the midst of celebrating the tenth anniversary of the independence of the Cuban Republic, when the news came of a revolt that threatened its life. The existence of the "Independent Party of Color" was, of course, well known and its demands understood, but there was apparently no thought that the negroes would take up arms. As soon as the gravity of the movement was perceived, however, there was an instinctive feeling that Cubans must drop their political differences and bend every energy to the restoration of order. The revolution was "the common enemy," in the language of the Havana *Discusión*. The same paper, referring to the possibility of American intervention, freely admitted that a certain amount of it was justified under the treaty, and might be called for in the present circumstances, but added that the very possibility of such intervention should act as a spur to the Cuban people, leading them to "redouble their efforts to reëstablish the peace so unhappily disturbed." The situation undoubtedly remains serious and even critical; but with sufficient vigor on the part of the Cuban Government and patience on the part of our own, there is no good reason why there should not be a peaceful outcome.

Whatever may be said as to the effect on Brazilian sentiment of our Attorney-General's suit to enjoin the "coffee valorization syndicate's" operations in our markets, the public reference to the matter by the Brazilian Ambassador was certainly an indiscretion. He described this suit, in his speech to the Pan-American Society, as "a heavy blow" to "hopes for a new era in our commercial relations." The suit is based, he declares, "on the quite revolutionary doctrine of paying for other people's merchandise, not the price they ask for it, but the price the United States—I mean the American merchants—want to pay for it." "Certain officials of this Government," Ambassador da Gama continued, "went so far as to proclaim before an American court of justice the forfeiture of the sovereignty of that foreign state." This is pretty strong language, and it is highly undiplomatic language. The ground for the Ambassador's allegation is, as every one now understands, the fact that the 950,000 bags of coffee held in this country by the "valorization syndicate" are the property of the Brazilian Government. It was bought for the purpose of controlling prices, and it is pledged by that Government as partial security for the $75,000,000 Brazilian loan; but it is held by the syndicate under contract stipulations with Brazil, and that is obviously why the Brazilian Ambassador felt himself warranted in expressing resentment.

They certainly have queer notions in England about party leaders and their relations to each other. Since Mr. Balfour's return to Parliament there has been a good deal of malicious talk about his having permitted Mr. Bonar Law to take his place at the head of the Conservative party in the House of Commons only so long as it served his own purposes. When he got ready, he would oust Mr. Law without ceremony, so it has been said, and resume the leadership. But this theory of Mr. Balfour's motives has been denounced by his party associates with a vehemence that must seem in this country entirely misplaced. In a recent speech, for example, Mr. Walter Long asserted that the whole story was an insult to Mr. Balfour. What could be more offensive to a man of honor than to have it intimated that he had "withdrawn from the leadership only for a time, in order that he might sail under false colors," and come out as leader again when it suited him? A greater insult, affirmed Mr. Long, "could not possibly be offered to any honorable man."

A recent letter by Mr. Balfour dealing with Anglo-German relations has convinced Professor Delbrück that war between Great Britain and Germany can hardly be averted. Professor Delbrück is an eminent example of the fighting type of German professor whose profound studies always lead to the one conclusion that Great Britain must get out of Germany's way or take the consequences. No matter how remote the professor's specialty may be—he may be an Assyriologist or an authority on deep-sea animal life, or a specialist in the chemistry of dyes and colors—he can always deduce from nature or history the necessity of increasing the German navy. The odd thing is that, having proved from science the inevitability of a war between the two great nations, the German professor frequently allows himself to lay emphasis on such comparatively trivial phenomena as a politician's chance expression of opinion. Professor Delbrück, for instance, thinks that Anglo-German relations were in a very much improved condition until Mr. Balfour's unhappy letter. But if the much-heralded life and death struggle between the two Powers is really inevitable, what good or harm can Mr. Balfour do?

FERRERO ON ROOSEVELT'S PLANS.

It is an old saying that the contemporary judgment of foreigners is very likely to be the verdict of posterity. Most Americans should dislike to think that what people abroad are to-day saying of the contest in the Republican party merely anticipates the sober opinion of historians. It would make melancholy reading for our grandchildren! But if we drop out of sight the shocking personal abuse in our struggle, and ask what is its large political significance, what principles and tendencies it exhibits, what break-up and recasting of parties it portends, we may well get help from one who observes it all with the detachment and perspective of a foreigner. And when that foreigner is one who has the historic background and philosophic temper and special knowledge of American conditions possessed by Guglielmo Ferrero, it is for us to give heed to what he says about us.

Writing in the Paris *Figaro* of the fight for another term in the White House which Mr. Roosevelt is making, Ferrero does not indulge in any of his favorite comparisons with the Romans. One might have expected him to lug in Cæsar, or Marius, or, at least, the Gracchi! But he keeps his eye closely upon our political situation, and seeks to give a true analysis of it. Leaving out personal feuds and bitterness, and all questions of individual ambition, he asks what it is, considered in its larger aspects, that Roosevelt has set out to do. To Ferrero this seems perfectly clear. Mr. Roosevelt is undertaking to make the Republican party over. To begin with, he splits it. The intellectuals, the conservatives, the men who, by reason of property or high intelligence or personal weight have been of great influence in the Republican party, Roosevelt is making war upon and seeks either to terrorize or expel. Their numbers he hopes more than to make good by flinging himself upon the discontented masses, appealing to the lower classes of all parties, and aiming to win power by the votes of the dissatisfied and the turbulent in all parts of the country. That this process is actually going on is obvious to everybody. Ferrero is right about the facts. Take our universities, for example: they are overwhelmingly against Roosevelt. He knows this perfectly. Yet it does not trouble him for an instant. He, the educated man, the one who used to be happy to be in academic circles, is now ready to throw over the whole despised set of college professors. Are not a hundred bricklayers worth more to him than one university president?

The philosophic explanation of Roosevelt's political course which Ferrero gives is that it is an effort to make the Republican party radical. The left wing is to be dominant. A party which had for fifty years been known as the party of wealth and intelligence—which had steadily fostered the industrial and commercial expansion of the country, believed in a strong central Government, and gone forward in foreign policy—this party is now to be reorganized by men who think only of social reforms and a radical programme. As Signor Ferrero points out, this sort of attempt to regenerate or broaden or make more popular the aristocratic party, has often been made, but it has almost never succeeded. Says Ferrero: "Such tactics are always difficult and full of danger. How many famous public men have fallen victims to this plan, when they have essayed it in the trying moments of history!" No specific cases are referred to by Signor Ferrero. He might have adduced Disraeli, with his Young England movement, or Lord Randolph-Churchill with his Tory Democracy. Neither really succeeded in the effort by such means to rejuvenate and enlarge their own Conservative party. They merely provoked outbidding by Liberals—just as, in our own day, Chamberlain and Balfour have been outbidden by Winston Churchill and Lloyd George. One's mind also goes back to the time when James G. Blaine was likewise going to do so much for the Republican party by driving out the fastidious intellectuals and filling their places with a miscellaneous lot of "Blaine Irishmen," and restless ne'er-do-wells. It is not exactly inspiration and courage which Mr. Roosevelt can find in the Blaine example!

It is this high probability that Roosevelt will fail like his forerunners which leads Ferrero to say that many of the European friends of the ex-President regret his having exposed himself to the formidable test. Yet they are too far from the strife, he writes, to understand thoroughly the "psychological motives" which have constrained Roosevelt to throw himself into the mêlée. In this respect, his countrymen are better situated. They have seen those "motives" in the unfolding, and know them for a compound of mean jealousy, a smarting for revenge, and an insatiable lust for power. Whatever the distant philosophical theory of the effect on parties and on our form of government of what Mr. Roosevelt is doing, we on the spot are convinced that he is pressing on as one who has no friendship and no conviction which he would not sacrifice without hesitation on the altar of his ambition.

THE OVERSHADOWED CONGRESS.

We shall have to alter the Latin proverb. If arms can silence laws, what can Presidential primaries do to them? Let the past six weeks answer the question. During that period Congress has been continuously in session, and many legislative subjects of great importance have been before it, yet so far as the great body of the American people are concerned, Congress might as well not have been sitting at all, or have been meeting in Uganda. The debates have been but fragmentarily reported in the press, and public interest in the proceedings has been almost nil. To refer to only one instance of the complete indifference with which really significant matters have been passed over, take the passing and signing of the new pension bill, adding $25,000,000 or $30,000,000 a year to the pension budget. The thing was agreed to in Congress in perfect lassitude, and the bill was approved by President Taft without creating a ripple of interest. Yet nothing more ominous and indefensible has been done in recent years. The country should have rung with it. But people cared only to read which candidate for the Presidency was certain to carry the Fourth District of Maryland, or to get the biggest vote in the Second Ward of Ironton.

During all this time of obscuration, the work of Congress has not been sensational, but it has been necessary and useful. The appropriation bills for carrying on the Government sometimes seem humdrum while under discussion, yet the debates on them in either house of Congress are often instructive, both as regards the details of the measures and the principles of

legislation involved. It is, indeed, on these bills that the hardest work of the ablest members of Congress is done. Yet, for two months past their labors might have been carried on in the Mammoth Cave, for all the attention they have attracted. Even in non-Presidential years this part of Congressional activity—the passing of the appropriation bills—is too much overlooked. This year it has been absolutely disregarded.

Not long ago the Senate agreed to the Declaration of London. This is an international agreement of great importance, designed to fortify the rights of neutral commerce at sea in times of war. There is also the project for international prize courts. Both these highly important measures have been concurred in by the Senate, yet one vernal breath from Oyster Bay has seemed of vastly more consequence to the people. On objection by Congressman Fitzgerald the other day, Congress was prevented from making a small appropriation for the International Parliamentary Union. Other nations contribute their quota to this very useful association for the promotion of a good understanding and peace among nations, but our House of Representatives refused to fall into line. Yet who cares? The fact is barely reported, and even those deeply interested in the matter make no audible protest. Legislation is lost sight of in the dust kicked up by the Presidential race.

Another strange oversight has to do with the bill to appoint an international commission to inquire into the high cost of living. Here, if anywhere, we might seem to have a matter that would come home to the business and the bosoms of the people. They are all the time groaning about the rising prices of the necessaries of life. The bill in question is one of the most intelligent and promising efforts that have been suggested, or that could be made, to discover the true causes of the world-wide phenomenon by a world-wide investigation conducted by experts. Yet the work of getting the measure through Congress has been left to the few economists and public men interested, helped by the recommendations of the President and the coöperation of several wide-awake Congressmen. It passed the Senate, and was recently reported out favorably from the House Committee on Foreign Affairs, and is now on the calendar. The report accompanying it recapitulates the arguments in favor of such an inquiry, and prints the array of names high in the university and political world, both of this country and of Europe, who have given their warm endorsement to the undertaking. It should win the approval of Congress without fail. Judged by any rational standard, it is of much more importance than the great run of our activity in party politics, and might easily mean more for the well-being of the country, in the long run, than a dozen Presidential primaries. Even if the newspapers and the general public have too much ignored this matter, it ought not to lack the slight push now needed in order to get it through Congress.

We admit that the capacity for political excitement is limited. Men cannot be yelling all the time about everything. And it is inevitable that a certain overshadowing of the work of Congress should occur, when the passions of the multitude are stirred by an unprecedented Presidential contest. But this is no excuse for the almost entire ignoring of what is going on in Congress. We ought to apportion our interest better. Some of it should be reserved for that branch of the Government which cannot remain permanently in eclipse without grave injury to the commonwealth.

SOCIALISM AND SYNDICALISM.

Seldom has publicity come so suddenly and so lavishly to any movement as to the Syndicalist movement. Before the Lawrence strike, and for several weeks after the strike was under way, there must have been very few people in this country who knew what the Syndicalist theory stands for and what was this I. W. W. organization in which the Syndicalist philosophy is embodied in this country. To-day there is little excuse for ignorance on the subject. The emancipation of the working class is no longer to be attained through the capture of the governments of the earth by Socialism, but through the capture of the industries of the earth by the working class acting through the unions. Not ballots, but the general strike, as the highest form of "direct action," supplemented by such minor forms of warfare as sabotage and the boycott, is to overthrow the present social structure. Syndicalism has come forth as the programme of the proletarian "doers" as opposed to the intellectual Socialist talkers in the parliaments. The extraordinary development of the American press has made it possible to promulgate widely the truth that political Socialism is pretty well played out, and that the future is for the revolutionary unions.

The appearance of Syndicalism has undoubtedly created a serious problem for the Socialists in every country except in Germany, where the people take it rather phlegmatically. But it is quite certain that the Socialist parties even in England and in this country, where Syndicalism has made its appearance with such dramatic suddenness, do not feel themselves so seriously menaced as the outsider is inclined to believe. The conquest of political power as the lever of economic revolution has been the foundation upon which the Socialist parties all over the world have been built up, and in spite of the Syndicalist furore, it still remains the basis. The Syndicalist philosophy of "direct action" has recently been summed up as follows:

> Fellow-workers, you want an eight-hour day? Well, take it, and when you come back the next morning, tell the master you were on strike four hours yesterday. You want to get possession of the instruments of production? You are in possession already—all you have to do is to declare that you own the factory in which you work. If the master protests, lock him out. You say you don't get the full product of your toil? Get it, do only as much work as you are paid for, and go slow the rest of the time. You say the machinery ruins your health? Ruin the machinery for a while. You say you are treated like dirt? Put some dirt into the product.

It is a beautifully simple gospel of force. Against it we can only put the resolution adopted by the recent National Socialist Convention at Indianapolis, which declares in clear-cut terms that the repudiation of political action and the advocacy of sabotage, or any other form of violence, shall constitute a cause for expulsion from the ranks of the Socialist party.

The conflict between Socialism and Syndicalism is only one form of the division between the moderates and legalists on one hand, and the hot-heads on the other, that is found in every movement and every school. Syndicalism arose in France out of impatience with the methods of Socialist parliamentarism. Parliamentarism stands for half-measures, for palliatives, for con-

cessions. Syndicalism demands all or nothing. The great social overturn is to be accomplished at a single blow by means of a general strike of the workers of the nation, in preparation for which petty methods of warfare are highly desirable. It is a philosophy of desperation, and as such it has aroused the bitter hostility of those who by decades of patient effort and in the face of tremendous obstacles have built up the Socialist movement. Syndicalism would take a gambler's chance, but Socialism has too much at stake to risk the chance. Already the Syndicalist movement is on the decline in France, where its ideas were first developed. In the hands of the French thinkers, Syndicalism has been becoming anti-democratic —why not have a Cæsar, who will turn over the wealth of the nation to the workers?—and is thus sapping the very foundations of the political power of the workingmen.

But, in the main, the Socialist leaders have refused to be frightened out of their wits by the high-sounding claims of the Syndicalists. They insist on pointing out that it is through the now contemned political activity of the Socialists that the workers have attained that self-confidence which has made the Syndicalist philosophy possible. Philip Snowden, who is one of the leaders of the Labor Party in the British House of Commons, declared only the other day that "the partial conquest of political power which the workers have made has done more for them in six years than all the strikes they have ever waged or ever will wage." But more to the point is his sharp retort to the Syndicalist boast that the recent railway strike and the coal strike have demonstrated the superiority of "direct action" over parliamentary action. It is quite the other way, says Mr. Snowden:

> Both the railway and the miners' strikes were failures as strikes. Both were converted into successes solely by the interference of the State, the very power which the men had scorned and rejected. If the employers and the men had been allowed to fight it out without interference, the men would have been abjectly beaten.

Very much the same analysis can be applied to the Lawrence strike which first gave Syndicalism its "boom" in this country. What really happened at Lawrence was not that a strike was won by Syndicalist methods, but that a strike was won under Syndicalist leadership. Syndicalism has found a fertile field for its operations among the unorganized and unskilled workers. Such were the foreign-born mill-hands at Lawrence. But the strike was won at Lawrence, not by sabotage or barricades, but by the methods that obtain in every strike—picketing, parades, and appeals for popular support. Actually, the strike was won as a result of that extraordinary episode connected with the exportation of the strikers' children. There followed an outburst of indignation all over the country; and a Congressional inquiry—political action—was set on foot. There was the same exhibition of public sympathy regardless of class or creed in the shirt-waist strike of a few years ago. The same unorganized mass of workers was brought together in a great emergency; but at that time Mr. Haywood and the I. W. W. were not in charge, and so Syndicalism did not get the credit. We are inclined to believe that the ultimate philosophy of Syndicalism has left less impression on the minds of the mill workers in Lawrence than on the minds of newspaper readers.

"DOGMATISM" AS A VIRTUE.

Professor Meiklejohn, it appears, is quite as old-fashioned as Dr. Hibben. The newly-elected President of Amherst, till recently Dean of Brown, came out the other evening in a speech to the Brown alumni of New York in no uncertain terms against the elective system. "The boy chooses on some special line—the love of vocation, the line of 'snaps,' the line of a certain profession or the days that will let the student get out of town. What do you get? Any sort of training? None at all." In an age when the temptation is so great in higher institutions of learning to reflect minutely the complex changing conditions of outer life, he strikes a vigorous note for breadth and simplicity of instruction. "The old classical curriculum believed that if you take certain studies and work them through you'd get out of them the deepest things of human experience. I love the dogmatism, the certainty, the courage of that old curriculum. Whether right or wrong, it had something to give, something to be taken." Not that he would necessarily restore the older order unaltered. But he insists that the time has come again "for the American college to select from the body of knowledge a unified system and make sure that the boy who studies it has learned of human life. It's time for a new dogmatism."

The term "dogmatism" was, of course, used by Professor Meiklejohn apart from any unfavorable connotation. Employed in connection with the system which has taken shape at Amherst, its meaning is perfectly clear: there is to be no compromise in the new President's leadership. His words are encouraging as one more indication of the direction in which higher education in this country is moving. It may well be that colleges like Amherst and Princeton, with their less complicated problems than those of the large university, will point the way to a clean-cut reaction all around. Their influence just now is most desirable. For many have wondered whether the plans for revision which the universities have made are not hedged about with too many qualifications. Hand in hand with the requirement that students shall gain a general knowledge of some half-a-dozen subjects goes the chance for them to choose from a multitude of courses designed for much more specific ends. Universities strike the outsider as being somewhat apologetic if any programme is not strictly practical. So statistics have been gathered to prove that the college man succeeds better than his less educated brother, even in business. This question is really beside the point. College used to be thought capable of giving a man something which he could seldom acquire in purely commercial life. Why permit the suspicion to crop out that the worth of that excess is at all doubtful?

If dogmatism means asserting the conviction that the pursuit of an ideal truth is of the utmost importance, by all means let our universities be dogmatic. Far more than they seemingly realize, they have it in their power to make their communities a law unto themselves. Their main concern should be, as it used to be, more for theory than for practice. We understand how natural is the temptation to follow the opposite method. Take the subject of economics. Just now the cost of living is one of the most widely discussed questions of the day. Papers and periodicals are full of it. What more profitable than to set the student investigat-

ing some aspect of it by reference to recent printed documents? The boy "sails in" and in time writes an intelligent report on the way in which coffee, we will say, has been "valorized." The investigation has been profitable, perhaps absorbing. But his interest in general economic laws pales before that engendered in the minutiæ of a red-hot up-to-date example. Fortunately, universities are beginning to see that theoretical, or absolute, truth—the sort upon which ideals are founded—is difficult to deduce from a narrow study of actual, contemporary life. Existence examined at close range means loss of perspective. On that account it is most desirable that there should always be a distinction between the thought of the university and that of the outer world.

Professor Meiklejohn, in accordance with the Amherst programme, hopes to create an atmosphere of proper detachment by requiring a study of the classics. To us it appears significant that both he and Dr. Hibben are philosophers, who will naturally see to it that their special subject is not neglected. It and the classics easily combine. Who can think of Greek without Plato? Oddly enough, in the recent discussions on education philosophy has received little attention. Yet of all subjects it should seem to be best fitted to form the basis of any broad, rational curriculum. Small good will come, for instance, from glimpses into the greatest civilization of the past unless power is got to reason abstractly. This faculty is at present almost lost. Not only do young men find it hard to project themselves back of the present, but equally hard to pursue any line of thought which has no practical bearings. At Oxford philosophic training, we know, has been insisted upon as much as that in the classics; and the general run of Oxford graduates impress one with their eagerness to speculate on fertile topics. The same used to be true of our own students. Somehow, the capacity for flexible theorizing must be won back, if the college and university hope to live up to their traditional purpose.

The picture of a restored dogmatism, based upon a broad philosophic outlook, appeals strongly to the imagination. It would beyond question be upsetting. For though there could be no return to the loose handling of facts, now thoroughly discredited by practical, scientific methods, a touchstone would be at hand for testing the worth of a hundred little courses whose announcements make such a brave showing in college catalogues. Is the knowledge they present broadly illustrative of the most important processes of thought and faith? Do they go deep into significant human experience?

THROUGH THE OUTLOOKING GLASS

"Whichever way you look at it," said the Red Knigbt, "there is only one possible conclusion. I am the logical candidate at Chicago."

"What *is* a logical candidate?" said Alice.

"A logical candidate," said the Red Knight, "is one who, when tbe necessity arises, can prove that 'I won't' means 'I will.'"

"That should be a very difficult thing to do," said Alice.

"*I* find it the easiest thing in the world," said the Red Knight. "Let us look at it in this way: No one will deny that the President of the United States should be a man about fifty-four years old, about five feet ten inches tall, powerfully built, wear glasses, and live on the north shore of Long Island. That, I believe, is axiomatic."

"That's another word I don't know the meaning of," said Alice.

"An axiom, my dear girl, is something which is so obviously true that the man who denies it must be a crook or an infamous liar. Very well, then. In the second place, a candidate for the Presidency should be a man of wide experience. He must have lived in the White House at least seven years, and before that he must bave been a member of the Legislature, a Police Commissioner, a cavalry colonel, and the author of a short but masterly treatise on the Irish sagas."

"Is that axiomatic, also?" said Alice.

"Naturally," said the Red Knight.

"Then it means once more you."

"Exactly," said the Red Knight. "And in the last place he should be a descendant of the old Dutch patroons, a native of New York, and his name should begin with an R and end with a T and have at least two O's and a V between. Now what does all tbat prove?"

"Axiomatically, you mean?" said Alice.

"Of course," said the Red Knight.

"It means you again," said Alice.

"You are a very bright child to see the point so quickly," said the Red Knight. "Thus I am the logical candidate of the moment. But please observe that I am much more than that. I am also the physiological candidate, because I can speak faster and louder than any man in the country, and can slug a man harder through the ropes. Then I am the zoölogical candidate, because of my record in Africa. And I am the entomological candidate, because I am the broadest-minded man in the world, and my views are absolutely insectarian."

"I don't think that is a very good pun, do you?" said Alice.

"I think it's one of the best puns I ever heard," said the Red Knight, hastily, and went on. "The successful candidate must be one who knows how to make hay when tbe sun shines and how to get in out of the rain; therefore I am the meteorological candidate. He should be the man brought forward by a vast national upheaval; that makes me the geological candidate. And, above all, he must not be thin-skinned when accused of bad faith and personal motives; that makes me the dermatological candidate. So what does all tbis show?"

"It shows," said Alice, "that you *are* the logical candidate."

"It does," said the Red Knight, and, having divested himself of his armor, he thrust his hands into his pockets and whistled cheerfully.

NEWS FOR BIBLIOPHILES.

The files of Colonial newspapers are becoming recognized more and more as important raw material for history. With few exceptions the early and rare historical books have been reprinted and originals or reprints are readily accessible in public libraries. Only a few libraries, however, possess extensive files of any Colonial periodicals, and, in tbe case of the first ones at least, the student must visit several libraries in order to see complete series of any of our early newspapers. The most extensive files are those belonging to the New York Public Library and the New York Historical Society, Massachusetts Historical Society, Library of Congress, Historical Society of Pennsylvania, American Antiquarian Society, and Wisconsin Historical Society. In 1895 William Nelson of Paterson, New Jersey, published, as Vol. XII of "Documents Relating to the Colonial History of New Jersey," a collection of news items relating to the colony of New Jersey, selected from the newspapers of all the American Colonies. This is the most important publication of such material that has been made heretofore. Now the Society of Americana of Boston is publishing, under the title of "An Historical Digest of the Provincial Press," a series of volumes in which will be reprinted all items relating to American affairs, personal references as well as historical events, in the newspapers of the several colonies down to the close of the Revolution in 1783.

The first series, which will be in twenty volumes, is to be made up of extracts from the newspapers of Massachuestts. It is edited by Lyman Horace Weeks and Edwin M. Bacon, and the first volume which has been issued to subscribers promises well for the character of the work. It is an octavo of nearly six hundred pages (the exhaustive Index filling 77 pages, double column), well printed on rag paper, with fifteen illustrations, including facsimiles of manuscripts, pages from early newspapers, portraits, and views.

In 1689 there was printed in Boston, by Samuel Green, a single-sheet broadside, with type page 6¾x12 inches, with a heading *The Present State of the New English Affairs*, and while there is no evidence that the publisher intended to issue additional numbers, this has been called the first Colonial newspaper. The honor, however, really belongs to a little sheet, *Publick Occurrences*, of which "Numb. 1," dated "Boston, Thursday, Sept. 25th, 1690," is preserved in the Public Record Office in London. That Benjamin Harris, the publisher, intended to continue it as a news-

paper is shown by his announcement on the first page: "It is designed, that the Countrey shall be furnished once a moneth (or if any Glut of Occurrences happen, oftener,) with an Account of such considerable things as have arrived unto our Notice." But four days after the date of publication of this first number, the Governor and Council, finding that it "contained Reflections of a very high nature" and "sundry doubtful and uncertain Reports," declared their "high Resentment and Disallowance" of it, and ordered "that the same be Suppressed and called in," forbidding "any person or persons for the future to Set forth anything in Print without License."

The publication of *The Boston News-Letter*, actually the first Colonial newspaper, began in April, 1704. It was published by John Campbell, the postmaster of Boston, who for about a year before beginning his printed newspaper had prepared and distributed to a limited extent manuscript "news letters." The volume before us contains also all items bearing on American affairs from the existing copies of these manuscript letters. Then begins the series of extracts from the printed *News-Letter*, this first volume embracing from No. 1, April 24, 1704, to No. 167, June 30, 1707. Besides reprinting all American items, a short digest is given of that portion of the paper which contained news of the rest of the world, mainly made up from English papers. The advertisements, often the most interesting section of the sheet, are reprinted in full. Where the same advertisement appears in more than one number it is printed from its first appearance and this entry is afterwards referred to.

The character of the material collected in these volumes is extremely varied. Besides historical events, legislative acts, etc., which are chronicled in the histories and Colonial law books, there is a large mass of local and personal information, passenger arrivals and departures, residences, real-estate transactions, wills, etc.

It is to be hoped that the enterprise will not fail of the necessary support, so that the compilers' scheme of covering the entire American Colonial newspaper press can be carried out. L. S. L.

Correspondence

DANA AND MOTLEY ON ICEBERGS.

To the Editor of The Nation:

Sir: Before the Titanic horror becomes ancient history—while, in fact, it is yet fresh in memory—it may be worth while to call attention to certain old-time experiences which have a reflex bearing on it.

It has recently been asserted that the Atlantic ice-floe during the present season is unprecedented, and that the Titanic fell to a certain degree a victim to conditions hitherto unheard of. This may be so as respects its latitude south, but, nevertheless, it is well worth recalling that there are accounts of not dissimilar experiences, in neither case resulting in catastrophe, from the pens respectively of two such eminent writers as the late Richard H. Dana, jr., and John Lothrop Motley. The one occurred in August, 1856, the other, five years later, in June, 1861. The modern ocean liner had not then come into existence. Mr. Dana went abroad for the first time on the steamer Canada, a wooden paddle-wheel ship, built in 1848, which was continued in service on the Boston-Halifax Line until nearly 1870. Mr. Motley was on the Arabia, also a wooden paddle-wheel ship, dating from 1852. Both ships were of less than two thousand tons measurement, and in their construction no compartments were provided. The average passage then was from twelve to fifteen days—ships steaming at a rate of some twelve to fifteen miles an hour.

This being premised, the following is Mr. Dana's account of a portion of his voyage. Leaving Boston on July 2, the Canada made the usual stop at Halifax, and on Sunday, July 6, Mr. Dana closed a long diary entry, descriptive of what took place, as follows:

> The lookouts are on each paddle-box, on the forecastle, and in the foretop, and the captain kept the deck. The boat is at half-speed. At each half-hour, when the bell is struck, each lookout responds, "All's well," in turn, beginning on the forecastle, and so following round. It has quite a romantic effect. Staid on deck until 11½ P. M., and went below with plans, in case we should be obliged to take to boats, after collision with an iceberg or vessel.
>
> July 7, Monday. Rose early, and was rewarded by the sight of an iceberg. After a few minutes on deck, "Starboard—hard a-starboard!" was shouted from forward. "Hard a-starboard!" was echoed from aft. "Starboard; every spoke!" cried the captain. "Every spoke, it is, sir," said the mate. "Stop her! Stop her!" By this time several passengers rushed on deck, and a large iceberg lay looming in the fog a few yards to windward, with the small satellites drifting by its side. All we could see in the thick fog was the dull, dark mass, a few shades darker than the fog, high and long, with a broken, wild outline. It was soon lost in the fog to leeward. We were sailing directly upon it, and only the bright lookout saved us from running upon it.
>
> The passengers are now better satisfied with the slackened speed of the boat, and praise the captain for his careful watch.
>
> Tuesday, July 8th. Still fog, but lifting considerably, and full steam on, and all sail, making up knots. The captain has not been in bed, or at table, since we left Boston. He lies down on his sofa, in his coat and boots. I told him the passengers were well satisfied with his caution, and quite contented to go at the slackened speed. "Whether they like it, or not," said he, "it is my duty to do it. I am responsible for everything." This was a little gruff, but I liked the downright honesty of it.
>
> Wednesday, July 9th. Still fog, still the grey, gloomy ocean, broken into foam, and tumultuous seas, all about us. But we are clear of ice, and there are fewer vessels to be met in this upper latitude—for we are going north about—so we keep on at full speed.
>
> Friday, July 11th. This is our first fine day since leaving Halifax. The sun is out bright, the sea is smooth and blue, and the air soft and agreeable.

Mr. Motley's account of a similar experience, but going westward, is found in a letter written by him to Mrs. Motley from on board the Arabia, off Halifax. It is as follows:

> Friday afternoon last, 7th June (1861) about an hour before sunset, we saw the first iceberg, longitude about 43 or 44; latitude 49. We passed within three-quarters of a mile of it. It was about 300 yards long and perhaps 100 feet high, pale green in color, very precipitous in form, with a deep rift or crevasse through its whole bulk. The sea broke over its base, as the surf on a rocky shore. Very soon afterwards there was another on the other bow and before dark, seventeen had been seen. We were driving along at the rate of thirteen knots the hour, and it seemed rather a ticklish kind of egg dance as the night closed in. Fortunately, the weather was clear, and there was no difficulty in seeing them, and avoiding a collision. Several of us sat up in the smoking room on deck till daylight—going on deck from time to time to look at the bergs. We were sailing all night through a complete archipelago of ice islands. Sometimes they were very near. One, I remember, was so close to the wheel house where I was standing, that it seemed possible to toss a biscuit on it, and in all directions along the horizon there were others. It was a very brilliant sight. They seemed like islands of fire, so intense was the pale light which they emitted through the dark atmosphere.
>
> I turned in about three, when the dawn had already begun, but the icebergs were as thick as ever. At one time there were fifty counted in sight at the same moment. You may suppose, therefore, that when I was dressing at about half-after eight, I was not specially delighted to hear the shriek of the fog whistle. Presently we blew off steam and stopped, and when I came on deck the fog was so thick that you could scarcely see the ship's length. Two immense bergs had been seen just before the fog set in, one of them said to be near three miles in length. This was probably a great exaggeration, however. Fortunately, in about two hours it cleared again, and we went on our way rejoicing—seeing several large icebergs astern of us. This was the last of them, apparently. The group had extended over some 150 miles, and it was estimated that we saw as many as 200, so that there were possibly as many thousands, which were near, but out of sight. Since then, though troubled with fog from time to time, we have not slackened speed, but have been shrieking every half-minute and tearing on through the impenetrable gloom. Now the weather is brilliantly clear, and we shall run into Halifax by one o'clock, remain there two or three hours, and probably reach Boston to-morrow night.

In connection with the ice-floe and accompanying bergs of the present year, the foregoing graphic accounts certainly are not lacking in interest. Had the Titanic been handled in the same cautious way, and with a like sense of responsibility on the part of its commander, the worst marine catastrophe in history would not have occurred. Charles Francis Adams.

THE RELIGION OF SENSIBLE MEN.

To the Editor of The Nation:

Sir: In his Introduction to the edition of Froude's "Essays in Literature and History" in Everyman's Library Hilaire Belloc disputes that Disraeli was the author of the remark often set down to him, that his religion was "the religion of all sensible men," and of the reply to the question what that religion might be: "All sensible men keep that to themselves." In a tone which is likely to affect the reader's opinion of Mr. Belloc rather than of the late Prime Minister, he says "that Oriental" "could no more have made such a witticism than he could have flown through the air; his mind was far too extravagant for such pointed phrases"; and he proceeds to commend Froude because he "rightly ascribes it to Rogers, a very different man from Disraeli—an Englishman with a mastery of the English language."

Now, as a fact there is authority for ascribing this witty saying to one who was born more than a century before Rogers. In a footnote to the life of Garth in G. B. Hill's edition of Johnson's "Lives of

the Poets," the following statement occurs: "Garth, being questioned by Addison upon his creed, is said to have replied that he was of the religion of wise men; and being urged to explain himself further, he added that wise men kept their own secrets." As source of the quotation is given Spence's "Anecdotes," p. 115*n*.

Possibly the *mot* may be traced to a still remoter origin. Its production hardly requires so particular an order of intellect and such special racial qualities as Mr. Belloc seems to think, although it may exceed the powers of the "many men, many women, and many children" who, Dr. Johnson declared, could have written the Poems of Ossian. POPULAR GOVERNMENT.

To the Editor of The Nation:

Sir: The surprising failure of the general public to discriminate at once between the sophistry of Roosevelt's declaration that the people must rule and the sound declaration of President Taft that ours is necessarily a representative government, calls for a brief statement of elementary principles.

When an appeal is made to the electorate, all votes cast by the minority cancel an equal number of votes cast by the majority. It is only the excess above these cancelled votes which is effective. Therefore, it is only this indefinite body, usually small, which transfers its authority to the candidate elected, clothing him with power to represent all the people, both voters and non-voters. Precisely the same thing is true in measures passed by the recall, the initiative, and the referendum.

There is no such thing as a government of the people, by the people, and for the people. It is not a working hypothesis. The State and nation are far more enduring and far higher than the individuals living within them. And when the supreme call of war comes, the Government has the right to demand that the last dollar of treasure and the last drop of blood of its citizens shall be surrendered, if necessary, in order that the Government may live. A popular government simply means that it shall be administered for the benefit of all; and not for the benefit of the privileged few, whether individuals, corporations, or organizations. And this administration must necessarily be by representation in its legislative, judicial, and executive branches.

Roosevelt stands revealed in his elemental character. Reseated in the White House, he will seek to make his tenure permanent. Playing with calculated purpose upon the emotions of the multitude, as a musician plays upon his instrument, he will also buttress his position by alliance with the most unscrupulous politicians, by all the power of Federal patronage, by the support of favored corporations, and by the purchased support of military pensioners, who, already, are tearing at the vitals of our States and nation.

THE COST OF BOOKS.

To the Editor of The Nation:

Sir: Your correspondent, Mr. Edwin B. Holt, is to be congratulated for his outspoken language (*Nation*, May 2). The bad habits of publishers, in Europe as well as in America, are fostered by what the learned Professor Krumbacher (of Munich) used to call: *die Treue der* 200 *sicheren Bibliotheken*. Krumbacher spoke of scientific and artistic works of a high standard; more modest books can reckon on seven or eight hundred university, college, and city libraries. These libraries suffice to refund the publishers and even to insure an exorbitant profit on their publications, which often, on account of their prohibitive price, remain inaccessible to the reading and working scholars. I have been advocating for many years, in the *Revue archéologique* of which I am the director, the formation of an international committee of librarians, representing the two hundred *sure* libraries and some others provided with fair means. Whenever a book is issued with superfluous luxury, or at a price not corresponding to its aim—of course books for bibliophiles may be issued at any price—the committee should at once declare that *not one* copy of that book shall be purchased by the syndicate of libraries. After a few experiences of that sort the publishers would find it wiser and safer to consult the committee beforehand by sending an advanced copy. Only scientific works should be submitted to the committee, and only works costing above four dollars a volume. I have already proposed that such a committee be formed as the result of a meeting of librarians, and that the seat of the delegates be in Oxford. Salomon Reinach,

GARMOMBLES.

To the Editor of The Nation:

Sir: In the current (April) issue of the English journal, *Modern Language Review*, I have offered a solution of the old Shakespearean crux, *garmombles*, the term which in the 1602 quarto of "Merry Wives of Windsor," iv, v, 72, Sir Hugh Evans applies to the men who have been swindling the inn-keepers of Maidenhead and Reading out of their horses, etc. The word is evidently identical with Scotch *jurmummle* or Yorkshire *jurmungle*. In Wright's "English Dialect Dictionary" the former is defined as "1. to crush, to disfigure, 2. to bamboozle," the latter as "a mess, confusion." Both, moreover, are said to be obsolete even in the dialects. As far as the initial syllable is concerned, apart from the palpable hit at the Count of Mompelgard, some allowance must be made for Sir Hugh Evans's defective pronunciation, for he is a Welshman and mangles his English all through the play. It is the second of Wright's definitions of the Scotch word which applies here—only, of course, *garmombles* is used substantively. Mr. R. Warwick Bond in his edition of the early Elizabethan play, "Misogonus," included in his "Early Italian Plays" (1911), had already explained the *girmumble* of that piece, ii, iii. 79, by reference to the Yorkshire *jurmungle*.

Since writing the above-mentioned article my attention has been called to the fact that Dr. W. H. Browne, in *Modern Language Notes* for December, 1906, noted the occurrence of the word under discussion in Thomas Nashe's "Lenten Stuffe" (1599), where a fisherman delivers a herring to the Pope's caterer and teaches him to *"gear-mumble* it, sauce it and dress it." The passage will be found Vol. III, p. 207, in the new edition of Nashe's Works by R. B. McKerrow, where we have the spelling *geremumble*. The Index of this edition gives still another occurrence of the word—with the same spelling—Vol. I, p. 321, in "Four Letters Confuted" (1592), where, in belaboring his enemy, Gabriel Harvey, Nashe calls him a "fanaticall *Phobetor, geremumble, tirleriwhisco,* or what you will."

The word is not recorded in the New English Dictionary, Schmidt's "Shakespeare-Lexicon," or Onions's "Shakespeare Glossary," so it has seemed worth while bringing the instances of its occurrence together. Perhaps some of your readers may be able to make additions to the list. Nashe, it will be observed, uses it both as a verb and as a substantive. Mr. McKerrow, like Dr. Browne, makes no attempt to explain its meaning. He merely contents himself with citing in his Addenda the passage in "Misogonus," referred to above. In both of the passages in Nashe, however, the word carries with it the notion of violence, of cutting up, doubtless. This brings it close to the first of the meanings which Wright gives for Scotch *jurmummle*.

RAGGED SOLDIERS.

To the Editor of The Nation:

Sir: Some time ago, in looking through the French correspondence of the year 1589 in the Public Record Office in London, I came across a draft of instructions for Lord Willoughby, who was going to France with a detachment of troops to assist Henry of Navarre in his wars. One passage in the draft (inserted in the hand of Sir Francis Walsingham, principal secretary to Queen Elizabeth), which was omitted from the instructions as they were finally drawn, may be interesting to your readers because it calls attention to a prevalent evil in the drafting of soldiers for Elizabethan armies and sharpens the point of that well-known scene in Henry IV, Part II, which describes the "pricking" of Falstaff's ragged company:

> Whereas, we are given to understand that certain captains, who have had particular charge in the Low countries, as also elsewhere in our service, having more regard to their own particular profit than to their reputation and credit, do, in a most disordered sort (when there hath been special choice made of such bands as have been delivered unto them) dismiss for money the most apt and able bodies to serve, and do either furnish their places with rogues and such as are ill-conditioned persons and disposed to mutiny, or else do not supply their places at all, and instead of whole bands have scarce half-bands, notwithstanding we are charged with their whole pay, a matter both dishonorable and prejudicial to our service; our pleasure is, therefore, that you shall see due execution of such orders as shall be set down by our Privy Council for the due punishing and avoiding of such like abuses.

The draft from which this passage is taken is in the State Papers, France, Vol.

XX, folio 56. I have ventured to modernize the spelling and punctuation.

The complete poetical writings of the late George Cabot Lodge, including his dramas, "Cain" and "Herakles," have been gathered into two volumes with a supplemental biography by Henry Adams. While Lodge was not a great original poet, while his poetry may lack the consecration of genius, it has talent and character; while it may not make tradition, it is itself in the best literary tradition. It is unmistakably the work of a man of taste and reading, acquainted not only with his own literature, but with those of other languages as well, who, out of the conflicting modern influences to which he has been exposed, has finally attained to a point of view and a manner of his own. A strong sense for the adventurousness of life, a conviction of the excellence of unrest and activity and of a saving discontent with settlement and security,

Lest we grow tired and tame and temperate—

these are the main characters of his verse and are admirably illustrated in the following sonnet:

Let us go hence!—however dark the way,
Let us at all adventure hasten hence!
Too well we know what secret excellence,
Real and unrealized, brooks no more delay
Of who would make love perfect, and display
In life the spirit's true magnificence . . .
Haste!—lest we lose the clear, ambitious sense
Of what is ours to gain and to gainsay.
Let us go hence, lest dreadfully we die—
Die at the core of life where love is great,
Where thought is grave, audacious, and serene . . .
Thither and hence all vast achievements lie,
There where the truth's transcendent virtues wait
Up the dark distance, radiant tho' unseen . . .

The pseudonym "John Carter" serves to label a set of verses which have attracted some attention severally from the fact that they were written by a convict in the Minnesota State Prison. While they bear no resemblance to Verlaine's work, written under similar circumstances, they possess like his the kind of poetic merit which is inseparable from the utterances of the human spirit under the influence of strong emotion. Superficially their most singular characteristic is the incongruity which results in their case from the juxtaposition of actuality with the conventions and assumptions of modern poetry:

The line forms sullenly; there is no sound,
Save a sharp voice that rasps its "Forward march!"
The shuffling feet creep onward through the arch;
Locks clatter; and in weariness profound
Most sink unconscious to a dreamless sleep,
While some few through the night long vigil keep. . . .

Ah, we that know the better from the worse
Our deeper guilt must pay a thousandfold.
In mourning garb come those we loved of old
And some weep silently; but others curse.
"Ye filled the cup; why should ye not then drink?"
The words are just; our whipped souls can but shrink.

Mr. Pierce has something of a taste for Biblical subjects, which he treats in a suggestive, rather than a symbolical, way. The greater part of his volume is taken up with the colloquial poem on the deluge—it can hardly be called dramatic—which gives its name to the book; while his "Armistice" feigns a parley at some length, held on the shores of time amid the discouragements of eternity, between the arch-enemies Michael and Lucifer. Mr. Pierce's quality is that of seriousness—a quality which is naturally at its best in such lines as those on his father's grave:

Unmarked he lived and unregarded died
Who slumbers here; much dared, endured, and willed;
Seemed great to friends and God and none beside,
Foundation deep where fates denied to build.

Yet, dust beloved, couldst thou but know how crowd
Thick coming memories round thy noteless bed,
Thou might'st be proud to know thy children proud
Of their unknown, unstained, unconquered dead.

Obscure and shunned the path 'twas his to go,
Yet one at which the boldest heart might quail,
Through bitter, hopeless years descending slow
Disease's dark, Apollyon-haunted vale.

Despair and anguish round on every hand,
And Reason rocking on her crumbling throne,
Few sympathizing, none to understand,
He fought his dreary fight unhelped, alone.

Mr. Stephens's muse, on the contrary, is a much more tricksy spirit; indeed, she displays at times an unmistakable streak of Celtic whimsy. "The Sotherer," "Peadar Og," and "MacDhoul" are as waggishly irresponsible performances in such a vein as any one would care to see. And yet Mr. Stephens has his graver moods, too, in which he can be as impressive as he is at other times racy. Of this rather more quotable manner his transliteration of Chopin's Funeral March is a good example:

Yea, ye shall rest, O be sure that your sleep will endure:
Through the daylight, the dusk, and the dark, while the moon and the sun
Rise successive and fail and die down when the journey is done:
Ye shall rest, taking heed of no thing that shall come or shall go:
Ye shall sleep through the thunder nor heed when the hurricanes blow:
When the strong trees are felled and the rocks toppled down from the height:
While the mountains dissolve into sand and the valleys upright
Climb stark into mountains again, ye shall hear not a sound,
Secure in the sleep that I give in the heart of the ground:
Till the earth like a mote through the spaces falls into the sun,
And the work of all things that have been is a work that is done.

This same transition from vivacity to sobriety is no less characteristic of Mr. Mackereth. Impish as is his "Paddy Magree," his lines on the coronation night of King George are weighted with a kind of severity which is becoming rarer every day in English verse:

The latest King in time is crowned,
Hailed by a matchless empire's lips,
Proclaimed to every ocean's bound
With salvoes from a thousand ships.

The pomps, the plaudits melt away;
Like clinging pride of storied wars
They drift, the dust of yesterday,
A moment 'neath the steady stars.

On nipples of unnumbered hills
The lonely beacon-glow expires;
Lost in the downs the desert rills
Alone salute the stellar fires.

Hushed is the hamlet, dim the hall;
The smouldering city masks her eyes;
On shadowy shores no sound at all,
Save where a wave frets once and dies.

Through velvet darkness no foot goes;
The regal tale is wholly told.
The sleep is on the wild-wood rose
That laps the bones of Kings of old.

In general terms, Charity may be said to be the inspiration of Miss Matheson's "Selected Poems," of which her present volume is virtually a new edition. Her verse is the expression of a nature essentially religious, deeply sympathetic of the ills of humanity, and thrilling readily to the daily contacts and encounters of existence. To the delicacy with which she has succeeded in interpreting the feelings proper to such a character is due her popularity with a wide range of readers:

Within a dreary narrow room
That looks upon a noisome street,
Half fainting with the stifling heat,
A starving girl works out her doom.
Yet not the less in God's sweet air
The little birds sing, free of care,
And hawthorns blossom everywhere.

Swift ceaseless toil scarce wins her bread:
From early dawn till twilight falls,
Shut in by four dull ugly walls,
The hours crawl round with murderous tread.
And all the while in some still place,
Where intertwining boughs embrace,
The blackbirds build, time flies apace.
. . . . . .

And if she be alive or dead
That weary woman scarcely knows,
But back and forth her needle goes
In tune with throbbing heart and head.
Lo, where the leaning alders part,
White-bosomed swallows, blithe of heart,
Above still waters skim and dart.

Mr. Wuppermann's subjects are so unequal that it is difficult to hit off his verse in a single phrase. They range all the way from heavy dramatic monologues by such personages as Tantalus and Mary Magdalene to snatches of impromptu on clouds and roses. The former show some sense for blank verse, and that is reassuring as far as it goes; the latter, some sense for lyric trifling. The best thing in the book, however, is in neither of these kinds, but in the way of a sonnet, "Pelléas et Mélisande":

Doubt not there are more things in heaven and hell
And the wide earth between, than thou and I
Have dreamt us of, depths that no human cry
Hath fathomed with its shrillness, to dispel
The silence of long æons—who can tell
The mystic meaning of the unbounded sky?
Ah, poet, thou hast asked the what and why—
Behold the answer that thy musings spell:

Darkness, the dumb, mysterious moon, the kind
And patient star throngs, sick with fear, that wait
Above the whispered warning of the wind;
Fathomless forces of the soul that bind
Impotent phantom things to love and hate:
The splendid triumph of life's master: Fate!

Mr. Stanton's verse, on the other hand, is generally slight—or slender. Now and then he does a sonnet, but his ambition is evidently epigram. Occasionally he produces an effect of concision and point. The following lines on "Materialism" are as poetically successful as anything of his:

All dry and waste our gardens lie o'ergrown.
Where streams of cool refreshment flowed of yore
The forests of the soul have been cut down,
The fountains of the muses spring no more.
No more in myrtled Greece survive the groves—
Apollo wanders elsewhere with his lute;
Dodona's shrine and Delphi now are mute;
Amid the trees what nymph or dryad roves?

In his "Masque of the Elements" Mr. Scheffauer has attempted what may be called a cosmic poem. On the whole, it is probably a fair sample of the sort of theme which evolutionary science may be supposed to offer the poets of the future, wherein the moral agencies and interests of the past are replaced by the great powers and representatives of nature—sun, moon, earth, the four elements, time, and space. While appreciation is hardly at the height of these motives as yet, it may be said at a venture that Mr. Scheffauer's execution is not wholly unequal to his subject. In fact, "The Song of the Spirit of Creation," with which the volume closes, is not without a certain impressiveness of its own:

Once more the soft, terraqueous chaunt I hear
In choral, and the nuptual planet-dance
I mark. With puissant sceptre o'er each sphere,
Life thrones in music and in wonder's trance.
Hail! vessels solar and terrestrial, hail!
Whose prows shall cross the dim, celestial bars
With helm siderial and cloudy sail,
Bannered with youth and lanterned with the stars.
What fates for ballast? by what voices grim
And laughters urged, your astral course I mark,
Warped to what ports remote your hulks shall swim
Or anchor silent in what stagnant dark?
Mine arms have raised you from the cosmic deep;
Now Fire hath sprent his jewelled drops and sown
Marvellous seeds whence beauty's plants shall creep,
Season to season weaving, zone to zone.
Now sacerdotal Love shall shape and dye
His forms within the house of joy and tears,
And Birth shall bless and Death shall sanctify
Earth's passion and her pageant through the years.

In spite of the titular poem of Mr. Watts's volume, a rather lurid rendering in dialogue of the graceless old scandal, the writer is, if anything, less happy in dramatization than in the delineation of nature—a mere scene or aspect, a tone or color sufficing for the evocation of a whole countryside or season, as in his stanza to Winter:

Under bare poles the forest bends beneath the hurtling blast,
And the pine tree dreams of the wild sea days to come to its tapering mast;
And the hemlocks on their rocky ledge give voice to a winter song,
And the snow falls fast with a stinging dash
And the birches creak and the oak-boughs clash,
And the north wind hastens along, along,
And the north wind hastens along.

Amid the variety of good verse accumulating under the signature of E. Herrick, the consciousness of ocean runs in a singularly persistent undertone of allusion and figure. In particular, "The Ballad of the Monmouth" renews with unusual success and spirit one of the favorite motives of English poetry:

The Monmouth and the Foudroyant
Were close in deadly battle grip,
And Arthur Gardiner swore aloud:
"Thy snowy ensign shalt thou dip
And drench it in the blood-streaked brine,
And with it wipe away the stain
That soils my name along with Byng's
And let me sail at peace again" . . .

The Swiftsure and the Hampton Court
Made little headway in the chase,
For Gardiner's soul was set beside
His straining sails, and made the pace.
The dolphins danced before the prow.
They loved the Monmouth all and each.
And then she found the Foudroyant
And all her guns broke into speech. . . .

Their music shook the evening air,
Their light across the sea was thrown;
Right well the Captain knew his ship,
Hard pressed, the Monmouth held her own.
For two to one is slender strength
To fight a man who fights the past,
The flower of King Louis' fleet
Was like to find her peer at last. . . .

And so they took the Foudroyant, battered and wet with blood and brine.
She was the pride of Louis's fleet; the Monmouth least of all the line.
So Gardiner made clear his name of the false fog of slander's breath;
The morning woke the world again, but Gardiner slept sound in death.

For all the poetical association of numbers it seems something of an anomaly to reduce verse to the exclusively numerical denominations affected by Mr. Flecker. His "Forty-two Poems," he explains, is a reissue of his "Thirty-six Poems" plus six new poems. However it may be with his measures, his inspiration seems to have been affected to some extent by the French: he has one or two translations of Baudelaire and Leconte de Lisle which preserve the temper of the original pretty well. In his own vein, too, there is traceable a little something of that kind of serious levity which has come to be attributed rightly or wrongly to modern Gallic verse:

I am afraid to think about my death,
When it shall be, and whether in great pain
I shall rise up and fight the air for breath
Or calmly wait the bursting of my brain.

I am no coward who could seek in fear
A folklore solace or sweet Indian tales;
I know dead men are deaf and cannot hear
The singing of a thousand nightingales.

I know dead men are blind and cannot see
The friend that shuts in horror their big eyes,
And they are witless—O I'd rather be
A living mouse than dead as a man dies.

CURRENT FICTION.

Through the Desert. By Henryk Sienkiewicz. New York: Benziger Brothers.

The Henry Sienkiewicz of "Quo Vadis" does not appear here. This story has none of the vivid panoramic quality which took his earlier readers by storm. There is, to be sure, an historic backing for the tale. The events take place in Egypt and the Sudan in the time of the Mahdi, and the fall of Khartum and the taking of Gordon have their influence in the narrative. But it directly concerns the adventures of two children—a Polish boy of fourteen and a little English girl of eight. Mr. Rawlinson, the girl's father, is a director of the Suez Canal Company, and Vladislaw Tarkowski, father of the boy, "Stasch," is his chief engineer and close friend. Both children are motherless—a fact which goes far towards accounting for their adventures. No pair of sensible mothers would have been likely to permit their boy and girl to set out in native hands on a long journey at such a time, even though the end of their journey was a long way from Khartum—already besieged by the Mahdi. However, the two fathers are more easily satisfied, and set out from Port Said to inspect a new canal system at Medinet, after making arrangements for the children to follow them a week later. Unluckily (or luckily for the story-teller), the Arabs in whose charge the children are to travel are members of the Mahdi's own tribe, and they are kidnapped as hostages almost at the start. The ensuing adventures give the boy Stasch plenty of chance to show his strength and prowess; and in the end he brings back his little companion and himself to safety, alone through the desert, according to the best traditions of the honorable company of boy-heroes. It is a story for children rather than adults, but its pictures of desert life and its interpretation of boy and girl character are upon a much higher plane than that of the ordinary story of the general type.

The Luck of Rathcoole. By Jeanie Gould Lincoln. Boston: Houghton Mifflin Co.

A prophecy, a talisman, a gentleman of fortune, a fair and saucy American maid, plenty of masks, sword-play, and quaint language, are the not unfamiliar materials here employed. The opening scene is laid in New York, and the time is supposed to be 1789. Washington is obligingly letting himself be inaugurated in the background, while in the foreground the young man and the maid are being introduced. He is of Scotch-Irish blood, and has come to America in search of a lost necklace without which his family cannot prosper, or he himself be safe. But he is perfectly ready to interest himself in other worthy matters. Miss Faith Wolcott, known as "Miss Moppet," is clearly such a matter, and as she is obliging enough to become a factor in the business of the necklace, a respectable plot is woven, as romantic plots go. Miss Moppet possesses "that rare gift of the gods, perfect beauty." Oddly enough, Nugent is not described as an Apollo, but he has "a quick eye and a strong arm, backed by almost reckless bravery," and that, after all, is more important.

The Fighting Blade. By Beulah Marie Dix. New York: Henry Holt & Co.

This is not a book which would be popular just now in England, for its hero is a young German soldier of fortune who kills a large number of Englishmen during the course of the tale, both on his own responsibility and as a captain under Cromwell. He has a duel on hand with Roaring Wat, the brother of pretty Thomsine; Wat wishes he had not, and his little sister dresses up as a boy and goes secretly to the German's lodgings to stop the affair. "In all those tingling trepidating moments, while she scurried through the midnight town on her crazed errand, she had been visioning the monster to whom she must make her plea." So, of course, when she lays eyes on him she falls deep in love. He is kind and polite, and from then on we have no serious anxieties as to the outcome. Even when the Royalists have caught Karl Ludwig von Kerstenbroock, and the gallows awaits, we are not really frightened. We have a feeling that all is going to be well. But will the author allow us one suggestion? On horseback the easiest way to carry a disabled man is not to sling him over one's shoulder, as Karl Ludwig does.

The Real Mrs. Holyer. By E. M. Channon. New York: Doubleday, Page & Co.

How large a dose of improbability may the gentle reader fairly be expected to swallow in a realistic novel? It is hard to say. A young Englishman of family marries an ill-treated governess, and they spend a honeymoon of a few weeks in the country. Although the bridegroom is an exceptionally frank youth and the bride a clever and sensible girl, she does not learn that his father is a nobleman and has a country house within a few miles of them. She knows only that for a time his father must not learn of the marriage. Her husband, called away for a short business trip to Jamaica, has urged upon her the importance of keeping their secret. Time passes, and nothing is heard from him; yet she makes no attempt to trace him, since this would involve declaring herself to his family. She bears a son, and supports herself and him by teaching in the village school; then, after five years, the mystery is cleared up by an accident. If we are willing to accept this fundamental improbability in her character, we shall find the story enjoyable. The emphasis is placed skilfully so as to divert attention from the weak places, and the heroine, with the exception just noted, is thoroughly human and attractive. The other characters are well-drawn types rather than individuals.

A LIFE OF MARK HANNA.

Marcus Alonzo Hanna: His Life and Work. By Herbert Croly. New York: The Macmillan Co. $2.50 net.

The singular interest of this book is undesigned. It lies less in the subject than in the author. Mr. Croly, that is to say, acting as official biographer, sets out to give us the "true" Mark Hanna, to revise current judgments of him, to clear away misunderstandings, and to arrive at a dispassionate appraisal of the man; always proposing to himself a certain ideal conception of him. His concluding chapter is a long and, no doubt, conscientious effort to explain and, to a degree, glorify Hanna as a "pioneer." Yet between the deprecating introduction of the volume and its apologetic summary lie the facts of the life; and these are presented so fairly by the biographer, with so little attempt to palliate or gloze over, that by themselves they pull down a good part of his theoretic structure. Struggling to work out a better view of Hanna's political activities, to rescue his character and

make it appear less sordid than contemporary estimates had made it, Mr. Croly is baffled by his own frankness and honesty. It is an almost pathetic case of an artist thwarted by refractory material.

Something, indeed, the biographer does accomplish in bringing out the human side of Mark Hanna. We see him a rather heavy and entirely unpolished man, yet good-natured, friendly, personally unpretentious, with a rough kind of democratic feeling for all sorts of people, kind to his employees and with a sincere interest in the welfare of workingmen. His affection for McKinley—amounting almost to devotion—was a master-passion in his life. That it brought Hanna fame and power does not affect its genuineness or intensity. He paid $100,000 out of his own pocket to help effect McKinley's nomination in 1896; he put his organizing abilities and his purse at the President's service all during his first term, and was cut to the heart when it appeared, for a time, that McKinley thought it neither advisable nor safe to trust his political fortunes longer to Hanna's management. But this was got over, and the two were on terms of the greatest intimacy until Czolgosz's bullet.

It is hard to read much importance into Hanna's early career as a business man. By shrewdness and energy and by taking advantage of his opportunities—such as those offered by the expanding trade of the great lakes—he amassed large wealth and acquired the reputation of a masterful man of affairs. His gradual drawing into politics was a natural development of his business activities. He had large interests, and they had to be protected. His street-railway franchises had to be guarded and renewed, and the readiest way to do that was to make friends of the mammon of local politics. So we early find him a generous campaign contributor. He even "peddled tickets" for the "right" members of the City Council. The votes of politicians in control of the traction franchises "had to be secured by some kind of influence." "A street railway company . . . had to purchase this influence or go out of business." The only alternative was that of "buying either the needed votes or the needed influence.' Mr. Hanna's Company was "no exception." "He did what was necessary to obtain the additional franchises." One sees that Mr. Croly is frank!

So he is in his account of Mr. Hanna's politico-financial operations on a national scale. Mr. Croly labors to show that Hanna honestly believed in the doctrines of protection. But his sincerity may be conceded; what were the methods that he sincerely pursued? His biographer gives us a plain tale. Hanna systematized the collection of campaign funds as it had never before been done. In this he was not so much a pioneer as Mr. Croly would make him out. Brave men had fried the fat out of protected manufacturers before this Agamemnon. But no one had so carefully seen to it that each piece of fat was located and duly fried. "Responsible men were appointed to act as local agents in all fruitful neighborhoods. . . . In the case of the banks, a regular assessment was levied, calculated, I believe, at the rate of one-quarter of one per cent. of their capital. . . . Life insurance companies were liberal contributors. . . . Mr. Hanna always did his best to convert the practice from a matter of political begging . . . into a matter of systematic assessment. . . . The explicit recognition on the part of contributors that they were *paying for a definite service* [our italics] enabled Mr. Hanna still further to systematize the work of collection." Could the process of commercializing politics have been more openly carried on? Mr. Croly is aware of the evil and is troubled by it, but does not appear always to recognize it in all its enormity. He records at length, for example, Mr. Hanna's efforts to induce Congress to make choice of the Panama route for the Canal; he makes no reference to the charge, which has been made on oath, that Hanna had had a campaign contribution of $60,000 from those interested in selling the French property to the United States. But this would have been, on Hanna's avowed principles, only a "definite service" regularly paid for.

The book's contribution to the political history of Hanna's day is not extensive. No important secrets are revealed; few new documents of significance are printed. There is a long and interesting account of the way in which the "gold" plank came to be adopted in the Republican platform of 1896, but it serves only to confirm what was previously known. The public record which Mr. Hanna left behind him is confessed by Mr. Croly to be "slim." His most important political negotiations were not committed to paper, and his correspondence, as only in part preserved, "throws comparatively little light upon the critical decisions and moments of his career." Yet the labor which Mr. Croly has expended has not been in vain. His style is diffuse and the book is unnecessarily long; but between its covers we have a truthful outline of a life big with morals for those who study Hanna's generation, and who see how its evil lived after it to vex the next. One of the men who in these pages is often referred to as a friend and coworker of Hanna's, has been heard to sum up the active principle of his political life more pithily than Mr. Croly anywhere attempts it. He did it in these words: "Whenever Mark Hanna wanted anything, his first impulse was to go out and buy it."

The Making of Western Europe. By C. R. L. Fletcher. Vol. I: The Dark Ages. New York: E. P. Dutton & Co. $2.50 net.

The sub-title of this work, "An Attempt to Trace the Fortunes of the Children of the Roman Empire," indicates clearly the purpose of this and of the volume that is yet to come. The first volume, now before us, has its limits laid down by its theme, the Dark Ages. Since the days of Maitland, if not earlier, these words have formed an epithet very convenient for the historical reader and extremely elusive in its many meanings for the historical student. Mr. Fletcher capitalizes the words, occasionally, in the course of the work, tacitly assumes them to indicate some process of retrogression or social somnolence, assigns them a period of time that ends with the year 1000 A. D., and then proceeds, probably without intention, to make use of a great quantity of evidence which shows that the term is a misnomer. All of this evidence asserts, as Dill has amply explained, that the altar fire of human culture never burned dim; and that, if it did so seem, it was for the sole reason that too often it was observed through the eyes of the barbarians. To the men of the South these years at no time presented more than a very simple, if extended, problem in assimilation, a problem whose analogue we have seen in our own times.

Perhaps in this touch and go acceptance of a convenient and popular generalization we may find the key to the inner life of the volume. The style, as might have been expected from our knowledge of the earlier "Introductory History of England," is vivid rather than restrained, popular rather than scholarly, sweeping rather than accurate. Bold strokes, contrasting suggestions, wide-reaching generalizations, take the place of patient accuracy and logical deduction. There has evidently been ample preparation, but there are comparatively few marks that indicate the nature of the tools used. The footnotes are informational and suggestive rather than scholarly, and for indebtedness to some of his contemporaries there is little acknowledgment. But in these very qualities lies also the strength of the work. Its vivid and rapid method make it delightful reading, and viewed with the eyes of the general reader or of the young student of mediæval history, its impressionism gives a sweep and depth that might have been lost by more painstaking methods.

The story of the making of Europe depends, among other causes, upon three guiding forces. The persistent life of a body of ancient law and manners, the intrusion into this of an older body of Eastern thought, and the growing economic necessities that forced a population which had been concentrated near

the Mediterranean to spread itself over an area eight or nine times as great. The second of these forces concerns itself with the great central problem of the Middle Ages, Christianity; and in his treatment of this topic Mr. Fletcher has been particularly clear and enlightening. This is especially true of his characterization of the almost imperceptible growth of the religion in its early years, and of the large debt that it owes to Pagan society around it. On the other hand, he dismisses the cults of Mithra and Isis with almost a word.

But Christianity became the great power of this period because it took to itself all the life of that old body of Roman law, and identified itself with the feudal system. As the author remarks, the so-called barbarians came into the Empire to enjoy its benefits rather than to destroy it. Now among those benefits was this Christianity, which, within itself, came more and more to be the medium of the transmission of all the accumulated values of the past. The elimination of the Arian heresy in the West is nearly coterminous with the first consciousness on the part of the Church of her position of strategic importance. This is the time, too, of the awakening in her of those designs and plans that should, in their mighty evolution, at last come into conflict with another force born of commerce and trade. The Christianity of Western Europe united its fortunes with those of Feudalism and landed preference, and it rose and fell, as a human mechanism or social organism, with Feudalism. In his chapters on life in Gaul and Italy and in that on Charles the Great, Mr. Fletcher repeatedly returns to this idea. But the author here, as before, approaches the question from the Northern side, as if Europe had consciously turned Teutonic and that a seeming revival of Roman law and social order had, in the end, modified barbarian habits. Rather is the reverse true, that the tribes which spread themselves throughout the Empire eagerly sought assimilation and willingly adjured tribal habits. This is shown, at successive stages of the growth of the Lombard Law, in the gradual disappearance of the idea of "blood money"; and, had Mr. Fletcher kept this idea thus in view, he would not have asked why, in the story of Lombard Italy, there is distinct mention of using Lombard law for Lombards and but one isolated case in which the application of Roman law is mentioned. The point is that, normally, Roman law determined all procedure, but that the dominating presence of the Lombards demanded the naming of the cases in which the foreign and not yet assimilated method was employed. On any other assumption than this it seems impossible to explain why the living body of mediæval law should be, as it was, altered Roman and not altered barbarian practice, among all the children of the Empire except, perhaps, England.

There is an interesting chapter on Islam, the last contribution of the East to the West during this period, that might have been expanded if a larger amount of space had been allowed for the question, too often forgotten, of the influence of the Jewish element in the religion and life developed among the followers of the Prophet. Some, perhaps unreasonable, estimates place the number of Jews in the neighborhood of Alexandria at the time of its conquest by Amru at above a million. Quite certainly the conquest and settlement of Spain by the Moors involve a transfer to Europe of a people who had taken to themselves a religion from Arabia, physical characteristics from North Africa, and a civilization absorbed from that part of Judaism that abjured Christianity. And thereon hangs a long tale that ends in the awakening of scientific knowledge in the West.

The volume is bulky but light in weight and easy to handle. It is not illustrated, but contains three adequate maps and an ample index.

American Colonial Government, 1696-1765. A Study of the British Board of Trade in its Relation to the American Colonies, Political, Industrial, Administrative. By Oliver Morton Dickerson, Ph.D. Cleveland, O.: Arthur H. Clark Co. $4 net.

The popular American conception of British history is a product of Whig writers, and none among these has exercised greater influence over our interpretation of his country's history than Edmund Burke, our admiration for whom as a man of letters has obscured the fact that his mind and pen were so long employed in the interest of a small clique of Whig politicians of narrow views and small ability. As a member of the Opposition in 1780, Burke brought into Parliament a necessary bill to cut down the civil establishment and, in the course of the ensuing debate, succeeded with his inimitable wit in ridiculing the Board of Trade, which he called "this hospital for the maintenance of veteran authors, not upon half, but full pay." He was at his best as he described the 2,300 "huge and massy volumes" which had been compiled within the course of almost a century.

All unconsciously, public opinion has accepted this "Old Whig" verdict on a department of government created particularly to promote the trade and colonies of Great Britain. But here comes Mr. Dickerson, who is among the first to make a careful investigation of these "huge and massy volumes," the examination of which Burke postponed till Doomsday, and by a very scholarly analysis of the situation reaches quite a different opinion. The Board enjoyed periods of great activity, separated by periods of somnolence, due not to the character of the office nor its personnel, but to the character of the Ministry. The department was established in 1696, and down to the accession of George I performed the functions assigned it with zeal and intelligence. Between the years 1714 and 1748 occurred a period of quiescence, because the Whig leaders preferred to concentrate authority. This was particularly true of the Duke of Newcastle, one of those fussy, nagging executives who cling tenaciously to their authority and grant no confidence or power to subordinates. The result was that the Lords of Trade, whose office was not organized for offensive warfare, were forced to suffer many encroachments upon their prerogatives.

With the appointment of Lord Halifax to the presidency of the Board, in 1748, began a new period of great activity and influence for a department that had appeared moribund. Mr. Dickerson, in his discussion of Lord Halifax and his successors, has added a valuable chapter to the history of the institutions of Great Britain and the relation of the mother country with her colonies. He has made a careful study of Lord Halifax's career at the Board of Trade and has clearly proved that an important element in the renewed activity in colonial business, so conspicuous in the middle of the eighteenth century, was due "to the energy and ambition of Halifax, who recovered the powers which had gradually been usurped by the Secretary of State, and even acquired new ones which the Board had never before exercised; such, for instance, as the power to appoint colonial officials and to perform other executive functions."

This period of revival lasted until 1766. The question naturally arises why Mr. Dickerson has chosen the year 1765 as the close of his study. That year has no significance in the history of the Board of Trade; whereas the years 1766 and 1768 did mark decisive changes which are casually mentioned in the narrative. In the first named year, the Board of Trade was completely subordinated to the department of the southern secretary; and in July, 1768 (not January, as Mr. Dickerson writes), the recently created Secretary for the Colonies became president of the Board of Trade, an event which brought to an end the issue raised in almost every Ministry of the period: Should the president of the Board of Trade or the Southern Secretary exercise the full authority over the colonies? Lord Halifax attempted twice to procure for his office that power; Lord Shelburne tried in 1763, Lord Hillsborough the next year, and Lord Dartmouth in 1766, the ques-

tion was carefully discussed in the summer of 1767, and in January a new Department of State was created for the colonies. Mr. Dickerson has missed the full importance of this issue, probably because his energy has been so fully expended in the examination of those "huge and massy volumes" that he did not search for some very significant passages in volumes of the memoirs and correspondence of contemporary statesmen, several of which are not mentioned in his otherwise excellent bibliography. He has thus been led to neglect almost entirely one important phase of his subject: the Board of Trade in politics. Certain politicians were bitterly opposed to the unification of the Colonial Office either by increasing the power of the Board or by creating a new Secretary of State for the Colonies. Mr. Dickerson does not inform us why Pitt foiled Lord Halifax's plans, a fact of which he is ignorant; also why certain politicians opposed the promotion of Lord Dartmouth to a third secretaryship; and why several of the Bedfords were never reconciled to the changes of 1768. Had he attempted in a discussion of these events to depict the political environment within which the Board lived, he would have greatly enhanced both the historical value and readableness of his work.

The chief interest of the volume is centred in the operations of the Board of Trade, its relation to the other departments of the Government, and its imperialistic policies. Particularly good is the analysis of the Privy Council and its committees, for in the chapter devoted to the subject the operation of the governmental machinery is displayed and sufficient proof is offered that there was only one committee of the Privy Council, not two, as has been so frequently supposed, which took under consideration colonial affairs. As the author writes:

> The whole machinery of the British Government for colonial administration included a Board of Trade to investigate, gather facts, and make recommendations; a Committee of the Privy Council to act as a board of review and a court of appeals, both administrative and legal; and the Privy Council, meeting with the king, before which all final actions of importance were registered.

The final judgment of the work must be highly favorable. The subject is not one that will appeal to the public in general, although the lucidity of Mr. Dickerson's style has made the volume very readable. Occasionally, indeed, the monotony of the discussion becomes wearisome; but in a work of this character fulness of treatment, even with danger from dulness, is to be preferred to brilliancy of style and superficiality. This fulness of treatment is offered by the volume, which is undoubtedly the first adequate discussion of the subject and one of the best treatises covering a very much neglected period in our colonial history.

La Famiglia Italiana Nei Secoli Decimoquinto e Decimosesto. By Nino Tamassia. Milan: Remo Sandron, Libraio della R. Casa. Pp. xx+373.

During the centuries which preceded the Communal Era, the diminished population of Italy was, for the most part, dispersed in small groups: in open *ville*, in the ecclesiastical *masse*, in *case coloniche*. Production was completely localized; economic competition ceased, and the state, as a unifying social force, became little better than a phantom. The political unit was no longer the nation or the city, but the family. Compelled to provide for its own security, the family changed its character; patriarchal government was revived, and only such persons as were agnatically connected together and subject to the same paternal power were recognized as kinsmen. Subsequently, a voluntary association of families gave birth to the Commune. This is a fact of primary importance; and, because a single concrete example is often more illuminating than many pages of generalities, we shall illustrate it by a brief account of the origin of the oldest of Tuscan republics.

The Pisans who, earlier and more vigorously than their Genoese rivals, swept the Saracens from the Western Mediterranean, and drove the prows of their galleys against the chains of the harbor of Palermo, were simply private citizens; though free at sea, they had as yet not achieved self-government on land (Amari, "Storia dei Musulmani di Sicilia," Vol. III, lib. v, cap. i). In the aggregate they formed a compact group of families, the richest and strongest in the city, the owners of all, or nearly all, ships which went to make up the navies of Pisa. United by common interests and by oaths, they had early established those sea-customs—*consuetudines quas* [Pisani] *habent in mare*—which were approved, in 1073, by Pope Gregory VII, and confirmed, six years later, by the Emperor Henry IV (Muratori, "Antiquitates," IV, 19). At first, of course, these customs can have had no validity or coercive power except as among the associates themselves, and, even for them, only when they were engaged in maritime undertakings. But the associates were not merely merchant adventurers; they possessed towers in Pisa and lands in the *contado*, and they must soon have realized that the same oath-fellowship (*conjuratio*) which enabled them to achieve freedom and supremacy at sea might prove an equally effective weapon upon dry land. Thus, side by side with the Bishop and the Visconte, the lawfully constituted powers of the state, we find a voluntary private association, continually growing in power and importance, gradually usurping public attributions, and, at last, blossoming into the free Commune. In the last decades of the eleventh century Pisa had achieved autonomy and was governed by her own consuls.

From the nature of the case, the territorial jurisdiction of the embryo Commune had been purely voluntary, representing, as it were, the sum of all the fragments of authority which the associated families separately enjoyed and exercised. In process of time, however, as the associative nucleus acquired greater cohesion and stability, a vigorous collective life destroyed the autonomy of the individual associates, and, little by little, those jurisdictional rights which its members had previously exercised over their own allodial lands and feudal estates were transferred to the body politic. Thus, from the very first, the newborn Commune possessed considerable territorial jurisdiction, and this it naturally sought to consolidate and enlarge, with the result that it was brought into immediate conflict with Lucca. Such, in its barest outlines, is the history of the origin of the Commune of Pisa, and, *mutatis mutandis*, it is the history of the origin of all or almost all the larger Italian republics; a voluntary association of family groups (see, on the whole subject, Volpe, "Questioni fondamentali sull' origine e svolgimento dei Comuni Italiani," Pisa: Tip. Successori Fratelli Nistri).

Considerations such as these enable us to understand why, in the early days of Communal freedom, public ambassadors were often dispatched on behalf of private citizens, and why the right of family vengeance so long continued to be recognized: the Commune seeking rather to limit its exercise as inexpedient than to suppress it as unlawful. Nor did the family cease to exist as a political unit until the Communal era had drawn to its close. In Italy, so far at any rate as the upper classes were concerned, the family, in the modern sense of the term, was a product of the Renaissance.

It will thus be perceived that, when Professor Tamassia undertook the task of writing a book on the Italian family in the fifteenth and sixteenth centuries, he committed himself to no mere chronicle of domestic life. Besides chapters on marriage, divorce, concubinage, and the like, the work contains others on crime, private vengeance, morals and religion, law and justice, and so forth. It is, in fact, a study of the Italian people during the period of the Renaissance, and one which possesses especial charm and value because the author has regarded his subject from an entirely new angle. The result is a volume of which it is impossible to speak too highly, and we hope that it may soon find a competent Eng-

lish translator. We have read nothing so profound or so illuminating since the days of Burckhardt and of Symonds.

Notes

R. L. Stevenson's memoir of Fleeming Jenkin is to be issued by Longmans in a separate edition.

The same house has in hand "The Authority of Religious Experience," by Dr. Slattery, rector of Grace Church, New York.

Mrs. Stratton-Porter's new book, "Moths of the Limberlost," is announced by Doubleday, Page & Co. for June.

Bell & Sons of London are bringing out in eighteen volumes of about 120 pages each a series of English History Source Books, covering the range of English history from Roman Britain to 1887. The work is under the general editorship of Kenneth Bell and S. E. Winbolt.

Dr. E. Sieper of Munich is the editor of a work in several volumes which will begin to appear shortly. Its title is "Modern England," and it will be published by the German-Anglo Committee for the promotion of friendly relations between the two countries.

The second issue in the American Historical Series, edited by Charles H. Haskins (the first was Professor Hazen's "Europe Since 1815"), is an "Historical Atlas," by William R. Shepherd, professor of history in Columbia University. The books are published by Henry Holt & Co., but the printing of the maps in the present volume has been entrusted to Koerner & Dietrich of Leipzig. The impression is beautifully clear. The maps begin with the ancient empires and conclude with a plan of the Panama Canal. Besides the usual maps of countries, cities, battles, there are such interesting additions as a Ground Plan of a Monastery (St. Gall), a Plan of a Mediæval Manor, etc. The book is well conceived and well executed. An interesting addition to Everyman's Library (Dutton) is "A Literary and Historical Atlas of Europe," by J. G. Bartholomew. The historical maps begin with Europe in 525 A. D. After them come plans of battles and maps of such regions as Dumas's Novels, Borrow's "Lavengro," Dickens's Works, etc. At the end is a literary gazetteer, followed by the index.

Percy Ashley's "Modern Tariff History," of which the first edition was published in 1904, now appears in a second edition (Dutton). The main changes consist in the addition of chapters to each of the three parts into which the book is divided—on Germany, the United States, and France, respectively. The new chapter on Germany describes the revised commercial treaties concluded with almost all countries in 1903-06, and the conventional tariff which went into effect in 1906; that on the United States, of course, takes up our Payne-Aldrich act of 1909; that on France considers the latest measure of all, the French revised tariff of 1910. In these supplements the same qualities appear which made the book valuable in its first edition—clear exposition, accuracy, absence of prepossession, and a judicial statement of the currents of opinion in the several countries. Mr. Ashley's judgments may sometimes seem colorless to those having strong convictions on the controverted questions of principle, but they are always sensible, and between the lines one reads a clear sympathy with liberal trade policies. It cannot be said, on the whole, that the trend of recent legislation has been in the liberal direction. Mr. Ashley notes, indeed, the signs of reaction against extreme protectionism in this country; but in Germany the new conventional tariff leaves the duties on manufactures on the whole unchanged, and increases the rates on agricultural products, while in France the tariff of 1910 pushes protection a notch higher. The book can be heartily commended as a general survey of the course of tariff legislation in the three countries since the close of the eighteenth century.

The verses which John Stow asserts in his chronicle were made by Lydgate for the pageants at Queen Margaret's entry into London, 1445, have most probably been unearthed, after lying in manuscript only partially identified all these years. They were found by Prof. Carleton Brown of Bryn Mawr College, in MS. Harl. 3869, just preceding the "Confessio Amantis." The verses bear no signature, but the scribe's superscription, part of which has been trimmed away, reads: "1445, ye 28 of May, Quene Margaret . . . the Citie of london." Also, headings belonging to the poem correspond so closely to Stow's account as to make the identification almost complete. So the tag to one stanza is "Atte the Brigge foot in Suthwerke Pees and plente. Ingredimini et replete terram"; in Stow are the words: "At the bridge foote toward Southwarke, a pageant of peace and plenty, *Ingredimini, & replete terram,* and certaine verses in English." On what authority Stow ascribed the verses to Lydgate does not appear, but Mr. Brown is right in thinking that tests of style serve to confirm it. The work is surely no more brilliant than the Monk of Bury's good-intentioned best, and besides has much of his quality. Mr. Brown in printing his find, which amounts to 170 lines, explains that at one place a space, sufficient for two stanzas, has been left blank by the scribe (who may have been copying what he knew to be a faulty document), and by a pretty bit of reasoning surmises the nature of their contents.

Arnold H. M. Lunn has edited a volume of "Oxford Mountaineering Essays" (Longmans), devoted rather to the suitable preparation of the spirit of the prospective climber than to the relation of climbing experiences actually achieved. The book opens with an appreciation of Prof. C. J. Holmes as an artist of mountains, by Michael T. H. Sadler of Balliol. The mountain artist, he holds, needs a discriminating hypercivilized primitivism, which shall have at its command a wealth of detailed knowledge from which wisely to select and discard until the proper synthetic effect shall be attained, and this quality he finds in Holmes to a greater degree than in any other modern artist. As for artists of an earlier day, the necessary selective point of view simply made no appeal, he holds. Norman Egerton Young contributes a readable essay on Mountains in Greek Poetry, fitly interspersed with quotations generally, though not invariably, translated at the foot of the page. Homer and Hesiod, Pindar, Theocritus, Æschylus, and Euripides are all drawn upon, Homer furnishing more than the other five combined. A chapter on "Roof-Climbing at Oxford" may suggest a *reductio ad absurdum,* but the philosophic spirit in which it is cast saves it. The volume as a whole is a commendable offshoot of Oxford culture, and will make pleasant reading to any one who has the requisite sympathy with the point of view.

In a monograph entitled "Saleswomen in Mercantile Stores, Baltimore, 1909" (Charities Publication Committee), the Russell Sage Foundation has published the results of an inquiry which it undertook in cooperation with the Consumers' League of Maryland. The author, who died before her book appeared, was Miss Elizabeth B. Butler, known for her earlier investigation of women's trades in connection with the Pittsburgh Survey. In the present volume she has set down the results of a comprehensive and painstaking study of shop conditions—heating, lighting, ventilation; arrangements for rest, refreshment, and the general comfort of employees; the organization of the working force; in particular, hours of work, irregular and intermittent employment, wages, bonuses, and rates of pay for overtime. The reader finds not so much an interpretation as an accumulation of material. Moreover, the material for the most part is of a kind which yields its fullest meaning only to persons with knowledge of comparable conditions elsewhere, and with the trained understanding to which bare figures are vivid. An exception to this general rule is the eminently readable chapter on saleswomen themselves, in which certain types of workingwomen are sympathetically and convincingly portrayed. Even in the dryest passages, Miss Butler wrote with prepossessing simplicity and readiness of expression.

While no great weight, either literary or historical, attaches to the "Memoirs of the duc de Lauzun" (translated by E. Jules Méras; Sturgis & Walton), they are decidedly entertaining. The author gives circumstantial accounts of his love affairs with French, English, and Polish ladies. Up to 1783 he had about twenty-one, including Mrs. Robinson ("Perdita"). Twenty of these were successful; but he relates them in such a matter of fact way that one has difficulty in finding the basis for a formal charge of conceit or fatuity, though he undoubtedly had his full share of both. Needless to say, his affairs led him into a variety of situations, none the less amusing as we read of them in English from the fact that the translator writes with a quaint French accent. There was Lady Sarah Bunbury's note, for instance, written in English and containing the simple message, "I love you," the duke at the time not knowing a word of anything but French. He had to rush out and buy a dictionary before he could embrace her. After 1778 he was largely occupied with military matters; he recaptured the colony of Senegal, which had been taken by the English, and later went to serve with Rochambeau in America. He rode so hard and fought so well for our cause that we can easily forgive him the following observation on a fellow officer, also French, laboring with a company of militia; "M. de Choisy is a brave man, but constantly in a passion. He began by telling the militia they were all

poltroons, and in five minutes frightened them almost as much as the English, and assuredly that was saying a great deal." He returned to France after Yorktown, and the memoirs come to an end, though he lived ten years longer and became a distinguished general in the Revolution. His noble blood, however, his past relations with the royal family, his independent character, and his moderation towards Vendéan prisoners, finally brought him to the scaffold, in 1793.

Theodor Fontane's "Grete Minde" is a characteristic work of the author, and is one of the most remarkable short stories in German. For the sake of the text alone H. W. Thayer's edition (Holt) is therefore welcome. But it further commends itself by a sympathetic review of the career of Fontane, abundant historical and geographical data bearing upon the story, and as many notes to the text as the intelligent student is likely to need.

"Das Nest der Zaunkönige" (Heath), the third story in Gustav Freytag's cycle of historical novels, "Die Ahnen," appears in abbreviated form in the edition of E. C. Roedder and C. H. Handschin. Summaries, in English, replace in the text omitted portions of considerable length; we should rather have seen these summaries transferred to the notes. The introduction warmly commends the democratic spirit and the moral earnestness of the author, and the notes give scrupulous attention to peculiarities of style as well as to matters of historical fact. A valuable feature of the notes is a preliminary presentation in systematic form of archaisms and other devices by means of which Freytag sought to transport his readers back to the beginning of the eleventh century.

According to a recent announcement, the Nobel Institute of Christiania, Norway, is about to begin the publication of a series of scientific works under the title: Publications de l'Institut Nobel norvégien. The purpose will be to treat questions of interest for the international peace movement. The publications will be printed in English, French, or German. The first volume was issued May 1, is by Dr. A. Räder of Christiania, Norway, and bears the title: "L'Arbitrage international chez les Hellènes." This large work will be followed by other studies by Prof. Achille Loria, Turin; Prof. L. Oppenheim of Cambridge; Prof. H. Lammasch of Vienna; Prof. Phil. Zorn of Bonn; Prof. P. Reinsch of the University of Wisconsin; Dr. H. Federspiel, Copenhagen University, and Prof. Halfdan Koht of Christiania University.

The Publications of the Society for the Advancement of Scandinavian Study, Vol. I, nr. 2, has just been issued by the secretary of the Society. It contains an article on Ibsen's "Peer Gynt," by Dr. A. M. Sturtevant; a "Study of Selma Lagerlöf's Style," by Dr. A. L. Elmquist, and one on "A Type of Scandinavian Word-Formation," by Dr. Leonard Bloomfield, besides other excellent material. Especially welcome will be the "Notes on Recent Scandinavian Publications," which includes some thirty of the most important works on Northern literature, philology, history, and culture recently issued in Scandinavia, Germany, and America.

The literary executors of the late Prof. Borden P. Bowne have published two of his courses of informal classroom lectures, under the title "Kant and Spencer" (Houghton, Mifflin). While the book contains some shrewd criticisms of Spencer, whom Professor Bowne first assailed in his earliest writing, nearly forty years ago, it brings no very substantial addition to philosophical literature. Suitable enough, no doubt, for their primary purpose, the lectures hardly had such originality and importance as to make inevitable their perpetuation in a bulky volume. The text, taken down by a stenographer and unrevised by the author, abounds in verbal errors and is singularly slipshod in style.

Nearly four years after the appearance of the first volume of "The New Schaff-Herzog Encyclopædia of Religious Knowledge" (Funk & Wagnalls), the publication of Volume XII (Trench-Zwingli) completes the work. The editor is Samuel Macauley Jackson, who has had the assistance of George William Gilmore, and, in Volumes I-VI, Charles Colebrook Sherman. This encyclopædia is a reconstruction of the celebrated "Realencyklopädie für protestantische Theologie und Kirche," of which the first edition, under the editorship of Tholuck and Herzog, was completed in twenty-two volumes in 1868, and which reached a third edition in 1896. The late Philip Schaff edited an English edition in three volumes and very much condensed, which was completed in 1884. In 1891 a third edition in four volumes was published. The present work is a more ambitious undertaking, the twelve volumes extending to above 6,000 pages and including more than 20,000 titles. The articles from the third German edition have been revised and condensed, for the most part by their authors, and much new matter has been supplied, especially on topics of interest to English and American students. Brief sketches of a large number of living theological scholars and religious workers have been included. Much attention has been given to the bibliographies, under the direction of George William Gilmore, and these form the most valuable feature of the work. The encyclopædia is Protestant in point of view, retaining in this respect the character of its German basis, which was constructed in opposition to the great Catholic work of Wetzer and Welte, but it is non-partisan towards the various Protestant denominations. It is conservative, especially in the fields of doctrinal and biblical theology, in which departments the articles are of least value. Of much greater merit are the contributions in church history, ecclesiastical biography, and comparative religion. The work is adapted to the needs of the general student, rather than to those of the specialist, although the investigator will often find the bibliographies of real help. It records progress and registers present opinion, but does not add to knowledge nor advance new theories. In biblical questions it is behind both Cheyne and Hastings, and is hardly equal to some recent secular encyclopædias on ground which it occupies in common with them. Its importance lies in the large territory of special interest to religious students which is not covered by any recent work of such wide scope.

"What Is Judaism? A Survey of Jewish Life, Thought, and Achievement" (Putnam), by Abram S. Isaacs, does not bear out the promise of its rather pretentious title. It is a collection of essays of very slight texture, reprinted from various periodicals, on subjects which, for their adequate treatment, require far more space than was at their author's command. Ten pages each suffice for Jewish history and literature, and such a weighty subject as "Has Judaism a Future?" is discussed in a purely rhapsodic manner. Sentences like the following abound in this chapter: "The Jew, then, is neither a Daniel Deronda nor a Fagin, neither a Shylock nor a Nathan"; "Call him an arrested development, if you like; a survival, an anachronism," etc. etc. Even worse things are met with elsewhere. There are exasperating repetitions and grammatical constructions at which one gasps, as, for instance:

> And, just as their constant migrations over so long a period insured their physical vitality, as they overcame obstacles and unfavorable conditions, so their continuous contact with new epochs of culture, now in Persia, now Arabia, now Spain, now Central Europe, here in Italy, and there in Poland: whether it was the Renaissance or the Reformation, the age of feudalism or the age of steam, this continuity of impressions and influences gave freshness and vigor to their intellects.

A list of Jewish celebrities, ludicrously incomplete, appears three times (pp. 58, 70, and 106). It includes Paul Lindau, the son of a Protestant pastor. The literary ineptitude of the book stares at the reader in many statements, like, "Among noted works that have been translated into Hebrew are 'The Mysteries of Paris,' plays of Shakespeare, poems of Schiller and Goethe, and choice productions from Longfellow, Mark Twain, Zola, and De Maupassant." The chapter on the Story of the Synagogue alone has some value. It is difficult to see why Professor Isaacs should have thought it expedient to gather into a volume, with so little change and revision, fugitive papers which merely obscure his well-known familiarity with Jewish subjects.

To all who know the delights of intelligent sight-seeing we recommend "Travellers' Tales" (Putnam), by Mrs. Manson Smith (for the mysterious "Princess" turns out to be a woman prominent in Baltimore society). The charm of this book lies in the fact that the author, instead of attempting to out-Baedeker Baedeker, assumes the reader to be well acquainted with Europe, and treats in detail only those things which are likely to have escaped his notice. Rather than a mere guide, she is a cultured impressionist; and her knowledge and understanding of what she sees are not due to hasty cramming. Then, too, she never gives one the impression of being hurried, of being the slave of a fixed itinerary; for she is not "doing" Europe, but enjoying it. Nor does she play the part of a forlorn sojourner in any of the countries that she visits, for she is entertained nearly everywhere she goes. In Madrid she is invited to witness a bull-fight from a private box, in London she sits in the peers' stand to watch the Royal Progress, and at Fox How she takes tea with Dr. Arnold's daughter. And she induces foreigners whom she has met by chance to talk in an interesting way. For instance, an old gentleman from Basle tells her of the quaint wedding

formalities and curious tipping customs that prevail in his native city. The main flaws in the book—and they are not bad ones—are her too-frequent adverse references to a certain ex-President, which seem rather out of place, and her choosing to begin and end with anecdotes about trained fleas—neither of them very apt or funny.

The report comes to us from Leipzig of the death, in his sixty-second year, of Edwin Bornemann, who was known for his advocacy of the Baconian authorship of Shakespearean plays.

Science

The Great Star Map. By H. H. Turner, F. R. S. New York: E. P. Dutton & Co. $1 net.

Just a quarter century ago, nearly sixty astronomers were assembled in Paris to organize a huge scientific enterprise. No less a task it was than to photograph all important stars in the heavens, whether north or south, calculate and publish their numerical positions, and issue lithograph plates of the whole. The way that it came about was this: the desirability of photographic charts had often been discussed, but their possibility had first been demonstrated in 1882 when the great comet of that year was photographed by Sir David Gill at the Cape, and alongside it, on the same negative, unexpected numbers of faint stars. This at once showed clearly that star charts could be made by photography in vastly less time than had heretofore been consumed in the laborious method of setting them down optically. Eighteen great observatories originally undertook to parcel out the whole sky and procure the necessary plates, with the intention of obtaining an indisputable record of the face of the stellar heavens at the close of the nineteenth century, which should be available for study by the astronomers of any future age. Five were British, four French, two Italian, three were German, Russian, and Spanish, respectively, and five Latin-American. Singularly the United States has never joined in this great international undertaking, although the high honor of taking the first photograph of a star fell to Bond at the Harvard Observatory in 1850, as Professor Turner relates.

Of all the contributing astronomers, none could have given a better popular account of this vast work than Mr. Turner has given in this little volume, which makes even the technicalities of such research acceptable to the lay reader. Each observatory has taken from a thousand to fifteen hundred plates, each containing stars varying in number from less than a hundred in sparse areas to 5,000 in the rich regions of the Milky Way. After exposure and development came the measures, which required many millions of figures, and "took a staff of four or five people at Oxford some ten years or so to complete; and the printing of them another four years." Although the Great Star Map in all its sections and aspects is yet far from complete, Mr. Turner writes hopefully of its probable conclusion within the next few years, and points out how, even in its present unfinished stage, it has served as a means of detecting new and variable stars, and in verifying theories of stellar motion and distribution. Incidentally, too, a campaign was undertaken about ten years ago for getting the sun's parallax by measuring photographs of the asteroid Eros, and the result exhibits a remarkable degree of precision. Mr. Turner goes critically into the estimated cost of the Great Star Map, and finds it to exceed half a million sterling; and if the work were published in full completeness of chart and volume, it is certain that the shelves of observatory libraries the world over would bend and burst with the costly mass. But every one who reads this story of the unique enterprise will find out just why it has been immensely worth while.

The D. Van Nostrand Co. is issuing a large number of texts on engineering subjects. They are generally to be commended, but it is vexatious to have them bound in so flimsy a manner, and printed on cheap paper, highly glazed and unnecessarily loaded. The books are far from cheap, and better material should be used. Prof. Julius Frith of the University of Manchester presents a rather elementary treatise on "Alternating Current Design." "Electric Traction and Transmission Engineering," by Prof. Samuel Sheldon is an exposition of the main problems encountered in the design of a complete electric railway system from the cars to the power station. "The Electric Central Station Distributing Systems" of Messrs. Harry B. Gear and P. F. Williams has a similar aim in untangling the complexities of distributing stations. These two books fit well into each other. The student who has learned the theory of the electric transformer, even from such excellent books as those of Professor Kapps or Professor Fleming, needs an introduction to the practical aspects of transformer design and construction. "The Design of Static Transformers," by H. M. Hobart, is an adequate help for such problems.

"Vehicles of the Air" (Chicago: The Reilly & Britton Co.), by Victor Lougheed, which was first issued in 1909, now appears in a third edition. Though the book has been somewhat expanded, few of the many new machines are described or pictured. Yet, in its present form, it contains many interesting facts about flying, and even makes a study of the flight of various animals, reptiles, and fish. The part of the book touching on materials and construction is unusually good, and the author would do well to expand and develop it, if a fourth edition of the book is contemplated. He might profitably concentrate his energies on a few parts of the subject, rather than attempt to cover the entire field.

In trying to describe the various important flights which have taken place, he has been embarrassed by their very multitude. The account of them up to the end of 1909 is nearly complete. Subsequent to that date the particulars are given of those flights only which resulted in new records. The interesting computation is made that the "total distance flown is mounting up at the rate of at least 60,000 miles a week (chiefly in France), and the aggregate is well past the 1,000,000-mile mark." In all this flying the comparatively few fatal accidents have generally been "due to some preventable carelessness or recklessness, rather than to any inherent danger inseparable from the reasonably judicious use of the new vehicles of the air." The tabular history of flights brings the story up to July, 1911. On page 214, the faulty table of wind pressures at various velocities, taken from the "Mechanical Engineer's Pocket Book," should have been corrected, the actual pressures being about 40 to 45 per cent. less than those given. The book contains above 500 pages and 270 illustrations, many of the latter being remarkably fine. It can be recommended to general readers, and, for certain purposes, to engineers.

John Wesley Hoyt, former Territorial Governor of Wyoming and professor of chemistry in certain Ohio colleges, died a week ago in Washington in his eighty-second year. Mr. Hoyt's interests were very wide. He published treatises on agriculture, civil service, chemistry, and a history of ancient and modern universities. He was sent by the United States as Commissioner to expositions in London, Paris, and Vienna, and was decorated with the Imperial Order of Francis Joseph.

Drama

Play-Making: A Manual of Craftsmanship. By William Archer. Boston: Small, Maynard & Co. $2 net.

This book exhibits all the qualities which naturally would be looked for in a work by William Archer, who has long been recognized as one of the ablest and most experienced of English dramatic critics. It is admirably written, rich in theatrical learning, and closely packed with sound, if somewhat obvious, advice. On the other hand, it is not remarkable for catholicity of taste or breadth of judgment. On all points dependent upon expert knowledge it speaks with authority, but only the most devoted of Ibsen worshippers will agree with all its critical opinions. Mr. Archer's perceptive faculty is often strangely blinded by his Norwegian obsession.

In defining the dramatic or undramatic he finds no difficulty, of course, in demonstrating the fact that drama does not always and inevitably consist in the conflict of will against will or in a victory over obstacles. He suggests that the real essence of it is crisis, and that

a dramatic scene reveals a crisis within a crisis, furthering the ultimate event. This is true enough, but is scarcely an improvement upon the old and simple formula that drama is the revelation of character by circumstance. He is on sure ground when he pours ridicule upon the elaborate analytical stage directions of Bernard Shaw and other modern dramatists; but he fails to see, or at all events to say, that this device, in many instances, is merely a cloak to conceal the inability of the writers to make their characters self-expressive. His discussion of the proper limits of the "scenario"—how many details ought to be included in the first rough draft of a play and to what extent the author ought to feel bound by them—though full of acute observation, will not help the student much, as he is forced to admit that every playwright must necessarily employ the method best suited to his own abilities. But it may be observed that the degree of what he terms the "plasticity" of the framework and characters must depend, first, upon the imaginative power of the creator, and, secondly, upon the definiteness and sincerity of his purpose. It is only in the making of the serious artistic play that the question is of much moment.

His chapters on The Point of Attack are interesting in their illustrative comparisons and nicety of critical dissection, but prove nothing except the independence of dramatic genius of all rules except the few fundamental principles familiar to everybody. Virtually, as Mr. Archer remarks in his preface, there is no universal prescription for playmaking. The art of it is largely instinctive, but may be developed, of course, by the study of what has been achieved by the masters. It is doubtful, however, whether much is to be learned from such comparisons and distinctions as he draws between such antipodal authors as Shakespeare and Ibsen. Such conceits, however ingenious, are purely fantastic. But they at least lead up to the confession that the retrospective and hereditary drama is not superior in plan or effect to the Shakespearean masterpieces which are content to reflect living human beings without reference to their pedigrees. There is excellent matter in the chapter on the proper functions of the first act, with a good deal that is superfluous. Much more valuable and instructive, in its combination of philosophical reasoning with significant illustration, is the essay distinguishing the interest of an audience from its mere curiosity, and showing the importance of keeping alive the expectation of an impending crisis. The subsequent discussion concerning the wisdom of a continuous maintenance or occasional relaxation of dramatic tension, is virtually an elaboration of this topic, but its illustrations are not always felicitous. Ibsen is not an infallible guide.

The article on the nature and use of the "peripety" shows a richly stored and ready memory, but is largely clever padding. It is followed, however, by an admirable paper on the difference between reasonable chance and improbable coincidence, with enlightening examples of both, and vigorous insistence upon the respect which the playwright must pay to plausibility. The question of the legitimacy of ending a dramatic dilemma by the sudden conversion of a dominant character—which is the subject of a succeeding chapter—is not susceptible of much argument. Here, plainly, plausibility must be the chief determining factor. In the essay upon "character-drawing" and "psychology" there seems to be some confusion of ideas, although it is impossible to suspect Mr. Archer of ignorance of the essential difference between the two things. On the subjects of "dialogue" and "details" he writes humorously, and, in the main, justly; but all artificial dialogue is not of the same quality as his quotations. And is the stage soliloquy so absolutely inadmissible? Many persons, when alone, do unquestionably talk aloud to themselves. This is by no means the only point on which many readers will disagree with Mr. Archer, but his book is a very good one, although, for practical purposes, it is needlessly long. Facility of composition is frequently a snare to him.

Next season Winthrop Ames, in association with Lee Shubert, will produce "June Madness," by Henry Kitchell Webster. This is the native play which was presented in Chicago early this season by the Drama Players. Mr. Webster is well known as a novelist by his "Calumet K." "The Banker and the Bear," etc., "June Madness" is his first essay as a playwright. Mr. Ames and Mr. Shubert have engaged Hedwig Reicher to act the principal part, that of Mrs. Thornborough, in which she made a hit in Chicago.

Augustus Thomas has changed the title of his new comedy from "When It Comes Home" to "The Model." The earlier name had, he found, been preëmpted by another dramatist. The latest designation will fit the story equally well.

William Faversham announces his intention of entering the Shakespearean field next season. He proposes to begin with a revival of "Julius Cæsar," which he promises shall be a happy mean between the profusely spectacular and the too austerely simple. The character he has selected for himself is that of Antony. Tyrone Power will be Brutus, Frank Keenan Cassius, and Julie Opp Portia. Afterward he intends to make other Shakespearean productions. Manifestly there is room for a third competitor in the arena in which Mr. Mantell and Mr. Sothern have been so successful.

Charles Frohman is meditating a new stage version of Lewis Carroll's "Alice Through the Looking Glass." The adaptation is to be made by Edward Sheldon. There is to be accompanying instrumental music, but no musical numbers. It is said that the production will illustrate some of the latest ideas in stage craft.

At the annual meeting of the trustees of Shakespeare's birthplace at Stratford, Sir Sidney Lee said that the redistribution of the collections between the Birthplace and the New Place must be done very systematically. His own notion was to retain on exhibition at the Birthplace all biographic records and documents relating to the personal history of Shakespeare and his family, early editions of Shakespeare's works, rare books, illustrating his life or writing, early portraits, relics that could be reasonably claimed to be personal memorials of Shakespeare or of his father—who lived and died in the Birthplace—and all early views of the Birthplace. At the Birthplace visitors should come as nearly as is possible into touch with Shakespeare's career. Nothing that was associated in any way directly with Shakespeare would be sent away. Nash's House he would devote to everything that illustrated the early history of the town, its development after Shakespeare's death; objects of Shakespearean interest later than Shakespeare's own time, and to specimens of domestic furniture of the sixteenth or early seventeenth century, for which there never had been room at the Birthplace. He should also like to see at New Place a tablet with an inscription stating what had once stood there, and what had become of the edifice, and recalling that Halliwell Phillips was the moving spirit in the acquisition of the estate. In Nash's House, too, he would place tablets descriptive of its history.

A great demonstration in honor of Maurice Maeterlinck was held in the Royal Opera House, Brussels, the other evening. The King and Queen of Belgium were present, with many other notable persons. The poet himself was the centre of general observation and attention. Madame Bartet of the Comédie Française recited a eulogy from the pen of Gérard Harry. Next Madame Bartet read some pages from Maeterlinck's "Nuptial Flight of the Bee," which were enthusiastically applauded. This was followed by the performance of the four acts of "Pelléas and Mélisande," with the incidental music written for it by Gabriel Fauré, the director of the Paris Conservatoire, who had come from France to conduct the orchestra. The poet's wife, Mme. Georgette Leblanc Maeterlinck, appeared in the part of Mélisande, while MM. Alexandre and Ravet of the Comédie Française played the rôles of Goaud and Arkel. The tragedy never had a finer interpretation.

Under the title "Polite Farces" (Doran), Arnold Bennett publishes three little pieces, which are said to be for the drawing-room. The intellectual status of the drawing-room is not defined, but it ought not to be much superior to that of the nursery for these playlets to find approval. In "The Stepmother" fun of an elementary kind is made of a vain and foolish woman, who is described as a popular novelist. In "A Good Woman" a girl, on her wedding morning, hesitates between her betrothed and an old lover who turns up unexpectedly. "A Question of Sex" concerns an attempt to palm off a girl baby as a boy upon a rich bachelor uncle. They are all humorous after a fashion, but are wholly unworthy of Mr. Bennett's abilities, and there is no discern-

ible reason why they should be embalmed in print.

Music

The urn containing the ashes of Felix Mottl is now deposited in a monument erected to the memory of the great Wagner conductor in the Waldfriedhof, near Munich. The monument is by Prof. Fritz Behn; beside the name of Felix Mottl it has carved on it the words, "Orpheus and Eurydice."

The German poet and novelist, Felix Dahn who died last January, supplied a number of musicians with material for their compositions. Xaver Scharwenka derived the plot for his opera, "Mataswintha," from Dahn's famous story, "Der Kampf um Rom," while Heinrich Vogl and Ferdinand Doebber used other of his stories operatically. George Henschel made a successful musical ballad of "Jung Dietrich," and other of Dahn's poems were turned into songs by Weingartner, Ingeborg von Bronsart, K. von Perfall, Christian Sinding, etc.

Frederick S. Converse, whose "Pipe of Desire" was produced at the Metropolitan while another of his works, "The Sacrifice," was staged in Boston, is composing a third opera, the name of which has not yet been revealed.

Among the novelties played by the Boston Symphony Orchestra during the past season was a set of "Character Pieces," by Arthur Foote—four piano pieces orchestrated by the composer himself, so skilfully that no one would have suspected they had not been composed originally for the orchestra. The audience liked them also because of their melodious traits and touches of Oriental color.

London harbors 1,700 professional vocalists, and no fewer than 638 of these are sopranos. Of "professors" of the voice, piano, violin, etc., there are more than 6,730. Of solo violinists there are a round thousand, but strangest of all is the fact that there are no fewer than 400 musical directors. The choral societies of London and outskirts number 73.

There are in Germany and other European countries 120 theatres in which operas and operettas are sung in the German language. They employ about 3,000 professional chorus singers. These are not only shamefully underpaid but in only twenty-eight of the theatres referred to are they employed more than six or seven months a year.

Rudolf Schütz has written a book (published by Breitkopf & Härtel) on Stepheu Heller, a composer whose pieces are undeservedly neglected. In his day prominent judges accounted him the equal or even the superior of Chopin. That he was not; but he wrote at least a dozen piano pieces, the revival of which concertgoers would applaud. Most of Heller's works belong to the realm of drawing-room music; but there is much more substance in them than in the productions of Thalberg, which mistakenly were supposed to be equal to Liszt's. Among the compositions of Heller which one is more likely to hear to-day are the Tarantelle in A flat, the "Lilli Preludes," and the sketch "Im Walde."

The Austrian Government has officially approved the value of mechanical sound-reproducing machines for educational purposes. The "Ministerium für Kultus und Unterricht" in Vienna has contributed funds for the publication of a "Neue Gesangsschule mit praktischen Beispielen auf dem Grammophon," by Prof. Eugen Fischer and the *Allgemeine Musik-Zeitung* speaks highly of the value of the new method. It consists in providing records to produce exercises and songs as sung by prominent artists. The pupil first listens to these attentively, then sings with them, and finally tries to sing the music alone, as nearly as possible with the same tone-color and phrasing as the original. A number of teachers have attained gratifying results by this method.

Jan Blockx, the composer, who was born in Antwerp in 1851, died last week in his native town. Since 1886 he had been a teacher of harmony at the Antwerp Conservatory. He composed a number of operas and orchestral pieces, and was busy on a work for the Metropolitan Opera House, New York.

Art

THE LONDON ACADEMY.

LONDON, May 17.

The famous Burlington House institution is not only an Academy, but a Royal Academy. The principal place in the chief room is therefore occupied this year by a "command" picture of the coronation. This piece had to be done by somebody, and Mr. Bacon has probably got through the business as well as the circumstances allowed. It contains scores of portraits, executed with photographic exactness, but except for the royal personages themselves, a few bishops, and two or three generals, there is scarcely any one to whose features an ordinarily well-informed person could attach a name. Christopher Williams's representation of the investiture of the Prince of Wales at Carnarvon Castle was not required to be a portrait album of the aristocracy, and is proportionately more interesting. But both these pictures are attempts at a kind of pictorial record which in these days is achieved more effectively by the kinemacolor process.

In historical pictures generally this year's Academy is singularly lacking. Scarcely any painter has found inspiration in the life of ancient times, or even in early legends. The Bible supplies only one subject, a Job. Classical mythology gives the usual Sirens, and two Penelopes. One of these, by J. W. Waterhouse, shows the faithful wife working at the loom and treating with indifference the suitors who are offering her flowers through the open window. In the other, by Sydney Muschamp, she is undoing her work by night. Sir L. Alma-Tadema sends a picture with a classical setting. It is entitled Preparations: In the Coliseum, and its archæological detail would make it tempting material for a jigsaw puzzle.

Apart from a few battle pictures—Rossbach, Albuera, San Sebastian, and Balaklava—there is little to arrest the eye in the scenes from modern history. The subjects include the death of Rufus; a council of Queen Elizabeth's deliberating on the news of the sailing of the Armada, assisted by the inevitable globe; the first performance of "The Merry Wives of Windsor"; the Speaker being held down in the chair of the Commons in 1628; a gathering of Jacobites; and Dr. Johnson visiting Sir Joshua Reynolds's studio. An unfinished picture by the late Edwin Abbey, The Education of Isabella the Catholic, is successful mainly by its contrast between the gorgeous array of Isabella herself and the religious garb of other figures in the procession.

On the whole, the most attractive pictures are those which treat varied scenes by sea and land—not merely the seascapes and landscapes, technically speaking, but those whose appeal is heightened by human interest. Their wide range may be illustrated by taking a few instances at random; for example, clearing timber in Wharfedale, foxhunting in the Midlands, the coffee hour in a Breton village, passengers waiting for a ferry in Zeeland, an autumn evening in the Alps, a pergola at Capri, the morning sun at Douarnenez, and even the Yee Fung Mun Gate at Nanking.

J. S. Sargent, who has no portraits this year, draws upon his Italian experiences for a vivid Bringing Down Marble from the Quarries to Carrara, a Breakfast in the Loggia, and a so-called Cypresses, which is really a study of sunlight falling on the backs of three Sienese oxen. A curiosity in its way is a picture by Sir Harry Johnston, the African explorer, who began his career as an art student and still follows painting as a hobby. It is a water-color, depicting a row of flamingoes on the Lake of Tunis.

W. L. Wyllie and C. Napier Hemy are still ahead of all their rivals as marine artists. They have, respectively, five and six canvases, each with the authentic tang of the sea. Miss Alice Fanner specializes successfully in pictures of yacht races. Coast scenery appeals to B. W. Leader, whose Evening on the Sands of Towyn, especially, wins high praise. Dreadnoughts, submarines, and the like are represented by some of the younger sea painters. Strangely enough, the most recent of all inventions finds its chronicler in the doyen of the Academy. James Sant, born in 1820, has lived long enough to paint a picture of two peasants gazing upwards from a hillside path at an aeroplane. As the work of a veteran in his tenth decade this is one of the marvels of the exhibition, for it shows no trace of failing powers.

The usual space has been given to pictures of homely incident. In A Bolt from the Blue a lady taking a quiet meal with her daughters is disturbed by a fateful telegram. Grandmother's Wardrobe shows a young girl scrutinizing the contents of an old chest, and in The Oak Cupboard there is a similar investigation of forgotten treasures. A blacksmith has made such a good job of mending a child's iron hoop that the artist labels it As Good as Ever. Bank Holiday, by William Strang, presents a young working couple seated at the table of a restaurant. There is an air of mingled helplessness and courage on the face of the man as he studies the wine list. In Home from the War a young soldier in the uniform of the Peninsular period is discoursing to a group of old friends occupying the settle of a village inn. In a similar setting the politicians of the countryside are discussing The Question of the Day.

A Rehearsal with Nikisch is less notable for its study of the orchestra than for its representation of the interior of the Queen's Hall. A different type of rehearsal is brought to mind in the spectacle of a monk and choristers trying over The New Chant. Another art is recognized in The Ballet Master and in John Lavery's La Mort du Cygne, a reminiscence of the final pose of Anna Pavlova's famous dance.

The grimmest picture is Vendetta. An Italian, appropriately accoutred, is peering over the wall of a mountain road into a ravine, into whose depths the other party to the feud has presumably disappeared. For the sake of contrast, this ought to have been hung next to Be Prepared, in which the Boy Scout movement receives serious treatment.

Such pictures tell their own tale, but there are a few that would require an explanatory memorandum to make them intelligible. Among them is one by J. C. Dollman, aptly entitled The Unknown. A half-nude woman is seated in front of a fire in a desert, facing a group of monkeys. She is commonly supposed to be a witch. No less mysterious is Briton Rivière's Into the Valley of the Shadow of Death, an allegory of knights, wolves, hares, etc, galloping through a vale towards a young lady with rosebuds. More easily understood, but equally freakish, is Arthur Wardle's The Lure of the North, with its mermaid seated on an iceberg, up which polar bears are clambering out of an Arctic sea.

Portraits are always a notable feature of a Royal Academy exhibition. This year Sir Luke Fildes is painting the "State portrait" of the King apropos of the Coronation, but it will not be ready until next month. William Llewellyn, who was elected an associate a few days ago, has completed his "State portrait" of the Queen, and Arthur S. Cope contributes one of the Prince of Wales. In Emil Oesterman's King of Sweden one's attention is distracted from the royal sitter by the painful newness of the suit he is wearing. The British Cabinet is represented by excellent portraits of the Prime Minister, the Lord Chancellor, the Foreign Secretary, and the Chancellor of the Exchequer, and the Labor party by Solomon J. Solomon's still more effective likeness of its leader, J. Ramsey Macdonald. At least three eminent judges hang in effigy on the walls; the other men of mark portrayed here include Lord Avebury, Gen. Botha, Bishop Talbot, John Murray, the publisher; Bland Sutton, the surgeon (with a vacant operating table in front of him); and Prof. Bernard Hopkinson of Cambridge. Mrs. Lees is shown in the robes she wore as Mayor of Oldham in 1910. Some striking faces look out from the portraits of little-known or unnamed persons. There are several charming children. "A Lady and Gentleman" would have attracted attention by its intrinsic merits, but the artist, William Orpen, has made sure of its being noticed through his device of a small round mirror above the lady's head, in which he shows a reflection of himself working at his easel.

The sculpture galleries are also mainly portraiture. We find busts of Joseph Chamberlain—where the empty frame of his single eye-glass produces an odd effect; of Andrew Carnegie, of the Rev. R. J. Campbell, of Hilaire Belloc, of Lord Kitchener, and of Kennedy Jones of the *Daily Mail*, whose chief, Lord Northcliffe, has to be content with a mezzotint in the black and white room. Earl Curzon appears at full length in the model of a statue, over against a statue model of Lord Clive. Sir W. Goscombe John sends a life-size recumbent figure, in bronze, of the late Marquis of Salisbury, which is to find a place in the family chapel at Hatfield. The largest piece of statuary in the exhibition is also a memorial—Sir George Frampton's Protection, a maternal figure with two children clinging to her knees. It is to commemorate the late Dr. Barnardo at his Village Homes at Barkingside. By general consent the most artistic piece of work in this section is J. Havard Thomas's model in black wax of the Thyrsis he is to execute in bronze.

H. W. H.

THE PARIS SALONS.

PARIS, May 18.

In this year's Paris salons for a far-away foreign country there are not many painters worth talking about. The fingers of both hands, perhaps of one, will count them among the 1,292 paintings of the Société Nationale and the 1,925 of the Société des Artistes Français. The only test must be—for men unknown before something unusually distinguished, and for those who are already known some remarkable new step forward.

What is the use of saying that Carolus Duran is still painting portraits as he has been doing forty years; that Aman Jean is again realizing his color scheme in a tapestry of The Four Elements, where as usual some of his figures are not clothed and others are not in their right mind, though the whole work will be vastly appreciated by the numerous generations of his pupils; that some of the most sympathetic painters—Cottet, René Ménard, Lucien Simon, and others—are conspicuous by their absence from the Nationale, and that foreigners mostly exhibit there, while the Artistes Français open their doors wider to "efforts" of young students, and also teem with portraits? Something may be said later of young Americans who win official distinctions. For present use, the man profane to art will be contented to know that ninety-nine out of a hundred of all the works exhibited verify the everlasting human truth—"The imitator of the imitator finds imitators!"

The most strikingly new exhibit at the Nationale is from a Spaniard, Valentin de Zubiaurre. His two pictures are catalogued as "Basque types." They will please those who have eyes to see such types; that is, all who have travelled in person along the unique Corniche road overlooking the Bay of Biscay from San Sebastian to Bilbao, and all who read lovingly the book of George Borrow, or take human interest in the Spain of settled habits—settled ages ago.

One of the paintings is of a holiday country scene, a few young people dancing and old folk in front with something to drink at a table beneath trees—pleasures of hope and pleasures of memory. In the other painting, seated meekly at a little table where the passers-by can drop a coin, with the candles of the dead lighted, are sober-faced fishermen's wives—"for the victims of the sea." This has been a favorite subject in Breton paintings, but how different from what we see here. The background is startlingly like the work of the Primitives; and yet it brings out the bare, rolling Basque hills under the crude light, with a distant hamlet in the valley and a few straight darkling trees. All the impressiveness of the land and the people is there—a clear-eyed, calm-nerved people, homely, but ever going forth, before Columbus and after Cortes, to discover new worlds of body and soul, or like their one saint, Loyola, to convert them.

It is another field and another manner than that cultivated by Zuloaga, who seems to lead among these Spanish painters that have been taking so high a place in late Paris Salons. Zuloaga has this year, in one picture, too much

blood from the hapless horse of his solitary, homeward-turning bull-fighter and there is too much blood in his other painting of a realist crucifix surrounded by prodigiously unpleasant devotees. Spain, pious or sportsman, is not all so emphatic. But in his portrait picture of "my uncle Daniel and his family," Zuloaga goes a step nearer Goya, without his caricature, which essentially is excessive and unbalanced emphasis. The uncle, a worthy-looking, worn-faced painter, is at his easel; three tall daughters of what Maurice Barrès calls the Spanish "chlorotic" type, are in line, their paleness heightened by rice-powder, and contrast with great sunken black eyes and black hair, with white teeth shining between violent red lips, with dark-draped curving contours, slender, vital, distinguished, belonging to an unmixed race of a proud spinal atavism acquired by rock-climbing, seafaring ancestors before the English pudgy Apollo or long-limbed Camilla scouring the plain had been evolved. The comfortable mother is seated at one end of the canvas, the immensely modern-looking son respectfully eclipses himself at the other. It is the visualizing of the modern family of a strong ancient race and persistent middle class—of such families as the Anglo-Saxon traveller seldom gets to see.

These two painters are at the Nationale. It is only fair to say that Carlos Vasquez, among the Artistes Français, also accredits his country's painting as he did before this newer exasperated school came in. His Robber Magpie is flanked by a delicious pair of country policemen—those who remain among the best impressions of the traveller in Spain. And let no one say all these are not purely visual impressions, and so have little to do with art in to-day's philosophy. So much the worse for philosophy, too prominent in many paintings here in which there is indeed little left to see.

Another of the most striking painters among the Artistes Français is a foreigner—the American MacCameron. He shows a troubled couple—Waiting for the Doctor. This young painter won a considerable name for himself in the Paris Salon some years ago, by his very real Absinthe Drinkers. His work is powerful portraiture, with little that is distinctly American except a certain brutality. Frieseke and Richard Miller are his two chief American rivals in French fame of painters in these late years. They have more of their native soil attaching to their figures, perhaps because they oftener choose their models among their countrywomen. Frieseke from the beginning has aimed at lightsome feminine grace and attains it in figures curving from habits of rocking-chairs rather than from the straight-backed seats on which the conventional French girl is fashioned. Richard Miller, returning from early wanderings after what is "different" in French life, succeeds in femininity also, often with color harmonies of drapery.

The work of an American painter whose eyes had long been accustomed to Spanish life and its vital motions would be curious. This year, as in other years, there is an astonishing number of young painters, men and particularly women, who have been received at the salons for very creditable brush-work with the distinction of the master's style, without original subjects, showing that they have worked up to a high standard of mechanical excellence. When they begin to think for themselves and to train themselves to think of beautiful things in life around them or in their own higher thoughts, instead of things their masters are painting, we may have American high art.

Because we are more independent in thinking in nature, we have better landscape painters. It is an art steadily sinking in France for some reason, perhaps because a certain amount of poetry in the air is necessary to its proper existence. Among Americans of the Artistes Français, Albert Gihon has been favorably known for a number of years. His painting seems new, perhaps, because it goes back to the old, like George Inness and earlier American painters; and yet it is human as in Europe. In his summer scene at Montigny on the River Loing, he realizes a gentle, sentimental, intimately friendly art of nature touched by the loving hand of man and instinct with human life. A French painter, who has begun attracting attention for a singularly new treatment of nature is Communal, with his scenery in the higher French Alps. It is his native ground, and he has seen these high lights and red roses of dawn fleet across the Vanoise glaciers, and sheer rock descents and mountain meres. You may rebel against the exact colors, but go and see for yourself—just above Mont Cenis northward—and you will find the lights are there and the forms, and, doubtless, the relations of colors. "I never saw a landscape like that," said a Philistine to Turner. "Own up that you wish you could!" was the very proper retort of the painter who knew what he saw.

The real glory of the year's salons is at the Artistes Français, in the work of a master who was but lately young and abhorred of the Philistine. It is Henri Martin, in two paintings—Autumn and Les Dévideuses (two girls winding yarn). When I wrote of this painter at his beginnings, I was sharply reminded that he was only "decorative." He is decorative still, to a degree seen out of pictures only in fairy land. The two girls, one winding yarn from the other's hands, are seated facing each other on a stone balustrade reaching across the picture. Between the balusters and across the rail, we look off to a sudden glory of molten autumn tints from the valley below up yonder to the hills and horizon. And the lines are decorative, and the colors, and all the composition of colors and lines—with nightingales at sunset from the shining hillsides answering the heart of youth. Autumn is hung in another hall; but from the door between you can look, right and left, at both paintings at an appropriate distance. They are surely decorative; and few laboring critics would venture now to doubt that Henri Martin is a painter with a high art of his own.

One of the consolations of these recent salons is the steady advance in importance and in imaginative power of this decorative painting, that is, painting designed to fill space, architectural or not. The loss of the churches was a great blow to high art; and the loss can be made good only by sumptuous private or public constructions. Otherwise painting would be confined to gallery landscapes and portraits and imaginative combinations of them, with here and there some glorified stage-pictures. French cities have been good in ordering from their painter sons great decorative works of art for Hotels de Ville and hospitals and universities—and public gardens. And private fortunes are spending their money usefully along the same lines. Toulouse will soon be one art museum, judging from the number of paintings and statues ordered by its municipality. The Société Nationale has this year a special section for "Sculpture and Decoration of Gardens"—which is another step forward towards identifying the money-spending of the idle rich with so sane a thing as art.

To-day we are dealing with painting. At the Nationale, one of the notable pieces is The Marriage of Psyche—an arch-coving from the *plafond* of the dining-room of some Lucullus of Buenos Ayres. The painter is José Maria Sert, the Catalan, who astonished salon visitors a few years ago by colossal decorations for a cathedral in Spain. Auburtin, in the same salon, has four scenes, dainty in color and conception—Sounds of the Flute, Songs on the Water, Spring's Portrait, Nymph with a Shell. They would be lost in any gallery, but they may well decorate the lofty walls of the palace of some merchant prince. Petronius says that Nature, when she wished to perpetrate a joke, creates a "nouveau riche"; but the world will forgive any Trust magnate who knows enough to order art like that. S. D.

Commendatore Eduardo de Martino, M.V.O., marine painter in ordinary to the late Queen Victoria, is dead in England, whither he came from Italy in 1875 to pass the rest of his days. He was a man of extraordinary talents. Born in Naples sev-

enty years ago, he soon entered the Navy, but was forced in 1867 to retire, owing to paralysis of the right side. This was the beginning of his career as artist. Fortunately, his passion for the sea could still be indulged. His pictures of boats and other marine subjects soon attracted much attention, and he had the patronage of several sovereigns. The late King Edward, the German Emperor, and the King of Italy accounted him not only a great artist, but a welcome friend. His most ambitious works include a series of eight big canvases illustrating the life of Lord Nelson and his triumphs at sea.

Finance

WHEN THE MARKETS COME TO A HALT.

Many weeks ago it was predicted on the Stock Exchange that, whatever happened in the interim, the near approach of the Presidential conventions would surely be marked by feverish activity. The political canvass is now reaching its pre-convention climax; yet financial markets, instead of responding by excited movements up or down, have lapsed into complete inertia. This mood was strikingly illustrated when the news of Mr. Roosevelt's victory at the Ohio primaries came in, a week ago. What Wall Street would say, when it read the morning papers of that Wednesday, was a question much discussed by Wall Street itself before Wednesday came. What it did appear to say on Wednesday was "Talk about something else"—which may have meant that the time was not ripe to get excited over politics, or that Wall Street lacked the capacity for excitement. At all events, the market gave no response to the political news; its attitude might have been taken, by a casual observer, to reflect complete indifference.

In fact, it was not wholly easy to adopt the programme of "talking about something else." No other subject invited animated exchange of views. The usual topics had been discussed to the point of weariness. Everybody knew all that was worth knowing about the early crops, about the steel trade, about the European money market, and about the financing of the United States Rubber Company. Not only had these matters been talked out, but the speculative markets had discounted them, over-discounted them, and checked off the proper part of the overdiscount on them. Nothing else, therefore, was reasonable to expect than that financial markets would yield to the lassitude which sometimes prevails in the spring season, and wait for something new to happen.

Sometimes there are explanations for such inertia, quite unconnected with the market's opinions on concrete events of the day. One reason why the markets halt at present is that it is not so plain as it seemed to be, a few months ago, what is to be the character of the general financial situation, later in the year. Neither in politics nor in industry nor in agriculture have events thus far moved exactly as had been anticipated, and yet it appears to be the fact that Wall Street looks on the future cheerfully. In some ways, hopefulness is probably more in the ascendant than it was in the early springtime. At the opening of March, a good part of Wall Street ridiculed the stock market for advancing in the face of the labor troubles. At the end of May, it is not only taken as perfectly natural that the market does not decline on shocks in the field of agriculture and politics, but there is a very manifest disposition to eschew all unfavorable argument and inference.

The existence of such a mood goes far to explain the absence of response on the Stock Exchange to what might be deemed unfavorable news. It is not the cheerfulness of 1908, when Wall Street and the business world decided to deny that any of the visible unpleasant facts existed, and to act as if they did not. It is unlike the enthusiasm of 1909, which was based on things that happened or that rumor insisted were soon to happen. The mood of 1912 is rather one of chastened and humble expectancy, that takes with thankfulness such good things as come, recognizes the bad things but looks for something to offset them, and still persists in the belief that matters are gradually getting better.

It is on the whole a rational and satisfactory mood, not being a product either of delusions of extravagant hope or of delusions of imaginary terror. When something of an exceedingly favorable character has unexpectedly happened in years of this sort, a period of something like a genuine boom has usually ensued. Thus far, it must be admitted that nothing of that nature is in sight; in fact, that the probability of it has apparently been blocked in at least two directions from which it might have come. But even if that were to be so during the rest of the year, there is something to say for intermediate periods of sane and prudent business, when wealth accumulates on legitimate lines.

Very probably, 1912 will be remembered in history as a year of sensational social and industrial disturbance, and perhaps of political upheaval also—it was rather impressive that readers of last week's European news accepted the barricades in the streets of Budapest (an intimate reminder of 1848) as quite a matter of course. One may suspect that the same historians who write, a generation hence, of all these movements of political unrest, will be puzzled when they read the story of the financial markets.

Perhaps the anomaly is explained by the fact that the panic of 1907 gave finance a rude but wholesome and necessary awakening from its own wild dreams. It is the markets which are sober now. But political epochs like this are apt to come in sequence to epochs when the moneyed interests were in the saddle, and were riding as wildly as the ordinary proletariat is riding now. We had a glimpse of that capitalistic orgy of a dozen years ago in the reminiscences of the shrewd Scotch promoter at last week's hearing in the Steel Trust suit. This cool-headed manufacturer described how he took at their proper valuation the ring of adventurers who were doing in the steel trade what the Fisks and Goulds were doing in the railway industry thirty years before; frightened them with a show of competition; made them pay $3,000,000 for his million-dollar steel plant, and, gauging properly the "craze for combinations all over the country," unloaded his tube plant on "two or three fools" who were ready to pay "some pretty high prices."

The Scotch must certainly have had their innings in those days; this was some years before Mr. Stevenson's compatriot did exactly the same thing on a vastly larger scale and pocketed his $217,000,000. How the resultant prodigious mass of watered stocks was again unloaded on the public is another part of the story. If the people at large are a bit wild in their present ideas of men and things and financial institutions, it is not for the High Finance of 1899 and 1901 to cast the first stone. It was infinitely madder in its day.

A NEW JAMES BOOK
Essays in Radical Empiricism
By WILLIAM JAMES
8vo. $1.25 *net; by mail,* $1.38

This book contains twelve of Professor James's philosophical essays, collected and edited by Professor Perry of Harvard. It is designed to carry out a plan which Professor James himself projected several years before his death. With one exception these essays were written within a period of two years; and constitute a consecutive and orderly exposition of a doctrine which the author regarded as of more fundamental importance than his widely known "pragmatism."

"Every genuine philosophic view, whether it includes a system or falls short of that academic dignity, has its convex and its concave side. On the convex side the philosophy fronts the world, armoured, bristling, a finished product. But on the concave side it consists of roots and queer whimsical human things, common affections, prejudices, instincts, all radiating from an inner centre of personality. It is on this concave personal side that we see William James in this volume of Essays. Here, it seems, we get at the personal roots from which his philosophy springs."—*The English Review.*

MADAME STEINHEIL'S MEMOIRS

Price $3.00 *net, postpaid* $3.20. *Octavo. Fully Illustrated. Gilt Top, Boxed.*

A Mysterious and Absorbing Human Document.

These memoirs are interesting not merely as a brilliant and beautiful woman's *apologia* and autobiography. They are also enthralling as a picture of the elegant, daring, cynical, and cultivated Parisian society in which she moved, and they introduce familiarly many people of distinction in the social, artistic, and literary life of the French capital. Her relations with Pres. Faure throw strange sidelights upon contemporary French history.

The Convictions of a Grandfather

By ROBERT GRANT

As everybody knows who has read his "Opinions of a Philosopher" and his "Reflections of a Married Man," the writer is a shrewd and genial philosopher; he views contemporary life with a keen if indulgent eye. Not a question of the day, big or little, confronting an American family of comfortable circumstances, but he touches here, with his sympathy and humor, yet in such a way as to show the true proportions of each; its relation to the truly significant things of life.

$1.25 *net; postpaid*, $1.35

By AUGUST STRINDBERG

Translated from the Swedish by Edwin Bjorkman

There Are Crimes and Crimes

The most widely known and acted of the longer plays by Strindberg, who to-day ranks first amongst modern European dramatists. A drama of life to-day in Paris, profound and of tremendous power, and more optimistic in its conclusions than most of his work.

75c. *net; postage extra.*

Plays by Strindberg

Strindberg, the foremost figure in Scandinavian literature to-day, and admittedly one of the greatest of living dramatists, is represented in this volume by three of his most characteristic plays—"The Dream Play," "The Link,' in one act; and "The Dance of Death," Part I, and II., a drama of tremendous power, generally considered his masterpiece.

THE FRIENDSHIP OF NATIONS

A STORY OF THE PEACE MOVEMENT FOR YOUNG PEOPLE.

60 cents

A new book especially significant on account of the growing interest in America in peace and arbitration. In a very delightful style the author tells of the achievements of the world in art, science, commerce and industry, the purpose being to show the debt of each country to the others. The growth of friendly relations between countries is traced, with special attention to the story of the Hague Conferences. The volume is profusely illustrated and presents a very readable history of peace for children of grammar-school age.

THE CITADEL

By SAMUEL MERWIN

Here is a book which is bound to attract attention, because—

(1) It is a first-rate novel which holds the reader from the first chapter.

(2) It is bold and somewhat revolutionary in its social philosophy, the hero a young Congressman, a progressive of progressives, ahead of his own times, with ideas about changes in the Constitution, about socialism, about woman suffrage, and about education.

(3) It is a fine love story,—a story of comradeship which leads to love and happiness.

TWO IMPORTANT BIOGRAPHIES

A. F. DAVIDSON'S LAST WORK and AN UP-TO-DATE LIFE OF GOETHE

Victor Hugo: His Life and Work

By A. F. DAVIDSON

Author of "The Life of Dumas."

All lovers of literature will share the deep regret of A. F. Davidson's many friends that this is a posthumous work. Fortunately he was able to complete it, but he did not live to edit the proofs. This was done by Mr. Francis Gribble. The latter, in speaking of it, writes that it was his aim to revise the proofs as Davidson himself would have revised them, nowhere tampering with any expressions of opinion, but only correcting obvious slips of the pen, and making only a few but inconsiderable additions. In his opinion this is the most important English study of Victor Hugo, alike as a man and as an author, yet issued. *Illustrated. 8vo. Cloth,* $4.00 *net.*

Goethe: the Man and His Character

By JOSEPH McCABE

It has often been remarked that there are few original English biographies of the great German poet. It was to fill the need of an up-to-date biography that Mr. Joseph McCabe undertook this work. The material for writing such a book is unquestionably rich, and has been collected and sifted by three generations of ardent students. The author has handled the material in a masterly manner and while presenting an intensely human Goethe, whose every chapter was a romantic love story, he also shows the effect upon his work of every passionate period of his life. We are thus able to follow intelligently the broad development of his artistic genius. *Illustrated. 8vo. Cloth,* $4.00 *net.*

DISTINCTIVE JUNE FICTION

BOTH SIDES OF THE SHIELD

By Major ARCHIBALD W. BUTT

With a Foreword by WILLIAM H. TAFT, President of the United States, and a Short Account of the Author's Life.

The reading of this ideal Southern love story is like listening to a friend tell of actual experiences. The typical old Southern family, Ellen the beautiful and heroic Southern girl, and Palmer the Northern journalist, are characters so clear cut and real that on closing the book one feels that the author must surely have given us a few pages from his own life.

"It is a book a man might well be proud to leave behind him, for it could only have been written by a man of fine mentality—warmth of heart—of true reverence for the best in womanhood—and above all by a man in whose breast the flame of true patriotism brightly burned—the patriotism that was natural to one who was a loyal son of the South, and a true American."—*Augusta Chronicle.* *Frontispiece. Cloth,* $1.00 *net; postpaid,* $1.15.

The Penitent

By RENÉ BAZIN

The visit of René Bazin to America has aroused widespread interest in this immortal Frenchman's writings. "The Penitent," his latest novel, will undoubtedly be considered one of his finest. It is an exquisite study of the peasant folk in Brittany, and the story of how Donatienne, the gay and pretty young wife, is led astray, and how she eventually returns to her stricken husband, is one of unusual power and insight into human nature. $1.25 *net; postpaid,* $1.35.

The Raid of the Guerilla

By CHARLES EGBERT CRADDOCK

The distinguished author of the "Prophet of the Great Smoky Mountains" has here given us some additional and admirable stories of this picturesque and interesting region and people, full of humanity, racy of the soil, and told with the true art and sympathy which have won her so many thousands of readers.

With illustrations by W. Herbert Dunton and Remington Schuyler. 12mo. Decorated cloth, $1.25 *net; postpaid,* $1.37.

A SELECTION OF THE BEST RECENT FICTION

FATE KNOCKS AT THE DOOR

By WILL LEVINGTON COMFORT

Author of "ROUTLEDGE RIDES ALONE" (Nine Editions).

"In a large range of story reading I have never chanced upon a nobler concept and act of love than this hero (Andrew Bedient) achieves in the climax, indeed, the idealism rises at last to the heights of Jean Valjean's devotion in the immortal 'Les Miserables.' "—*Edwin Markham.*

"Mr. Comfort sees deeply and his imagination carries him far. There are moments of capital insight in the chapters dealing with the fullness—and emptiness—of the lives of his group of woman-workers in New York . . . and some pages of real meaning and beauty that should recommend the book to the woman of to-day."—*New York Tribune.*

"Will Levington Comfort's new novel confirms the large promise of his earlier books. This is the ripest novel he has yet written—an exceptionally fine and strong book of a man faring forth on the supreme adventure."—*Edwin L. Shuman, Chicago Record-Herald.*

The Nation

NEW YORK, THURSDAY, JUNE 6, 1912.

The Week

Mr. Taft has wisely urged the National Committee to conduct public hearings in the matter of contested delegates. It is all very well to cite the precedent of the Roosevelt steam-roller tactics of four years ago. But we all know that if Mr. Roosevelt chose to settle matters in secret session at that time, he must have had a very good reason for it, to question which is to expose one's self to everlasting infamy. And in the second place the Colonel, when he tries to "put something over," has a gift for "getting away with it" that Mr. Taft can never hope to rival. It is plain that Mr. Roosevelt's followers would have made an enormous amount of capital out of any unfavorable action taken by the Committee in secret session. The cry of fraud would have been raised on the floor of the Convention. As it is, Mr. Taft has little to lose in an open trial of his case before the Committee, provided his interests are ably defended there. Publicity in this business of the Southern delegates may cut both ways. It will be shown that Federal patronage has been instrumental in winning delegates for Taft. But Mr. Roosevelt's representatives should also be made to show the means by which they have been winning delegates for the Colonel.

It would be unfair to say that Col. Roosevelt has changed his mind about fighting Senator Root's selection as temporary chairman of the National Convention. He has had no mind of his own on that subject. His mind is in the hands of his delegates. This he explicitly admitted on Sunday. He then stated that such delegates as he had "seen" were of the opinion that the temporary chairmanship was "unimportant," and that "no issue should be made" in respect to that matter. But he added that he wanted to "hear from the delegates throughout the country before committing myself finally." Now he has heard and, his mind having been made up for him by the majority, he has discovered that the duty of opposing Mr. Root is a stern daughter of the voice of God, resting as it does upon the highest principle about which no honest man can hesitate or vacillate. Hence the orders go forth to fight Root from the drop of the handkerchief.

Not even the fact that it is said to have originated in the Department of Justice, can convince us that the Humphreys bill, which was unanimously passed by the House on Monday, is a wise measure. The case of the Government against the steamship lines for violation of the Sherman Anti-Trust law is about to come up in court. The Humphreys bill bears directly upon this suit in that it empowers the court, if it finds the steamship lines guilty, to "prohibit all vessels employed pursuant to such contract, combination, or conspiracy, or in such monopolization or attempt to monopolize, from entering at or clearing from any port of the United States," this prohibition to last, under penalty of $25,000 fine for each ship, until the "conspiracy, combination, or contract" is ended. Under this law it is quite possible that steamers bearing thousands of returning Americans might be turned back as they neared New York, and sent to Halifax or Montreal to unload.

In searching history for an analogic missile to fling at the opposing candidate, Mr. Taft need not have gone back so far as Louis XIV. Andrew Jackson ran his campaign of 1832 largely on the assurance of his personal popularity with the hurrah-boys element; but in those days, instead of the candidates going upon the stump and appealing directly to the people for their votes, both parties made liberal use of token coins covered with satirical devices. Most of those directed against Jackson naturally contained quotations from his self-assertive utterances, and their commonest subject was his warfare upon the United States bank. One which proved particularly telling bore on its face the figure of a hog at full gallop, with the inscription, "Perish Credit, Perish Commerce, 1830. MY Victory. MY third Heat. Down with the Bank!" On the reverse side was a bust of Jackson with the legend, "MY Substitute for the United States Bank. MY Experiment, MY Currency, MY Glory." There is no record of a smashed bank in the Colonel's case, but in some other respects a Jacksonian analogy would be not without fitness.

The passage of the eight-hour law for all Government work, and for the Panama Canal after it is completed, evidences a remarkable change in the sentiment of Congress. Only one Democrat voted against it in the Senate, and but ten Republicans. A number of Democratic Senators voiced their misgivings—but the bill slipped through with comparatively slight discussion; and thus a vitally important legislative step is taken, with the public hardly aware that it was under consideration. Just as almost no newspaper attention was paid to the passing and signing of the pension bill which Mr. Taft, knowing better, approved, so this eight-hour bill is likely to be overlooked in the excitement of the Presidential campaign. Yet its results will be far-reaching, indeed, affecting every taxpayer in the land. Every contract for public work hereafter will be more costly because of this provision, and from considerable work, like building ships for the navy, the contractors will be frightened off in numbers. It is all a part of the effort to regulate economic conditions by statute. We have got into the habit of thinking that by raising or lowering the tariff we can increase and decrease the prosperity of millions of workingmen. Now it is thought that by putting the Government at a disadvantage with most private corporations, the latter will be induced to follow suit and make their day one of eight hours only. However desirable the short day, this is a very questionable way to obtain it—by making extra burdens for those classes in the community who do not work on Government contracts.

The Ohio Constitutional Convention fittingly crowned its labors by naming a special day for the verdict of the voters upon the forty-two proposals to be submitted to them. To have coupled voting upon a new Constitution with voting for President and other officers would have been for the members of the Convention to show

slight courtesy to their own work. One detail of the voting arrangements will strike some citizens of other States as a little peculiar: the liquor license provision is to have a conspicuously separate place on the ballot, an honor accorded to no other in the entire list. Yet these others include such fundamental changes as woman suffrage, the initiative and referendum, direct primaries, and reform of judicial procedure. The explanation is to be found in the part that regulation of the liquor traffic has played in Ohio. It has made and unmade Legislatures, and been the test of political faith.

To combat the dissemination of fictitious news in matters affecting international relations is among the first tasks set itself by the European bureau of the Carnegie Peace Foundation. It is a task of great difficulty, but the results that may be obtained are easily worth the effort. No one will deny that the conscienceless and the ignorant newspaper press is responsible in large measure for the regularly recurrent crises which agitate European politics. Whether the cause be simply ignorance or unconscious prejudice or deliberate misrepresentation, a central bureau that shall make it its business to call the attention of editors to fictions that pass in their columns as facts must count in the long run for a higher standard of international ethics. There is the maxim, of course, that a lie once cast abroad cannot be overtaken. But if an active hue and cry be set up after every lie as it turns up, the public may ultimately be taught to receive tainted matter with suspicion.

In some quarters there is a simulated or genuine concern over the clause in the army appropriation bill which will terminate Gen. Wood's career as Chief of Staff on March 4, 1913. Secretary Stimson has come to his defence by saying that the rule proposed—that no one shall act as Chief of Staff who has not served with troops of the line for ten years— would have barred out George Washington, Scott, Sherman, Sheridan, and Schofield. But those men were great soldiers and leaders, officers trained in several real wars. Gen. Wood is primarily a medical man and only secondarily a soldier. To think of comparing him with men like Meade and McPherson, graduates of West Point and scientific officers of unusual ability, is to outrage the memory of those patriots. Of course, the easiest way to throw dust in the public's eyes was to say that the friends of Gen. Ainsworth are taking revenge; that the move is a corrupt bargain between Senator Warren, who wants to save the army post he has carefully nurtured at Cheyenne, and Chairman Hay, who has a grievance. Why would not an equally straightforward and, we think, a considerably more truthful statement be that Gen. Wood has disappointed and angered members of both committees of Congress on military affairs; that they, both Republicans and Democrats, have lost confidence in him because, as Chairman Hay has proved, he takes one position at one time and reverses himself the next? If there really is politics in this whole thing, not all the politics is in Congress.

The failure of *Hampton's Magazine*, after a brief and notably checkered career, will undoubtedly be cited in some quarters as another victory for the Interests in their campaign against free speech in the magazines. In this connection we may quote from George French's latest article in the *Twentieth Century*, entitled, "The Damnation of the Magazines," an extraordinary article for the way the writer's very honest statement of facts is totally belied by his conclusions and by his flaming title. If anything stands out clearly in this account, it is the fact that the damnation of those magazines that have met their fate came, not as a result of the activity of the Interests, but as the result of a vicious editorial policy and a buccaneering system of business management, both in its unscrupulousness and its extravagances.

Despite a certain amount of unnecessary rhetoric, Senator Smith's speech on the Titanic disaster is a useful summing up of the results of his inquiry. Capt. Smith he treats handsomely, beyond bringing out the one forever damning fact that he paid no attention to warnings and crashed into ice at the highest speed made on the voyage. At Capt. Lord's door he lays, and we believe justly, part of the terrible responsibility for the fearful and unnecessary loss of life. There can be no doubt that the Californian, by a rare coincidence of the sea, lay within sight of the sinking Titanic, and never moved, or even inquired by wireless what was the meaning of the rockets and lights. That is a stain upon the honor of all seamen; like that constituted by the refusal of some in the Titanic's partly filled lifeboats to go to the rescue of those whom they heard in their death struggles near by, it can only be effaced by many acts of gallantry to come. There is no doubt that if the hero of the tragedy, Capt. Rostron, had been on the decks of the Californian, the loss of life would have been reduced to a minimum—indeed, all would probably have been saved. Senator Smith is correct, too, in pointing out that there was lack of discipline on the Titanic. "If this is discipline," he asks, "what would have been disorder?"

Does not the fire on the Carmania at Liverpool on Sunday suggest that when the International Conference for the purpose of safeguarding life at sea meets it should take up the question of fire? There have been a number of such serious outbreaks on vessels of various classes during the last three years, but fortune has so greatly favored the shipowner that nothing very dangerous has occurred on board ship at sea. We are aware that if this subject is broached to shipping men a chorus of voices will at once protest that it is impossible to conceive of there being a really serious fire on a transatlantic steamer. But in view of the recent cocksureness of the fraternity that ships of the Titanic type are virtually unsinkable, it might be well to study this question also from a scientific and professional point of view. The flames on the Carmania seem to have spread with great rapidity, and the conflagration required the service of the entire Liverpool fire department. Would it not be wise to consider what would have happened had the ship been beyond the reach of city firemen? Naval officers have learned in the last two or three wars to strip their ships of everything very combustible, even making the officers' furniture of steel; at the same time, our merchant vessels have been increasing the amount of rugs, furniture, curtains, etc., of an inflammable character.

The death of Daniel H. Burnham removes a notable figure among American

architects. An organizer of remarkable ability, Mr. Burnham had of late years become conspicuous by reason of semi-public services for which his memory will long be cherished. We refer, of course, to his interest in the city beautiful, notably in Washington, where his work in coöperation with Charles F. McKim and Augustus Saint Gaudens insures to this country one of the most beautiful capitals in the world, developed according to the original plans of Major L'Enfant. For Chicago, his home since 1856, and the scene of his chief labors, Mr. Burnham had for some years past been working on a plan which, if followed out, will redeem that city from its present ugliness. In such matters as these Mr. Burnham thought broadly and with rare foresight. He built invariably for the distant future as well as for the immediate present, and it is indisputable that he worked with genuine patriotism, as well. But for the country at large Mr. Burnham's chief service will remain the Chicago World's Fair of 1893, an exhibition for which he would not, of course, have claimed exclusive credit; it was the work of all the leaders of the profession. The ability to work with others, the power to conceive great schemes and carry them through, and the realization of the duty of the architect to public and country found in him their complete development.

Year by year the task of the baccalaureate orator grows more difficult. Once upon a time his duty was very simple. Here were several hundred young men on the point of leaving Alma Mater's cloistered seclusion for the experiences, the trials, and the temptations of the world. Warning and advice were in place. But what is there about the world to-day that a commencement speaker can teach his audience? Among his listeners are men who have managed to take away enough time from cloistered seclusion to run down in their own motor-cars for a week-end near Broadway; men who have worked their way to Europe in cattle-boats and come back as able seamen; men who have worked as bear-leaders and strike-breakers; men who have edited daily newspapers and conducted successful theatrical tours; men who have managed football finances running up into the fifty thousands; men who have held mock political conventions, pulled wires, and—alas—stuffed ballot-boxes. If your baccalaureate orator is a venerable divine of the old pastoral school, there are several things about the world which these fledglings in cap and gown could teach him.

The Cuban situation is apparently going from bad to worse. The proposed suspension of the Constitutional guarantees, which is equivalent to the declaration of martial law, and the talk of a prompt repeal of the law against organizing parties along racial lines, which is supposed to be at the bottom of the trouble, show how serious the situation is. If Congress gives President Gomez the power he desires, he can shoot captives summarily. A reconcentrado policy is also being talked of by Cubans against Cubans—the very same Cubans who were so outraged by Weyler's reconcentrado camps. But what Gomez really needs is to borrow half-a-dozen American army officers of the type of those that built up the rurales during the Magoon administration, to run the revolutionists to earth. His persistent policy of playing politics with the army, even to the extent of conniving at the attempted assassination of a high officer, is now bearing fruit in the apparent inability of his military to accomplish anything. Moreover, Gomez is hampered by his own record. Did he not become President by reason of his having taken up arms against Palma? Is it so very wicked of the negroes now in revolt to do likewise, or is it that imitation which is the sincerest form of flattery? Finally, a sinister development is the report that if the outbreak is not soon quelled, a loan will have to be arranged. It has been openly charged in the Cuban press that Gomez has taken from the Treasury its last dollar. The possibility of a financial paralysis of the republic must, of course, have been known to the revolutionists.

Discussing the system of "exchange professors" between France and the United States, the Paris *Temps* rather wickedly recalls the *mot* in one of Dumas's plays: "I have just met X. We have exchanged ideas, and now I find myself without any." It is not implied that such is the case with any of the American professors who have lectured at the Sorbonne, or with the representatives of the French universities who have brought their ideas to the American market. But there is a feeling in university circles in France that students as well as professors from abroad could find some ideas still left in France, despite all that have been "exchanged." Accordingly, a new "national office" has been created for the schools and universities of France, the chief aim of which is to give information as to what France "can offer the foreigner desirous of study." The scheme is ambitious and elaborate, covering a multitude of details about expenses and special courses and academic degrees and so on. French institutions of learning already attract many students from abroad—above 5,000 is the latest figure given—but the hope is greatly to enlarge this number by means of special appeals calling attention to the special advantages offered.

Sunday's parliamentary elections in Belgium appear to have disappointed the expectations of the Liberals and Socialists, who had joined forces on the issue of the Government's Educational bill, which provides for a state subsidy for the Catholic schools. For nearly thirty years the Clerical party has held a majority in the Chamber, and this it still bids fair to retain, though by a slender margin. The Opposition strength in Parliament has steadily increased, but any sudden overturn is made very difficult by the existing plural franchise. Every Belgian citizen above twenty-five years of age has a vote. If he is the owner of real estate to the value of 2,000 francs, or possesses a corresponding income from land or funds, he is entitled to a supplementary vote. If he has graduated from an institution of higher instruction, or holds one of the higher posts in the civil service, or is a member of one of the learned professions, he has two supplementary votes. Thus in the last legislative elections there were 986,499 single voters, 386,224 electors with two votes, and nearly 300,000 electors with three votes, the last class alone almost balancing the great mass of workingmen votes, and the second class disposing of an overwhelming majority in votes, though in a numerical minority of 300,000 in a total electorate of 1,673,000. Naturally, the abolition of the plural vote constitutes an important feature of the democratic programme in Belgium.

DEFECTS OF THE PRESIDENTIAL PRIMARY.

Any criticism of the Presidential primaries, instituted for the first time in several States this year, must begin by admitting that the new system promises to be an improvement over the old, and that we are in for extended experiments with it. The fact that serious defects in its operation have manifested themselves, calls only for correction, not for abandonment. And even with all the confusion and mistakes and positive evils that have marked the first application of the new method, it cannot well be denied that it is superior to the old. It is superior, that is, in giving the party as a whole a better chance to express its real choice. That this opportunity has not been more freely availed of, does not affect the argument. That the results have not been such as to show that the system is incapable of abuse, is also beside the point. Grant the blunders and confess the disappointments, the true question is whether the Presidential primary, properly safeguarded, is not better fitted than the old way to satisfy the people that their wishes are respected in the election of their rulers. To create such a feeling of satisfaction is one of the great ends of democratic government.

Consider, for example, what happened last week in New Jersey. It may be true—we believe it is—that the victory of Roosevelt in the primary did not represent a real majority of the Republican party in that State. It certainly did not respond to the wishes of Republicans of most intelligence and weight in their communities. But what of that? The chance was there to make the best sentiment of the party prevail, but it was not seized. Republicans by the thousand did not vote at all. If they threw the primary into the hands of the unthinking, the flighty, the purchasable, that was their own fault. And depressing to them as the outcome was, who will assert that it was not better so than it would have been if the whole matter had been arranged in the old fashion, with Sewell and Dryden, Kean and Briggs, sitting around a table in secret and "delivering" the State's delegation?

Democracy will grasp imperfect instruments, and use good ones bunglingly; but will bestir itself to remedy defects when they are made clear to it. Now, certain weaknesses in the Presidential primary have been made so apparent in the past two months that steps must be taken to remove them before the system is put on trial again. One need is imperative. It is that of making the Presidential primary really a party primary. The laws governing it should make it impossible for Democrats to vote in a Republican primary, or vice versa. The scheme being one to ascertain the will of the party, none but enrolled voters of the party ought to be permitted a voice. Yet in Massachusetts the Roosevelt managers openly advertised for Democratic votes, and we have heard that it has been chucklingly admitted at Oyster Bay that 20 per cent. of the Roosevelt vote in Massachusetts and some other States was cast by Democrats. This reduces the whole thing to farce or fraud. Before the Presidential primary can be regarded as at all an accurate means of determining the preference of a political party, it must be confined strictly to that party.

Another thing to be taken promptly in hand is the matter of permitted expenditure of money. What we have seen this year shows the necessity of a sharp extension of corrupt-practices acts to cover the Presidential primary, and also of limiting the amounts that a candidate or his committees are allowed to expend in any given State or district. The $70,000 spent by Roosevelt in New York County was a public scandal of which there should be no repetition. If the reports of the vast sums laid out in Pennsylvania by the supporters of both Roosevelt and Taft were not grossly exaggerated, they smell of corruption. A Presidential primary that can be bought up, or that is made too expensive for any but millionaires, would be too obvious a mockery to be tolerated.

Still another reform upon which the advocates of the Presidential primary seem to be agreed is that it must be held at about the same time in all the States. The successive primaries of this year have been plainly demoralizing. We have seen the theatre of excitement and of manipulation pass from State to State. First Illinois is torn to pieces and then Massachusetts, with Ohio and New Jersey following. All the political machinery and the sinews of war are moved from one State to another like a circus on its travels. It is not only the suspense and the long-drawn fighting, so bad for the nerves of the country, that we have to consider. In this descent upon State after State, there is an open temptation to resort to corrupt methods. The moral effect of preliminary victory is felt to be so great that it will be struggled for desperately and at all costs. The danger is that we shall have a recurrence of the old evil of "October States," when Ohio and Indiana were flooded with money and overrun with politicians, while the electorate was debauched, all for the sake of "pointing the way for November." That mischief grew to be so inflamed that it was done away with in response to a universal demand; and the friends of the Presidential primary must be on the alert to prevent corruption, thrown out of the window, from coming back through the door.

MAYORS, GERMAN AND AMERICAN.

The Berlin newspapers have been giving much space to the election of their new Lord Mayor, Adolf Wermuth, well known to many Americans because of his successful management of the remarkable German exhibit at the World's Fair in Chicago in 1893. In 1900 he was appointed to the Department of the Interior, of which he became undersecretary in 1904. Four years later he became a privy councillor, and in 1909 Secretary of the Treasury, which high position he filled until a difference of opinion with the Chancellor over the inheritance-tax question led to his resigning in March of this year. To have obtained a man of Cabinet rank for the Mayoralty, and one who has been for thirty-six years in Government positions, is felt by the Berliners to be an unusual achievement and to prove to the rest of Germany that their chief executive position is worthy of the very best men in the highest places in the Government. The new *Oberbürgermeister* will receive 40,000 marks a year, or $10,000 in American money, though, of course, the 40,000 marks purchases very much more in Berlin than it would in New York, where the Mayor is paid $15,000—none too large a salary for the responsibilities carried.

The chief difference between the election of Herr Wermuth and of an American Mayor is in the term of office. Four years is the longest service of a mayor in this country. The Berlin Aldermen

chose Herr Wermuth for a period of twelve years, being free to select from among all German citizens. If he is successful and in good health, he will be reëlected when his term expires; or he may be pensioned. In the 104 years that have elapsed since the chief or lord mayors were first elected in Berlin, only nine persons have held the position, Herr Wermuth being the tenth, giving an average service of more than eleven and one-third years. In New York there have been nine Mayors in twenty-seven years, and no less than forty-eight in 104 years. Does not this in itself suggest one reason why Berlin has been so much better governed than New York? Herr Wermuth's immediate predecessor had served since 1899 as chief mayor and for six years previously as vice-mayor. Herr Kirschner's career as a city official began in Breslau in 1873. He has, therefore, been a practical municipal administrator for a lifetime. Where can we point in this country to a Mayor who has been all his life at work on civic questions or has had a Governmental career comparable to Herr Wermuth's? Mayor Gaynor has had a long official career, but only by reason of his service on the bench. Mayor Harrison of Chicago is the only living American of whom we know who has had five terms in a large city. Ferdinand C. Latrobe held the chief magistracy of Baltimore for seven terms—fourteen years—and Mr. Harrison's father was also five times Mayor of Chicago. On the other hand, the Lord Mayor of Munich, who visited New York a month or so ago, has held his present position no less than nineteen consecutive years, to the complete satisfaction of the city.

The usual American rule, as everybody knows, is to deny a civic career to a man, however able. He has his choice, if he wishes, to serve for a lifetime as a clerk, or at most a minor official, or of becoming a partisan candidate for high office, with the likelihood of defeat at the end of one term, as it came to Mayor Low after his, and to the Socialist Mayor of Milwaukee, who, whatever his mistakes, seems to have tried sincerely to better the city. The Socialist Mayor of Schenectady is also not likely to be judged on his merits as an administrator when his term is up. He, too, will probably be fought with the cry that it is a disgrace for the city to have at its head a Socialist, whether good, bad, or indifferent. The result usually is that good men leave office after too brief service to be really masters of their tasks, while the demagogue is apt to remain for at least a term or two, by reason of his appeal to class or mob, or his skilful use of a more or less base partisan machine. Where, then, is the opportunity for a continuous policy? What the chance for an original mind to work out administrative problems?

By this comparison we do not, of course, mean to imply that we would change our democratic system overnight for the German. The latter doubtless has its defects, too, but it must be confessed that, compared with our own, the results are amazingly good. We are not prepared to say that in a vast city like New York, with its great variety of nationalities, and the marked differences in relative interest in the government between sections and classes, the people should be deprived of a direct election of their chief magistrate. But we would point out first that, by the elimination of partisanship in the government of cities, we could take one great step towards continuity of service and towards luring into municipal office more of the kind of officials who govern cities abroad. Once let us wipe out the distinctions brought about by national party names and we shall find Mayors of long service less the exception and more the rule. Moreover, no one has ever maintained that a democracy is the most efficient form of government. A relative inefficiency will, perhaps, always be the price that a democracy must pay for the privilege of having a voice in its own affairs. The end is to make that relative inefficiency as small as possible, and Mr. Bryce is not the only observer who has noticed the vast progress we have made in the right direction.

CANADA'S GREAT PROBLEM.

"Immigration to Canada," says a Government report just published at Ottawa, "is the crucial economic factor in the progress of the Dominion." The reason for this is that "every financial responsibility that has been assumed for the development of Canada, whether in pledging public credit for railways, or for civic expansion, or for industrial enterprises, has been assumed in expectation of a greater increase of population than the natural increase." The risk in such a policy is well shown by the discrepancy of three-quarters of a million people between the estimated and the ascertained population of 1911. It is this discrepancy, in fact, that has brought the problem of Canadian immigration sharply to the fore. The Dominion has long been dependent for its development upon settlers from the outside. In the language of the report, the expansion of modern Canada is the expansion of immigration. "No other country has, relatively, such a record of assimilation of non-native peoples as Canada." How warmly she welcomes them may be seen in her liberal naturalization laws, which give to any alien who takes the oath, full rights of citizenship after three years' residence. The Dominion is thus somewhat in the position which the United States occupied for the first seventy-five years of our existence. The difference is that our problem was never so acute economically, although serious enough politically, partly because we could not have mortgaged the future if we had wished, and partly because it was seldom necessary to urge aliens to take advantage of the obvious opportunities in this land.

Canada, however, cannot afford to wait for the foreigner to make up his mind. With her, promptness is one of the elements of the problem. Where shall she look for immigrants? She is receiving them from two sources which she regards as highly satisfactory—the British Isles and the United States. This double stream "kneads quickly into Canadian national life." Each part of it is desired. The Americans, mainly farmers accustomed to prairie life, go West, where their experience and ready adaptability are invaluable—such is the complimentary phraseology of the report. The Britishers, largely wage-earners, scatter over the entire Dominion. The problem is consequently two-fold: to maintain the flow to the western provinces, and to increase it in the eastern. This would mean specific encouragement of British immigration, a policy that is enforced by political considerations. This political factor has been formally recognized in the Canadian House of Commons, where a former Cabinet Minister declared it "good policy to have the bulk of your immigration from the British islands." The occasional spread-eagle utterances of prominent American politicians are hardly calculated to diminish this feeling.

Canada's plain course, then, is to expand her immigration from Great Britain, which, owing to relative pressures of population, means not Scotland or Ireland, but England.

At this point the report begins to use guarded language. It speaks of "this rather embarrassing topic," and of the "need to handle the question frankly." The difficulty, it appears, is "the traditional British willingness . . . to unload" inferiors and their dependents on "the colonies." "Our attitude," affirms the report, "rightly is 'No inferiors need apply.'" It is not simply a state of population, then, that is to be remedied, but first a state of mind. England is interested in the immigration question on her own account because of her actual and prospective recipients of charity, represented by the eight thousand which the Bristol Civic League found within the limits of that city. This is true, even if the president of the Bristol Chamber of Commerce could go on to ask what reason there could be for a chamber of commerce to discuss emigration. Immigrants of this sort, willing and able to work, the Dominion would welcome. What she objects to is the industrially maimed and halt. The report does not hesitate to lay the blame for the English attitude towards Canada upon the English, who have much "to learn and unlearn in the way of adapting themselves to Canadian conditions." It characterizes as "ineffably foolish" the supposition of any Englishman that Canada can be adjusted to his notions on sight. And it goes so far as to point out "the overwhelming necessity that the people who come to Canada from Britain shall be prepared against exercising upon people of alien birth an influence that makes the idea of joining the Empire repellent to them."

In that last clause lies the largest consideration connected with the problem —the possibility and the desirability of making Canadian immigration a factor of Imperial unity. At the beginning of the century, only 20 per cent. of British emigration was going to British countries. In a dozen years, that proportion has risen to 80 per cent., with Canada having become the chief hope of British statesmen in that regard. On the other hand, within the last year Frenchmen have been officially warned by their Minister of Industry against emigrating to the Dominion. The need for strengthening the ties that bind Canada to the mother country is shown by the contrast that is drawn between the feeling of the Englishman in Canada and in Australia. In Australia, he finds the prevailing accent to be that of his own dear London. He hears England freely spoken of and sees it written of as "Home." He finds no large element of republicans. In Canada a different spirit prevails. Loyalty is mixed with independence. Canada needs England, but she will not cease being Canada on any terms. It is evident that the difficulties of her immigration problem are not small. The frank and thorough way in which she is facing them, however, is the best means of bringing that day which Lord Grey predicted, when Canada will be the centre of the Empire, the leader of the Britannic nations.

AEROPLANE PROBLEMS.

The solution of the problem of flight in heavier-than-air machines, which Wilbur and Orville Wright attained after years of patient experimentation, came about as a result of the partial abandonment of a preconception under which the majority of the earlier experimenters had labored. This consisted in the assumption that the flight of birds in the air could be rivalled by imitating the anatomical structure of the bird. Most of the earlier machines showed a predilection for flapping wings and curved surfaces. As late as 1897 the machine built by M. C. Ader for the French Government "reproduced the structure of a bird with almost servile imitation." Professor Langley's "aerodromes" revealed a similar tendency in the tip imparted to the comparatively flat wings. Success was attained by the Wrights in working out the principles of what may be called the non-avian school represented by Lilienthal, Chanute, and their successors in the field of gliding flight. Here the problem resolved itself into a matter of combining the sustaining energy of fairly flat surfaces with the driving power to be obtained from a highly-perfected motor-engine. The principle of bird structure was not altogether abandoned. The warped ends of the aeroplane with which the Wrights met to so considerable a degree the problem of stability hark back to the avian tradition. The monoplane, in build and still more in appearance, would seem to be a still further return to older principles. But this has seemingly been accomplished at the sacrifice of a large measure of stability as compared with the biplane.

It is not detracting from the fame of the Wright brothers and their foreign contemporaries to point out that their success was due in large measure to the development of the gasolene engine. That would explain why, independently of the Wrights though some time after them, Santos Dumont, Farman, and Delagrange succeeded in flights of respectable duration. High engine efficiency supplied not only the necessary motive power, but provided a very important factor working for stability. It also furthered the rapid development of the art by enabling men to study the problem where it could be most successfully studied—in the air. The problem of stability for the Wright biplane was solved by a highly efficient engine. It needed a still better engine, of the type turned out by the French manufacturers, to make the monoplane possible, with its greater dependence upon speed for equilibrium. Thus the automobile makers have done their part in devising motors capable of developing a hundred horsepower and being mounted on a frail structure of lathing and canvas. It was the first step to devise speed that should make flight possible. That accomplished, aviators have begun to study how to dispense with speed. Thus it may yet be the historical function of the perfected engine that it enabled men to fly long enough to master the secret of flight, or at least of perfect equilibrium, without a motor.

Hence it would appear that the old desire to wrest from the bird its entire secret has not lost its appeal. The latest experiments conducted by the Wrights at their old trial ground on the sand dunes of North Carolina were directed towards the solution of the problem of automatic equilibrium. But apparently, also, the Wrights had their minds fixed upon the question of flight without mechanical power. That would be indicated by the renewed trials with gliders which are reported to have taken place. It was characteristic of the courageous methods of these two Dayton pioneers. In their early experiments they soon found it necessary to throw over all hitherto compiled data of air pressure and to work out tables of

their own. During six years of flight it must be that their stock of aerial data was enormously increased. And possibly the point had been reached where Wilbur Wright and his brother found themselves strong enough to attempt the realization of the dream cherished by the older experimenters—the use of the air currents by man precisely as the birds make use of them.

But the question of making the aviator independent of his engine may be conceded to be a fairly distant ideal. For the present, the great effort must be to make the aviator with his engine independent of the vagaries of the air. It would be highly regrettable if the craze for speed and long-distance records should divert attention from the problems that still await solution. The aviator reaps a harvest of fame and profit that the experimenter must dispense with. And it is the glory of the Wright brothers that they were not content to enjoy quietly the full measure of fame and wealth that came to them, but set themselves other difficult pioneering tasks. Wilbur Wright was not spared to achieve that complete mastery of the air towards which he made the first great step. A kindlier fate may be that of his brother.

AN ELUSIVE GREAT SEAL.

We have had in the current political campaign an illustration of the fragile basis on which much so-called history rests, even when the events involved are too recent to warrant a presumption of confusion in the minds of the men most actively concerned in them. The question whether Mr. Taft was or was not present when the Roosevelt Cabinet discussed the suspension of the prosecution of the Harvester Trust will never be settled to the satisfaction of everybody interested, because it must depend so largely upon the accuracy of unassisted human memories. The historian who gives any prominence to this episode must therefore content himself with quotations from the pleadings on both sides of the dispute, and leave his readers to draw their own conclusions.

Such historical difficulties are suggested also by the newspaper announcement published a few days ago of the discovery of the great seal of the Confederate States of America, "the existence of which has been shrouded in mystery for nearly half a century, . . . its whereabouts pledged to secrecy by the most solemn Masonic oath"—just why, we are not informed. The first thing that must have struck the careful reader of this news was the discrepancy among the several versions printed almost simultaneously. The seal may be old, but its discovery, or recovery, is too new to afford any reasonable excuse for the representation in one account that the United States had purchased it along with a lot of Confederate documents a number of years ago, and in another that it had been given to Rear-Admiral Selfridge at that time as a souvenir, in one that the Admiral had sold it and in another that he had presented it to the people of Virginia, etc. The single fact of importance which is left in no wise uncertain is that the relic under consideration has passed into the control of three prominent Virginians, who intend to find a home for it in one of the public institutions of Richmond.

What lends picturesque interest to the announcement of the discovery is the fact that, at intervals since the dispersal of the effects of the Confederacy in 1865, there have appeared at least two other claimants of the honor of possessing the great seal. The State of South Carolina received in 1888, as a gift from a former citizen, what purported to be the genuine article. The donor, or some one in his behalf, undertook to rehearse its pedigree, including a story of how it came into his possession directly from the hands of Col. John T. Pickett, commander of the rear guard of the Confederate forces defending Richmond, who had found it in the office of the Confederate Secretary of State while the evacuation of the city was in progress.

Eleven years later another claimant appeared in the person of a West Virginian, a descendant of Col. Alexander Boteler, chairman of the committee on whom the Confederate Congress imposed the task of procuring a seal for the infant republic. This Boteler seal, like the one which has just started for Richmond, was of silver, whereas the South Carolina seal was described as of baser metal.

But with the lapse of another eleven years there was published, under respectable auspices, a circumstantial account of the flight of the last remnant of the Confederate Government from Richmond towards the Gulf. Their final council, according to this narrative, was held in May at Abbeyville, S. C.; and that evening Secretary Benjamin asked for a hatchet, and with it defaced the great seal of the Confederacy. "About twelve o'clock the same night," the writer goes on, "the party continued their retreat . . . and while crossing the Savannah River in the darkness some one suggested that the seal be thrown overboard. . . . When the boat reached mid-stream it was dropped with a dull splash into the sandy bed of that beautiful Southern watercourse, where to this day, its mission all fulfilled, it serenely rests."

There may have been other accounts of the fate of the great seal, but these will suffice to show how easy it is, when the possible future importance of an object or an event is not in anybody's thought, for the details to become confused in the minds of those who ought to know most about it. In this instance, a presumption is created in favor of the authenticity of the relic which was the latest to turn up, by the circumstance that it was traced to its hiding-place in Rear-Admiral Selfridge's safe through some of Col. Pickett's memoranda which are now in the Library of Congress. Its hallmarks, moreover, are said to bear every indication of genuineness. But what, then, was it that Secretary Benjamin defaced at Abbeyville and somebody dropped into the Savannah River at midnight? Shall we ever find out till some enthusiast, with the persistency of Dr. Owen in his hunt for Shakespeare's head, drags the Savannah for this battered emblem of sovereignty? Or is the whole Abbeyville incident a romantic fiction, and is the adult Benjamin's hatchet doomed to pass into the same legendary limbo with the juvenile Washington's?

THE MISSION OF THE CHURCH.

"Smith doesn't care a farthing about the state of his soul . . . he declares that he believes churches are a good thing, and he will do almost anything for a church but attend its services. What he really means to say is that he thinks the church is a good thing for Jones and me, but that, as for himself, he gets on comfortably without it. And the great danger both to the church and to Smith lies in the fact that he does apparently get on so comfortably with-

out it!" In these words Meredith Nicholson states for *Atlantic Monthly* readers one of the tremendous, if quiet, changes that have come about in a single generation. There are literally multitudes of persons who can remember, with him, communities where it was not respectable to miss "divine service." To-day there is slight exaggeration in the statement that the apologetic tone has shifted to the church attender. The burden of proof is no longer upon the one who, for whatever reason, stays away. In number, at least, he is too respectable to be denounced, and, if the whole truth is told, his respectability is a matter of something higher than mass.

Why does Smith not go to church? What makes him act so differently from his fathers? Well, Smith is not deeply concerned with the conduct of his ancestors. Art, for instance, might have interested some of them, but that would not strike Smith as any reason why he should bore himself with it. A thing must justify itself to Smith, not by having appealed to the world in the past, but by appealing to Smith now. And the church simply does not appeal to him. He answers your question of why he does not go, therefore, by asking why he should go. How are you going to reply to him? Since he has graciously said that he thinks churches are a good thing, perhaps the most plausible answer would be that he owes it to them and to himself to join in making them better—more attractive, that is, to men like himself. Even this will probably not affect his attitude. You might as well suggest that he help improve the stage or literature or newspapers. He feels that he is only a common human being, and that these things are quite outside the range of his influence. If they appeal to him, good. But if they do not, he can only let them alone and get along without them until they do, it being manifest that he can get along without them much better than they can get along without him.

The problem, then, is not how to save Smith, but the church. That this view is just the reverse of that which would have been generally taken in any preceding age merely emphasizes the difficulty of the situation. To be sure, there are persons who hold the old view. There is the anxious mother who got a religious society to pay her son a dollar for every church service he attended, hoping to see him become worthier of her love. The experiment failed. Found guilty of impersonating an officer, the youth was sentenced to a term in jail. Meanwhile, the streets are filled with young men who almost never enter a church, and yet are under no suspicion of serious misconduct. The conclusion is inevitable: either the church has exaggerated its importance, or its work is being done in other ways. We think both things are true. In the past the church professed to know vastly more than it did know of the origin and the destiny of man, and more than it is at all necessary to know in order to be a decent and even religious person; and in the present all of its non-theological activities are supplemented by other organizations. Why, then, save the church? If for no better reason, because it is poor economy to let an expensive and complicated plant go to waste instead of wearing out and being renewed like living tissue.

What shall the church do to be saved? One set of voices cries for a return to the old ways, which means, specifically, more theology. Another and larger cry is for greater social service; that is, more attention to the bodies of mankind. It may be doubted whether either alone solves the problem. The theology of the past may be dead, but, on the other hand, it is as true as it ever was that man does not live by bread alone. The question of our day is not faith or works, but what faith, what works? To give coffee and rolls to a hungry man out of a job is to serve God, if you want to put it that way, but if the church stops with coffee and rolls, it makes a ludicrously and pitiably inadequate use of its resources. Now there is a work that is not being done by any other organization in any formal way, a work that needs to be performed as sorely as any, and that is the elevation of the motives that actuate men and women, the strengthening of their better selves. This task the church has nobly discharged in previous times, and it should continue to discharge it in the years to come. But perhaps it is a task that hereafter is to be attended to incidentally rather than formally. Character, Gov. Wilson has remarked, is a by-product. Even so, the church can surely find a way to preach effectively while it is binding up humanity's wounds. And it will do well to remember that its power, like the power of any institution, bears no fixed relation to the number of persons who identify themselves with it.

RECENT GERMAN FICTION.

To weld into a book all the conscious intellectual currents and all the unconscious emotional tendencies of a certain people at a given period has ever been the coveted goal of the writer of novels. America has yet to wait for the long-heralded American novel. But Germany can now boast of a work very nearly fulfilling all requirements of such a vast undertaking. It is "Die Intellektuellen," by Grete Meisel-Hess (Berlin: Erich Oesterheld). The author attracted attention by her story, "Die Stimme," published some years ago, and later by a dignified and scholarly work on the problem of love and marriage, and has proved herself possessed of unusually mature judgment. In this book she presents what might be called a composite portrait of the young generation of Germany and Austria, which has outgrown old faiths and thrown aside old ideals and launched forth to "realize itself" with a reading of life based upon undigested science, economic data, and an exaggerated importance of the individual ego. Hence the eternal recurrence of the conflict between that ego and the social instinct, between personality (no more abused word in the modern vocabulary than this!) and society. Hence also the pitiful spectacle of intelligent human beings who waste their strength in self-indulgence, in the cult of hobbies, and the pursuit of chimeras. Hence also the emotional impotence and spiritual sterility of those precious æsthetes and supercilious intellectuals who abound in the professional circles of Vienna, Berlin, and Munich, and whom Frau Meisel-Hess has portrayed in types so true and striking as to be unforgettable.

Into this world the author has placed some women, among them one exceptionally gifted who seeks fulfilment of her life under less restricted conditions than her orthodox Jewish home. Her experiences in the quest for happiness, in connection with those of her brother, her cousins, and her friends, make a well-constructed and absorbing narrative. But in the spirit of the book lies its greatness. It is written from the standpoint of one who has known the Odyssey of the modern ego, who understands and yet does not despair of humanity. She smiles at the futile affectations of the æsthetes and the destructive speculations of the intellectuals. She looks upon the panorama of contemporary conflicts as upon inevitable and logical phenomena in the development of society. There is no proselytism for any new theory, for any new experiment in

the more intimate relations of human life.

The problem of love and marriage is the engrossing topic of many new stories. A very original variation upon the old theme is that of the Swiss writer, Ernst Zahn, in "Die Frauen von Tannö" (imported by G. E. Stechert & Co.), in which the author treats with admirable discretion the complications arising when a pedagogue reformer tries to pledge to celibacy the women of a rural community which is ravaged by an apparently hereditary ailment. Another unusual theme is skilfully handled by Carlot Reuling, in "Die Strasse der Erkenntniss" (Egon Fleischel & Co.). The hero of this novel suffers from having fallen heir to his father's great name and reputation for brilliancy, and the tragedy reaches its climax when he proposes to the girl he loves and discovers that even here his progenitor had preceded him. Hermann Stegemann, the Alsatian writer, draws in his "Theresle" (imported by G. E. Stechert & Co.) a heroine who, with an infallible intuition for the right course to pursue, works out her salvation independently of her family, and from a simple waitress rises to the ownership of a summer hotel. Karl Bittermann strikes a timely note in his story, "Der Ruf der Felder" (Egon Fleischel & Co.), in which he traces the regeneration of his peasant heroine, who had followed the lure of the city and only on her return to the soil returns to her better self.

A group of stories by women about women deserves special mention. Gabriele Reuter's singularly charming and pathetic story, "Frühlingstaumel" (Berlin: S. Fischer), relates the experiences of a gifted actress who convinces her audiences of the genuineness of her feelings, but in real life fails to find credence. The caddish hero is drawn with great subtlety, and an eccentric woman painter supplies an element of grim humor. Helene von Mühlau's stories are rather depressing, dealing mostly with blighted lives, but there is strength in them. "Eine irrende Seele" (Egon Fleischel & Co.) is a remarkable study of a sensitive soul whose vitality is exhausted in the conflict between her illusions and the real world. "Nach dem dritten Kind" dramatically presents the tragedy of an army officer's wife whose family increases out of proportion to her husband's income. An unusually good first book is Elsa von Bonin's "Das Leben der Renée von Catte" (Egon Fleischel & Co.). In the heroine and her brother Hannsbabo the author has drawn types of the old aristocracy of the "Mark," with a sure and sympathetic touch which suggests the study of Fontane.

Hans Heinrich Ehrler is also a new name. His "Briefe vom Land" (Albert Langen) is a simple love story in the form of letters, containing some choice bits of description of a most delicate feeling for nature and revealing a character of unusual distinction. With a dramatic power surpassing even his strongest work so far published, Ludwig Thoma has in "Der Wittiber" (Albert Langen) moulded into a grim tragedy the story of a widowed peasant who, in his hunger for affection, drifts into a love affair with a servant girl, and himself becomes a drunkard and his son a murderer. Lulu von Strauss und Torney, in her "Judas" (Egon Fleischel & Co.), also presents a rural tragedy, but upon an historical background, the scene being a German village in which the news of the French Revolution suddenly rouses the simple country-folk to violent resistance against exploitation and abuse by the authorities in power. This, however, is only the background for the story of two brothers, the elder, a drunkard, neglecting and mortgaging the family place, the younger working as a hired hand to save it for the other's wife and children, but a victim of the villagers' vile suspicions. The author has a keen insight into the folk-soul and has succeeded in giving her work a touch of the heroic epic. Rudolf Herzog, who lectured for the Germanistic Society this season, has also written a story with an historical background, "Burgkinder" (imported by G. E. Stechert & Co.). The central figure is a very sympathetic character, living a recluse life in a castle near the Rhine, and bringing up the orphaned children of a French refugee. The story has strong dramatic moments, when the blood of the father asserts itself and calls them to espouse the cause of his country and ally themselves with his people.

NEWS FOR BIBLIOPHILES.

The publications of the Bibliographical Society of England are necessarily limited in their circulation. It is expressly stated that copies can be supplied to members only, and "in no case can more than one duplicate copy be supplied to the same member," unless that member has "lost or damaged" his. In some cases, no doubt, the supply is fully equal to the demand. Many would reckon their libraries complete without the "Dictionary of Booksellers and Printers at work in England, Scotland, and Ireland, 1641 to 1667," or the "Abstracts from the Wills and Testamentary Documents of Binders, Printers, and Stationers of Oxford from 1493 to 1638." But the Society's latest volume, "A List of English Editions and Translations of Greek and Latin Classics Printed before 1641," has a distinct interest and value for students of the classics, and it is to be regretted that so few of them will ever have the privilege of reading it. It has been compiled by an American, Miss Henrietta Palmer, for whom Victor Scholderer has written an excellent Introduction.

The authors are arranged alphabetically, Greek and Latin together, and even the Pseudo-Classics are included. For instance, "The Hystorye Sege and Dystruccyon of Troye, by Dares Phrygius, which was a souldier while the Siege lasted," appears in three English translations made in the middle of the sixteenth century, and "The Riddies of Heraclitus and Democritus," printed in 1598, and equally a work of fancy, is ranged alongside of the authentic classics. We suspect that the "Historical Treatise of the Travels of Noah into Europe," by Berosus the Chaldean, a writer who survives in a few fragments, represents merely what Berosus might have written on this subject. In fact, to be strictly accurate, the word "classics" should have been omitted from the title.

In the list one notices, in the first place, the total absence of Æschylus, which is not surprising when one remembers that, for generations after the Aldine edition was published, his text was so corrupt as to be unintelligible. Of Aristophanes one play, the "Knights," was edited in 1593; no play was translated. Sophocles is represented by an edition of the "Antigone," 1581, and what seems to have been an adaptation of the "Œdipus Rex" in three "Cantoes," published in 1615 and not now extant. Euripides comes off best with three entries, a free translation of the "Phœnissæ," an edition of the "Troades," and Erasmus's Latin version of the "Iphigenia at Aulis."

The dramatist who appealed most to the taste of the age was Seneca, who has more entries than any other writer except Virgil and Horace. Plato was neither translated nor edited, but two editions of the spurious "Axiochus" appeared in 1592 and 1607.

Among the translators, Chapman with his Homer, Hesiod, and partial translation of "Hero and Leander," stands head and shoulders above the rest. Men who had the scholarship necessary for a translation were engaged in reconstructing corrupt texts and would have thought translation beneath them. Such work was done chiefly for moral edification, and by inferior scholars. Many curiosities of literature are included in this list, for instance, the version of Martial in Welsh (1571), and the translation of Horace's "Satires" in 1566 by Drant, who in his preface says that he has "shaved off Horace's hair, pared his nails, and wyped away all his vanity and superfluity of matter." Another eccentric work is Stanyhurst's version of the first four books of the "Æneid," which Professor Saintsbury has called "the most absurd book in all literature." It is written in English hexameters constructed on the classical basis of quantity instead of accent. This sort of thing was called "reformed verse" and more distinguished writers than Stanyhurst, Abraham Fraunce, for instance, followed the fashion.

In 1585 reformed spelling had reared its head, and we find an edition of Æsop entitled "Æsopz Fablz in tru Ortography with Grammar-notz." With a few exceptions which became English classics, such as Chapman's translations and North's "Plutarch," these editions and translations are accessible only in such libraries as the British Museum, the Bodleian, and the Library of the University of Cambridge, and several are not positively known to have existed except in the intention of the author who procured a license

for their publication and perhaps went no further.

THE TESTIMONY OF A FRIEND.

To the Editor of The Nation:

Sir: I am of those who used to think that Mr. Roosevelt's was the case of an impulsive man, whose heart was right, who acted and spoke as he really thought without much regard for consistency, but with real sincerity. But my eyes were opened. His inconsistency is calculated and deliberate. He plays to opposing sides of the gallery. His untruths are calculated and deliberate lies, uttered for the purposes of deceit. To say that he would not stir a finger to attract a corrupt boss is crass nonsense. He would not only raise his finger to beckon such a man, but he would as effusively grasp that man's hand and shake it with warmth as he does the greasy hands of locomotive engineers—when reporters are around. The proof is at hand. He did that very thing with Boss Cox in Cincinnati. He did, indeed, refuse to dine at a public dinner if Lorimer were there, but that was to catch pious gudgeons. He shook Cox's hands to catch political gudgeons. This has been his constant habit through life in order to promote politically his own personal fortunes.

A young naval officer, an enthusiastic admirer of his, wrote me the other day that his course of late had somewhat weakened respect for him, but he was in favor of Mr. Roosevelt's policies, and therefore would support him. I entered into no argument with him. I simply suggested that he take pen, ink, and paper and write down in succinct form what he considers Mr. Roosevelt's policies to be, and I prophesied that he would be rather astonished when he got through with the job. He has promised to do so, and I am awaiting the result with some interest. When he tries to jot down in black and white the rambling, incoherent, inconsistent, hazy utterances of a demagogue, and formulate them into statesmanlike propositions of concrete policies, his mind will be in a state to receive information, to which it is now impervious.

The best way for any man to decide for himself whether Mr. Roosevelt is a true man is to ask himself a few questions:

(1.) What did Mr. Roosevelt say to the American people about Taft in 1908?

(2.) What has he said of Mr. Taft in 1912?

(3.) Has he not unsaid in 1912 everything he said of Mr. Taft in 1908?

(4.) If yea, is he speaking falsely now, or did he speak falsely then?

(5.) If it is not a case of bearing false witness, then or now, was he deceived then, or is he deceived now?

(6.) If he spoke falsely then, what was his motive?

(7.) If he speaks falsely now, what is his motive?

(8.) If, after years of close acquaintance and intimate intercourse, with ample opportunities of knowing the character, disposition, and ability of his one-time friend he was so wofully deceived in 1908 as then to paint him as a strong, able, and conscientious man, or is so wofully deceived now as to vilify him as a weakling, an ingrate, and a hypocrite, what guarantee have the people that he is not, or will not he, equally deceived in the men who now, or hereafter will, surround him?

(9.) If his tongue cannot be depended on to tell the truth, or his judgment to discern character, whichever it be, is it the part of wisdom for the people to put him in a position where the consequences of his false witness, or misplaced confidence, whichever it be, will be disastrous to the country?

(10.) When he is charged with having arrested, as President, the prosecution of the Harvester Trust, at the request of the very capitalist who is now showing his gratitude—for favors to come, as well—by financing his present campaign, is it any answer for him to say that his Secretary of War, whom he then sought to promote, the President whom he is now seeking to destroy, was an acquiescing party thereto? And, if it is no answer, what shall be thought of the sincerity of a man who denounces favoritism in public and practices it in private?

If you think the letter is worth publishing as the opinion of one who, in his younger days, believed in Theodore Roosevelt as a man, and, like him, was a Republican, and, like him, said he would not vote for James G. Blaine if nominated, and, unlike Theodore Roosevelt, stood by his words, whereas Theodore Roosevelt ate his; and if you value the opinion of a man who, ever since 1884, has fought to the best of his poor ability fraud and chicanery in his party's politics, while Theodore Roosevelt, in public, was ever professing to fight the bosses, and in private was lying down with them as meekly as any lamb, obtaining office by their means, and now seeking to do the same, even to the extent of buying away from his former friend the Southern officeholders; and if you think this letter ought to be over the name of the writer, you are at liberty to publish it.

In the younger days of this republic, its citizens were wisely taught to fear "the man on horseback." Mr. Roosevelt, in his pose as a "rough rider," in his insane ambition for a third term, in his demagogic appeals to passion and prejudice, in his insensate egotism as the only man who can do things, in his crudities and ravings, is the man on horseback whom we have most to fear. THE "HAT SPIRIT" OF OYSTER BAY "JUDGED DOWN" IN 1672.

To the Editor of The Nation:

Sir: The Oyster Bay style of losing first one's hat and then one's head in the prize-ring was condemned by judicious Friends two hundred and forty years ago to-day.

An account of the American journey of George Fox, 1671-3, printed in the January number of the "Journal" of the Friends' Historical Society, London, thus describes the visit to Oyster Bay, May 17-27, 1672:

"Thence wee went about 40 miles to oyster bay where was a Generall meeting wch held 6 dayes and was lardge where wee mett with som of the hatt spirits wch was Judged Downe & condemned and the truth was sett ouer all."

Verily, "truth is mighty and will prevail" in the long run, over the hat spirit and the prize-ring method.

THE ORIGINATOR OF THE FEDERAL IDEA.

To the Editor of The Nation:

Sir: The criticisms of a recent publication (Taylor, "Origin and Growth of the American Constitution") involve an historical problem that merits further comment. The one fundamental question at issue is: Who originated the Federal Idea? By the Federal Idea is meant the idea of a confederation having a central Government armed with the power to legislate, independently of State Governments, directly upon individuals. This power is exemplified typically in the ability to tax individuals, and is, of course, diametrically opposed to the unwieldy system of levying quotas upon colonies or States.

The author of the volume in question (pp. 28-29) explicitly states that this Federal Idea is the fundamental concept of the Constitution:

> Approaching it on its financial side, he [Pelatiah Webster] set for himself the task of constructing an entirely new Federal fabric to be endowed, for the first time in the world's history, with the independent power of taxation. . . . In that fundamental concept was embodied the path-breaking idea (*bahnbrechende Idee*) that wrought the revolution.

But on page 21 occurs the sweeping and erroneous statement: "Certainly at the time of the making of our first Federal Constitution neither Franklin nor any other American statesman had conceived of a Federal system armed with the power to tax."

On the contrary, it is certain that Franklin had conceived of exactly that kind of a system as early as 1751, and got it embodied in the Albany Plan of Union in 1754. In short, he originated this central idea of the Constitution more than a score of years before the publication of Pelatiah Webster's interesting pamphlet of 1783.

In dealing with the Albany Plan, the author of the recent volume asserts (p. 122) that "the scheme of taxation contemplated in that plan was simply the requisition system, based on quotas." This point may be settled by referring to the reprint of the plan in appendix iii of the volume itself. The author reprinted the document, but erred in accepting an interpretation of it given in an older, secondary work. He failed to practice the precept of Langlois which he often repeats: "There is no substitute for documents; no documents, no history."

To lead up to the Albany Plan of 1754: None of the plans of the preceding sixty years suggested even faintly the Federal Idea. (For the text of these plans see Carson, "One Hundredth Anniversary of the Constitution," Vol. II, appendix). Franklin first suggests Federal taxation of individuals in a letter of 1751 (reprinted in Smyth, "Writings of Franklin," III, 42).

Again, in Franklin's "Short Hints" on a plan of union, drawn up and submitted to some of his friends, just before the Albany Convention of 1754, the financial scheme suggested three years earlier was somewhat elaborated, as follows:

General Treasury: Its fund, an excise on strong liquors, pretty equally drunk in the colonies, or duty on liquor imported, or—shillings on each licence of a public house, or excise on superfluities, as tea, etc., etc. All of which would pay in some proportion to the present wealth of each colony, and increase as that wealth increases, and prevent disputes about the inequality of quotas.

Here, then, is a direct statement made by Franklin, before he attended the Albany Convention, to the effect that his new plan of taxation was for the explicit purpose of obviating the difficulties of the old quota system.

As finally embodied in the Albany Plan of 1754, Franklin's new idea takes the following form:

Power to Make Laws, Lay Duties, etc.: That for these purposes they [the President-General and Grand Council] have power to make laws, and lay and levy such general duties, imposts, or taxes, as to them shall appear most equal and just (considering the ability and other circumstances of the inhabitants in the several colonies), and such as may be collected with the least inconvenience to the people; rather discouraging luxury, than loading industry with unnecessary burthens.

The Federal nature of this plan is again attested by the further provision that, besides a general treasurer, the Grand Council may nominate and the president-general confirm, a "particular treasurer" in each colony to have charge of the funds arising from the Federal taxes.

The fundamental nature of the new idea embodied in the Albany plan is further revealed by an elaboration of that idea in another plan drawn up later in the same year. The Massachusetts plan was proposed by a committee of the Assembly of that province. The original copy of the plan is in the handwriting of Thomas Hutchinson, who was a member of the Albany Convention. This plan is largely an elaboration of the Albany plan, with a few important changes.

The Massachusetts plan provides more machinery for carrying into effect the Federal legislation and tax-levies. "Collectors" of the general taxes are to be appointed in each colony. "And all laws and orders for enforcing the payment thereof in any and every colony . . . shall be as fully and effectively observed and executed as if they had been the laws of that particular colony where any offence shall be committed, and all offences against such laws and orders shall be tried and determined accordingly."

Here, then, is a complete Federal system, the Federal laws to be enforced by the courts of the land and, since the proposal was to establish the articles of union by act of Parliament, there would be provided a supreme court in the Privy Council.

The people of Franklin's day did not fail to recognize his early contribution and its likeness to the Constitution of 1787. When the Albany plan, with comments on it, was printed in the *American Museum* of Philadelphia in 1788, the man who submitted the paper for publication wrote as follows to the editor:

New York, Oct. 28, 1788.

Sir: As I am one of the numerous admirers of your valuable museum, I beg leave to suggest an important production of Dr. Franklin's, to your notice—which ought to be wrested from obscurity—and deserves a place in your museum. I mean a plan of government for America, promulgated at Albany in 1754. I am surprised it has lain dormant and unnoticed among all the publications on the subject of the new government. As the outlines of the plan bear so strong a resemblance to the present system, it will not only prove extremely interesting, but will tend to convince the wavering, that the new constitution is not the fabrication of the moment, but urged upwards of thirty years ago by that great man—even when we were subordinate to a superior head. May we not then reasonably suppose he never lost sight of his favorite system, till, in the end of his life, he has lived to see it accomplished?

I am, etc.,

A true Patriot and Federalist.

Due credit should be given to Pelatiah Webster, and to all others who in the years just preceding the Federal Convention of 1787 proposed new ideas or modified older ones that were to become embodied in the great instrument. But in the matter of priority of suggestion as regards the "great discovery," the "wholly novel theory," the historian must go farther back than 1783 or 1781. The one absolutely fundamental principle of the Constitution was thought of at least as early as 1751, and was formulated in detail in 1754. So far as can now be determined, the originator of the Federal idea was Benjamin Franklin.

AN EXPERIMENT IN PEDAGOGY.

The Montessori Method: Scientific Pedagogy as applied to Child Education in "The Children's Houses," with Additions and Revisions by the Author. By Maria Montessori. Translated from the Italian by Anne E. George. With an Introduction by Prof. Henry W. Holmes. New York: Frederick A. Stokes Co. $1.75 net.

In an heroic age like our own, when every scientist is either Newton or nobody and none may be a Kipling who is not also a Shakespeare, it is rather difficult to do justice to a clever and sympathetic woman who offers a suggestive experiment in pedagogy, especially when she announces herself as only the third person who has had anything significant to say. Those who have heard of the Montessori method as a revolutionary discovery will be disappointed to learn that it is a method which, unnamed, is practiced to some extent by every intelligent mother of young children. Any child so fortunate as to own a nest of small boxes, which he piles one upon the other, pyramid-like, in the order of size, is illustrating the Montessori auto-education in the matter of dimensions. The child whose godless parents allow him a pack of playing cards with which to satisfy his delight in the construction of mathematical series, possesses good "didactic material" for education in number and arrangement. And every mother who wisely prefers to let the child work out his own salvation in these matters, with attentive and sympathetic observation and only a little judicious assistance, has grasped the idea of the Montessori teacher. Nor is Dr. Montessori the first to appreciate the impediments to quiet and orderly behavior which are presented by the size and weight of the chairs and tables, the doors and the steps, of the adult household; nor the first to seek a remedy. To appropriate all of these ideas as one's own private "method" is much like seeking a patent for paring potatoes with a knife.

Yet in justice it must be said that to Dr. Montessori belongs the credit of perceiving their possibilities for a system of education and for elaborating them into an institution and a method. The volume in which her method is expounded is fresh and readable, even where it is technical, and it may be cordially recommended, not only to teachers, but to every parent of young children. It reveals to us an attractive personality, a woman of native originality and keenness of intelligence, who has a genuine love for children and a sympathetic insight into their point of view, and who is at the same time well trained in medicine and biology, though her psychology is not to be commended. But, what is most to the point, she is able to show us her method in operation and to offer results.

These, however, are subject to two important limitations. In the first place, the "Children's Houses," as her schools are named, have so far been designed for only very young children, from two and a half to seven years of age. It is clear that a method adapted to children of this age might have no relevancy whatever to the education of older children—and in particular the method of auto-education and the liberty of the child. Whatever discipline we might impose upon the older children, few of us would deny that the young child should be largely untroubled by responsibilities and for the most part simply allowed to grow. Yet there is no evidence that Dr. Montessori's theory is mindful of this limitation. In the second place, the Children's Houses have so far been chiefly occupied by the children of the very poor. The Children's House was, in fact, in its inception, a sort of day-nursery, established in a tenement-settlement, for the children of working mothers. For these it may be surmised that the exercises in cleanliness and order, in bodily grace and in manners, have a special, though not exclusive, application. And probably these are the children who, because of hereditary insensitiveness or of poverty of stimulus in their surroundings, have the greatest need of education of the senses. At any rate, successful results with children of this class would not conclusively justify the universal adoption of a system of education based upon methods of teaching defectives.

For such, indeed, was the origin of

tho method. Dr. Montessori regards herself as the lineal and solo descendant of Itard, a prominent physician of the period of tho French Revolution, who conducted tho education of the idiot boy known as "the wild boy of Aveyron," and of Dr. Edward Séguin, who, taking the work of Itard as his starting point, founded and conducted various institutions for tho feeble-minded in France and the United States during the latter half of the nineteenth century. Dr. Montessori tells us that her own "true degree in pedagogy" was obtained from two years' experience with the feeble-minded in Rome. Séguin's method was to lead the idiot "from the education of the senses to general notions, from general notions to abstract thought, and from abstract thought to morality." But though, as Dr. Montessori asserts, by this method the idiot became normal, he remained inferior, and for her the chief result was to suggest how much more might be accomplished by the same method for the normal child. The opportunity came for putting the suggestion into practice when the Roman Association for Good Building invited her to undertake the organization of infant schools in its model tenements, and in 1907 she opened the first *Casa dei Bambini*. To appreciate the appalling conditions which Dr. Montessori and the Association sought to remedy, one should read her eloquent Inaugural Address, printed as chapter iii of "The Method." The idea was quickly adopted in other countries, especially in Switzerland, where there are now seventy Montessori schools.

Two purposes are combined in the Children's House: it is both a school and a pedagogical laboratory. Nor is it always clear whether its fundamental principles, the liberty of the child and the passivity of the teacher, are determined by the welfare of the child or by the desire to preserve him as good material for scientific observation. For Dr. Montessori, however, the two ends are coincident. Hence, the function of the Montessori teacher, or "director," is, above all, to observe. She is never to point out errors, for even slight errors show that the child has ceased to be spontaneous and needs a change of occupation. Her active responsibilities are confined chiefly to a forecast of the direction of the child's activities and a provision of the suitable material; and assistance should be offered only when it is welcomed. The ideal Montessori teacher must, therefore, be a person of rare tact and discernment.

On the other hand, since there is little or no formal teaching, one director may easily conduct a Children's House of forty or fifty pupils, who may be in attendance from nine o'clock until five. Here, as Professor Holmes points out in his Introduction, the Montessori school differs from the kindergarten. "While kindergarten children are generally engaged in group work and games with an imaginative background and appeal, . . . the Montessori children spend almost all their time handling *things*, largely according to their individual inclination and under individual guidance." Indeed, the idea of a Children's House is that of an all-day home specially furnished both for the comfort of children and for their assumption of its entire care. There are no fixed desks or benches. The chairs, tables, and rugs must be light enough to be easily carried by the children themselves from the house to the garden—of course, there must be a garden in which the children can work. A bathroom is a most important feature, and a rest-room where hammocks can be slung is highly desirable. There must be a supply of dishes and of pitchers and basins for washing the hands, all of a size to be easily handled by children. Upon the educational value of these arrangements Dr. Montessori lays great stress—and rightly. They constitute "didactic material" of a most important kind, which even the better homes do not always supply, not merely for training children in independent responsibility for the decencies of life, but for cultivating bodily grace and poise and the ability to perform bodily tasks with a minimum of strain and noise.

This, indeed, embodies the Montessorian conception of discipline. Her idea is that children have a natural love of accomplishment, are delighted to do what they know how to do, and will willingly obey an instruction where they are not annoyed and impeded by ignorance, awkwardness or unwieldiness of the material to be handled. Undoubtedly there is much truth in this. At the same time the poise and maturity of good breeding attained by the Montessorian infants is somewhat astounding, and there is evidence of a good deal of make-believe in "the liberty of the child." In some cases, as in the "lessons in silence," where the children are rendered breathless by the suggestion that they may hear the baby breathe, or "the whisper of the trees," it seems that the liberty of the child is but another name for the shrewdness of the teacher.

So far, however, the institution appears to be an admirable one, and especially adapted for its original purpose and environment. Possibly much may still be said for the exercises in the discrimination of sounds, colors, forms, sizes, weights, odors, smooth and rough surfaces, which, under the head of "education of the senses," constitute a large part of the curriculum. A typical illustration of the method employed is furnished by the series of geometrical "insets," or, better, inlays, each of which just fits a depression cut for it in a board or frame. The selection of the proper place for each figure is both a fascinating game and a cunningly devised method, characteristic of the system of auto-education, for drawing attention to differences in form and testing correctness of discrimination. Yet it is just here that we begin to doubt. Some of these sense-tests invite constructive analysis; others by their very nature forbid it. As a matter of mere sense-education, it may be doubted whether these formal exercises, however important for the dull or defective, add anything of value to the similar education which a wide-awake child receives at every moment of the day.

The chief question, however, is that suggested by the programme of "intellectual" education, as exemplified in the process of learning to write. For Dr. Montessori this is both an after-thought (it was the children and their parents who urged it) and a cherished discovery—namely, that, by the utilization of energy now wasted, any normal child can equal the performances, say, of the son of Boris Sidis. By means of free exercises in tracing geometrical figures around the edges of the insets, which are used as patterns, and then in filling in the outlines, the muscles are trained for the use of the pencil and also coördinated with the eye. Then to the child are given sand-paper patterns of script letters, pasted upon cardboard, to trace first with his finger and then with a pencil, and at the same time he hears the sound of the letter. This is the first of Séguin's "three steps"—the association of the visual and muscular-tactile sensations with the sound. The next is to select or to trace the appropriate letter when he hears the sound; and the third is to give the sound when the letter is pointed out. Presently, after much repetition, he combines a number of letters to form a word; and in the process of learning to write he has virtually learned to read. Dr. Montessori claims that by this method children of four learned to write neatly within three months.

This may well be. No observant parent will venture to deny the possibility. The question is rather whether a sufficiently docile puppy might not have done the same—that is, a puppy willing, like the Montessori infants, to practice blindly all the analytic steps; and whether in intellectual quality the result would have been measurably different. For the method is strikingly similar to the method of teaching a dog tricks. Dr. Montessori would reply that the dog misses the joy of recognizing in the combination *m-a-n-o* the familiar word for hand. But she admits (pp. 303, 304) that her own pupils did not always enjoy this pleasure—that is, they did not recognize their acquisition as *language*—and it is evident that any such recognition was independent of the method. The truth is that the psychology of the method is crude. Dr.

Montessori fails wholly to distinguish between an intellectual achievement and the formation of a habit. She places before the child the predigested results of analysis, trusting to the brute force of association to effect a coherence and a meaning. It is true that in the acquisition of reading and writing association plays a large part. Yet even here there is room for a genuinely intellectual activity in which the amount of repetition otherwise necessary would be reduced by the child's analysis of his task. Unhappily, however, any effort to understand what he was trying to do would impose a certain strain upon his mind. So far, then, from converting the normal child into an intellectual prodigy, we may doubt whether the method suggested by the education of idiots will develop even the normal average of intellectual power.

If the method is to be confined to children under seven, the weakness of its intellectual programme may not be serious. It will be a vital weakness if, as it seems, the Children's House is to be the model for a general system of education.

CURRENT FICTION.

Hieronymus Rides. By Anna Coleman Ladd. New York: The Macmillan Co.

This is a book of "Episodes in the life of a Knight and Jester at the Court of Maximilian, King of the Romans." It is the story of Hieronymus of Cologne, bastard son of Emperor Frederick IV. With royal and gypsy blood in his veins, he falls naturally into adventures both chivalrous and madcap. For the love and service of his half-brother, Maximilian, he fights Turk and Moor; he submits to torture and imprisonment and at the last suffers the death which was meant for his kinsman. He is by turns soldier, knight, madman, jester. He loves deeply twice and gypsy-wise once. In his company we fall in with fifteenth-century characters of every description: emperors, priests, statesmen, soldiers, peasants, cutthroats, Venetians, Tuscans, Spaniards, Germans, Turks. We have history and biography, wars and public policies, and, in equal amount, heraldry and millinery. The translation from this to that period is complete with no tang of affected archaism. The chronicle is supposedly supplied by one Martin, chaplain to Maximilian. But as this is not practicable through all of the hero's innumerable adventures, the pen of Martin appears and departs with rather disillusionizing effect. The whole furnishes a striking picture of the times and a most lovable portrait of a mad, sad, merry, loyal spirit. Endless research must have gone to its making. It is perhaps a certain monotony of tone that makes the story, for all its stir of incident, sit a little ponderously on the reader. There is no shading; the falcon figures as large as the lady, as in a vast decorative drawing, without perspective. But it is a thoughtful work and repays reading.

The Chink in the Armour. By Mrs. Belloc-Lowndes. New York: Charles Scribner's Sons.

This is not, as the title might lead one to suppose, a swashbuckling romance. There is not a sword-thrust or a "'Sblood, Sir!' he cried," between these modest covers. The time is the present, and the scene is a gambling resort not far from Paris. Bring to that resort a young and innocent English widow, with a tolerably good income, a wonderfully good pearl necklace, and a desire for experience, and you have a situation sufficiently modern. Frank Danby handled a similar motive very disagreeably in "Baccarat." Mrs. Belloc-Lowndes is incapable of being disagreeable. Her style has something of the vague lady-like charm of Mrs. De la Pasture's gentle pen; and the thrilling situation towards which the whole invention moves would be more thrilling if it did not have the effect of being told at second-hand—like a child's version of a ghost-story. Sylvia, the heroine, is the dainty blue-eyed, golden-haired English heroine of (English) fiction, ready with her blushes, and capable of fainting on occasion; and she makes a quaint figure in the Casino at Lacville—an airy-fairy Madeline with modern improvements. She is particularly original in her final choice, not of the faithful English suitor, but of the French gambler who has been the unconventional comrade of her somewhat risky but never risquée escapade.

The Green Vase. By William R. Castle, jr. New York: Dodd, Mead & Co.

In a sense this is a geographical romance, for its development turns on the inheritance of Old Boston traditions, on the spiritual emptiness of South Boston, and on the soul-cleansing influences of the Arizona desert. South Boston weds latent Old Boston in the shape of ancestral tastes lying dormant in the heart of a wage-earning maid. Genuine Old Boston, one who "thought naturally in terms of Japanese prints," breaks the bonds in which "generations of virtue" have held him; under pressure of tragic opportunity he possesses himself of Old Boston manquée and carries her off to fulfil her thwarted dreams of beauty. The attempt goes down in failure, but the Arizona desert purges each and every one of dross till in the end righteousness and peace and atavistic tendencies kiss each other.

Much is interesting in the unfolding of the story, and much is crudely, irritatingly improbable. Perhaps the foremost outrage on belief is the love of Helen for Henry. His lack of æstheticism must have shown itself, if he is correctly described and quoted, long before they came to the marrying point—very long before the arriving bride was confronted in the new home by "The Green Vase," symbol of the Philistinism which was to wreck her peace. The reappearance of her worst gossiping enemy as a trusted friend is absurd; so is the behavior of the Beacon Street fine lady who chokes and whines and weeps, seen and heard, before each of the two men she loves in vain. The social handling of the story in all its strata, low and high, is disturbingly forced. The desert influence is well depicted, and the desert affords perhaps the only ground where these distorted souls could plausibly find themselves again. There is no denying that through thick and thin the interest holds, but it is the interest of wondering how it will all come out rather than of a sense of solidity in the material.

The Return of Pierre. By Donal Hamilton Haines. New York: Henry Holt & Co.

It is surprising to note how little plot is requisite nowadays for a novel. Pierre Lafitte, a young conscript, returns from his three years' service to his home in the little village of Ardun, and finds his sweetheart apparently betrothed to another man. The Franco-Prussian war breaks out; Pierre reenlists and fights through the war, rising to the rank of captain. The rival, who has proved to be a German spy, dies; and on Pierre's second return he marries his old love. This, with the help of large type, thick paper, and much description of army life and battle scenes, is able to pass as a novel. The author has evidently studied the history of the war with some care, and the character of Pierre is sympathetically and rather well presented. But the book lacks body and saliency; it is not much more than a diluted short story.

HARVARD ESSAYS.

Harvard Essays on Classical Subjects. Edited by Herbert Weir Smyth. Boston: Houghton Mifflin Co. $2.25 net.

Of these eight readable and instructive essays three may be classed as simple expositions, three as inquiries or investigations, and two as partaking in some measure of both qualities. In "The New Criticism of Roman Art" Professor Chase gives a clear and judicial account of some recent attempts of German scholars to rescue Roman sculpture from the undue disparagement which was the natural result of the revelation of the Greek originals to nineteenth-century Europe. The connoisseurs of the Post-Renaissance centuries accepted the mar-

bles of the Roman galleries as ideal masterpieces and unapproachable models. But after the work of Winckelmann and the transportation to the European museums of the Elgin and Ægina marbles, Roman sculpture came to be valued by Hellenists mainly as material and documents for the reconstruction of the history of Greek art. The new criticism is more than a counter-reaction in favor of the rehabilitation of Roman work. It is an endeavor to assign it its true place in the larger evolution of mediæval and modern art. In opposition to the abstract idealism and conventional limitations of Greek sculpture, the special innovations of this Roman art are "the illusionist manner, the development of the background, the elaboration of naturalistic plant and floral ornament, the continuous method of narration, and the production of novel optic effects by deep undercutting and isolation of the figure." These traits Professor Chase exemplifies in their historical development by careful description, accompanied by illustrations, of the four great typical monuments: the Ara Pacis Augustæ, the central reliefs on the Arch of Titus, the reliefs of the Column of Trajan, and certain of the reliefs on the Arch of Constantine.

The late Prof. M. H. Morgan's essay on "Some Aspects of an Ancient Roman City" gives more than its title promises. Beginning with the contrast which Pompeii suggests with the broken skyline and smoke-laden atmosphere of a modern metropolis, he passes on by insensible transitions to a more general comparison of the external conditions of ancient and modern life, and in a succession of pregnant paragraphs illustrated by a wealth of anecdote and quotation contrives without pedantry to compress into the compass of a readable essay a veritable handbook of antiquities.

Professor Jackson's study of Alciphron is something more than a direct matter-of-fact account of that entertaining ancient letter-writer. It treats of Alciphron's typical significance as a representative of the Greek literary revival under the Roman Empire, known as the "New Sophistic," and interestingly traces his indebtedness to Athenian comedy for many of his most amusing incidents and traits of character.

Though various aspects of the subject have been studied by Gaston Boissier, Reitzenstein, Wilamowitz, and Schneidewin, Professor Gulick is in a sense breaking new ground in his "Notions of Humanity Among the Greeks." So vague a term demands perhaps a greater nicety of definition and a fuller citation of the sources than was compatible with the plan of this book. When we have discriminated the various English, French, and Latin associations of *humanitas* and its paronyms, there still remains the delicate problem of correlating these words with their nearest Greek equivalent. Professor Gulick is always interesting and suggestive, but neither he nor any other student of the topic has avoided the pitfalls which these ambiguities set for unwary or too ambitious generalizers. He is, of course, aware of, and explicitly refers to, the fundamental distinction between humanism and humanitarianism. But the uncritical reader will sometimes be led to confound them in his rapid and not always quite adequately motivated transitions from the one point of view to the other. It is one thing to write the history of the growth of pity, helpfulness, human kindness, and humanitarian sentiment, and quite another to trace the development of the ideas, or ideals, of culture, the educated man, humanism, and cosmopolitan breadth of view. The two series may be associated in our own ultimate ideals, they may tend to develop *pari passu*, but there is no necessary connection between them. Professor Gulick's essay is richer for his bringing together of all the passages suggested to him under either head. But some of the interpretations into which this breadth of treatment seduces him tempt to a minuteness of criticism which would do injustice to his work as a whole. A doubtful passage in a spurious letter attributed to Dion is hardly sufficient authority for the statement that Plato uses the word *apanthropos* "of one who isolates himself from the wisdom and judgment of his fellowmen." The associations of the English word "resignation" carry us far from the *Verneinung* of the will, which for Schopenhauer was the essence of the highest Shakespearean tragedy, and to say that Alcestis was "resigned" to die for her husband is no answer to his statement that ancient tragedy exhibits quiet submission to the inevitable, "aber kein Aufgeben des Willens zum Leben selbst." Schopenhauer himself enumerates instances of self-sacrifice in Greek tragedy, but his point is precisely this: that self-sacrifice for a cause is not Hamlet's or Macbeth's final recognition of the worthlessness of all causes. Professor Gulick's essay, then, is a good beginning, but a really critical treatment of the theme demands a philological apparatus which he could not present in a popular essay.

Professor Parker's "Plato and Pragmatism" illustrates the versatility, or perhaps the virtuosity, of a well-trained classicist. He has assimilated the style of his colleagues of the philosophical department, as he might adopt that of Livy for an exercise in Latin prose composition. A foregone conclusion is dramatically presented as a succession of tentative inquiries in which the reader is taken into partnership, and all ideas make their entrance upon the stage embodied in personifications and metaphors.

In "Ovid and Metamorphosis" Professor Rand writes with his usual felicity and literary charm, and in the illustrative original translations incidentally reveals himself as a skilful master of the Popian couplet. The high value of the entire essay as an interpretation of Ovid seems to us quite independent of what an abstract résumé would have to single out as its main thesis. Professor Rand is entirely right in his protest against the view that the "Metamorphoses" is to be read as a useful compendium of all mytho'ogies conceived in the spirit of its Greek predecessors or of Boccaccio's "De Genealogia Deorum." Admirable is his defence of the wit and fancy of the "Amores" against the censure that sees only indecency in their playfulness, or the pedantry that complains of the lack of the lyrical cry in their persiflage. He justly maintains the essential unity of Ovid's work by showing that the "Metamorphoses" approaches both life and mythology from the same point of view. But in the management of his transition to this final thesis, he, like his author—*nimium amator ingenii sui*—lets his wit run too far. "Change and transformation in the realm of ancient legend allured him now, because in that little world of contemporary mythology which he had built, change and transformation had played a sovereign part." This is a clever and arresting way of making his point, but in all soberness it is surely straining the analogy thus to identify the transformations of mythology, or the old philosophic and poetic topics of mutability, with the sudden shifts in point of view and the Heinesque or Horatian parody of one's own emotion that are the distinctive notes of the "Amores." And, similarly, though there is truth in the main contrast between Ovid's unreserved allegiance to flux and flow and the Lucretian vision of indestructible atoms as that which abides in change, the antithesis is not aptly illustrated by the line,

> Haec quoque non perstant quae nos elementa vocamus.

It is quite fanciful to take this as an anticipation of our new physics. The *elementa* of Ovid's line, as Professor Rand is, of course, aware, are neither the atoms nor our elements, but the traditional quaternion, earth, air, fire, and water, and the impermanence and the transformations of these had been a commonplace from Plato's "Timæus" down. In fact, Ovid is doing little more in this passage than repeat Lucretius's development of the theme, and his *summa tamen omnia constant* also repeats the Lucretian formula for that which abides, *summarum summa est æterna.*

Space fails for an abstract of the two longest essays, Professor Moore's "Greek and Roman Ascetic Tendencies" and Professor Smyth's "Greek Conceptions

of Immortality from Homer to Plato." These two complementary studies in the history of religious ideas, as already intimated, may be classed both as expositions and inquiries. They are masterly expositions and condensations of the work of predecessors in this field, but it is apparent on every page that the authors have studied the original sources afresh and are either drawing their own conclusions or giving a personal expression to ideas which they have made their own. Taken together, the two essays form an excellent introduction to the history of ancient religious thought as opposed to mythology on the one hand and cult on the other.

The editor's preface, speaking of the wide diversity of topics treated, claims no other unity for the book than that of the Harvard conviction "that the literature and art of Greece, and the literature and art of Rome, are so intimately bound together that they may not suffer divorcement." To this the reviewer is happy to add a certain unity of style and tone, in qualities which it is pleasant to believe are distinctively American. A similar volume of German essays might display more erudition or originality. A French volume might possibly maintain a higher level of interest and literary charm. An English volume might exhibit finer single passages of eloquence—purple patches of declamation or description, or dreamy, romantic sentiment. But one would have to look far to find eight essays by different hands so uniformly temperate and rational in style as these, so free from fine writing, bad taste, grotesque imagery, extravagance, exaggeration, and perverse ingenuity.

The book is appropriately dedicated, in a graceful copy of Greek elegiacs, to Prof. William Watson Goodwin, the honored master of all Harvard Hellenists of the past two generations.

Geschichte der Frankfurter Zeitung. Volksausgabe, herausgegeben vom Verlag der Frankfurter Zeitung. Frankfurt am Main.

When, in 1906, the *Frankfurter Zeitung* celebrated its semi-centennial, the paper published a book commemorative of the occasion, which was mainly intended for private circulation. This has now been reissued in a *Volksausgabe*, a stout volume of 1,100 pages, which brings the history of the journal and its connection with public events down to date. Aside from its immediate purpose, the volume possesses genuine general interest as a reference book of some of the most important political and commercial happenings of the world during the past fifty years.

Few journals anywhere can look back upon a past of similarly consistent and successful aims. The paper has had the good fortune to be, from the day of its foundation, in July, 1856, to the year 1909, under the sole control of an editor and publisher of singular integrity, sagacity, and power. Leopold Sonnemann issued in Frankfort at first a modest *Geschäftsbericht*, which rapidly developed into a *Handelsblatt*, and on this commercial basis he reared the journalistic structure which has become one of the world's great newspapers. The public career of the proprietor kept pace with the development of the journal. Sonnemann became the leader of the German *Volkspartei*, and an important member of the Reichstag, besides occupying positions of honor in the city of Frankfort. He died, universally respected, October 30, 1909.

As the organ of the Democratic party in Germany the *Frankfurter Zeitung* has come into frequent conflict with press laws, and with the powers which, under the changing conditions of the fatherland, enforced the laws with varying severity as suited their purposes. In July, 1866, when the Prussians occupied Frankfort, the editors, for publishing an article hostile to the conquerors, were forcibly taken from their sanctum and marched off to headquarters. After some military browbeating, they were, however, released the same day. In times of peace the editors fared worse. Not infrequently they were called upon to defend themselves against charges of disrespect to the civil and military authorities, including Bismarck and the Emperor, and in several instances the sentence was for imprisonment. In its relations to Bismarck the journal does not lay claim to absolute consistency. It is not ashamed to own that its first estimate of him was far from accurate. On the 26th of September, 1862, it devoted to the new president of the Prussian Ministry, Karl (*sic*) von Bismarck-Schönhausen, an editorial expressing its complete distrust of the man who had attained power by a *coup d'état*. A few weeks later he was characterized in its columns as "a nobleman and diplomat of the old school, a man who can talk brilliantly about a good many things, but is an easy-going amateur in everything, and knows nothing of the people, its views, aspirations, and hopes." The astute Berlin correspondent, who wrote thus, predicted Bismarck's downfall within a year. A more serious mistake in its course, which the *Zeitung* does not attempt to palliate even now, was its sympathy with the Paris Commune in 1871. The letters from Paris which Ludwig Pfau wrote to the paper at that time, expressed "the sharpest condemnation of the doings of the victorious party." With all its persistent advocacy of the rights of the people, the *Frankfurter Zeitung* has always drawn a sharp line between the party of pure democracy and the Social-Democrats, and has found few kind words for Lassalle and his followers, though never in favor of anti-Socialist laws. Nor was it ever an enthusiastic advocate of popular government measures. Its attitude towards the colonizing policy of Germany and her military expansion has been uniformly cool and guarded.

One of the great merits of the *Frankfurter Zeitung*, in American eyes, was its stanch advocacy of the cause of the Union during the Civil War. At a time when some of the most influential German papers, including the *Cologne Gazette*, leaned towards the Confederacy, the *Frankfurter Zeitung* preached faith in the permanency of our institutions; and, what was of great practical importance, in the soundness of our credits. On the fourth of July, 1876, the *Zeitung* issued a special centennial number, joining in our rejoicings. It was the first paper on the continent of Europe to send a permanent correspondent to New York, and in 1873 was the only European journal, besides the London *Times*, that published special cable reports about our railway crisis. Its judgment on American affairs has always been sane and well-informed. It early recognized the advent of the United States as a world power, but refused to join in the general cry of the "American peril." In 1907 Theodor Barth wrote for its columns a series of remarkable letters concerning our economic and political developments. Latterly, it has shown keen insight into our conditions by predicting a possible third candidacy of Roosevelt on the expiration of President Taft's present term.

The *Frankfurter Zeitung* justly prides itself on the excellence of its *feuilleton*, in which department it is surpassed only by the *Neue Freie Presse* of Vienna, a journal with which it shares the completeness of American financial news, while leaving it far behind in regard to other information of our doings. In the list of the many men of international fame who have contributed to the *feuilleton* of the *Frankfurter Zeitung* are the names of Tolstoy, Anatole France, Robert Koch, Björnstjerne Björnson, Georg Brandes, Jozef Israëls, Maeterlinck, Strindberg, Verga, Fogazzaro, Claretie, D'Annunzio, Arrhenius, Humperdinck, and others of similar eminence.

While the *Frankfurter Zeitung* does not, perhaps, survey the whole field of European and transcontinental politics as systematically as, for instance, the *Kölnische Zeitung*, and in its editorial columns does not always display the impartiality of, say, the *Weser-Zeitung*, there are in the German language but three or four Berlin and Vienna papers that rival it in variety of contents and in journalistic enterprise of the best sort. And none has shown greater earnestness in upholding the advocates of universal peace and international arbitration. Nor, finally, has any other

European paper cultivated such pleasant relations between employer and employed. The list of those who, according to the volume before us, have completed a twenty-five years' service, or celebrated a jubilee of some other kind, in the editorial and administrative offices of the *Frankfurter Zeitung*, is quite impressive, and so is that of the savings, pensions, annuities, and other funds for the benefit of all the employees to which the proprietors have contributed their share.

The American People. Vol. II: The Harvesting of a Nation. By A. Maurice Low. Houghton Mifflin Co. $2.25 net.

In tracing the main threads of American national psychology from the Revolution down, Mr. Low's style becomes more oracular than it was in the first volume. It may require a little mental readjustment on the reader's part to make the necessary allowances for rhetorical exaggeration. This will appear incidentally in our quotations. Mr. Low's main thesis is that our democracy has progressed strongly and normally, that it has completely assimilated successive immigrations, that it has broadened its outlook through assuming the responsibilities of rule beyond the seas. He formulates somewhat elaborately a law of immigration by which each incoming mass forces its immediate predecessor up a peg in the social and economic scale, while the excess of male immigrants encourages intermarriage both with our native-born women and with those of earlier immigrant stocks. In short, there seems to be an automatic principle of assimilation by which racial character is broken down almost as soon as the newcomer lands. At this point the prevailing ardent democracy takes him up and Americanizes him. This process is keenly analyzed, though Mr. Low's alleged laws of social promotion through competition at the bottom will presumably cease to operate as cheap land and jobs become rarer. It is well observed that no national ideas of any sort can be traced to any of the early immigrant races. Indeed, the process of Americanization has been ruthlessly prompt and complete.

Any undue elation we may draw from Mr. Low's very favorable political analysis is tempered by his wider social generalizations. Here the ampullosity of his style and his habit of quoting with confusing generosity from our newspapers and magazines may partially conceal the sting of a very severe criticism. Under the delusion of a false chivalry we have made of our women a rather expensive sort of household pet, shutting them off from all real interests and influence:

> Presidents have not been made or unmade by a woman's smiles or a woman's wiles; love of woman has made no man patriot; no man has played traitor to win a woman's favor. In American history there is neither Helen nor Borgia. . . . American history, because woman has neither reigned nor ruled, is at once the most decorous and the dullest of which we have any mention.

Deprived of these perturbing and romantic elements, American social life and political ideals have reduced themselves to an ardent and unreflective equalitarian democracy. Under the resentment of superiority, manners have gone by the board. Americans, as Mr. Chesterton once shrewdly remarked, have not bad manners, but no manners. The same instinctive dislike of authority has made us a lawless people and impatient of all restraint. The striving for immediate and material ends has kept our minds in a rudimentary stage. "The American mind has become shallow, almost childish, with an extraordinary power to generalize, but strikingly deficient in the ability to analyze, a mind with neither depth nor breadth nor grasp." Thus our politics have been highly fickle with few leading and consistent ideas. All the European monarchies have been more genuinely progressive and radical in actual legislation. Our hope lies mostly in a certain vitality of the democratic principle and in the chance that as a world power we may achieve a more comprehensive notion of the state.

Such in essentials is the picture Mr. Low draws, though his circumlocution obscures the outlines. At bottom it is not unlike Kipling's portrait. Both are caricatures, and both have much truth in them. An incapacity for ideas is an honest British heritage, which is, however, especially graceless in a nation unprovided with compensatory guiding prejudices. Our regrettable shortage of Helens and Lucrezia Borgias is due to the fact that we unhappily derive not from the British aristocracy but from the British middle classes. Our exaggerated alertness and impatience of legal constraint are qualities proper to near descendants of successful pioneers. A somewhat jealous and unmannerly democracy is a necessary defect of a society still quite fluid as regards classes. These are commonplaces upon which it is not profitable to dwell.

Mr. Low's book, taken broadly, is at once interesting and singularly academic. Washington, where he is a veteran newspaper correspondent, is possibly the worst place to undertake such a work. And, in fact, Mr. Low has a little the look of being left high and dry in critical isolation amid the dehumanized science of the Government experts, the detached curiosity of the diplomatic circle, and the limited intellectual complacency of the Congressional set. Add to this a journalistic reverence for the casually printed word, and the reasons are complete for not taking this very readable book too seriously.

On many sides the author's information is strangely inadequate. The intellectual and specifically Socialistic ferment introduced with the German and Russian Jews he quite ignores. It is a force seriously to be reckoned with, and for better or worse constitutes a contribution of ideas in our body politic. Mr. Low seems unaware of the meaning of the eager and sometimes inchoate efforts for self-culture expressed in the Chautauqua movement and the women's clubs. The gradual Continentalizing of American habits of recreation, largely through foreign travel, escapes his notice. The growth of well-endowed art museums and institutions for disinterested research throughout the land might well have occupied his attention. These things are symptomatic of a more diffused and less narrowly concentrated democracy, of a growing interest in the things of the spirit. The so-called Progressive movement he takes on a Wall Street rating at far less than its real significance.

On the whole, this is a stimulating book, quite candid if a little pretentious, and serviceable by way of reminder that democracy must be weighed not by its inner passion, but by its results in human happiness. In this sense the democratic experiment in America is still inconclusive.

The Russian People. By Maurice Baring. New York: George H. Doran Co. $3.50 net.

"My object in writing this book," Mr. Baring explains in his preface, "is to supply the average reader with an introduction to the course of Russian affairs; to supply him with a rough idea of those things which, it is generally assumed, the student will have found out for himself." He intends his book to be more elementary and entertaining than "the serious, well-built, and accurate works of the classic writers on Russia, such as Sir Donald Mackenzie Wallace, M. Leroy-Beaulieu, Professor Morfill [who scarcely belongs in this company], or Professor Pares."

The volume hardly corresponds to the author's intentions. Though it is written in a lively, journalistic style, and is in many ways a useful addition to English books on Russia, it is not consistently elementary, rather less so than Wallace's great work, and it is not so "well-built and accurate" as one might expect of an author who, though addressing himself to untrained readers, does not wish to sacrifice the high standards of the "classic writers." Its most valuable feature is a sketch of the general course of Russian history from its beginning to the nineteenth century, comprising about a third of the whole book, and drawn largely from the work

of Professor Kluchevski. This is clear and entertaining, filling a distinct gap in popular historical literature. The opening chapters, on Russian physical geography, the Russian character, and Russian manners and customs, are equally successful. On the other hand, the chapters on the emancipation of the serfs, the mir, the zemstvo, and the revolutionary movement, are inferior to the accounts of the same topics already accessible in Wallace, Leroy-Beaulieu, or Pares, not only in scientific worth but in clearness and charm of presentation. An exception may be made, however, of Mr. Baring's treatment of the positive and negative results of the revolutionary agitation of 1904-7, where he is on ground not covered by previous writers, and where he performs his task well.

Faults of detail are numerous. The chapter on Pushkin is a gaudy patch, disfiguring rather than adorning the historical narrative upon which it is sewn. Some slips are evidently due to haste in writing. Yet not even a journalist can be pardoned for calling (p. 195) Nicholas I and his brother Constantine sons of Alexander I instead of his brothers, or for classing (p. 188) Tatishchev (died 1750), and Kantemir (died 1744), as writers in the reign of Catherine II (1762-96). More important, the statements (p. 322) on the changes of the electoral law for members of the Duma are sadly confused; Mr. Baring apparently jumbles together two distinct events. The modification of the electoral law by means of the Senate's interpretations, after the dissolution of the first Duma in July, 1906, was indeed technically legal; the promulgation in June, 1907, of a new law for the election of the third Duma was in flat defiance of clause 87 of the fundamental laws, to which Mr. Baring himself refers, since that clause provides that no temporary measure, adopted by the Government between sessions of the Duma, shall alter the electoral law for that body.

Notes

Amundsen's book on his expedition to the South Pole is appearing serially in Denmark and Norway; the publisher is Gyldendal of Copenhagen and Christiania.

Cassell & Co. have in press John Redmond's new book, "The Home Rule Bill." Mr. Redmond deals with the historical aspects of the question, and analyzes the new bill, of which the complete text is given.

This week Holt will issue "France in the Time of Philip Augustus," by Achille Luchaire, edited by Louis Halphen and translated by E. B. Krehbiel.

Something should be said in commendation of Edwin Fairley's edition of Buckley's translation of "The Odyssey," books vi-xiv, xviii-xxiv (Merrill). Buckley's text has been altered and generally improved with the aid of the better-known translations by Butcher and Lang, and by Professor Palmer, and a short introduction, a few pages of notes, and a glossary of proper names have been added. The binding is not ugly, the paper and type are unusually attractive.

Petermann's Mitteilungen for May contains an article by Dr. A. Wegener in which the origin of the continents is treated from the point of view of geology, the physical arguments having been stated in the April number. In the military department there is an account by Hauptman G. Kuchinka of the Russian railways from a military geographical standpoint, and a description of a projected railway in the Chinese province of Shantung to connect the open port of Chifu with the interior.

"The Use of the Bible in the Education of the Young" (Longmans), by T. Raymont, is offered as an aid to elementary and secondary teachers in adapting Bible instruction to their pupils. The fact that Biblical instruction of any kind is rigidly shut out of the public schools of so large a portion of this country leaves such a book a somewhat narrow field with us, so far as its practical use by teachers is concerned, but Mr. Raymont's presentation of the subject offers many good suggestions to parents who are interested. Leonard Huxley has edited a volume of representative selections from the writings of Matthew Arnold, entitled "Thoughts on Education" (Macmillan). The arrangement is chronological, and the source of each extract is indicated by title and page, except in the case of selections from Arnold's annual reports as inspector.

The "Proceedings of the Bostonian Society," just published, contains an interesting account by Charles F. Read of Washington's three visits to Boston. The first was in 1756, to confer with Gov. Shirley, then Commander-in-Chief of His Majesty's forces in North America, to arrange a question of military precedence. In his "Notes" on that journey, he writes that he treated some ladies "to ye Microcosm" while in New York. According to an advertisement in the *Mercury* of that date, this was an "elaborate and celebrated piece of mechanism, called the Microcosm, or the World in Miniature. Built in the form of a Roman Temple, after twenty-two years of close study by the late ingenious Mr. Henry Bridges of London. It will be shown every day from six in the morning till six at night to any select company (not less than six), at six shillings each." There is also an account of the Latin Grammar School of Boston, England, by J. J. McGinley, which existed as early as 1329. The present structure was erected in 1567, and soon after, according to the records, it was agreed "that a Dictionarye shall be bought for the Scollers of the Free Scoole; and the same boke to be *tyed in a cheyne*, and set upon a deske in the school, wherunto any scoller may have accesse as occasion shall serve." One of the school buildings is the old Guildhall, interesting to Americans, as it contains the stone cells, with iron gratings, where the Pilgrim Fathers were imprisoned. It is fast falling into ruin, and a subscription has been raised to restore this "valuable relic of antiquity."

The fur trade had so much to do with the discovery and settlement of the West that every scrap of information concerning the method of its exploitation is of importance. For this reason, the publication by the Lakeside Press of Chicago of the "Autobiography of Gurdon Saltonstall Hubbard," in the series known as the Lakeside Classics, is a matter for congratulation. Mr. Hubbard entered the service of the American Fur Company in 1818, and for the next few years was generally a member of what was known as the "Illinois Brigade," which spent each winter purchasing furs from the Indians in the vicinity of the Illinois River. In the spring the thirteen boats of the Brigade were united from the various trading stations, and sailed with their cargo of furs on the spring flood up the Des Plaines River and across the Chicago Portage to Lake Michigan and thence to Mackinaw, the centre of the fur trade of the Northwest. In his old age, Mr. Hubbard wrote the recollections of these experiences. This autobiography was privately printed by his family some years ago, but is now republished from the original manuscript in the Chicago Historical Society. The little book is exceedingly interesting and full of information on the early history of the Lake region.

The Carnegie Institution of Washington has undertaken the republication of the leading classics of International Law. The first volume published is a treatise by Richard Zouche, who was a judge of admiralty from 1641 to 1649, and, as the editor puts it, "a good specimen of the civilian who was produced at Oxford, while the thorough drill in the old system of legal training as revived by the impulse given to it by the Italian refugee, Alberico Gentile, still lasted on." The work is edited by Prof. T. E. Holland, and consists of two volumes, the first an exact reproduction of the original edition of 1650, the second an English translation. Zouche does not give his own opinion on any point, but, as he states in his preface, after adducing cases and principles, and expounding the arguments on one side and the other, he leaves the judgment of the hearers free and unfettered. Though a great number of the questions propounded by him are now only of historical importance, several of the points he raises are unsettled even at the present time. He was the first to use the term "International Law," and the great merit of his work is that he conceived of the Law between Nations as a whole, and that he recognized war as merely the means by which, as a last resort, the rights which the nations enjoy in time of peace may be vindicated.

While inclined to be repetitious, especially regarding the work of the State University, Frederic C. Howe's "Wisconsin: An Experiment in Democracy" (Scribner) is a clear and interesting summary account of the series of steps that has centred the attention of political students upon the Commonwealth of La Follette. The first chapters of the volume, narrating the struggles of the future Governor and Senator against the forces in power, are easily the most entertaining. They have somewhat the interest of an epic. With the removal of La Follette from the scene, one's point of concentration is gone. The dramatic contest between youthful Progress and hoary Re-

action is succeeded by an unexciting, although by no means uneventful, period of development, with the expert in charge everywhere. One's attention, accordingly, becomes diffused. But the story which the book unfolds is too important to need extraneous attractions. The direct primary, the regulation of railway rates, employer's liability, State insurance, tax equalization, and extension of the opportunities of the University are among the "experiments in democracy" of these twenty years. The unique feature of Wisconsin politics and administration is the part which the University plays. It is the State research laboratory, in which questions are investigated, policies formulated, and bills drafted. With one hand it reaches the Capitol, and with the other the most distant farmer. By such achievements as that of making Wisconsin the second State in the Union in dairying, it has won the admiration of the most hard-headed agriculturist, so that farmers are now following their sons to Madison for a few weeks at least in the University's lecture-rooms and stock pavilion. Mr. Howe is too enthusiastic over what has been accomplished to be well qualified to point out weaknesses, actual or potential; and, like the men who have made the new Wisconsin, looks upon Germany, because of its devotion to efficiency, as the model state. In both of these respects his comments and conclusions need modification, but as a record the book is highly valuable.

Although the humor of calling English women "John Bullesses" is exhausted before the end of Yoshio Markino's "Miss John Bull" (Houghton Mifflin Co.) is reached, the picturesque language of the well-known Japanese artist holds to the end its naïve charm. His highly complimentary opinions of English babies, girls, and women are saved from monotonous sweetness by the prick of humorous criticism. Witness the incident of the old lady who obstructs the entrance of the omnibus. "I don't say every one. Perhaps one among ten thousands," he adds. "The British public is very polite. They dare not utter grumplaining words to old ladies." For the new word Mr. Markino deserves the freedom of the land of Lewis Carroll. He looks at all sides of his subject:

> Talking generally, the John Bullesses have very charming and romantic appearance just like butterflies. They are the good subjects for novels, poetries, and pictures. But their inner side is very much *matter-of-fact*. . . . What I like best in John Bullesses is that their nature is quite sentimental, yet they absolutely deny it. This very spirit has brought up many a great hero and heroine in England.

The lover of nature speaks in his admiration of the "gracious and benevolent trees" at Windsor, and of the young ferns that "timidly came out from the cool moisted ground in the shape of question marks." His loyalty to England, he declares, is not unpatriotic.

> Nonsense! It makes me so grieved I think that there are many fools who misunderstand the word "patriotic" as "the fighting spirit" with the neighboring country. Don't you know friend-making is far more patriotic? . . . May the graceful Queen forgive my dreadfully ragged English, for my heart is in the full uniform before her Majesty.

He philosophizes, among other things, on dress: "When the old women try to dress up themselves to look younger they look even older than their real age. . . . You cannot imitate your neighbor's religion. So with the dresses." The secret of dressing well, he declares, is to have a costume in which one is "comfortably contented"; "if you have your heart and soul well in them, you look quite well; even if your dresses are most extraordinary." To these reflections he was led by seeing a suffragette in a motoring costume with a "roofed cap and in long boots." To the cause of suffrage he gives his Banzai, and closes an entertaining book with a description of the "picturesque and poetic" procession on the 17th of June, 1911, "one of the nicest and most successful things the suffrage John Bullesses have ever done." An effective adjunct to his amusing but not wholly idiomatic prose is his thoroughly idiomatic self-expression in many pen-and-ink sketches and a few full-page drawings of charming color and design.

Prof. William Dallam Armes has done a good service to scholarship by his careful editing of More's "Utopia" in Robynson's translation (Macmillan). The volume, which is intended as a text-book for college classes, is provided with an introduction, excellent concise notes, a glossary of archaic words, and with an analytical index, a most desirable feature in connection with a book like More's, which discusses a profusion of topics. In the introduction More's literary art receives very explicit treatment, and his influence as an intellectual figure is well summarized.

The latest publication of the Irish Texts Society is a reissue of Volume III, "The Poems of Egan O'Rahilly." O'Rahilly was perhaps the most important of the Munster poets of the seventeenth and eighteenth centuries. Certainly none of them is read with more enthusiasm by Irishmen to-day, and the first edition of his poems was quickly exhausted. The Irish Texts Society, in providing for a new issue, took advantage of the opportunity to include additional material, and the present volume is extensively enlarged and revised. Five new poems—one of them, the "Elegy on Blennerhasset," being of considerable interest—have been added to the body of the work; several historical documents, illustrating various poems, have been inserted in an appendix; and the introduction has been largely rewritten, and many statements corrected or modified. In short, for all purposes of scholarly consultation the new edition entirely supersedes the first. We might add that the original editor, the Rev. Patrick S. Dinneen, has been assisted in the revision by Tadhg O'Donoghue.

To The Spell Series (L. C. Page), which has already explained the secret allurements of Holland, England, and Italy, Mrs. Caroline Atwater Mason adds a volume on "The Spell of France." It would have been better, we think, to have inserted the qualifying word "southern" in the title, inasmuch as Mrs. Mason deals only with the countries of the Midi, Provence and Languedoc. For, although she has an undeniable right to prefer southern France to northern France, and to find an authentic "spell" only in the former, she and her publishers have no right to ignore a possible difference of opinion in so arbitrary a fashion, which, moreover, might well mislead the prospective purchaser. This criticism aside, the author has produced a pleasant little volume in that sentimental and semi-fictional vein which seems especially to attract the American public. Here the necessary historical and archæological information is conveyed to the reader in a sprightly dialogue between husband and wife as they make the round of the famous sites and antiquities of Arles, Nîmes, Avignon, Vaucluse, Pont du Gard, and the stations of the Riviera and the Pyrenees.

It is a book of simple and genuinely enthusiastic enjoyment in beauty of land and magnificence of man's work, and, last, but perhaps most pungent and exhilarating of all, in the humors and small memorable adventure of foreign travel, with its chance encounters and fleeting acquaintances.

Believing that earlier biographers of Josephine, like Aubenas and Saint-Amand, have been too favorable to Napoleon's first wife and portrayed her more as she ought to have been than as she really was, Joseph Turquan some fifteen years ago (before the appearance of Masson's valuable work on the subject) undertook to write a life of the "real" Josephine. Part of this, dealing with the period from 1796 to 1804, is now put into English by Miss Violette Montagu, "The Wife of General Bonaparte" (Lane); a second volume on "The Empress Josephine" is in preparation. M. Turquan very properly prints many of the passionate letters which Napoleon wrote to his wife from Italy immediately after their marriage; they leave no doubt about the ardor of his love for her at this time, but they were not appreciated by his wife, who took more interest in her poodle and in other admirers. Otherwise, M. Turquan's material is largely drawn from well-known memoirs. Many of his passages are mere flights of his own sentimental imagination, disparaging moralizations upon feminine frailty, and such exclamations of sympathy as "Poor Bonaparte! How his love was misunderstood!" "Poor fellow! He was very much in love!" Some of these passages may be tolerably *réussi* in the French original, but in English they seem mawkish, and make the portrait of this foolish, unhappy coquette perhaps less attractive than she really was.

The "Comparative Grammar of the Greek Language" (Frowde), by Joseph Wright, is intended for students, not for specialists, who are referred to more extensive treatises, listed in a select but fairly representative bibliography. It contains, therefore, little that is original and devotes but small space to controversial theories. It aims to be comprehensible from the beginning by students with little or no knowledge of Sanskrit, and attains this aim much more often than other similar treatises. Characteristic of the method is the large number of examples cited, upwards of fifty in many cases. The author rightly believes that examples are more effective than statement. There is, however, no indication that any list is exhaustive, even when it contains but three or four. In general we miss an attempt at historical treatment of the development of forms. Occasionally distinction is made between historic and prehistoric periods of Greek, but this is not consistently carried out, and no genuine perspective is exhibited. But there is

a good index, and the book is usable and accurate.

Science

The history of the beginning of aviation, with which Claude Grahame-White's "The Story of the Aeroplane" (Small, Maynard) opens, is filled with many incidents that could only be known to a pilot of wide experience and acquaintance. More than any previous writer on the subject, the author has an insight into the character of the men by whom the conquest of the air has been made. He describes with particular vividness Blériot's crossing from France to England on July 25, 1909. An account is given of Blériot's flying school at Pau, which was made necessary by the demands for aeroplanes and for instruction in managing them after he flew over the channel. The development of the aeroplane engine follows, and in this, as in other chapters, the author tells an agreeable running story. The sensations of flying are also elaborately set forth, together with Mr. Grahame-White's experience while he was learning the art. Notable flying records are chronicled in seven tables, and the aeroplane death-roll is given in a manner similar to that found in the author's previous work written jointly with Henry E. Harper. After the accident list, the subject of the safety in flying is taken up, a long chapter being devoted to the question. Among many other matters treated in this chapter is the difficulty of navigating an aeroplane in a strong wind. The following quotation is suggestive of the progress that may be expected:

No passenger-carrying service will be possible, either, until the aeroplane is able to meet adverse weather. Of course, one does not imagine that a flying-machine will be able to fight against a gale. Nobody expects that—at least not for a very long time to come. But what the aeroplane wants to do is to be able to fly in any such high or gusty wind as we have on many days in the year. Such winds do not approach the velocity of gales, but they are sufficient, at present, to keep an aeroplane to the ground. It is clear that the aim of every one who has the interests of flying at heart must be to rid the aeroplane of this reproach of being unable to fight a wind.

M. Blériot, M. Farman, M. Paulhan, and nearly all the greatest of the world's thinkers in the matter of air craft, are now hard at work upon this problem of conquering the wind. M. Paulhan has very clear and definite ideas on the subject. His theory is that a machine must be made with its plane surfaces capable of being altered in size as the machine passes through the air. Already, with an experimental machine, he has demonstrated that the mechanical difficulties of reducing the surface of a plane without robbing it of its strength can be overcome. The idea of this reduction in surface is simple. If it can be brought to perfection, some design will be adopted whereby a pilot, by the movement of a lever near his seat, will be able to "reef" his sails, like those of a ship.

The military aeroplane is discussed at length, and there are many stories of the aviation meets in various countries in which the author has taken part.

"Let's Make a Flower Garden," by Hanna Rion (McBride, Nast & Co.) goes to prove that more than mere garden knowledge is needed for the making of a good garden book. Here the personality of an artist, showing itself in a style both clear and humorous, and in a broad, if occasionally whimsical, outlook, helps to unite garden sense and garden sentiment. Though written for beginners, this record of personal experience may well be read by the seasoned gardener, not only for its advice, but also for its individuality and taste. Whatever the author touches—and she wanders to wild gardens and to birds—she handles with an excellent balance between the practical and the personal. The volume is attractively printed, and is well illustrated by photographs and by drawings by Frank Verbeck. Form, style, and matter combine to make this one of the best flower-garden books of recent years.

"Everblooming Roses" (Duffield), by Georgia Torrey Drennan, does not bear out all the promise of the title-page, which suggests that the book is a practical guide in "culture, habits, description, care, nativity, parentage." A practical guide the book is not; for although considerable definite advice is given, this advice is diffuse and haphazard, mainly by reason of the author's "I'd like to say more but can't just now" style. On the other hand, the chatty historical and literary allusions and digressions are inclined to terminate suddenly before a formidable wall of floral names—including Rhyncosporum jasmanoide. Roses that "amateurs need never attempt to grow" are discussed at length, the "touching history" of Souvenir de Malmaison is given in full, and meanwhile hints as to the selection and care of roses are dropped here and there. As a consequence, the book is a hybrid, half practical and half literary. Some amateurs may indeed be attracted by this compound; for our part, we prefer instruction and entertainment in separate volumes or at least separate chapters. It should be added that the book contains a useful fifty-page descriptive list of roses that bloom during most of the summer.

In the autumn of 1909, Clark University celebrated its twentieth anniversary. The exercises held at the time were both interesting and instructive. The University itself is somewhat unusual, in that it has been content to refrain from bidding for a large number of students and has allowed a small band of teachers and pupils to devote themselves to scientific research. In harmony with the aim of the University, students were invited to attend lectures on the most recent developments of science. Four of these lectures, delivered under the auspices of the department of physics, have been published by the University Press. The collection begins with three lectures by Prof. Vito Volterra of the University of Rome. With remarkable lucidity, considering the abstruseness of the subject, he discusses the modern conception of time and space. He attacks the problem by the method of Minkowski, who introduces time as a fourth dimension of space. Since we can form no geometrical idea of space with more than three dimensions, Professor Volterra considers the problem when two directions represent space as a plane, and the third direction, which ordinarily gives volume, is replaced by time. The consequences are then deduced for waves from this postulate. The second and third lectures deal with elasticity. Some remarkable results are illustrated by elastic reactions of gelatine cylinders; and finally the mathematical development of the effect of past distortion on the elastic properties of solids is sketched. This effect of past actions on the present condition of a body, he calls mechanical heredity. Prof. Ernest Rutherford follows with a fascinating account of the history of the alpha rays, which he concludes with a description of his own work to prove that these particles emitted by radioactive bodies are atoms of the gas, helium. The next lecture, by Prof. R. W. Wood, deals with his interesting and illuminating experiments on the spectra of metallic vapors. The volume closes with the results of a systematic study of the properties of steel by Prof. Carl Barus, who spent many years investigating this important subject in all its aspects.

"Engineering as a Vocation" (David Williams Co.), by Ernest McCullough, gives the bright and dark sides of the profession as a livelihood. On the whole, his picture of the life of the engineer is not alluring, but after all a profession is attractive because of the possible rewards it offers rather than the average gain, and the former are great. The author wisely counsels a broad and thorough education. He lays stress on the value of a good English style, but is not himself a very good model. The writer who persists in using "illy," in calling the graduates of engineering schools "alumnæ," in splitting infinitives and in mixing tenses of verbs, strengthens the opinion that the style of engineering students is a bit crude.

The Rede Lecture for 1911 was given by Sir Charles Parsons, who took for his subject "The Steam Turbine." The Cambridge University Press (Putnam) now publishes the lecture in book form. The writer is one of the leaders in this modern adaptation of the old turbine of Hero, and it is interesting to note the sudden evolution of this toy into the driving power of great ships. A pathetic interest is aroused by his illustration of the turbine engines in the ill-fated Titanic.

Wilbur Wright, pioneer airman and inventor of the first practical flying machine, died at his home in Dayton, O., on May 30. The son of a clergyman, who afterwards became a bishop of the United Brethren Church, Wilbur Wright was born near Millville, Ind., in 1867. Neither he nor his brother, Orville, who was so closely associated with him in his experiments, had more than a high-school education, yet they worked out most intricate problems in mechanics. One of the first questions they attacked was that of discovering a means of controlling the balance of an aeroplane. After a brief test of the principles of automatic balancing control, favored up to that time by inventors, they resolved, with their customary boldness, to discard precedent and embark upon a fundamentally different principle—that of mechanical control, with the machine as inert as possible to the effects of change of direction or speed. It was their discoveries along these lines, their invention of fore-and-aft deflecting rudders, and of ailerons or wing-tips that flexed in response to a driver's touch of a lever, which constituted their claim to the monopoly of all airship rights. Their active experiments began in October, 1900, at Kitty Hawk, N. C., but it was not until 1903 that a power machine was made by them to fly, and then less than a minute at a time. In the summer of 1908 the Wrights came into world-wide

prominence. Wilbur, by his flights at Le Mans, France, astonished Europe, while Orville was flying at Fort Myer, near Washington. The history of their achievements since that time is too well known to need recountal here. Yet any account of Wilbur Wright would be incomplete without mention made of his simple bearing. In the hour of his success, when he was acclaimed and petted by foreigners, he remained unaffectedly himself.

Dr. John Arthur Irwin, who died at his home in New York on Saturday, was born in Roscommon, Ireland, in 1853. Before coming to this country he had taken degrees at Trinity College, Dublin, and at Cambridge University. He was a member of several European and American medical societies, and the author of not a few treatises on his subjects.

Drama

Irish Folk-History Plays. By Lady Gregory. New York: G. P. Putnam's Sons. $3 net.

Half a dozen of Lady Gregory's dramatic compositions (three tragedies and three tragic-comedies) are contained in these two volumes. All of them, except the first, "Grania," have been performed in the Abbey Theatre, Dublin, but the Irish players did not try any of them in this country. Perhaps it was prudent not to do so. To tell the truth, they do not exhibit much dramatic instinct or faculty, although they possess positive literary value and have a special interest for students of Irish legend, character, and dialogue. All of them are infinitely better suited to the study than the stage, for, although they are not altogether lacking in effective incident, serious or comic, and occasionally thrill with passionate and eloquent emotion, they are exceedingly loose and feeble in construction and often grossly extravagant in design. They are also weak in characterization, all the personages, whether kings or peasants, being cast in very similar moulds and speaking after very much the same fashion. Whatever the type represented, the personage, in thought and language, is plainly a reflection of Lady Gregory, who, with all her imaginative sentiment and her intimate knowledge of Irish character as a whole, has, apparently, little power of individual creation. Though the talk of her puppets is racy of the Irish soil and atmosphere, and contains vigorous, poetic imagery, sure pathos, and humor, much of its charm would inevitably vanish in the passage across the footlights.

Of the tragedies the hitherto unrepresented "Grania" is undoubtedly the most vital work. Three persons talk together through three acts. Lady Gregory has expanded her legendary material beyond all discretion. But the tale itself is human and tragic, and the wayward passion of the ardent heroine, the fierce jealousy of the elderly King whom she flouted, and the struggle between love and loyalty on the part of Diarmuid—a rough Irish Lancelot—are portrayed in scenes abounding in psychological insight and oratorical vigor. A fine natural robustness animates the narrative, together with some strokes of genuine pathos and a flavor of the antique, if not of the heroic. In the final reconciliation of Grania and Finn, after the death of Diarmuid, there is an inconsistency for which the original fable is probably responsible. "Kincora," which deals with the rivalries of the famous Brian and his associate Kings, Malachi and Maelmora, and the mischief wrought by the ambitious Queen Gormleith, belongs rather to the category of romantic melodrama than tragedy. This piece is livelier in action and more varied in incident, and therefore better adapted to theatrical representation. But the real value of it resides in the characteristic Hibernianism of its moods and dialogue, rather than in its dramatic qualities. There is no real differentiation of personalities, except, perhaps, in the case of Brian, who is marked by a certain intellectual distinction. Kings and servants are equals in political knowledge and sententious utterance. Their discourse makes excellent reading, but is destructive of all dramatic illusion. It is doubtless true that monarchs and serfs in ancient Ireland were pretty nearly on the same intellectual plane, but it was a much lower one than that occupied by Lady Gregory. "Devorgilla" is an episode rather than a play. It is the story of the unhappy Queen who induced her husband, King Diarmuid, to call for the assistance of the English, and thus to bring irremediable ills upon his country, and who tried afterwards to make atonement by good works done in the seclusion of a convent. She is esteemed as a saint until her identity is revealed. The tale is pathetically told, but not in terms of the drama.

The so-called tragic-comedies may be dismissed very briefly. In "The Canavans," placed in the time of Queen Elizabeth, several typical Irish characters are engaged in lively comic incident, but the tale is farcical to the verge of extravaganza. In "The White Cockade," an episode after the Battle of the Boyne, the spirit of the time is fairly well caught, and the Irish dialogue, as usual, is vital, but the piece is very poorly made, and James II is depicted as so contemptible a creature that no interest in his fate is possible. This, of course, is a mistake dramatically. In "The Deliverer," the scene of which is laid in ancient Egypt, with Jews in the place of Israelites, a not very successful attempt is made to establish a parallelism between Moses and Parnell. It is a clever bit of patriotic fantasy which could appeal only to a special Irish audience. All these plays have their particular value in the repertory of an Irish national theatre, but their dramatic possibilities are insignificant compared with their legendary and literary interest.

From the end of July till the beginning of December Laurence Irving and Mabel Hackney will be on tour in the English provinces. They will produce four new plays —the "Typhoon," by the Hungarian dramatist, Lengyel; also Mr. Irving's own versions of Beaumarchais's "The Barber of Seville," "The Marriage of Figaro," and "The Guilty Mother." Their repertory will further include "The Unwritten Law," "The Incubus," and "Hamlet." Soon after Christmas they hope to be seen again in London.

One of the latest ventures in London is that of the Cabaret Theatre Club, which is to be opened very soon. This is to be run on novel lines. From 9 to 11:30 o'clock each evening there will be a dramatic entertainment. Thereafter supper will be served to the accompaniment of a lighter programme, composed of dancing, operettas, sketches, and playlets of every kind and description. The organizers disclaim all attention of following in the track of the Chat Noir in Paris. Among the writers upon whom they will, in the first instance, draw are Villiers de l'Isle Adam, August Strindberg, John Davidson, and Wedekind.

Mrs. Alfred Lyttelton's play, "Peter's Chance," which has just been tried at the London Royalty, opens with some admirably realistic scenes in a London Mission. Peter's story is that of a weakling torn between his religion and the charms of Kitty Roman, the female thief. When Kitty lures him away from the mission, he returns to rob the chapel—at her bidding. At the very door his religion prevents the sacrilege; and he is murdered by Kitty and an accomplice while defending the chapel doors against them. Kitty is said to be played with vivid effect by Florence Lloyd, but the dominant figure of the play is the unsophisticated, large-hearted Father Bentley, said to have been played in masterly fashion by J. D. Beveridge.

There is much smart writing in "The Grey Stocking and Other Plays" (The Riverside Press), but not much of solid dramatic or even theatrical value. The author, Maurice Baring, is a man of wide experience, considerable powers of observation, aided by a happy knack of characterization, but, like many other modern playwrights, his eagerness to shine as a social satirist and to make his personages talk cleverly, renders him careless of the qualities most essential to success in the theatre. His dramatic motives are weak or confused, and action is continually swamped in dialogue, often much more sparkling than appropriate or human. At the root of "The Grey Stocking" there is a valuable theatrical idea. A good girl, full of the joy of life, is fascinated by an intellectual prig, and discovers after marriage that she has nothing in common with her husband—who adores her—or with his friends. So she remains faithful, fond, and miserable. Two young men, with either of whom she might have been happy and to

both of whom she is affectionately inclined, confess their hopeless passion for her, and then bid farewell, for ever, to her and temptation. Then she learns that her husband has accepted a professorship at Cambridge, and that the remainder of her life must be passed amid surroundings which, of all others, are the least congenial to her. All this might have been the ground-work of a pregnant and poignant life-story, but Mr. Baring has not handled his material skilfully. He has written some clever scenes, but has not succeeded in welding them into vertebrate drama. Nevertheless, this is the best piece of work in the book. "The Green Elephant," a more or less ingenious piece of theatrical mystification, in which everyhody is suspected of stealing a jewel which has not been stolen at all, but pawned by the heroine, is as preposterous in detail as it is trivial in theme. "The Double Game," a Russian revolutionary tragedy, might be useful for stage purposes, being swift in action and full of intrigue and incident. The central figure, that of a young noblewoman, who has sacrificed everything in the zeal of her revolt against despotism, and who commits suicide when she discovers that the man she loved and trusted was a traitor, is well and eloquently drawn. The piece is all the more effective, perhaps, because it is written in two acts instead of four.

Music

The star system is nothing new in the musical world. Generations ago the Paris Opéra was famous for its ensembles of stars, three or four of the greatest artists of the time often appearing together in some favorite opera. Such ensembles are rare now. The other evening, however, "Rigoletto" was sung in Paris by the Monte Carlo Company, with a cast including Caruso, Delmas, and Titta Ruffo. In Germany, the newspapers seem to imagine that New York has set the pace in this matter. In Vienna, they talk about their Imperial Opera being "Americanized," because its present manager, Gregor, is doing his utmost to present famous artists, from Caruso down.

Famous artists, unfortunately, are scarcer than ever. A startling illustration of this fact is furnished in a recent number of the Hamburg *Fremdenblatt*. Speaking of a performance of Wagner's "Tristan," with Edyth Walker as Isolde, it refers to this American singer as "the only Isolde to be found to-day on the German operatic stage." Imagine how delighted these Germans would be with our Gadski, or with Fremstad.

The report that Mascagni was to write an opera in collaboration with Gabriele d'Annunzio is confirmed by recent advices from Paris. These two popular men met the other day, and the contract was signed which puts the Italian author under bond to write his first libretto. The publisher Sonzogno, who made a fortune with the prize opera, "Cavalleria Rusticana," has also been in Paris to make arrangements for the production of this projected opera, which is to be called "Parisina." He intends to have it sung first in that city, in Italian, by prominent artists, in a series of performances that are also to include other Mascagni operas.

One of the latest recruits to Oscar Hammerstein's forces in London is Miss Bertha Cæsar. She appeared with signal success in the three characters of Olympia, Giulietta, and Antonia, in "The Tales of Hoffmann." Offenbach, when he wrote this opera, intended that these three rôles should be sung by one and the same person. The feat was accomplished at the original production of the opera by Mlle. Isaac.

The programme book of the London Philharmonic concert on May 23 contained the unusual words, "Analytical Notes by Richard Wagner." The symphony played was Beethoven's ninth, and the notes were those written by Wagner for one of the venerable Society's concerts which he conducted in 1855.

When the London Symphony Orchestra, after travelling 11,000 miles and playing, under Nikisch, in twenty-seven cities and towns in the United States and Canada, returned home, it was taken in hand by Siegfried Wagner, who had not visited England for some seventeen years. He gave a concert the first part of which was devoted to selections from his own operas, while three of his father's works filled the second part, including, appropriately enough, the "Siegfried Idyll," which, as every one knows, Richard Wagner composed at Triebschen, as a surprise for his wife, after the birth of their son. The operas from which extracts were heard were "Herzog Wildfang," produced in 1901; "Der Kobold," (1904), "Bruder Lustig" (1905), "Sternengebot" (1908), "Banadietrich" (1910), and "Schwarz-Schwanenreich" (1911). The soloists were Madame Lilli Hafgren-Waag and Walther Kirchhoff of Bayreuth. Dr. Rottenberg, the Frankfort conductor, who has been directing the "Ring" cycles at Covent Garden, recently expressed the opinion that Siegfried Wagner is "sadly misjudged" in his own country, where, according to his view, he "suffers under the misfortune of being the master's son." He fared no better in England. Although Weingartner, who is much admired in London, has declared that he regards Siegfried Wagner as one of the best living conductors, the concert given by the latter was attended by "a surprisingly small audience." Nor was there much balm in the critical verdicts on his music.

Art

THE VENICE FÊTES.

VENICE, May 10.

This spring is a season of unusual festivity in Venice. In addition to the Art Exhibition which has been held regularly every other year for some twenty years past, we have had the inauguration of the new Campanile. Every one will remember the dismay which the fall of the historic belfry of St. Mark's on July 14, 1902, after a life of a thousand years, caused not only in Venice but throughout Italy, and even in foreign countries.

The work of clearing away the rubbish was started at once, and Giacomo Boni, the well-known Venetian archæologist, living in Rome, was called to prepare the foundations for the new tower. Owing to differences of opinion, he resigned his appointment and was succeeded by Luca Beltrami, the restorer of the Castello Sforzesco in Milan, and he in his turn by a commission of architects under Gaetano Moretti. On St. Mark's Day, April 25, 1903, the foundation-stone was laid by the Count of Turin, representing the King of Italy, and the then Patriarch of Venice, Cardinal Sarto, now Pope Pius X. New piles were driven in around the old ones, which were still in good condition, and new blocks of Istrian stone placed around and above the original platform; the new foundations are thus calculated to support 90,000 tons, whereas the tower weighs only 20,000. The cost of reconstruction amounted to 2,200,000 lire ($550,000), of which 500,000 were provided by the Venice municipality, 100,000 by the King, 1,555,000 by public subscription, raised partly in Venice itself and partly in the rest of Italy, while 55,000 lire were sent from abroad, chiefly by the London Royal Academy. Finally, on April 25 last, the new tower was solemnly inaugurated with a most imposing ceremony, in the presence of an enormous and enthusiastic crowd, by the Duke of Genoa, representing the King, and by the Patriarch, together with all the civil, military, and ecclesiastical authorities of the city.

Now that the Campanile has risen once more, even the most skeptical agree that it was a necessity. The instinct of the Venetians proved right, for the straight, severe tower breaks the series of parallel horizontal lines of the Procuratie, and acts as a support round which the mass of St. Mark and of the other comparatively low buildings of the piazza concentrate; its absence threw the whole architectural scheme out of gear, while the view of Venice from the sea, without the Campanile, was simply unrecognizable. And the result is eminently satisfactory.

The reconstruction of the Campanile is more than a mere architectural achievement. The old tower was the old Venice, the Venice of the Republic with all its pomp and magnificance, its glorious traditions, its conquests in the East. The fall of the Campanile, if it did not coincide with that of the Republic, curiously resembled it, inasmuch as it was a sudden dissolution of an institution which had outlived its time. The year 1902 marked the end of a period of depression through which Italy had been passing, and the rebuilding of the new tower progressed side by side with that wonderful renascence of Italian prosperity and of the Italian spirit which has marked the first years of the twentieth century, and of which Venice itself has had no small share. The Venice

of to-day, if it is no longer the queen of the Adriatic, is also no longer a city of the dead, a mere haunt of tourists, peopled with hotel-keepers, beggars, and guides, as many foreigners, including some who have pretensions to culture, still seem to think. Although the tourist traffic has grown enormously and the city is also a summer sea-bathing resort for Italians, the port has been expanding steadily, and through it the trade of a large part of Italy, and even of Central Europe, flows on its way eastward once more, as in the days of the *serenissima;* industries are arising, both in the city itself and on the neighboring mainland dependent on it, and every year new enterprises are started, new fields of activity opened up. The people are richer and better dressed, the building trade has taken a new lease of life, new houses are rising and old ones being improved, and there are evidences of increasing wealth on every side. This year, when after a decade of silence the great bells of the Campanile are ringing out the chimes once more, the Italian occupation of Tripoli promises to offer still further means of expansion for Venetian trade with the Levant, and while the festivities for the new monument were held, Italian soldiers were fighting in Lybia and the guns of Italian warships were booming in the Ægean, reviving the enterprises of the Dandolos and the Morosinis. Even if the war with Turkey had done nothing else for the country, it has had the supreme merit of making the Italian people united in fact and in feeling, as well as in the "Statesman's Year-Book" or the "Almanach de Gotha."

If ancient art is well cared for and modern traffic is prospering, modern art has certainly not been neglected. The exhibition of this year, if not better than any of the preceding shows, maintains the usual high level of excellence. The organization, due to the energy and ability of Signor Antonio Fradeletto and of the Mayor of Venice, Count Grimani —the exhibition is a municipal undertaking—is admirable, both from an artistic and a business point of view. Venice has now come to be one of the chief markets in Europe for modern works of art, and its biennial shows are perhaps the most important periodical international exhibitions in the world. Every year some new feature of interest is added, and everything is done to attract fresh talent and new schools of art from every country.

The chief novelties of this year are the Swedish and French pavilions, and the prevalence of "one-man shows." In the central hall of the main building we have the great mural decorations of Pieretto Bianco, The Re-awakening of Venice, representing the restoration of St. Mark's, the rebuilding of the Campanile, the construction of a battleship in the arsenal, and the work of the port; they are an interesting and original composition in which the artist has given proof of considerable power and effective technique, but somewhat monotonous in tone. No less than sixteen artists have their own shows. Cesare Maggi, one of Italy's most talented young artists, certainly is worthy of the honor, and stands very well the ordeal of a room filled with his own paintings; he has evidently been inspired by Segantini, especially in his mountain landscapes, but is no servile imitator. Gaetano Previati is an original artist, also of the so-called "divisionist" school, of which Segantini was one of the founders, with a charming dream-like fantasy and a keen decorative sense. Ettore Tito is undoubtedly the strongest of the Venetian artists of to-day; his great decorative panel, Italy as the Heir and Guardian of the Maritime Glories of Venice, exhibited in the Venetian pavillion in Rome last year, is painted in the grand heroic manner reminiscent of Tiepolo, while his portrait of Princess Borghese is one of the best things in the whole exhibition. Auguste Sezanne has illustrated the splendors of San Marco in a series of delightful paintings, glowing with gold and rich coloring and full of quaint poetical imagination, for he has peopled the great spaces and dim corners of the cathedral with figures of angels, Byzantine princesses, and warriors who seem to have stepped down from the mosaic-covered walls. Canonica, who is perhaps the best living sculptor in Italy, also has a room to himself, and the works he exhibits, especially a child's head and the funeral monument to a little girl, are well worthy of his reputation.

On the other hand, such artists as Ciardi and Bianca, although by no means without talent, are not sufficiently original to deserve one-man shows. Giacomo Grosso is powerful and brilliant in technique, but vulgar and loud—his portrait of the actress Virginia Reiter is a typical example of his work; he belongs to a period of Italian art now happily passing away. There are also some retrospective shows, one of Avondo, the Piedmontese landscape painter, and another of Tranquillo Cremona, one of the early impressionists; they are chiefly interesting from the point of view of art history and development. In the other rooms there are many good things by Fragiacomo, Arturo Noci, Marcini, etc., and also by younger and less well-known men, which show that Italian art is alive and vigorous.

The foreign pavilions are now six in number—the British, the French, the German (this was formerly limited to the Munich "secession"), the Swedish, the Belgian, and the Hungarian. This year the British section is less important than usual; possibly the splendid British show last year in Rome made it difficult to renew the feat after so short an interval. Lambert's strange picture, The Mask, is perhaps the most striking of the collection. The German building contains the work of four highly original artists: Adolf Hengeler, Ludwig Dettmann, Hans von Bartels, and Fritz Erler. The first-named is to my mind the most attractive; his interiors peopled with fascinating children are fresh and full of rare charm, and in some of his other works he shows the best qualities of Stuck, without the latter's occasional lapses into ugliness. Erler's decorative panels are pictorial and painted with a large brush and a sure touch, but they do not seem to mean anything particular, or at least their meaning requires an explanatory programme for the benefit of the initiated.

The French pavilion is also limited to four artists: Lucien Simon, J. E. Blanche, E. R. Ménard, and Gaston La Touche. Simon exhibits some admirable specimens of technique, which explains the hold he has gained over younger men, but he is evidently greater as a teacher and an inspirer of others than as a producer of finished works of art. Blanche has some clever impressions of English pageants, in which the contrast between the gray skies and the solemn, gloomy buildings of London and the brilliant Coronation processions, scarlet and gold uniforms and military splendor are admirably rendered.

In the Swedish pavilion, Anna Boberg's decorative views of Norwegian fjords are attractive, but rather monotonous. Belgium sends many valuable works; perhaps the best are the extremely delicate semitone drawings by Knopff. Hungary is less well represented than in Rome last year or in Venice itself two years ago, but Mannheimer and other artists exhibit some good portraits. An interesting show of works by members of the Wiener Künstler Genossenschaft occupies a room in the main building, and several other works by foreign artists are scattered about the different rooms.

The general arrangements of the Venice exhibition, as usual, deserve warm praise, and offer a striking contrast to the disorganization and discomfort of the Roman shows of last year. Everything runs smoothly; the pavilions are scattered about the charming public gardens, which are easily and quickly reached by the useful penny steamers, and it is often a relief, after toiling away at the startling vagaries of the ultra-violet rays of certain fearfully modern artists, to come upon an open veranda looking out on a peaceful expanse of lagoon.

THE "MONEY TRUST INQUIRY."

After a somewhat prolonged period of backing and filling by the House Banking and Currency Committee over the so-called "Money Trust inquiry," and after a conflict of opinion between the committee and the banks regarding a series of searching questions, sent out in printed form to all such institutions, it was announced at the beginning of this week that formal taking of testimony would be begun at New York on Thursday. It will apparently begin with the examination of well-known financiers, and will have to do, in general, with the relations of organized wealth to the various financial institutions, individually and as a whole.

The present position of that investigation is unfortunate in several ways. Very many people, even of those who were not averse to a public inquiry on the subject, expressed their belief, at the time the House decided on the investigation, that it ought not to be conducted in the heat and excitement of a Presidential campaign. This opinion was not based primarily on the possibility that the inquiry would be used for campaign purposes and might, therefore, lack the unbiassed and judicial attitude which is preëminently important. That was a serious enough consideration in itself. But it had further to be remembered that inquiries of this nature, once they become identified in the public mind with the political manœuvres of an electoral campaign, are inevitably stamped as mere campaign expedients.

The more such proceedings are made part of the clamor of the hustings, the greater the probability that the general public, in its surfeit and weariness over the whole electoral controversy, when the vote is taken and the campaign ended, will dismiss from its mind the findings of the Banking Committee, along with a multitude of other "campaign issues." Such a result is so plainly foreshadowed by all the experience of previous Presidential campaigns, that some of the warmest and most aggressive advocates of the "Money Trust inquiry" have from the first deprecated active pursuance of the investigation during the political struggle.

It was equally regretted, by the thoughtful part of the community, that a collision of authority should have arisen between the committee and the banks. Technically, the banks which refused to fill out the committee's blank forms of inquiry regarding certain accounts of their individual shareholders, were in the right. The National Bank law does expressly provide that no such institution "shall be subject to any visitorial powers other than such as are authorized by this title" (which refers to the official bank examiners, under the Controller of the Currency) "or are vested in the courts of justice." This provision is all-embracing, and it is difficult to agree with the committee's counsel, Mr. Untermyer, that it is nullified by the voluntary consent of banks in certain cities to allow the Clearing-House Committee to exercise general powers of supervision.

What the foregoing section of the law unquestionably has in mind is the assertion of "visitorial powers" by some other arm of government. It certainly could not apply to the voluntary opening of its books by a bank to a properly constituted organization connected with it in the way of ordinary business. But even so, people who look a little way ahead cannot help thinking the conflict unfortunate—more particularly so, since a joint resolution of both houses of Congress, conferring such authority and signed by the President, would revoke this protective clause. As matters now stand, it may be presumed that, in the absence of such a resolution, the committee's inquiry will be conducted through examination of individuals; which, after all, is the proper scope of such a committee's labors. The fundamental question in this inquiry is whether our credit institutions are or are not being brought under a common control, through which the facilities of the general credit fund are arbitrarily granted or denied. This is the allegation of the projectors of this investigation. It has been made insistently and in the most extravagant terms. If it is true, the fact ought to be established by unimpeachable public evidence. If it is untrue, it cannot be disproved except through public hearings before a committee of inquiry, and the proper purposes of the inquiry may be fulfilled more completely and satisfactorily through an investigation thus conducted.

It is announced that the committee is about to take testimony on the question of the relations of concentrated wealth to the Clearing House and the Stock Exchange. In this the committee will be treading old ground; in particular, the Stock Exchange side of the matter was investigated with the utmost thoroughness by Gov. Hughes's special committee of 1909, who were personally far better qualified to inquire into and pass upon the functions of the Exchange than a Congressional committee could possibly be, and whose report, while eminently judicial, was candid and convincing.

In the matter of the New York Clearing House it is quite safe to predict that the committee's inquiry will clear the air and remove some wholly unwarranted misconceptions from the mind of the outside public. Whatever criticisms may have been levelled by thinking and experienced men against the conduct of individual banks and bankers, at certain junctures in the past, the Clearing House organization and committee have been free from them. The traditions of the institution are of a sort which all New Yorkers conversant with its history regard with pride. It has stood, to the extent of its authority and power, for what have been called old-fashioned banking methods. It has, indeed, occupied for two or three generations the honorable position of guarding primarily the interests of the depositor against unsound and dishonest banking and its consequences. The very powers of supervision over banks in its membership, to which the Pujo committee's counsel has referred, were asserted in response to a spontaneous demand of bank depositors that their interests should be protected by a committee in whose standing and competency the community had confidence.

A Mysterious and Absorbing Human Document.

These memoirs are interesting not merely as a brilliant and beautiful woman's *apologia* and autobiography. They are also enthralling as a picture of the elegant, daring, cynical, and cultivated Parisian society in which she moved, and they introduce familiarly many people of distinction in the social, artistic, and literary life of the French capital. Her relations with Pres. Faure throw strange sidelights upon contemporary French history.

ESSAYS IN RADICAL EMPIRICISM

By WILLIAM JAMES.

This book contains twelve of Professor James's philosophical essays, collected and edited by Professor Ralph Barton Perry, of Harvard University. The book is designed to carry out a plan which Professor James himself projected several years before his death. With one exception, these essays were written within a period of two years; and constitute a consecutive and orderly exposition of a doctrine which the author regarded as of more fundamental importance than his widely known "pragmatism." In 1909, in referring to the controversy over pragmatism, Professor James wrote: "I am interested in another doctrine in philosophy to which I give the name of radical empiricism, and it seems to me that the establishment of the pragmatist theory of truth is a step of first-rate importance in making radical empiricism prevail." The present volume expounds the "radical empiricism" here referred to, and except for a few scattering sentences, contains the only statement of it which the author made. It is indispensable to any student of James, and owing to its systematic treatment of problems will serve as a text for the study of Metaphysics or the Theory of Knowledge. The volume contains, among others, the following well-known essays that have not yet appeared in book-form: "Does 'Consciousness' Exist?" "A World of Pure Experience," "How Two Minds Can Know One Thing." *8vo.* $1.25 *net; by mail,* $1.38.

Modern Science and the Illusions of Professor Bergson

By HUGH S. R. ELLIOT. With Preface by Sir RAY LANKESTER, K.C.B., F.R.S.

This work is a reply of science to the philosophy of Professor Bergson. It expresses scientific discontent with Professor Bergson's attempt to explain life and the universe; and it challenges the right of philosophy to intrude into the sphere of science. The work expounds the latest scientific views on the nature of life, and other problems of fundamental interest. *Crown 8vo.* $1.60 *net.*

The Life of the Plant

By C. A. TIMIRIAZEFF, Sc.D., LL.D., Prof. Emerit. Moscow University, F.M.R.S. Translated from the Revised and Corrected Seventh Russian Edition by Miss Anna Chéréméteff.

A popular exposition of the essentials of plant life by the famous Russian scholar, Timiriazeff. It requires little previous knowledge of botany or of science, and is for the most part intelligible to any ordinary well-educated person. *With 83 Illustrations. 8vo.* $2.50 *net.*

Present Philosophical Tendencies:

A Critical Survey of Naturalism, Idealism, Pragmatism and Realism, together with a Synopsis of the Philosophy of William James. By RALPH BARTON PERRY, Assistant Professor of Philosophy in Harvard University.

"A great book. . . . Philosophical systems of every kind were, during the latter part of the nineteenth century, thrown into the melting pot. From the flux modern philosophy emerges, and it is at this point that Prof. Perry commences his very able volume. . . . Having had the immense advantage of personal contact with William James at Harvard he is better qualified to sum up the latter's philosophy than any other writer. His views concerning the man whom posterity will probably recognize as the greatest American philosopher are more than worthy of discussion."—*N. Y. Times.*

George the Third and Charles Fox:

The Concluding Part of "The American Revolution." By the Right Hon. Sir GEORGE OTTO TREVELYAN, Bart., O.M., Author of "The Life and Letters of Lord Macaulay," and "The Early History of Charles James Fox." In Two Volumes.

"A notable addition to English historical literature. No one can pick it up without surrendering to the ease of its style and the interest of the views it presents. . . . It is picturesque and fascinating, and makes Sir George's work, like Macaulay's History, to which it may well be compared, 'as interesting as a novel.' . . . Its opinions are well worth the attention of the most serious students of great events."—*N. Y. Times.*

Introductory Philosophy: A Text-Book for Colleges and High Schools

By CHARLES A. DUBRAY, S.M., Ph.D., Professor of Philosophy at the Marist College, Washington, D. C. With a Preface by Professor E. A. Pace of the Catholic University, Washington, D. C.

The aim of the author of this manual has been to stir up the student's mind and awaken it to the necessity of individual reflection, rather than write a book of ready-made formulæ to be memorized. Meanwhile he makes the student acquainted with the fundamental problems of philosophy. The book comprises: (1) Pyschology, which the author has endeavored to make as practical as possible and to which, on account of its special value for the development of the mind, he has devoted about one-third of the whole; (2) Logic; (3) Æsthetics; (4) Ethics; (5) Epistemology; (6) Cosmology; (7) Philosophy of Mind; (8) Theodicy; to these is added an outline of the History of Philosophy. The discussion of points which to-day lack actuality is omitted, and special attention is given to those problems which, at the present time, stand in the foreground and are of special importance to the ordinary student in colleges.

The Week

Mr. Roosevelt's cries of "naked theft" are more and more taking on the appearance of naked folly. Some of his most vehement charges were dashed to the earth in Chicago on Monday by his own supporters. Deliberately and repeatedly and in detail he had asserted that open and monstrous "frauds" had been practiced by the Taft adherents in Indiana. The Taft delegates, he vowed, represented barefaced robbery. But his case was submitted by his skilled counsel to a jury of fifty men, at least thirteen of whom were his ardent friends, and by a *unanimous* vote it was decided that there was not a shred of evidence to sustain his calumnious assertions. It was not a steam-roller crushing down righteous protests; it was simply an overwhelming demonstration that a series of slanders and lies had been emitted by the steam-roarer.

When the American troops were withdrawn from Cuba in 1909 it was confidently asserted by most of their officers that they would be back within six months. Any one who believed that the republic would last a year was ridiculed. Six months would be quite long enough to loot the Treasury, or for the "outs" to oust the "ins." But more than three years have passed; the tenth anniversary of the establishment of the republic has come and gone, and though the Gomez Administration totters, perhaps to its fall, it may yet succeed, with the moral support afforded by the American Government, in weathering the present crisis. If it should not, another intervention will be necessary, and the work of rebuilding will go on again in better hands, we trust, than in 1906.

For it cannot truthfully be said that our Government of intervention set an ideal example to the natives of what a Government ought to be. It played politics on the American order, subject to the modifying influences of Cuban conditions, and it was recalled far too soon. It left many improvements unfinished; its superb system of roads was hardly begun. As we pointed out at the time, the whole structure of government and virtually the entire administrative law of the Island were made over from an Anglo-Saxon point of view and turned over to Latin-Americans before they had really had time to know what it all meant—the Gomezes and Guerras not caring, of course, to know. Just why the recall of our troops took place when it did has been explained only on the ground that President Roosevelt wished to have the American flag hauled down during his Administration; but never was a less-finished job palmed off as a complete one. We set out to teach the Cubans how to govern, and we left them not only a dubious administrative example, but had started them housekeeping in a structure they were largely unfamiliar with, with a café-swaggerer and an opera-bouffe revolutionist as the head of the house. To say that the collapse of this Government means that the Cubans can never learn to govern themselves is as unjust as it would have been ten years ago to affirm that our American cities could never learn to govern themselves properly.

The letter of Mr. Vanderlip, chairman of the Clearing House Committee, to Mr. Pujo, chairman of the House Banking Committee, emphasizes the unhappy turn which the Committee's inquiry into New York banking affairs is taking. We hold no brief for the New York banks or the Clearing House Association in this matter, and we have repeatedly expressed our judgment that a careful inquiry into the facts, known or alleged, regarding the so-called "Money Trust," was not only advisable but necessary—though, in common with the chairman of the Banking Committee, we have held that the inquiry should not be made in the heat and excitement of a Presidential contest. But we have also felt, and so, we believe, have the majority of impartial readers of the recent proceedings before the Committee, that the manner in which the inquiry has thus far been pursued was frequently unfair, based on apparent assumption that something was wrong in each specific incident taken up for examination, and calculated to prejudge the case before both sides had been heard. If the hearings are to be continued at the present time, we submit that, in justice to the Committee's own reputation, the policy of a one-sided inquiry and of a prosecution be changed to something more in line with Mr. Pujo's own professions.

By a vote of 27 to 20, in which party lines were broken down, the Senate on Monday upheld the report of the Conference Committee on the Army Appropriation bill, thus terminating General Wood's service as chief of staff on March 4, 1913, if the House should also accept the report. The truth is that the feeling against General Wood goes deep and rests on a firm basis—too good a basis, indeed, to weaken the cause of the anti-Wood Senators in voting him out of office. That, as we have already said, is a mistake. Congress ought not to legislate against an individual office-holder. It has no right, moreover, to trespass upon the President's functions by naming the committee of army officers which, in connection with certain Senators (Warren among them) and Representatives, is to investigate the question of what army posts should be retained and what sold. At the same time, it ought to be perfectly obvious that if General Wood were a man of the type of General MacArthur, General Young, General Miles, General Bell, not to speak of Schofield, Sherman, and Sheridan, such legislation against him would be impossible, even if there were a dozen Ainsworths to pull political wires.

The detailed figures of the Pennsylvania Republican primary are now available. Despite the supposed excitement over the Taft-Roosevelt contest, only 474,032 Republicans shared in the primary, whereas 745,779 voted for Taft in 1908. Of these 474,032, only 191,179 were for the President, as against 282,853 for Roosevelt. In some counties, such as Adams, Bedford, and Greene, but one-third of the voters of 1908 took the trouble to go to the polls in order to rule. Mr. Roosevelt owes his selection to 282,853 voters only, a trifle more than one-third the 1908 vote, his own vote in 1904 having been no less than 840,949. The saviour of his country has thus been appointed sav-

icur in Pennsylvania by a small minority of those normally Republican; yet he is more than ever convinced that there is an irresistible popular demand for him. In only one county, Allegheny, did the Republican vote exceed that cast for Taft in 1908, and this "Republican" vote, it is openly charged, embraced Democrats, Prohibitionists, and Socialists, who were induced by one means or another to help place Mr. Flinn, the "reformer," at the head of the party in the State. In Philadelphia, which was carried by Taft, the vote fell off by 72,203, and in Lancaster, another Taft county, not 50 per cent. of the Republican vote went to the polls. All of which repeats the experience in Illinois, Ohio, and New Jersey. When the people rule in a Presidential primary this year, they are few in number.

The plan for a group of "Museums of Peaceful Arts," announced by Dr. George F. Kunz at the meeting in New York last week of the American Association of Museums, is certain to be welcomed by the public as soon as its purpose and scope are clearly understood. Philadelphia has for years had its "Commercial Museums," based particularly upon the idea of aiding our foreign commerce by showing manufacturers what and what not to send abroad. The scheme which Dr. Kunz outlined is something far more elaborate—the estimated cost is to be $20,000,000—with separate buildings devoted to electricity, steam, astronomy and navigation, safety appliances, aviation, mechanical arts, textiles, commerce and efficiency, mining, labor, agriculture, etc. That there is excellent precedent for such an undertaking, for which Dr. Kunz announces the support of men like James Speyer, E. H. Gary, Charles M. Schwab, Jacob H. Schiff, Henry M. Towne, and Robert Underwood Johnson, is not perhaps well known. Not much more than a month ago some distinguished delegates from a similar institution in Germany were visitors in New York in search of material for their museum—the Munich Deutsches Museum—which is devoted to presenting and preserving the history of the development of industry and natural science, as well as the housing of a technical and scientific library; noteworthy papers and drawings by the leaders in commerce and industry and science, with particular reference to inventions. Models of our skyscrapers, of our subways, our acroplanes, of the New York Public Library, were some of the exhibits the committee took back to Munich, as well as one of the sleds which Peary used on his trip to the North Pole. The history of any art, or science, or industry can best be learned if its development is illustrated in an objective manner, and to the Deutsches Museum, which is international in its scope, come visitors from all over the world.

Three years ago the National Committee on Prison Labor was organized for the purpose of studying the problem of contract labor in penal institutions. The specific findings of the Committee have confirmed the general belief that the system of contract labor stands condemned as a practice uneconomic, honeycombed with graft, and deleterious in its effects on the morale of the prison population. The results of the National Committee's agitation, carried on in conjunction with the American Federation of Labor, and summarized in a little pamphlet just published by the Committee, are impressive. The principal aim towards which the efforts of the Committee are directed is the employment of prison labor on public work only. Wisconsin has lived up to its reputation for progressive reform by setting to work on a complete remodelling of its convict labor system, to be based on a report now being compiled by the secretary of the National Committee acting as an extraordinary member of the State Board of Public Affairs. The present Governors of Massachusetts and Kentucky were elected on platforms containing a prison-labor plank. The substitution of public employment for private contract employment is now under way in Virginia, New York, and Alabama. And the problem is also under official consideration in Rhode Island, in Maine, in Iowa, in Maryland, and in Tennessee.

The report of the special commissioner appointed by the Governor of California to examine into the disturbances at San Diego confirms the general impression of what the issues and methods are in the conflict between the citizens and authorities of that city, on the one hand, and the I. W. W. on the other. From a reading of I. W. W. literature the Commissioner finds:

> It is the organized and deliberate purpose of the I. W. W. to teach and preach and burn into the hearts and minds of its followers that they are justified in lying, in stealing, in trampling underfoot their own agreements, in confiscating the profits of others, in disobeying the mandates of the courts, and in paralyzing the industries of the nations.

Nevertheless, as far as San Diego is concerned, no attempt was made to translate these principles into overt acts. More than two hundred arrests were made by the San Diego police, but those were solely for violating the street-speaking ordinance. On the issue of free-speech the Commissioner finds that the City Council was within its Constitutional rights in forbidding public meetings within an area of six blocks in the congested section of the city, but that the police have overstepped their authority in prohibiting I. W. W. meetings anywhere within city limits. On this point and on the arbitrary acts of the so-called Vigilance Committee—the report was written before the Reitman incident—the Commissioner speaks out strongly. At the same time the report makes it very clear that the I. W. W. agitation in San Diego has been a nuisance and a pest, and that it explains, even if it does not excuse, the conduct of the city authorities.

Golfers well on in years will be encouraged, or, at least, moved to be less discouraged—by the news that a veteran at the game has again won the amateur championship of England. John Ball has now a record to exceed even that of our amazing "old man" of golf, Walter J. Travis. It is twenty-four years since Mr. Ball won his first championship, and here he is still able to survive a great field of the finest players in England, and come out first. The wonder is, of course, that such a triumph can be scored by a man of his age, in a game requiring the nicest adjustment of the senses and control of the muscles, combined with the mental and moral qualities which every golfer will explain to you are necessary for the highest achievement at the sport. It is stated in the dispatches that the finals in the championship were regarded as a battle between the new school and the old in golf, and that the old school won. It is hard to understand what this means unless it be that the youthful

golfer leans to tremendous "swiping," with the frequent penalty of wildness, while the older players strive for direction and steadiness. But the latter, as everybody knows, will win more than half the time. If Mr. Ball won by never missing and keeping on the line and not minding it if his opponent outdrove him forty yards, then he was illustrating not the old school of golf but the common-sense school.

Study of the social evil goes on apace. The admirable Chicago and Minneapolis reports on conditions in those cities are now followed by a report from the Vice Commission of Portland, Oregon, which bears upon the question of disease. In Philadelphia and in Atlanta, vice commissions have also been appointed, the membership of the former being exceptionally fine, including such workers as Rabbi Berkowitz, George H. Earle, jr., Miss Anna F. Davies, head-workers of the college settlement; Mrs. Martha P. Falconer, superintendent of the House of Refuge for Girls, and the Rev. Joseph Cochran, to mention only a few. A well-known reformer and attorney, William Clark Mason, is chairman. Mayor Blankenburg, in constituting the committee, wrote an admirably sympathetic letter and assigned a secret service police squad to serve the Commission. The Atlanta Commission is composed only of men, sentiment there being curiously against the appointment of women, although the questions at issue concern women primarily. The sessions are to be open, and everybody is requested to come forward and give testimony. Excellent as this procedure is, as a matter of policy we doubt if it will, because of the publicity, attain the ends sought, but it is a fine thing that so important a Southern city is going to know the conditions within its limits. In Indianapolis, too, the women are pressing the Mayor to close up the vicious district, but without much success, so far.

Americans are not alone in wishing that some pages might be blotted from the history of their political campaigns. In the German Reichstag, a few days ago, Count Posadowsky deplored the violence of electoral appeals and recriminations, and gave it as his opinion that "all election literature ought to be torn up and not left as material for the satire of a future Tacitus of the German Empire." But would not a penetrating Tacitus pounce upon that very utterance to give point to his satire? He might say that our generation did not shrink from doing what it hoped would be hidden or forgotten hereafter. We do the unfair thing, that is, but are averse to having the bad reputation for it fastened upon us. However that may be, the record stands, and the future historian will have the scanning of it. The moving finger writes, and not all our shame or repentance can alter a line of what is written. But the Tacitus who one day comes to give the sum of it will be bound to take all the contemporary evidence into his cognizance. He will have to set it down of the United States in 1912, for example, that although political controversy sank to unwonted depths, and though the President was assailed by the ex-President in the language of the bar-room and the prize-ring, the proof is overwhelming that this vulgar squabble did not represent the attitude or meet the wishes of the great mass of Americans, who stood aghast at the spectacle.

The appointment of Viscount Haldane to the post of Lord High Chancellor is another step in the process by which the scholars and men of letters in the Liberal party have gradually been withdrawing from the Parliamentary firing line. The Lord High Chancellor is a political as well as a judicial officer, but it is not so exposed a position as the Secretaryship of War, during the incumbency of which Lord Haldane has had some very severe criticism to meet and some very difficult problems to deal with. Following John Morley's elevation to a peerage and removal to the quiet atmosphere of the House of Lords, Viscount Haldane's appointment leaves only Augustine Birrell, of the original "highbrow" contingent in the Asquith Cabinet, in active service on the floor of the House of Commons. Rumor has already dealt with Mr. Birrell's transfer to the House of Lords, but that, of course, can hardly occur until the Home Rule bill has been disposed of, as Mr. Birrell now holds the strategic post of Irish Secretary. A great change has come over the face of British politics since Mr. Asquith came into office, and the men who have forced their way to the front are the fighting men of the type of Lloyd George and Winston Churchill. Yet it is no mean tribute to Mr. Asquith's talents that he should have succeeded so admirably in imposing harmonious coöperation on men of such diverse temperaments and training as Lord Haldane, Lloyd George, and Sir Edward Grey.

Speculation has been busy with the conferences at Malta in which Premier Asquith, Winston Churchill as First Lord of the Admiralty, Lord Kitchener, and the commander-in-chief of the British naval forces in the Mediterranean have been taking part. Among other guesses is the one that Great Britain is partly to hand over the defence of her interests in the Mediterranean to France, and that the Anglo-French *entente* will thus be changed to a formal alliance. But, as it appears, the "momentous" meeting at Malta has left things very much where they were. At the present moment, Great Britain's strength in the Mediterranean has been reduced to almost a nominal basis, as a result of the policy of naval concentration in home waters inaugurated half-a-dozen years ago. During this time the Suez Canal has been virtually under the protection of the French Mediterranean fleet, and a formal alliance could hardly alter the situation. What is probable is that the Malta conference did not deal with such momentous questions as alliances, or even with the policy of building Dreadnoughts against Italy and Austria, but with the more immediate problems arising out of Italy's military operations in the Mediterranean.

The attempted assassination of Count Tisza by a Deputy is the culminating point of parliamentary terrorism. Enlightened opinion in Hungary has taken to heart the lesson of the recent riots in Budapest, but apparently the Hungarian Diet never learns. The press has been calling upon Parliament to abandon "the strife of programmes and temperaments," and to recognize that the time has come for a definite solution of the universal suffrage question. But the fact that on Tuesday of last week no less than seventy-five Deputies had to be thrown out from the Chamber before order was restored and the Government's Army bill could be dealt with, shows plainly that the strife of temperaments is still to be seriously reckoned with.

THE REVIVAL OF VIOLENCE.

A prediction about the Chicago Convention comes to us in a letter from a cool-headed Republican who is to be a member of it. He writes that the "meeting will doubtless be a riot, and violence is almost certain to occur." This may be undue apprehension, but there is much talk current to bear it out. The commonest metaphors employed about the work of the Convention reek of force. There is to be a ruthless use of the steam-roller, we are told by one side, and "strong-arm" methods are to be remorselessly applied. From some of Mr. Roosevelt's zealous youth we are getting dire threats of violence. Medill McCormick declares that if the Roosevelt contestants from the State of Washington are not seated, they will "shoot the roof off the Convention." This is doubtless the exaggeration which a rich young fellow falls into when he thinks to be forcible by talking like a cowboy. Let Mr. McCormick begin his shooting, and one "good Chicago polis-man," in Mr. Dooley's phrase, would promptly attend to his case, quenching him and his cigarettes by a dip into Lake Michigan. But allowance made for all such posing and blustering, there remains enough to disturb people who have been accustomed to think that there is something more in politics than the display of brute force.

This tendency to substitute violence for reason and the argument of pike and gun for logic, has had many recent manifestations not directly political. It seems to be getting the fashion to think in terms of force, not intelligence. The most popular philosophy of the day inclines to ask the mind to take a back seat in favor of "life-force." M. Bergson would doubtless be the last man to practice violence, or to defend it, but his conception of vast creative powers struggling like giants in puny men has fitted into a good many notions prevalent about the duty of getting what you want by violent means. We used to deplore violence, but now we apologize for it. The idea seems to be that if you don't go out and fight for your cause by smashing things and resisting the police, you show yourself a half-hearted and craven creature to whom nobody need pay any attention. This spirit of violence is invading field after field. The way to argue is with your fists. If you go to a "Futurist" and try to persuade him that his ideas about art are all a mistake, the proper answer for him to make is to hit the critic in the eye.

We do not say that this glorification of violence stands out naked and unashamed. The thing is cloaked. It is not violence which is openly praised, but energy. That is the favorite word. It is supposed to go along with great simplicity of nature and deep earnestness of purpose. What we are asked to admire is a man or a set of men conceiving everything with great directness, moved by elemental passions, and moving on to a predetermined goal with a rush of intensity that nothing can resist. Reflection and hesitation are considered out of place. They only waste time and paralyze the will. The thing to do is to make up your mind quickly where you want to go, and then take the bit in your teeth and gallop there madly, no matter upon whom you trample on the way. It is this kind of native force brushing aside obstacles and rapidly attaining its ends that is to-day apotheosized.

No disguises, however, philosophical or other, can really hide the essential quality of all this. It is the negation of the intellect, the disavowal of science, the enemy of society and of all secure human progress. Everything to give way to energy? That may easily mean sheer brutality, the law of tooth and claw. For the implications of this view are almost always physical. It is the biggest muscle, the largest number, that must conquer. But reason is also a form of energy. So is humane feeling. So is patriotism. To these, however, our modern school of the divine right of the strongest gives little heed, or, if it does, clothes them all in violence. We are somehow to "get there." It is for man to "deliver the goods," no matter where he gets them or how damaged they are. Argument is good, if it happens to be on your side, but the only argument of final validity is the assertion of power to beat your opponent to a frazzle.

This recrudescence of the spirit of violence will pass. The world cannot be put back permanently into the stone age. Even in politics we shall find out again that the only way to get on is by sitting down to reason together, by conciliation and concession, by the methods of men who respect themselves and respect one another and are not rowdies. All these explosions about knocking people over the ropes and shooting off roofs are simply a temporary reversion to barbarism of which we shall all soon be ashamed. Patience is perhaps the chief political virtue. It was the sublime quality of that statesman whose name is so often nowadays taken in vain, Abraham Lincoln. If he were with us to-day, we should doubtless have from him many a shrewd and humorous thrust at the follies of the energetic school, of which the motto is that if you see anything you want in politics, take it; but we may be sure that he would counsel us to possess our souls in patience until this madness, too, was over-past.

THE REPUBLICAN OPEN SORE.

One feature of the contested seats in the Chicago Convention is like a ghost come again to haunt the Republican party. We refer, of course, to the delegates from the Southern States. Already we have heard from both factions in Florida and in Alabama: "There is no Republican party in this State." The same might be said with truth of nearly every other Southern State. There is a machine, but there are no voters. Office-holders struggle with ex-office-holders, or would-be office-holders; delegates and contestants are moved about like pawns, or bought like cattle; but all pretence of there being a real party acting through chosen representatives, was long since abandoned. This disgraceful condition of affairs has continued for years. It has often been a public scandal. Frequently it has caused the most bitter party and personal recriminations. It is simply being made public at Chicago just now somewhat more glaringly than usual.

For years this state of things has been regarded as a Republican open sore. But no determined efforts have been made to heal it. Again and again plans have been brought forward to purify or reduce the Southern representation in the Republican Convention. But nothing has come of them. The latest one, however, came nearer success than any of its predecessors. In the Convention of 1908, where Roosevelt marshalled the Southern postmasters and collectors, who, he now complains so angrily, are being used against him, a resolution was introduced by Senator Bourne de-

signed to abate the nuisance. He proposed that each State should continue to have four delegates-at-large, but that district delegates should be apportioned, not by population, but by the number of votes cast for President in the preceding election. This would obviously whittle down the number of Southern delegates almost to the vanishing point; and it was so intended. The proposal was rejected by the Convention, yet only by a vote of 506 to 470.

The evil has persisted only because Republican politicians have wished it to persist. That block of 200 votes or so in the South has been as a glittering prize for them. It was so easy, or might be so easy, to seize it, and it might prove so decisive! For years Republican Presidents and candidates have eagerly clutched after the Southern delegates. They were arrayed for Arthur in 1884. Sherman was reaching for them in 1888, and thought he had them, but afterwards complained bitterly that Alger had "bought up his niggers." Harrison had them in 1892, and his dependence upon their vote was made the ground of as violent an attack upon his candidacy as is now directed against President Taft's for the same reason. In 1908 Roosevelt flung himself into the fight to force the nomination of Taft, and rounded up the Southern delegates in the approved style; also setting his steam-roller in operation before the Convention to smash flat every contestant. If the result of the whole has been to degrade and debauch the Southern Republicans, whose fault is it but that of the party which has lacked courage resolutely to take hold of the scandal and make an end of it? Nearly the first act of the National Committee at Chicago last week was quietly to pass a resolution declaring that it had no intention of doing anything to interfere with the Southern representation in the party! The sore is to remain open.

Admission of the evil, however, does not imply that those who play the game, into which it enters, are not bound to abide by the rules. Until to-day it has never been contended, as Col. Roosevelt now virtually contends, that a Republican nomination achieved by the aid of Southern Republican delegates has no power to bind the party. Harrison was renominated in 1892 demonstrably by the votes of the Southern phalanx. In opposing him, Senator Wolcott read out a list of all the office-holders who were there in the Convention to do as they were bid by the dispenser of Federal patronage. This was done to bolster up the argument that Harrison was not the real choice of the party; but there was no threat or dream of bolting his nomination. The thing was vicious, but it was regular, and that was enough. Similarly, in 1908, Roosevelt had a noble assortment of Southern office-holders to vote for Taft at his orders, and he would have been the loudest in denouncing any Republican who should have contended that the action of the Convention, even though the balance of power in it was held by dummy delegates representing States where there was no possibility of a single electoral vote for the party, was not binding on the conscience of every member of it. Only when his own inventions return to plague him does he cry out that fraud and villany are striking down the righteous. The whole method of Southern representation ought unquestionably to be reformed. As it works, it is bad for the party, bad for the Southern Republicans—both tempted and betrayed, as they too often are—and bad for public morals. But in the matter of this wrong, as in that of boss government and the tariff, Theodore Roosevelt never lifted his voice or raised a finger during the seven years of his Presidency; and if he is now injured by a vicious system which he not only permitted to go unchallenged and uncorrected, but cheerfully took advantage of, the only thing to say to him is: "Tu l'as voulu, Georges Dandin!"

PROSPECTS AT BALTIMORE.

It was inevitable that the Democratic campaign for the Presidency should thus far have appeared to be side-tracked. With a dog-fight on one side of the street and a shooting-match on the other, people walking quietly about their business cannot expect to attract much attention. The Republican hurly-burly has deafened the country to the other party. Yet it is the unmistakable general opinion that the chances are very strong that the next President of the United States will be named at Baltimore, not at Chicago. The prevailing view is that expressed by Col. Watterson when he says that no party so debauched and butchered as the Republicans now are can possibly elect a President, no matter who their candidate may be.

The election of delegates to Baltimore is now nearly completed. Rival headquarters, after the fashion set by Republicans, put forth stout and absolutely inconsistent claims. Their contradictory figures recall the story of Lord John Russell, whose brother, the Duke of Bedford, had deposited $50,000 in the bank to Lord John's credit and who asked him if his account did not look better that quarter. Russell replied: "I never look at it. The clerks make so many mistakes in their arithmetic that it is no good looking at their figures." Many of the Democratic figures are obviously untrustworthy, but the standing of the various candidates is roughly known. Clark and Wilson are in the lead, the Speaker having apparently a few more delegates than the Governor, but neither having a majority in sight, much less the necessary two-thirds. Underwood comes next, and then Harmon.

To speak of the last-named first, his success in Ohio, whose forty-eight delegates were bound to him last week by the unit rule, illustrates the elements both of his strength and his weakness. A powerful minority is opposed to him even in his own State, and outside it he has made but trifling headway. Yet no man has or deserves more respect for sterling public qualities than Judson Harmon. Few question that he would make a satisfactory President. His age is, on general principles, a disqualification, yet he comes of a long-lived family and is at sixty-six in full vigor and capable of a great amount of hard work. His Administration in Ohio, too, has been of a sort to win the approval of sober-minded and substantial citizens. Especially notable have been his achievements in tax-reform. His resolute adherence to his convictions and his independence are not questioned. And yet even his friends now perceive that it is scarcely possible that he should be nominated at Baltimore. There is nothing against him except a state of mind, but that is the most deadly opposition that any candidate can have. What we mean is, of course, the general feeling that Gov. Harmon is too much out of touch with the living political forces of the day. He would be called behind the times and stigmatized

as a reactionary. This, we believe, would be highly unjust to Gov. Harmon, but the charge would surely come and it would be difficult to meet it in a way to satisfy the large public. Now, there is no use in fighting against psychology in politics, and it is at present dead against Judson Harmon. His best friends are aware of this; and many of them are free to say that they do not think his nomination at Baltimore is possible or would be wise.

If psychology is against Harmon, common sense is against Clark. Though he will have a large number of delegates at first, his candidacy has not really appeared serious. The chief reason is that the people of this country cannot sit down and imagine Champ Clark President. The misfit would be too glaring. As against Roosevelt, Clark would be simply ludicrous. Most Democrats who are free to express their opinions and who have any knowledge of the facts, are fully of that mind; and it is inconceivable that the Baltimore Convention should put forward the Speaker except upon the theory that the Democrats can elect a yellow dog this year.

If it narrows down to a choice between Underwood and Wilson, there would be much to say for the former. He has never been tried out in a large way as an executive, but in the House he has shown fine qualities of leadership. He is both sagacious and patient, fair and firm. No man ever better grasped such a great opportunity as came to him in the present Congress. His complete overshadowing of the Speaker is a suggestive test of the calibre of the two men. Underwood is a Southerner, yet prejudice against him on that score could hardly count heavily in the election, though it might be a factor to reckon with in two or three closely contested Northern States. What Democrats are really troubled about, in connection with Mr. Underwood, is the question whether he has sufficient weight and thrust to impress himself deeply upon the country in a Presidential campaign; whether his speeches or writings would be of a sort to formulate issues in a way to catch attention and compel a victory; whether his personality is of the vivifying and inspiring sort.

Comparison of Oscar Underwood with Woodrow Wilson along these lines is distinctly favorable to the New Jersey Governor. No better political speaker has come to the front in a generation. His gift of pointed utterance enables him to appeal both to the highly educated and to the masses. And he has already strongly touched the imagination of the people. His success as leader and reformer was as brilliant as it was rapid, and the conviction is widespread that he has the stuff in him to go far. As a living embodiment of hostility to boss rule, as particularly well fitted to lead the battle against tariff abuses and all forms of privilege, his nomination at Baltimore would hearten the Democratic party and give to thousands of Republicans the opportunity, for which they are longing, to vote for a high-toned Democrat. And if it should become a question of pitting Wilson against Roosevelt, what Democrat could better point the contrast between restrained intellectual vigor and passionate outbursts, or could more successfully beat off the raid which, it is clear, the Rough Rider would seek to make upon the vote of Progressive Democrats?

LET THE PUPIL RULE.

In response to the request of a professor at the University of Illinois, eight thousand high-school students of that and adjoining States have confessed their real feeling about the books they have had to read in the list of College Entrance Requirements in English. It is unnecessary to explain his method of tabulating the results. The vital thing is the figures, and they are plain enough. At the top of the forty-one classics considered stands "A Tale of Two Cities," with the proud percentage of eighty-nine. Next comes "The Last of the Mohicans," with a percentage of eight-seven. These are followed by "Ivanhoe," "Hamlet," "Enoch Arden," "Silas Marner," "Macbeth," and "The Lady of the Lake." Tied for thirty-seventh place are "The Deserted Village" and "The Ancient Mariner," but they are pressed by "Sesame and Lilies" and Carlyle's "Essay on Burns," while Emerson's "Essays" lags at the very end with a mark of forty-eight. In between come "Treasure Island" and "The Vicar of Wakefield," "Paradise Lost" and "Cranford," Poe, Burns, Chaucer. These statistics make their collector moralize. Surely, he sighs, the record in the case of "The Ancient Mariner" is "a little pathetic when we consider for how many years and with what enthusiasm we have been compelling practically all our high-school students to spend weeks on this book."

Interesting as the results of this literary referendum are, they cannot be called final, for the reason that the pupils were restricted in their choices for the Entrance Requirements list. Before we are entitled to say what books high-school students approve and what they disapprove, we are bound to give them the right of initiative. Who knows how far down the list "A Tale of Two Cities" would be found if it were forced to compete with Jack London and Kipling, and we know not what other writers dear to the high-school heart? Let another contest be held, in which 10 per cent. of the pupils of any high school shall have the power to name a book for entry in the race. Then let all the selections be voted on. It may occur to the reader that there may be differences of choice due to the sex or age of the students, but the Illinois statistician assures us that these are negligible. Boys and girls, first year and last, in general display like tastes in these matters. What we need, therefore, is a nation-wide initiative and referendum among our children on the issue of what books they shall study. The election might well be preceded by a short and dignified campaign, conducted in the high-school literary societies and student journals.

And what of the recall? Is the pupil, having tried Addison and Ruskin and Emerson, and having cast his ballot against them as reactionaries, to be still confronted with them? Not if the Illinois professor has his way. Being the tribune of the pupils, he says in so many words that if he were himself at the present time in charge of a high-school English course, he would drop out the books in the lower group. On this platform, we believe he could sweep the country, regardless of how many terms he has already served. It would be unfair to leave the impression that our Illinois investigator is governed solely by the show of hands he has evoked, beautifully democratic as such conduct would be. After some cogitation, he was rewarded by the emergence of a principle which, all unconsciously, guided the selections presented to him. That principle he states as follows, in

his account of the experiment in the *English Journal:*

> That the popular books in this list are uniformly books containing *vivid and dramatic presentations of human life with strong ethical import,* while the books that are distinctly disliked are those in which the primary appeal is æsthetic, stylistic, which convey their message indirectly through their beauty or humor, or which present human life, not with bold plainness, but delicately, lightly, subtly.

There is one consideration which might be advanced by partisans of the books that are low on the list, and that is that they have been poorly taught. But what is this except to explain a candidate's failure by the mistakes of his managers? And how is it possible to criticise managers who have had such brilliant successes as those who have won the general admiration for Dickens and Scott, for Cooper and Shakespeare? We may as well admit the substantial truth of our professor's analysis, and proceed to commiserate the teachers who have had to recommend, and to congratulate the students who have had the discrimination to reject, books which are so stupid as to undertake to convey their message indirectly through their beauty or humor, or to present human life, not with bold plainness, but delicately. In taking this position, they are merely aligning themselves with the great mass of untrained readers who have never attended high school. Could there be better evidence of the soundness of their judgment?

EATING ON THE STAGE.

Nothing piques an audience more than stage meals. Is it a real roast? Is the drink truly wine? And what a pity that even an elaborately set dinner usually lasts but a few minutes! How can actors so time their swallows as to be free at the cue to enunciate clearly? These are problems which have arisen in fairly recent times. The make-believe picnic over which the banished duke in "As You Like It" presided has been replaced in certain modern presentations by actual eating and drinking, until, as some one has suggested, the charge might be made against the duke of having carried away much of the court plate. It was inevitable, of course, that the attention now given to verisimilitude of setting should not pass over appurtenances of the board. Care in the matter was further dictated by the growing importance of dining in fashionable life; as well as by writers' realization that interesting points of human character are often revealed over food. Flat and stale the world may look at breakfast, as seen from the dead-level of disillusion; the capacity for keeping up appearances, for finding life interesting and complex and perilous, can often be brought out best amid the intimacies of tea or dinner.

What may be called the mere mechanics of stage-eating and drinking have sometimes proved to be a great problem for managers. In the olden days, when the audience was satisfied to hear the empty cannikins clink and to see painted sirloins doing decorative duty on a side-table, the matter was simple enough. But so long ago as the presentation of Gilbert's "Sweethearts" one personage at least was seriously inconvenienced by the new requirement. Obliged by her rôle to eat three tarts in rapid succession, the actress requested gleefully that they be of strawberry flavor, thinking thus cheaply to indulge a favorite appetite. But, like the man set to eating thirty quail, not many nights had passed before the sight of a strawberry tart threatened to bring her to madness. A change was made to orange, with little success; finally an American's ingenuity devised a quickly soluble wafer which removed the embarrassment. The spaghetti-man in "The Music Master," we learn, has since died; the cause of the death was not stated—perhaps it was unnecessary to state it. Solid food is said not to be served on the stage, cooked apples, or, if the manager is penurious, stewed turnips, taking its place.

And what of drink on the stage? Every one will recall the double-barrelled goblets, containing between the two layers colored liquid, which used to simulate glasses of wine. They for the most part have now passed. Sir Henry Irving, rumor had it, insisted that good wine was none too good for the stage. Yet usually, we believe, ginger ale is stage champagne. Its advantages over the genuine article are obvious. One alone prescribes the use of it. For what audience could resist an uproar if, for all the waiter's care, the contents of a bottle were to plump the hero in the face or shower the diners one and all?

In spite of its difficulties, stage-eating appears to be a settled feature, and the play without it is rare. What its general effect upon theatre-goers is would be interesting to learn. Does it live up to its theoretical purpose of presenting traits which could hardly be brought out in any other way? Take Blundell's dinner in Pinero's "Letty." There was undoubted humor in the sight of this *nouveau riche* attempting to order the "stylish" things in a fashionable restaurant; yet to keep the scene from dragging, the French waiter was obliged to roll r's interminably. A certain naturalness was attained in the informal meal in "The Witness for the Defence," and by it the picture of wretched domesticity was sharpened; and in "Trelawney of the Wells," which has been revived, the gayety of a banquet was required to bring out the delicious irrelevancies of certain of the characters. In all stage-eating the time-element is difficult to handle. Sometimes the problem can be simplified by a natural interruption, as in "Macbeth," putting an end to the feasting; much the same effect was got in "The Witness for the Defence," by the criminal brutality of the husband. In most instances, however, the very few minutes spent at the table can hardly fail to leave the audience troubled. Nor does it help to say that stage-dining falls in perfectly with the scheme of other foreshortening. Eating is something upon which everybody's attention is pretty definitely fixed; and the fact that a savory-looking roast is but picked at for a moment is hard to justify. Playwrights themselves have, of course, noted the discrepancy. This past season the time occupied by the usual breakfast on the stage was burlesqued by Barrie. Napkins were unfolded and then immediately folded; *voilà*, the meal was over. In the days when make-believe was so much the way of the stage, a good deal could be and was left to the audience's imagination. To-day, the supplying of too many preliminary details incites an audience to stickle for the rest.

With eating and drinking goes smoking, of which the stage contributes an enormous volume these days. The long-stemmed clay pipes of "She Stoops to Conquer" have yielded for the most part to the ubiquitous cigarette. How brave looks the hero as, in evening clothes, he takes a silver case from one pocket and a silver matchbox from another! What a thrill runs through the audience when Lady Frieda performs a few

puffs and lays the cigarette aside! That arrangement was most happy. For the audience concluded that the actress who impersonated her simply followed the dictates of the rôle and ceased smoking as soon as she decently could. Yet stage-smoking has its advantages. It keeps the hands busy and graceful; and there is no chance of overdoing it.

THROUGH THE OUTLOOKING GLASS

The train pulled into the station, and the Red Knight looked at his watch. "Forty minutes late," he said; "another infamous trick." He seized a telegraph blank, and wrote: "Congressman McKinley, Taft Headquarters—Brigand! Assassin! Polygamist! Collect." He turned to Alice. "I feel much better now," he said. "Let us go."

Opposite them in the car sat a young lady who was reading "Thus Spake Zarathustra," and chewing gum. So they knew they were in Chicago. They came to a hotel that was taller than any building Alice had ever seen. It was so tall that millionaires living on the top floor were in the habit of swearing off their taxes, on the plea of non-residence in the State of Illinois. They entered the elevator, and by and by they reached the floor on which their rooms were situated. As they opened the door, the first thing they saw was George the Harvester and Ormsby the Barrister weeping in each other's arms, and wiping each other's eyes with packages of rejected credentials.

At the sight of the Barrister the Red Knight showed no anger. He merely took off his helmet and threw it at the bell-boy. Then he pressed his forehead against the window-pane, and the glass cracked. Then he turned to the Barrister. "You must have had a very pleasant trip down South," he said, quietly gnashing his teeth.

"I did," said the Barrister, brightening up wonderfully.

"How did it all happen?" said the Red Knight.

"Shall I tell the story by Congressional districts or by States?" said the Barrister.

"By States," said the Red Knight.

The Barrister cleared his throat and began:

> I took a barrel into Ga.
> (" 'Ga' being Georgia, of course," he explained.)
> They jumped right up and yelled "Hurrah."
>
> I took a trunkful into Fla.
> They came to cheer from near and far.
>
> I spent two trunkfuls in Ala.
> They danced and sang: "You bet we are!"
>
> I took a crateful into Ark.
> They said, "Your reasons hit the mark."

"But this is all so very, very obscure," said Alice.

"It was intended to be," said the Barrister, and went on:

> I sent to them and said "Indorse,"
> They stood right up and said "Of course."
>
> I wrote to them and said "Contest."
> They said "Cash up, we'll do the rest."
>
> I said to them "Remember now."
> They said, "Keep cool, we'll show you how."
>
> They voted once, they voted twice,
> They voted hard to earn the price.

"But who are 'they'?" asked Alice. "Are there really such people?"

"Of course there are," said the Barrister. "I invented them myself," and he went on:

> They started for Chicago, Ill.,
> To ratify the people's will,
> But—

"That's all there is," said the Barrister, stopping abruptly.

"Yes, that is all there is," said the Red Knight, "and a nice mess you made of it."

"Mercy, Sire," cried the Barrister, falling on his knees.

"Failure deserves no pity," said the Red Knight sternly. "If it were not for the chance that you may do better in 1916, I should make short work of you at once. As it is, you will, as a penalty, between today and the first of next year, read and briefly summarize every one of my past Presidential messages."

"Including the paragraph about the tariff which Cannon made you take out?" sobbed the Barrister.

"Everything!" said the Red Knight. "Come, Alice. The trumpet calls to battle. It's now or never—unless the circumstances change."

FRENCH BOOK NOTES.

PARIS, June 1.

"Le Petit Commerce contre les Grands Magasins et les Coopératives de Consommation" (Paris: A. Rousseau—205 pages 8vo), by Henry Vouters, *docteur en droit*, is a searching study of "one fragment of a vaster question which preoccupies both economists and parliaments—*the problem of the middle classes*." An introduction of forty pages explains the problem for the sake of clearness in Karl Marx's formula of capitalist evolution, that is, in relation to capitalist accumulation and increasing proletarization of the masses—for between these the middle classes, independent to a certain degree of either, ought by the formula to disappear. Our author's brief statement of facts shows that the Marxian prophecy is suspiciously slow of fulfilment; and, in reality, Socialists like Kautsky acknowledge themselves obliged to change their formula materially. The facts in the struggle for life of small shopkeepers against the great shops and coöperative stores, with corresponding legislation up to 1910, are studied in France, Bavaria, and Prussia; the middle classes of the two latter countries in particular have united in a vigorous and organized campaign of self-defence.

A first part of forty pages deals with the big shops and the objections of small traders to them, both for the practical monopoly towards which they tend and for their social and moral relations with customers, employees, and furnishers; the legislative, and particularly the fiscal measures, demanded against them; and the results obtained by taxation—and whether this does not really fall on the customer or employee or manufacturer. The second part (fifty pages) treats the competition of co-operative stores (workingmen's associations); their alleged abuses and weakness; and, again, legislative regulation and fiscal measures, with the results in the three countries named, where they have had their chief development. A conclusion, in eight pages, notes that legislation and fiscal burdens have not stayed the movement of business concentration in either form—rather the contrary. ". . . The negative policy of the small shopkeepers has proved sterile." Advantages of a positive policy are indicated; it would imply association and coöperation among these individualist middle classes themselves, threatened as they are by Capital and Labor alike. The book has four pages of valuable bibliography, exclusively French and German; and the constant references of footnotes to the text and statistical tables add greatly to this study of a burning question in the changing constitution of civilized society.

"L'Indochine Française" (Paris: A. Colin—356 pages, 56 illustrations, 4 maps—4 francs), by H. Russier and H. Brenier, is a convenient volume for those who wish to make intelligent acquaintance with Indo-China, which forms so considerable a portion of the immense colonial empire of France, just as the Philippine Islands do of the growing colonial stretch of the United States. There is a bibliographical introduction; eight chapters on the natural history and features of the country; six chapters on the inhabitants and their various races; eight chapters on working the country's resources—mines, forests, agriculture, industries, communications, and trade; five chapters on the political and administrative organization; and a conclusion concerning what has been done and what is possible. "In twenty years, exports from Indo-China to France have increased from 2 to 44 millions; and French goods imported into Indo-China from 16 to 101 millions"—in spite of an unfavorable customs system. "In such conditions, it is wonderful that people so often speak of giving up Indo-China."

"La Colonisation Française dans l'Afrique du Nord—Algérie, Tunisie, Maroc" (Paris: A. Colin—550 pages 8vo, 4 maps—6 francs), by Victor Piquet, is a book of present interest, now that Frenchmen are in full difficulty of exercising their new protectorate over Morocco. A previous work of this author on the "Civilizations of North Africa—Berbers, Arabs, Turks," was favorably reviewed in the *Nation* two years ago. Yet another gives the military history of French "Campaigns in Africa, 1830-1910—Algiers, Tunis, Morocco." These three volumes form a complete account of the vast, populous region which is now, after fifteen centuries, again actively making history. In a first chap-

ter, a geographical description of North Africa in its eleven physical divisions is given by way of introduction (25 pages). Algiers (275 pages) is taken up successively with its history, where there are a dozen enlightening pages on its Moroccan frontiers (a late burning question); its administration, military and civil, by regions and communes; its agricultural colonization, and the constitution of property; the condition of the natives, political, financial, and social; the population and economic questions. In the same order, questions concerning Tunis are explained (135 pages). The history of Morocco is narrated in its relations with France from the conquest of Algiers in 1830 to the present occupation and successful working of the Chaouïa (Shawia); next, Morocco is studied from the social point of view; in the organization of its public services, finances, and instruction; real estate and agricultural association; and colonizing possibilities (90 pages). For the whole of North Africa, the chapters on "economic activity" (mines, forests, agriculture, industries, trade, etc.), are of distinct value to international commerce and reference libraries. The maps are intended to give needed tabular information by shading: What many Frenchmen fancy North Africa is, and what it really is; North Africa, political and economical; North Morocco, and Atlantic Morocco. However the final division of the extreme north of Morocco may be made between Spain and France, this book will keep its value for exact information.

"Otahiti" (Paris: A. Colin—280 pages, 3.50 francs), by Henri Lebeau, is a wide-awake traveller's bona-fide tale of "the country of eternal summer." He had read beforehand the story of Capt. Cook's Irish sailor who manœuvred to stay in the happy island. "I have tried to give those who have not seen Tahiti as exact an idea as possible of the realities, trivial or poetic, which offer themselves to the observation of the traveller who is at all cultivated and comes nowadays to this charming isle without preconceived ideas or other intention than to look on at what passes there." In sum, meddling civilization seems to have made more victims there than the old indolent, irresponsible savagery; but the natives manage still to enjoy their pleasure island in their own way.

"Henry Harrisse" (Paris: Ch. Cadenat—83 pages 8vo), by Henry Vignaud (in French), is a "biographical and moral study" of its subject, with a critical bibliography of his writings. The "study," no doubt, had to be written where a personality of so strong idiosyncrasy was also a "*savant* who has been called, not without some reason, the Prince of Americanists. . . . The author of these lines was one of the last friends of Harrisse; but, like so many others, he had had to stop seeing him. Now that the tomb separates them, he forgets all that should be forgotten, . . . to say that he drew from his works precious lessons of the necessity of depending on original sources only and of the critic's duty to tell the whole truth, whatever it may be." The bibliography of Harrisse's publications is of great importance to those historians who have come to be called Americanists. It comprises 94 headings under 11 sections, each accompanied by a short critical note. It is well to notice that the copy of his first work, "Bibliotheca Americana Vetustissima," which Harrisse left to the Congressional Library, Washington, "contains rectifications and additions enough to make another volume." Mr. Vignaud, who is president of the Société des Américanistes de Paris, has also published since the completion of his *magnum opus* on Columbus—"Les Expéditions des Scandinaves en Amérique devant la critique" (34 pages on a new false document), and "Americ Vespuce" (43 pages, his voyages and discoveries, critically studied)—both *tirages à part* from the *Journal de la Société*, 1910-1911:

> Our considerations authorize the conclusion that the attribution of Amerigo Vespucci's name, first to South America, and then to the entire continent, is quite as justified as would have been that of the name of Columbus. The great Genoese and the great Florentine are the veritable discoverers of the New World; and it is reasonable that their two names should always be associated—to the exclusion of that of Cabot. For, although this last intrepid mariner landed in the New World (that is, on the continent), before either, he neither understood the importance nor the real character of his discovery; and it had not the same influence on the development of our geographical knowledge.

The present Memoir, which is a defence of Vespucci against historians ancient and modern, concerns only the voyages; another on the giving of his name to America is to follow.

"Edgar Poe" (Paris: Bloud—260 pages, 2.50 francs), by Emile Lauvrière, appears in the series of Grands Ecrivains étrangers. It is based on the large and complete work of the author published eight years ago, with a few additions from the gleanings of later years. It is the clearest account yet given of a genius who was exalted abroad before he could have due appreciation at home; and even now he has to be explained away in his native country. In pure literature, he is the only American author who has so far profoundly influenced the literature of Continental Europe and become a world's classic. M. Lauvrière repeats his medical thesis, which was approved by the Académie de Médecine in 1905. Its conclusions, as he shows, are not unlike those of Poe himself, whose genius, even though akin to madness, realized the sober Aristotelian condition of "reason expedited to put two and two together." SCANDINAVIAN BOOKS.

BERGEN, Norway, May 30.

Prominent among contemporary Danish writers is Johannes V. Jensen, whose latest work, "Skibet" ("The Ship"), has for its central idea the Norseman's longing for the sun and his wanderlust, special attention being given to the expeditions of the Vikings. The author's description of the founding of Copenhagen, despite certain historical errors, has the kind of patriotic intensity which captivates.

Of Otto Rung, another Danish author, Georg Brandes wrote recently: "People ought to pay more attention to Rung's books than they have done so far. He has the greatest talent of his generation." Last year, Rung put forth an able drama, "Broen" ("The Bridge"), and lately has published a novel, "Lönkammeret" ("The Private Closet"). He understands human nature, and in particular the conditions of a large city, with all its tumult and busyness. The subject of his latest book is present-day life in Copenhagen, its contrasts between the poverty in the suburbs and the splendor and dreams of happiness and beauty in the centre of the city. The story is told in a nervous style, which keeps a firm hold of the reader.

The writer, Sophus Michaëlis, known in America through the performance in New York of his drama, "The Revolutionary Wedding," is one of the ablest and most enthusiastic students of Napoleon in Denmark. Last year he wrote a serious drama on the little Corsican, but without marked success, and recently he has published a novel, entitled, "1812. Den evige sövn" ("1812: The Eternal Sleep"). As the title indicates, the novel describes the unhappy campaign in Russia. It is done with great intensity and sense for dramatic moments, and furnishes what may properly be called thrilling reading. The book will no doubt appeal to the public, but to compare it with a master-work like Tolstoy's "War and Peace"—as one critic does—seems like ridiculous exaggeration.

A short time ago Sweden's greatest writer, August Strindberg, died in his sixty-fourth year, and, in accordance with his known wishes, was buried on a Sunday at seven o'clock in the morning. The eccentric but highly gifted author was very popular in his own country, particularly among the working classes, from whom he derived and whose cause he championed to the last. In spite of the early hour, an immense crowd assembled at the cemetery, the workingmen and the students meeting under striking banners. An edition of Strindberg's "Collected Poems" is just now being published (Stockholm: Bon-

nier), and already has an imposing number of subscribers.

Of recent Swedish fiction mention should be made of a powerful work by Gustaf Janson, "Lögnerna" ("The Liars"); a collection of short stories, "Apen och andra noveller" ("The Ape and Other Stories"), by Richard Wallner; of the novels, "Paus" ("Interval") and "John Claudius' äfventyr" ("John Claudius's Adventures"), by Henning Berger, and "Nisse," by Ludvig Lindberg.

A small pamphlet which has caused a great deal of discussion in Scandinavian newspapers and magazines is written by the well-known Swedish economist, Prof. Pontus Fahlbeck. It is called "Svensk och nordisk utrikespolitik" ("Swedish and Northern Foreign Policy") and touches on the timely question of the relation of the Scandinavian countries one to another, and their position in world politics to-day. The author points out that the Scandinavian countries should no longer persist in the belief that they will be undisturbed by any European crisis, and argues that two things now are necessary for them to do: to put their defence in better shape and to join one of the leading Powers in an alliance. The danger to the Northern countries, Professor Fahlbeck sees in Russia which is looking for an ice-free harbor on the Atlantic coast. Proper precaution would therefore dictate an understanding with Germany with a view to joining the Triple Alliance. Though written with a great show of logic and acquaintance with the facts, the pamphlet has met with hostile criticism. It is opposed, for one thing, by the strong English sentiment prevalent in Scandinavia.

The latest work by the Norwegian dramatist, Gunnar Heiberg, has caused a sensation. In a five-act drama, "Jeg vil værge mit land" ("I Will Defend my Country") he deals with the dissolving of the union between Norway and Sweden in 1905, and attacks the Norwegian policy which was followed during the latter part of that year. A small minority of Norwegians, though agreeing with others that the dissolution was inevitable, maintain with great vigor that Norway should never have been compelled to abolish her fortifications along the Swedish border. The peace obtained in such way was bought too dearly, Mr. Heiberg means, and in his drama he develops his views as to the destructive moral effect of this measure on the nation. Looked at from a dramatic standpoint the work is excellent, the scenes are well built and full of life, and some of them have real beauty. But, politically considered, it is not a fair picture, the authors of the measure being drawn as petty schemers, given over entirely to selfish ambition. For this reason the drama was received with protest when performed at the National Theatre at Christiania, some of the most sarcastic and slanderous speeches being drowned out by the hissing of the audience.

The edition of Capt. Amundsen's account of his expedition to the South Pole has just been started. The first part of the book is very neatly printed and contains a number of good photographs. It begins with a short preface by Fridtjof Nansen, who praises Amundsen's courage and ability. Amundsen's own narrative gives proof of his great modesty; it is simple and direct, and at the same time interesting and vivid. The Norwegian edition of the work will be completed before Christmas. A timely publication is Dr. O. J. Skattum's book on South Polar expeditions. It traces the history of such enterprises down to the attainment of the South Pole. It is clear and trustworthy and readable.

ARNE KILDAL.

NEWS FOR BIBLIOPHILES.

In the fifteenth century, when the Mediterranean trip, then taking the form of a pilgrimage to the Holy Land, was as to-day very popular, many travellers wrote accounts of their adventures. The most famous of these, judged by the editions of his book, was the pilgrimage of Bernard von Breydenbach, Dean of Mainz, whose "Peregrinationes in Terram Sanctam" is the subject of a careful and elaborate bibliography by Hugh William Davies, recently published by J. & J. Leighton, London.

Breydenbach seems to have left Oppenheim near Mainz on April 25, 1483, and to have returned in January, 1484. The printed account of his itinerary, however, begins at Venice. Among his companions was an artist, Erhard Reuwich of Utrecht, and the illustrations in the book, engraved from his drawings, are now its most interesting feature. This is the first instance in which a single painter is definitely known to have undertaken the illustration of a printed book. At Venice the party was much enlarged, Mr. Davies having found, from various sources, the names of not less than fifty-three persons who accompanied Breydenbach from Venice to Jerusalem. At least two of these pilgrims, Felix Fabri and Paul Walther, wrote accounts of the journey, both of which are still extant in manuscript, though not printed until modern times.

Breydenbach is described in the "Itinerarium" as "hujus operis auctor principalis," but, from statements in Fabri's narrative, Mr. Davies concludes that the Latin text, at least, was composed by Martin Roth of the Dominican convent of Pforzheim.

The colophon of this first edition is dated Mainz, February 11, 1486. A second edition, with German text, is dated June 21, 1486. Both of these, as well as an edition in Flemish, all from the same types, with colophon dated May 24, 1488, were probably brought out under the supervision of Breydenbach himself. The colophons of all three editions give Erhard Reuwich, the artist, as printer, that of the German edition going so far as to assert that it was printed in Reuwich's own house ("und die truekerey yn synem huss volfüret"), but, as no other book whatever is known with his name in the colophon, it is presumed that he may have borrowed or rented the types for the time being. The types may have belonged to Schoeffer, as they resemble those used by him, and very probably he was actually the printer.

The engraver of the woodcuts is unidentified—they may have been engraved by Reuwich himself. The large panoramic views, especially, are of the greatest interest, and are the first of their kind. "They are distinguished," says Mr. Davies, "from other woodcut views published in the fifteenth century by their air of truth, as well as their liveliness," and, again, "the views are undoubtedly authentic, as well as artistic, and are valuable as giving an exact picture of these famous places as they appeared in 1483."

It is interesting to trace the travels of the original wood blocks. After being used in the three Mainz editions in 1486 and 1488, they passed to Lyons in 1489, were back in Germany again in 1490, and, finally, appear in a Spanish edition printed at Zaragoza, in Spain, in 1498.

In a bibliography of this character, limited virtually to the description of twelve editions only of a single book, the most minute particulars as to arrangement and collation, sheet-marks, water-marks in the paper, citations of references, location of copies, etc., can be given. In this respect the work is a model. Besides this, the story of the book and its author is interestingly told. There are sixty full-page plates of reproductions of title-pages, dedications, and woodcuts. The books described are all in the possession of C. Fairfax Murray, and it is worthy of note that one of his two copies of the Spanish edition (Zaragoza, 1498) once formed part of the library of Ferdinand Columbus at Seville.

The volume is a large quarto, printed on fine paper, in an edition limited to two hundred copies.

RESPECT FOR LAW.

TO THE EDITOR OF THE NATION:

SIR: It is a platitude that the cohesiveness of a republican form of government depends upon the existence among the people of a habit of respect for law, of a strong belief that principles rather than men should govern. No greater teacher of these ideas existed than Lincoln, who, abhorring slavery, taught the people that a government of laws was sacred, and that, therefore, they must for the time bow to the provisions of the Constitution which recognized slavery.

To my mind the gravest danger to be apprehended from Mr. Roosevelt is that he has no appreciation whatsoever of the importance of preserving among the people the foregoing humdrum civic habits. Where laws stand in the way of his purposes, they do not command his obedience, but merely arouse his impatience, so that he ignores them or bends them to his purposes. The inevitable result of his teachings and example is to induce his followers to believe that the general welfare requires that the determination of all public policies should be confided to a popular idol, who shall

decide not by any fixed principles, but by his own idea of the immediate requirements of the situation; who, when he finds a law impeding his purpose, may, if he deems it "economically unworkable," or otherwise a "bad law," ignore it; who, when any man opposes his attainment of power, may be excused or commended for removing the obstruction by foul fighting.

Mr. Roosevelt is not only a captain whose tendency is to navigate the ship of state without any standard chart or compass, or by any fixed star, but, in order to insure his own popularity, he is willing that the crew which elected him captain shall use up the general supplies and provisions, incidentally eating and drinking heartily to the captain's glory, without any thought of the length of the voyage or the needs of the future.

Reckless as almost all of our statesmen have been in encouraging Congress to treat the people to expensive governmental luxuries out of the people's store, none has ever been so devil-may-care as Roosevelt. Economy is not popular. Economy is not spectacular. Economy is humdrum, and is to be achieved by hard work and sacrifice only. Economy wins no cheers; you couldn't stage it nor set it to music.

In the present contest Roosevelt's deficiencies have been pointed out. The voters have been asked to condemn them. Were he nominated after that, it would vindicate him in pursuing his natural tendencies. In a national campaign those tendencies would again be the issue. If elected after such a campaign, he would feel that the whole people had endorsed his gratification of those tendencies. In that event, I believe that patriotic men would have to witness the spectacle of a people, intoxicated with enthusiasm for a vigorous, engaging personality, enjoying the excitement of following a flaming torch of leadership which led to ill-considered and frequent changes in governmental policy, converted by their leader's example and teachings to discard our governmental system of checks and balances, to regard with contempt or impatience the molly-coddle civic habits of respect for laws, of belief in enduring principles, or restraint in exercising power against the minority.

I believe, therefore, that Mr. Roosevelt's nomination and election would do more than any other conceivable event to bring to an end the genuine government by the people which the fathers of the republic established. H. A. B.

A PROTEST.

To the Editor of The Nation:

Sir: In a recent editorial, you say in an off-hand manner: "Take our universities, for example; they are overwhelmingly against Roosevelt." I have no statistics to contradict your assertion. But my impressions, based on some knowledge of conditions in our Western universities, certainly do not support your view.

If you had said that many (if not most) of our Law Schools are against Roosevelt; if you had stated that the majority of the students and faculty of some of our Eastern colleges and universities do not support his candidacy; or if you had even asserted that the members of many of our Western institutions of higher learning are very much divided in their allegiance, you would probably have been well within the truth. It appears to savor strongly of provincialism to base an impression of this sort upon a knowledge of conditions in a few Eastern universities. Our Western institutions, more particularly the State universities, are too close to the people to be overwhelmingly *against* Bryan, La Follette, Wilson, Roosevelt, or any other candidate with a strong popular following.

True it is that there are a few Western college or university presidents who misrepresent us in this as in other matters. But most of us are progressive (if not insurgent) in our sympathies and tendencies. The great majority of us are on the side of the people against the "interests" in this war, though we are divided in our choice of leaders. In order to prevent a possible misunderstanding, I should perhaps indicate my personal preference for La Follette or Woodrow Wilson, but I am willing to accept Bryan, Roosevelt, or any other genuine champion of popular rights against a conservative or reactionary nominee. My only fear is that in action Roosevelt may prove himself insufficiently radical or too ready to compromise.

TEDDINESS AND TEDDIDITY.

To the Editor of The Nation:

Sir: In looking over "Tono-Bungay" last evening, I happened to find a few most remarkable words. Their applicability to one of our "national figures" is so astonishing that—well! I will content myself with quoting them:

> I thought of my uncle as Teddy directly I saw him; there was something in his personal appearance that in the light of that memory phrased itself at once as Teddiness—a certain Teddidity. To describe it in any other terms is more difficult. It is nimbleness without grace, and alertness without intelligence.

THE HARVARD EXCHANGE PROFESSORSHIP.

To the Editor of The Nation:

Sir: It seems worth while to call attention to the working out of the Harvard exchange professorship plan, which has been put into effect for the first time this year. It will be recalled that under this plan Harvard sends out a professor who spends a month at each of four Western colleges—Colorado College, Grinnell, Beloit, and Knox. Each of the Western colleges sends a member of its faculty to Harvard for a semester; these representatives devote about a third of their time to teaching, and are free to use the rest for study and research.

Judging by the experience of Colorado College, the plan has been very successful this year. Prof. A. B. Hart, the first exchange professor from Harvard, has just completed his lectures here. During his stay he has assumed the regular duties of a member of the faculty. He has taken charge of the course in American history, and in connection with the political science course has given a series of lectures on American statesmen. Besides these courses he has delivered a number of illustrated lectures on Japan, China, India, and the Philippines. All the lectures have been open to the public, as well as to the students, and have been largely attended.

One result of the lectures has been to stimulate interest in American history and politics among the students. In various respects Professor Hart has presented to them a new and interesting point of view. In this way the exchange arrangement seems likely to be of great value to the Western colleges. Next year Harvard will be represented in the West by Prof. George Herbert Palmer.

A BACH FESTIVAL.

To the Editor of The Nation:

Sir: The Bach festival, held in the old Moravian town of Bethlehem, Pa., on Friday, May 31, and Saturday, June 1, under the leadership of Dr. J. Fred. Wolle, was a musical event of first-rate importance.

With a chorus of more than two hundred voices, forty members of the Philadelphia Orchestra, and Mrs. Mary Hissen-DeMoss, soprano; Mrs. Gertrude Stein-Bailey, contralto; Nicholas Douty, tenor, and Frank Croxton, bass, as soloists, Dr. Wolle gave on Friday afternoon the cantatas "It is Enough" and "Christian Stand with Sword in Hand"; and on Friday evening the cantatas "Soul array Thyself with Gladness" and "Strike, oh! Strike, Long-looked-for Hour." These cantatas, so far as I know, have never been sung elsewhere in the United States.

On Saturday afternoon, the Mass in B minor was sung in two parts, with an intermission of one hour and a half.

Although the festival was almost entirely unheralded, there was a very large attendance of musicians and music lovers from all over the United States, and even some foreigners travelling in this country. The festival was held in the beautiful vine-covered chapel of Lehigh University, with a seating capacity of 1,200. The fine campus and extensive lawns of University Park made a fit setting for the festival, and the weather was perfect. Each session was announced by the Moravian Church trombonists, from the belfry in the tall spire of the chapel, by the playing of three chorales. The work of the orchestra, chorus, and soloists, under Dr. Wolle's direction, was a revelation, even to the most careful students of Bach music.

This festival was the seventh held in Bethlehem since 1900, and great satisfaction was expressed by all visitors that there would be another festival next season.

AUTHORSHIP OF "THE LIE."

To the Editor of The Nation:

Sir: In your issue of May 23, Mr. Theron Wilber Haight revives a discussion threshed out long since in the columns of *Notes and Queries*. He advances the curious theory that the familiar poem of thirteen stanzas beginning "Go, Soul, the body's guest," commonly entitled "The Lie," was put together from some quatrains of Sylvester by Bishop Percy, and that it first

appears in his "Reliques," 1765. When Percy attributed the poem to Raleigh, Mr. Haight believes he deliberately imposed on his readers.

It is clear that Mr. Haight has not examined the evidence in the case, for he makes no allusion to J. Hannah's "The Poems of Sir Walter Raleigh, collected and authenticated, with those of Sir Henry Wotton and other Courtly Poets," Aldine edition. Hannah's conclusions in regard to the poems that may be attributed to Raleigh, and especially in regard to "The Lie," are generally accepted. A. H. Bullen, surely an acknowledged authority on Elizabethan verse, declared that "The Lie" "may be assigned without hesitation to Sir Walter Raleigh" (see his reprint of "Davison's Poetical Rhapsody," London, 1890, Vol. I, p. ixvi), while T. N. Brushfield in his careful "Bibliography of Sir Walter Ralegh, Knt.," second edition, Exeter, 1908, relies on Hannah's evidence, so far as Raleigh's verse is concerned.

It is hard to understand Mr. Haight's assertion that there is no authentic record of the existence "of that particular structure of verse generally called 'The Lie,'" until a hundred and fifty years after Sylvester's death in 1618. He is again alluding to the appearance of "The Lie" in Percy's "Reliques." Percy, in a note prefixed to the poem, states that it is found "In a very scarce miscellany entitled 'Davison's Poems, or a poeticall Rhapsodie divided into sixe books.'" Mr. Bullen has shown that it appeared in the second edition of the "Rhapsody," 1608; the only known copy of the first edition, 1602, is defective. "The Lie" is included in several MSS. Among others cited by Hannah is MS. Harleian 6910. This MS., all in the same hand, has on fol. 73 the date 1596, and it is generally presumed that "The Lie," which appears on fol. 141 verso, was written down not much later. No earlier version has yet been discovered.

In the Appendix A of his "Poems of Sir Walter Raleigh," Hannah prints from Chetham MS. 8012, an answer to "The Lie." The second line of it reads "Make answer that rude Rawly no stomach can digest." I have noticed this same poem in MS. Rawl. Poet. 172, where it is entitled "An aunswere to the lie by Lo: of Essex." Here the second line reads "Make aunswere that soe rawe a lie noe stomache can digest." In both lines, the pun is sufficiently obvious.

THE CONFEDERATE SEAL.

TO THE EDITOR OF THE NATION:

SIR: There is no mystery about the great seal of the Confederate States lately found in the safe of Admiral Selfridge and now to be properly housed at Richmond. Col. John T. Pickett showed it to me in the summer of 1872, and subsequently had many facsimiles of the obverse of it made and liberally distributed among friends and acquaintances at Washington, to accompany a pamphlet giving its history.

The seal never went into service, having got through the blockade too late to be put to use. That is a pity, for the seal is, or was, beautiful in design and execution. I can well believe what Col. Pickett told me when he showed it to me—that Messrs. Wyon, the famous seal makers, pronounced it the handsomest piece of work of the kind that, up to that time—1864—they had ever produced. CHARLES F. MACAULAY'S WORDS.

TO THE EDITOR OF THE NATION:

SIR: The sin of plagiarism has occasionally been so effectively exposed in your columns that it is sad to find an example of it in your issue of May 16. It may best be exhibited by the usual deadly parallel:

LITERARY NOTE IN THE "NATION."	MACAULAY'S ESSAY ON BUNYAN.
It is interesting to note that all the early editions [of "The Pilgrim's Progress"] were evidently meant only for the cottage and the servants' hall. The paper, the printing, the plates were all of the meanest description. It is perhaps the only instance in which the educated minority has come over to the opinion of the common people.	It is a significant circumstance that, till a recent period, all the numerous editions of "The Pilgrim's Progress" were evidently meant for the cottage and the servants' hall. The paper, the printing, the plates were all of the meanest description. . . . "The Pilgrim's Progress" is perhaps the only book about which, after the lapse of a hundred years, the educated minority has come over to the opinion of the common people.

It is to be suspected that the literary editor set out to draw upon nothing more classic than the ready-made "note" issued by the Tract Society, whose new edition of Bunyan's work was the matter immediately in hand. If so, we may derive edification from learning how even a Tract Society may fall from grace, and further from discovering, as some have done heretofore, that one of the dangers of omitting quotation marks is that it may be a plagiarist that we plagiarize. A.

EARLY EGYPTIAN RELIGION.

Osiris and the Egyptian Resurrection. By E. A. Wallis Budge, M.A., Litt.D., etc., Keeper of the Egyptian and Assyrian Antiquities in the British Museum. G. P. Putnam's Sons. 2 volumes. $10.50 net.

The recent publication of the Vedas of Egypt, the Pyramid Texts, the oldest body of literature surviving from the ancient world, in a careful edition of the Hieroglyphic text by Sethe of Göttingen, has made it possible to undertake researches in the analysis of early Egyptian religion, fundamental in their importance not only for the understanding of Egyptian civilization, but also for the study of the history of religion in general. Nowhere have we an uninterrupted, unarrested development in religion of such length as that which we may trace in Egypt for above three thousand years before Christ. It furnishes an imposing vista in human thought, in which we may discern the successive domination of one influence after another as nature, society, and the inner life of man contribute force after force to fashion and deepen religion.

In the beginning we discern nature contributing the two leading gods: Re the Sun, and Osiris the Nile, or the principle of life which fructified soil and vegetation alike. These two faiths, the Solar and the Osirian, early felt the influence of the Egyptian state and of social forces which humanized the two gods. They pass from the domain of nature to the sovereignty of human affairs, and with paternal solicitude guard the fortunes of men. Of the two the supremacy of the Sun-god Re, in the monuments at least, is quite clearly the older, being early identified with the fortunes of the state, till the Solar faith became indeed the state religion. Although he granted the great of the earth a celestial hereafter, Re remained a god of the living. The belief in the ever-dying, ever-rising Osiris was a popular faith which rapidly spread among the common people, and in its rise, later disclosed than that of the Sun-god, we discern the struggle of a popular with a state religion, the earliest such conflict known in the world of religion. A study of the Pyramid Texts reveals the emergence of the moral intuitions as well as the Osirianization of these ancient documents as a steady process marking the progress of the Osirian faith in its conquest of court and Pharaoh. The supremacy of the Sun-god was not shaken; Osiris remained a god of the dead, and the two faiths coalesced in a composite and confused fabric, of which it is now impossible to untangle all the complicated threads. In the end when the Egyptian state went down, Osiris triumphed, and in the Roman age he victoriously girdled the Mediterranean to make conquest of the northern peoples and even to enter the palace of the Cæsars. Monuments such as the Egyptian obelisks at Rome and the temple of Isis at Pompeii are but the scanty wreckage left by the tide of Oriental and Egyptian religion which before the beginning of the Christian era had swept across the Roman Empire. They are the last survivals from the ancient struggle between the Sun-god and Osiris, which began more than five thousand years ago under the shadow of the Gizeh pyramids.

With this large and complicated problem of the place of Osiris in Egyptian religion, Dr. Budge endeavors to grapple in the two bulky volumes under discussion. He makes the Osirian faith the original and at all times the dominant

religion of Egypt, and identifies it with elements still surviving in the inner African religions of to-day. We find such convincing evidence for this far-reaching conclusion as the affirmation that the Egyptian islands of the blessed in the celestial waters are the islands in Victoria Nyanza, although there is no indication anywhere that the Egyptians ever heard of this lake, or even that the Egyptian celestial islands mentioned are Osirian. Three random words for "people" in ancient Egyptian speech are gravely averred to be identical with three kinds of malignant spirits in interior Africa. As a matter of fact, of all the great gods in the Egyptian pantheon, Osiris is the only one who exhibits evidences of Asiatic connection, a fact which has recently been emphasized by Reisner in his Ingersoll lecture at Harvard, though much more evidence can be adduced than Reisner brings forward.

The Sun-god, on the other hand, according to Budge, is a late intrusion introduced into Egypt from abroad in the Fifth Dynasty. In reading such statements the student of the monuments rubs his eyes and reads again. Is it possible that the figure of the Sun-god as a Falcon, depicted on all the leading monuments of the First Dynasty, and even on pre-dynastic monuments is a phantom which has deluded us all? Are we all laboring under a delusion in accepting the names of Khafre and Menkure, the builders of the Fourth-Dynasty pyramids at Gizeh, as names which are compounded with that of Re, the Sun-god? And yet all this was before the Fifth Dynasty!

By such methods as these, then, the author ignores the existence of Re, the Sun-god, on the one hand, although he was the greatest god of Egypt throughout her history, and, on the other, involves Osiris in a methodless hodge-podge of inner African superstitions shuffled together at random, without discernment, analysis, or interpretation. Doubtless, some things from the life of the black races of Africa crept into Egypt in the course of ages, but it will require at least some semblance of method to demonstrate what these importations were. The work displays no ability of its author either in the discernment, the collection, or the arrangement of material. The most obvious and tangible facts are either overlooked or misunderstood. We are told that the stone temple emerged in the Sixth Dynasty, or possibly earlier, in face of the fact that Quibell found remains of a stone temple of the Second Dynasty at Hierakonpolis and ruins of the imposing Fifty Dynasty temples to the Sun-god have been excavated by the Germans at Abusir. The author solemnly assures us of the existence of ancestor-worship (Vol. I, p. 290) in this land where it never arose. We hear more than once of Egyptian *tribes*, although there never were any in historic times, and the "Book of the Dead" is identified with the Pyramid Texts!

When by some happy chance the author makes an observation which bears some resemblance to the facts, he has no difficulty in forgetting it at once. We are told regarding Osiris: "About his burial-place there is no doubt, for all tradition, both Egyptian and Greek, states that his grave was at Abydos" (Vol. I, p. 67). Having this universally acknowledged fact in hand, we are brought up on page 210 of the same volume, by the statement: "Now, the tomb of Osiris, *par excellence*, was at Busiris." In the second volume, however, we are again informed that it was acknowledged to be at Abydos in the Twelfth Dynasty (p. 9), while a little further on (p. 83) we discover that this fact had become certain in the Eighteenth Dynasty.

This happy facility with facts adduced by himself is familiar to all Orientalists who have worked with Budge's books, and any one who is not acquainted with the phenomena in the case will find an instructive list in the review of Budge's "History of Egypt" in the *American Historical Review*. One who meets this situation for the first time in the work of a man of high *official* position in the Oriental field is not a little startled, and in a recent review of another of Budge's books by George Foucart, the hardened reader of Budge will note with some amusement the pained surprise with which Foucart remarks, "Non seulement la démonstration ne sera pas faite, mais voici qu'il semble que M. B[udge] soit en contradiction la plus étonnante avec lui-même." Foucart is unable to understand how a scholar can "oublier les faits qu'il a cités lui-même en tant que documents, etc." A glance at these two volumes on Osiris, or a little use of Budge's "History" will sufficiently familiarize M. Foucart with the invariable method by which our author has produced such a formidable line of volumes as now burden the shelves of our Oriental libraries.

It is not to be expected that a man who does not know what he has himself said ten pages earlier can marshal his data and disclose in them the course of a long cultural development—a process demanding the complete mastery of a great mass of materials and a command of the whole field which will enable him to trace the Osirianizing of Egyptian religion, and the expansion of the Solar faith till his reader discerns it as the orderly unfolding of a deep and ever-expanding vista. When a modern student of religion begins his discussion with the assumption of primitive monotheism, it is quite possible for him to state as Budge does of Egyptian religion, that "all its fundamentals remained unchanged through the Dynastic Period" (Vol. I, p. xiii).

Travelers on the Nile, and students of symbolism in art will be interested in our author's interpretation of the familiar cross, known to all, as the symbol of life, and commonly designated the *crux ansata* ("cross with handles"). The actual object depicted in this mysterious Egyptian symbol, has long been uncertain. Dr. Budge identifies it at last as the umbilical cord of Horus with the placenta attached. The only objection to this highly ingenious interpretation is that it is wrong, as any tyro could demonstrate in a moment. Moreover, a little more familiarity with the current literature of the science would have furnished Dr. Budge with the fact that the famous symbol in question has recently been shown to be so commonplace a thing as a sandal-latchet, the name of which happens to possess in Egyptian the same consonants as the word "life."

This is of a piece with the author's use of Egyptian throughout. The oldest city of Osiris, called by the Greeks Busiris, appears in these pages in its Egyptian form sometimes as *Ṭeṭ*, again as *Ṭeṭu*, *Ṭetet*, and *Ṭattu!* We have long passages of the Pyramid Texts selected at random, inserted in English translation in these volumes, and we are informed by the author that they appear here in English for the first time. A comparison with the French version of Maspero at critical points discloses the basis of these first English versions. In a passsage referring to "evening kettles," which Maspera has rendered "chaudrons brûlants," misunderstanding the word "evening" as "brûlants," Budge renders "fiery caldrons." Such deadly parallels between Budge's renderings of these intensely difficult texts, and the inevitable misunderstandings in the French version could be multiplied indefinitely. Moreover, the new text of Sethe was available in sufficient time for the author to have employed it in place of Maspero's now obsolete edition, or at least to have collated his renderings with Sethe's exhaustive text.

Even among Budge's books it is impossible to find another such muddle of ill-arranged misinformation as we find in these two volumes. It has seemed the more necessary to set forth the truth regarding the work, in view of the fact that a number of widely read popular periodicals have inserted the conventional notice of it, in which the uninformed hack reviewer has highly commended it as a notable contribution to learning.

Views and Vagabonds. By R. Macaulay. New York: Henry Holt & Co.

The Squirrel-Cage. By Dorothy Canfield. New York: Henry Holt & Co.

Manalive. By Gilbert K. Chesterton. New York: John Lane Co.

The fiction of the eccentric or irresponsible hero grows steadily in volume. The day of the plain man is not over, we decline to believe it, but he has to take second place in a considerable proportion of our current novels. The artist-idol is largely responsible for this. With increasing frequency the novel-reader is invited to the spectacle of the artistic temperament in action. It must be true that there is a public which is positively interested in the writing man, and the painting man, and the fiddling man. Chiefly a feminine public, one suspects, in America at least; for if there is any member of the community who is looked down upon by the robust American male it is the artist. He has no office hours, he is not a Mason, nobody knows how he gets along: why doesn't he go to work? The ladies are more tolerant, since the grasshopper has a certain fanciful charm for the spouse of the ant. But they feel that he ought to be apologized for, made allowances for in various ways; and the result is that relatively new and exceptionally flourishing species of fiction which occupies itself with assuring the world that the grasshopper is really a most useful creature. The simple and obviously true assertion that the artist, the real artist, is not a grasshopper at all, would knock the bottom out of this type of literature, if the ladies, and the ladies' novelists could be brought to believe it. But, of course, they could not. There are certain conventions of the sort which fiction could hardly do without. If the artist is a vagabond, the nobleman is a brute, the actor a libertine, the statesman a liar. All murderers, Mark Twain discovered, are left-handed—as it may be said, roughly, that all heroines worthy of the name have violet eyes.

The "Joyous Wayfarer" is a young Englishman named Massingdale. His father is a captain in the navy, not a stupid man, nor insensible to art, but quite unwilling that his son shall become an artist. The son cares for nothing else, but with the amenableness of young England to the hand that holds the purse-strings, allows himself to be steered towards the bar. In due time he becomes a licensed practitioner of the law, and the betrothed of a nice young English girl. But it is only necessary for her to throw him over to lead him to abandon all his respectable prospects and set off for Paris to study painting in earnest. Of course, he is to succeed in the end. But the road to success in the arts is notoriously as rough as the path of true love, and our wayfarer has his stiff adventures. He has, to be sure, the encouragement of a great Parisian teacher and of a group of Bohemians to which the master belongs. But he has no money to go on with, and is reduced to various shifts to keep body and soul together. There is a French singer and demi-mondaine with whom he has had a casual relation before his engagement, and her hopeless and picturesque passion for him plays its part in the story. But he cannot forget his English girl, and she is restored to him in proper course, with the aid of a somewhat sensational episode which gives the hero a chance to bear himself with credit in the rôle of rescuer. So much for the plot: the real charm of the book for the reader must depend on whether Massingdale's "lines" ring true for him or not. For Massingdale is, above all, a talker, a person of whimsy and flamboyant humor, and it is touch and go whether one is amused or bored by this type of hero. Our impression is that the young man is a bit of a popinjay. He is never unconscious of his professional make-up; and one eye, at least, is always on the gallery.

In "The Unknown Woman" a different type of artist is presented. Massingdale is unconventional, not irresponsible—an almost tiresomely worthy young man beneath his audacities of manner and speech. Maurice Maury is a man of the world, with a footing in society. He is in no danger of falling into a casual Bohemianism, but is untrustworthy at bottom. After living many years in Italy, he returned to New York confessedly for the purpose of taking toll of his fellow-countrymen. His wife and he are both fond of luxurious living, and there is a young daughter, almost ripe for society, and in need of all sorts of expensive "advantages." So Maury (who, of course, has genius) devotes himself to making money. At some expense—slight at first—of his own integrity, he cultivates the favor of a rich clientèle, deliberately produces inferior work of superior marketability, and for a time reaps his reward. But his complaisance is presently carried too far, and costs him his reputation and his clients. This is all incidental to the main action, which concerns his relation to "the unknown woman," who chances to be his wife. She is credited with being a creature of fire and mystery; beautiful, of course, and virtuous according to her own lights. She has a diabolical temper and a not angelic pride; but, then, she is half-Italian. As a young girl she has had an experience which in old-fashioned fiction—and life—would have labelled her "ruined," and so disposed of her once for all. But this is aggressively not old-fashioned fiction. She not only marries Maury without telling him of that early experience, but she does not even deign to be ashamed of it when he finds it out. It all happened before she knew him—therefore it has nothing to do with him. And, what is more, she looks with complacency at the prospect of her daughter's marriage to her former "betrayer"—as the old vocabulary had it. And what is most—but the matter needn't be gone into further: it is all perfectly emancipated and rather nasty. In the end the unknown woman and the spineless artist discover that they love only each other—a sadly old-fashioned ending.

There is another type of irresponsible hero who is just now popular. Mr. Locke's "Septimus" and Mr. Hewlett's "Senhouse" represent him in his more sophisticated form—the dilettante in life who finds it more amusing to be eccentric than to be elegant. In "The Broad Highway," Jeffery Farnol amalgamated him, to piquant effect, with the ancient swashbuckling hero of romance. In his pure and simple form, he is the young gentleman with theories, who chooses to reform himself or the world by turning blacksmith or carpenter.

The young gentleman of "Views and Vagabonds" turns first blacksmith and then cabinet-maker, equally to his own satisfaction and the contempt of his fellow-man. He is only a Benjamin Bunter to begin with, but his supposed father is an M.P., and his mother a lady of quality, and he has been reared for a pillar of the superior classes. He comes out of the university an advanced Socialist, however; takes to blacksmithing, and marries a daughter of the people on principle. In the outcome he is no happier than he deserves to be. The daughter of the people is as good as he, but has the hopeless limitations of the peasant; and not even the discovery that he is really of similar stock—a discovery that fills him with exultation—serves to remove the barrier between them. In short, all the enthusiast's dreams amount to in reality is a dingy existence among people to the level of whose taste in art and life the luckless enthusiast is forced in self-defence to descend. He lives in a machine-made cottage termed by his wife "Daisyville," drinks beer with his drunken father and father-in-law, and looks forward to seeing the Coronation from a local 'bus. Withal, he is not unhappy: the scene closes in a mild half-light of acceptation—upon "a world of foregrounds" in which "things are more important than the ideas behind them, phenomena than noumena. One handles and touches and tastes each thing as it comes along; for in the end it is the artist's world, not

the philosopher's." Benjamin is not the only unconventional figure in the book. There is a delightful pair of grown-up children, the Crevequers, whose vagaries are a fair offset to the deliberate follies of the carpenter-blacksmith. The moral of the story is altogether in their favor.

Mr. Daniel Rankin of Endbury also abandons a respectable career for carpentering, but from a very different motive. He has no set creed in regard to the duty of laboring with one's hands, nor has he any sort of social theory to prove. He simply takes to joiner-work because he "has to begin somehow to earn his living honestly without being too tied up to folks." He has had to escape from "the squirrel-cage" of life as accepted by Endbury's leading people. The insurance business has promised him "success" in the Endbury sense, but he cannot stomach the accepted methods, and he sees no better prospect in other sorts of business. Indeed, the business world, like the social world, seems to him a maze of insincerities and compromises—a squirrel-cage from which, turn and twist as one may, there is no escape for the half-hearted. So he withdraws, much to the disgust of polite Endbury. But Rankin is not the chief figure in this story. This is young Lydia Emery, born in the squirrel-cage, and held there firmly by her adoring family. Already attracted by Rankin, and sharing his natural instinct for escape from vulgarity and insincerity, she is propelled into marriage with a man whose motto is Success. The portraits of this man and of Lydia's family, slaves to their bank accounts, their servants, the opinions of their neighbors, are drawn with force and humor. In the end Lydia is to make her escape; but Endbury is unaffected by it: life in the squirrel-cage goes on as actively and emptily as ever. We recall no recent interpretation of American life which has possessed more of dignity and less of shrillness than this—uncompromising as it is.

If the story has a moral, it is, as Mr. Chesterton would put it, that only the responsible are irresponsible. And this is the obvious moral of "Manalive." Manalive is an extraordinary being (from the conventional point of view), who is really too sane to do anything sensible. He abandons his university and the world, not to enter the ranks of the serious-minded, but to make himself "a kind of fanatic of the joy of life." It will at once be perceived that when Mr. Chesterton's hero speaks of the joy of life, he does not mean what the words mean. Far from it. "Though not an optimist, in that absurd sense of maintaining that life is all beer and skittles, he did seem really to maintain that beer and skittles are a most serious part of it." He enters the scene with a leap over a high garden wall, preceded by a hat, a green umbrella, and a Gladstone bag, and from that moment events are lively, if not particularly intelligible even with Mr. Chesterton's gloss. It is, of course, like this writer's other so-called novels, a tract, an essay, an extravaganza—a bit of lively exercise on the part of that incorrigibly teetering mind.

THE FAR NORTH.

The Arctic Prairies: A Canoe-Journey of 2,000 Miles in Search of the Caribou; being the Account of a Voyage to the Region North of Aylmer Lake. By Ernest Thompson Seton. New York: Charles Scribner's Sons. $2.50 net.

Hunters and Hunting in the Arctic. By the Duke of Orleans. Translated by H. Grahame Richards. London: David Nutt. 7s. 6d. net.

As the traditional woman with her postscript, so Mr. Seton has reserved for his appendices the most important part of his book, which is a discussion of the possibility of pushing our zone of healthful and profitable habitation much farther north than has so far been considered feasible. The best grain fields of America lie in what was at one time held to be waste land because of its northern location, and the author is confident that there are immense possibilities still farther in the same direction. Man, like the lower animals, he holds, will find his best development in the coldest part of his range in which he can find a sufficient quantity of food. The giant races of original America existed on the buffalo plains of the far Northwest and in Patagonia, just as the giant race of Africa is the Zulu of the Cape. It is the excessive heat of the tropics or the under-feeding of the polar regions that produces the dwarf. As to the region which has already been won, he quotes Henry Ward Beecher's words of about thirty years ago: "You note the class of men going in there—that means brains; you see the endless grain-lands—they mean wealth; you mark those long winter evenings—these mean time to think. There is a rare combination: brains, wealth, and time to think. I tell you there are great things coming out of the Canadian Northwest. Keep your eye on Winnipeg." That there are still farther to the north immense expanses with soil conditions suitable to grain, he has satisfied himself with his own eyes. That killing summer frosts will retreat still further before the axe and plough, as they are alleged to have retreated from parts already gained, is his firm conviction. Where the balsam poplar grows the potato will grow; where the white poplar is found barley is possible, and the jack-pine marks the possibility of wheat. But these terminal lines go far beyond the Northwest limit of the Peace River region, and hence mark that entire region as an easy conquest. The climate of this region he pronounces one of the most salubrious in the world, with no special diseases and no annoying pests but mosquitoes and bull-dog flies, with which experience will teach the settler how to cope, just as it has taught the people of Minnesota and Manitoba. For milk and meat in parts too cold for our ordinary breeds of cattle he is an enthusiastic believer in the possibilities of the yak, or woolly ox, which has proved its adaptability by coming down from its frigid native haunts in Tibet, to live and breed successfully in such sea-level regions as Shanghai, Paris, Antwerp, and the London Zoölogical Gardens. From the Atlantic to the Pacific, some four thousand miles, extends a belt of land with an average width of five hundred miles, fifty States the size of Ohio, let us say, suited admirably to grazing in every respect but the severity of its winters; and to the yak this obstacle would be simply no obstacle at all, but rather the one thing necessary to make it feel really at home! The author is not sanguine enough to believe that people from warm climates are going to flock into this belt at once, when these possibilities are demonstrated. His idea is that Canada should open the way, make access easy by building railways where necessary, and invite immigration from Northern Europe—men and women who already know how to cope with the difficulties of a cold climate and who would be only too glad of the opportunities offered by rich lands at merely nominal prices. Through the generosity of the Duke of Bedford a herd of yaks has been presented to the Canadian Government for breeding purposes, with a view to testing their capacity thus to extend the bounds of a comfortable and prosperous civilization into the north. We have said so much of the immigrant and the yak which the author would introduce that we can only add, concerning the caribou which he went to find, his optimistic conclusion that its numbers still run into the tens of millions, that slaughter of it now is far less than in the past, and that there is no danger whatever of its extinction.

The volume of the Duke of Orleans is made up of descriptive extracts from the diary of a voyage to the Arctic seas in 1909, with various memoranda from voyages made in 1904, 1905, and 1907. The author is a confirmed lover of the deep, and regrets that France has not made a better showing in maritime enterprise:

> If a nation wishes to retain its vigor and to endure, it must nourish a liking for things maritime in its children, and induce them to "go down to the sea in ships." . . . It is at sea that I have experienced the most powerful and poignant emotions of my life, where I have always been most keenly conscious of the presence and pro-

tection of God; and it is when I have been face to face with the dangers of the sea that I have seen social distinctions vanish, he alone commanding who had proved himself worthy to command.

The northern seas are attractive to him just because of the dangers of the ice and the fogs and gales which constantly threaten. "Those frozen seas have taught me to love even while doubting them; to them I have given part of a wandering exile's life, part of my innermost self." These extracts from the introductory chapter foreshadow a spirited and attractive book, tinctured in every paragraph with the amiable personality of the author, and the reader is not disappointed. Sometimes he becomes quite amusing, as when his elation at the supposed discovery of wild musk-oxen on Walrus Island gives way to disgust upon finding that it is only the domesticated herd of some intrepid outrunner of the civilization which he supposed he had left far behind. "Farewell, then, to my fond illusions; farewell also to my hopes of discovering bears, walruses, and wild musk-oxen! The latter had been domesticated; the former must all have been destroyed or have disappeared inland before the warfare waged upon them by man. The devil take these salaried slaughters—and may Saint Hubert pardon them!" In type, paper, and illustrations (we can hardly include the binding) the book is unusually satisfactory to the eye.

Socialism as It Is: A Survey of the Worldwide Revolutionary Movement. By William English Walling. New York: The Macmillan Co. $2 net.

The vision of Marx and Engels saw the workers of the world, ever growing in numbers, in misery, and in desperation, ruthlessly ruled and exploited by a capitalist class whose numbers were ever shrinking but whose wealth was ever increasing. Finally, driven by the irresistible force of starvation, the multitudinous proletariat would rise in revolt, seize the government in their own interest, expropriate the capitalist class, and establish the new classless Coöperative Commonwealth as the final enduring "synthesis" of the long-drawn (Hegelian) dialectic process of social evolution. Such was the original, orthodox Socialistic dream-picture of the "catastrophic" school. Time and the inexorable force of facts long ago destroyed the baseless fabric; no one any longer believes in the "catastrophe" theory. Now comes William English Walling, one of the "intellectuals" of the American Socialist party, with a new picture of things as they are and a new prophecy of things that are to be—both rather different from the picture and the prophecy of Marx.

In the first place, instead of a small and dwindling group of immensely rich and all-powerful capitalists, Mr. Walling sees a large class of capitalists, great and small, constituting a very considerable percentage of the total population. In the second place, instead of a "middle class" virtually non-existent because it has been almost entirely absorbed by the proletariat, Mr. Walling finds a large class of people "who either on account of their ownership of some slight property or because they receive salaries or fees sufficiently large, must be placed in the middle class"; and this class he finds to be "increasing numerically more rapidly than any other." In the third place, instead of an enormous mass of oppressed, half-starved destitute workingmen constituting the proletariat, Mr. Walling finds a working class which has in fifty years materially bettered its economic position, and is now incited to the class-war on capitalism, not by hunger for food, but by hunger for *equality*—economic, political, and social, in the wide sense of the words. "*No matter how fast wages increase*," says Mr. Walling, in his own italics, "*if profits increase faster, we are journeying not towards social democracy, but towards a caste society.*" The only thing that will satisfy the true revolutionary Socialist of to-day is the establishment of social democracy with the working class in absolute control of it; no amount of material betterment of the working class is of any consequence to the Socialist unless it is created by means which bring nearer the desired consummation.

Now the grouping of opposing forces in the class war, as Mr. Walling sees it, is very interesting. He finds that we are rapidly passing into "State Socialism," or "Capitalist Collectivism," as a result of the "popular unrest" and uprising against the large corporations. This is what he calls the "New Capitalism," and he expects it to result in excellent and far-reaching reforms which will aid the small capitalist against the large capitalist (and the consumer against both), and result in many and important material benefits to the wageworker, without, however, in the slightest degree improving his relative position as regards the capitalist or bringing him one inch nearer to control of the political power. This condition he expects to endure for some considerable time, while the capitalist class and the working, or propertyless, class contend for the support of the great middle class already mentioned, for these "middle-class millions" are the "bone of contention" between Socialism and capitalism.

Read in connection with Weyl's "New Democracy" (recently reviewed in these columns), Mr. Walling's account of the new Socialism (as we may call it) and of the currents of social evolution as observable to-day, the world over, constitutes a particularly interesting study. Both men are shrewd observers, both impress the reader with a sense of fairness and frankness, and in the pictures drawn by each there is much that is alike. Yet in their views of the ultimate future they are poles apart. The student of Socialism will do well to note in reading Mr. Walling's book how notably Socialism is changing front to adjust itself to the new and greatly improved conditions of the working class, and the similarly changing front of capitalism. Somehow the necessity for the "final synthesis" of the classless commonwealth does not seem so evident in the new alignment as it used to be made to seem under the old catastrophic presentment.

The Constitution and Finance of English, Scottish, and Irish Joint-Stock Companies to 1720. By William Robert Scott, M.A., D.Phil., Litt.D., Lecturer in Political Economy in the University of St. Andrews. Vol. II, Companies for Foreign Trade, Colonization, Fishing, and Mining; Vol III, Water Supply, Postal, Street Lighting, Manufacturing, Banking, Finance, and Insurance Companies, also statements relating to the Crown Finances. Cambridge University Press; New York: G. P. Putnam's Sons. $5; $6.

In the field of commercial and mercantile history, this work of a scholar with business experience in the past, and now a lecturer in political economy at a leading Scottish university, is one of the most notable productions of recent years. It is remarkable, not only for the thoroughness with which the author has surveyed the field of corporate business activity in the British Isles in the period before 1720, so far as joint-stock companies are concerned, but also for the singularly dispassionate and business-like manner in which he has approached the many difficult problems that have arisen. The material for the history of politics and diplomacy is easy of access, as compared with that out of which the history of business endeavor must be wrought, and the qualifications of financial expert and trained historian are all too rarely found in combination. That Dr. Scott possesses both the patience to find and the skill to interpret the meagre and scattered records is indubitable testimony to his sagacity and understanding.

Dr. Scott has dealt with the internal organization and financial administration of some two hundred companies, ranging from such great corporations as the East India Company, the Royal African Company, and the South Sea Company, to the "Proprietors of the Sucking-Worm Engine" and the "Society for Improving Native Manufactures so as to Keep Out the Wet." To some of

these he has been able to devote from fifty to a hundred and more pages each, and others he dismisses with only a dozen lines or half a page on account of the meagreness of the information obtainable.

From the point of view of economic and financial history, Dr. Scott has entered a field of exceedingly fruitful inquiry, which, as he says in his preface, has been strangely neglected. Though much has been written on the history of the early British companies, the subject has hitherto been treated from the standpoint of ulterior results rather than in relation to the system itself, which made these results possible. Though the first volume, which will record the general development of the joint-stock system and bring it into its proper relation with the chief social, political, industrial, and commercial tendencies which influenced it, is still in press, unexpectedly and unaccountably delayed, and though the author's conclusions regarding the uses of capital after the close of the Middle Ages are, therefore, yet to appear, the volumes before us are exceedingly suggestive, not only to the historian, but also to the searcher for facts and illustrations regarding manners, customs, and ways of living in the British Isles two centuries and more ago.

The first of the volumes thus far issued deals chiefly with the companies that were concerned in foreign trade and colonization, and furnishes a point of view that is both unusual and illuminating. By bringing into line with the companies that were organized for trade only those that were promoted more especially for trade and settlement in America, he is able to show their essential similarity and the unity of the mercantile efforts that lay behind all the commercial activities of that time. Thus the Virginia and Plymouth companies, the company of adventurers that aided the Pilgrims in the Mayflower, the Massachusetts Bay Company, and other lesser organizations, familiar to the student of colonial history, are brought into comparison not only with the companies organized for traffic in Canada, South America, and the West Indies, but also with the other companies whose business was solely for trade in the East—with Russia, the Levant, India, and Africa. From such juxtaposition we see the interacting and co-operating forces, usually lost sight of by writers on early American history, that were effecting the expansion of British commercial interest and were integral factors in the work of settling Virginia and Bermuda, Massachusetts, and old Providence Island. We get a vivid picture of capitalistic energy and ambition in London and elsewhere, undistorted by that bias of hostility or hero-worship which has frequently marred the accounts of older writers. We see the same men concerned with the settlement of America that were interested in the trade with the East, and we can in no inconsiderable measure visualize their movements and determine their motives. Only from such a standpoint can the proper proportions be determined and a means of comparison be obtained, which will present our colonial settlements in their proper light.

One result will be an inevitable recasting of former judgments upon men to whom place has been given in our historical text-books. The most significant of such revisions of opinion concerns certain members of the Virginia Company, Sir Thomas Smythe, the Earl of Warwick, Sir Edwin Sandys, and the Ferrars. Sandys and the Ferrars do not emerge from these pages with unblemished reputations for fair dealing. According to Dr. Scott, they manipulated the records in the interest of their own party, employed methods in the company's elections suggestive of modern machine politics, and were interested to gain financial advantages that would feather their own nests and provide lucrative posts for their own supporters. Warwick and Smythe appear to better advantage. The day has gone by when we can speak of Warwick as the head of the court party, and Smythe showed little of the self-seeking disposition of Sandys, who received as much for one year of service as Smythe did for twelve. Dr. Scott clearly demonstrates that the business of the Virginia Company was not fairly carried on, and that the Sandys party was responsible for much of the mismanagement that threatened the career of the colony and led to the downfall of the company.

To students interested in the every-day life of the period, the third volume is a mine of information. Details can be obtained of the methods of supplying water to London, of conveying letters and parcels, of lighting the streets, of making paper, and of manufacturing silk and linen fabrics. Descriptions are given of the uses of lead, brass, and glass, of the systems of extracting vegetable oils, making soap, and refining sugar, of the manufacture of tapestry, lacquer, leather, and various textiles. Elaborate chapters follow on the Banks of England and Scotland, on fire and marine insurance, and on the crown and national finances, accompanied by statistical tables and a pocket chart of the daily fluctuations of the stocks of the South Sea and East India Companies from May to September, 1720.

We shall look for the publication of the first volume with exceptional interest, but even as it stands the work is of unusual value, deserving hearty recognition.

My Memoirs. By Marguerite Steinheil. Illustrated. New York: Sturgis & Walton Co. $3 net.

Nothing could be more free from tragic anticipation than the guarded girlhood, surrounded by tenderly affectionate parental solicitude, of Marguerite Steinheil-Japy, as she sometimes styles herself in these Memoirs. The daughter of a rich industrial father, and of a beautiful peasant mother, she was born at Beaufort, a village in the Territoire de Belfort, near the Swiss and German borders, on April 16, 1869. Unlike her brothers and sisters who were sent to boarding-schools, she was brought up at home under the eye of her father, a man of great cultivation and of evident charm, who taught her himself to play the violin, the organ, and the piano, and trained her in connoisseurship and deportment. She also learned to paint and to sing, and, on her long rides and rambles with her father, to love nature and to observe it. Altogether, it was a happy, wholesome childhood and youth to which Mme. Steinheil looks back, marred only by the memory of an unhappy love-affair with a young lieutenant to whom she was betrothed, but from whom she was finally separated by her family through counsels of characteristic French prudence.

Despite all these precautions, however, her transition from girlhood to womanhood was abrupt and rather brutal. Her father died when she was nineteen, and a year later, through the influence of her relatives and largely on the strength of their ironic assurance "that happiness was far safer and more lasting with a man of mature years than with the average young man," she made an ill-mated marriage with the painter, Adolphe Steinheil, who was just twice her age. Henceforth a sinister note begins to sound in her life, and the portents of a tragic *dénouement* are not lacking. Separated from her husband shortly after the birth of a daughter—the Marthe who figured so extensively in the reports of the trial—but continuing to live with him on formal terms for the sake of their child, Mme. Steinheil opened her salon in the Impasse Ronsin and entered feverishly into the manifold excitements of Parisian society. Her circle was political and artistic, and among the friends who remained most faithful to her in her ordeal later on, were many men of international note, such as Henner and Bonnat, the painters, and Massenet, the composer, who was in the habit of styling himself "Your devoted, faithful, obedient, respectful, and punctual accompanist." Of these three, as well as of Coppée, Zola, and many others, Mme. Steinheil has amusing and typical anecdotes. It is evident that she played her part as a hostess well, that her position in society was assured, that she

even attained to a measure of leadership in certain circles, and acquired political influence that she was not slow to exert on behalf of her husband, friends, and petitioners.

It was this success that, according to her account, first caused her to be remarked by Félix Faure. The President, who seems scarcely less a "bourgeois monarch" than Louis Philippe, made such use of what he regarded as her political sagacity and psychological acumen, that, in her relation with him, Mme. Steinheil, who makes no attempt to draw a veil over her equivocal "friendships," appears less a mistress in the vulgar sense than a royal favorite. The story of the state documents of which he made her the custodian, and of the stolen necklace which gives a strong flavor of romance and melodrama to this whole episode in her life, heightens the illusion and links her with the great ladies who were likewise great courtesans, of the *ancien régime;* though the story of her accusation, her prison experiences, and her trial, will remind the reader rather of that *cause celèbre* of the seventeenth century in which Mme. Brinvilliers was the central figure. When it is recalled that Mme. Steinheil was acquitted—as an accused may be in France, where an agreement of the jury is not necessary either for acquittal or conviction—by a vote of seven to five in her favor, it is seen how narrowly she escaped, not only the actual fate of the notorious poisoner on the scaffold, but the association of their names forever in a common infamy. That she was actually guilty was, indeed, generally assumed by the popular mind, of which the judicial prejudgment of her case was but an accurate reflection; and in the howling Parisian mobs that demanded her death and showered their insults upon her, so that she was moved secretly and under guard from one prison to another, we seem to hear the very voice of Paris itself, always turbulent and bloodthirsty, which has hurled its imprecations and curses at its victims in all ages.

A kindlier feeling prevailed towards Mme. Steinheil before the end, and this, too, is characteristic of Paris, which, having expended its wrath and desire for vengeance, tends in the end, by a kind of emotional recoil, to take to its heart and make martyrs of those whose lives, a moment before, it was demanding with wolfish ferocity. That this mercurial disequilibrium should be echoed in the public press is not surprising; for the newspapers everywhere to-day are, in most cases, only the more articulate voice of the mob. But though we may thus explain it, we cannot help a shudder of horror, disgust, and disquietude at the part played by the press in the case of Mme. Steinheil. She was shamelessly terrorized and betrayed by certain of its representatives, and one who reads her account of the frightful experiences she passed through can wonder less that she committed so many grave errors of judgment, than that she did not utterly break down under the stress and strain of such hounding.

No one has ever been punished for the crime of the Impasse Ronsin, and the identity of its perpetrators remains as mysterious as ever. Mme. Steinheil is inclined to believe—and the facts of the case seem to sustain her theory—that in part, at least, it had a political motive, and that there were factors involved which made its complete clearing up not altogether desirable for those in high quarters. French politics at that time were a hotbed of intrigue, and enough ugly scandals have come to the surface to make the existence of others, more carefully covered up, quite credible. In this aspect, the *affaire Steinheil* connects itself readily with the *affaire Dreyfus*. Indeed, when Félix Faure died, and persistent rumor had it, for a time, that Mme. Steinheil was in some way implicated in his death, it was as a Dreyfusard or an anti-Dreyfusard agent—there was some conflict of opinion on this point—that she was supposed to be acting. Fortunately, in her own case, if it be true that a deliberate attempt was made to hush up a grave scandal by procuring the conviction of an innocent person, this plan was frustrated, and did not lead to a miscarriage of justice worse, because more irreparable, than in the case of Dreyfus. "I feel the shudder of a judicial error," exclaimed the judge, M. de Valles, at the trial, and Mme. Steinheil was acquitted.

Notes

"Religion and Thought in Ancient Egypt," by James H. Breasted, is announced for early summer by Scribner.

The same house will publish "Types of English Piety," by R. H. Coats.

Sturgis & Walton Company has in press "The Life of Nietzsche," written by his sister, Mrs. Foerster-Nietzsche. The work is in two volumes, and the first volume, entitled "The Young Nietzsche," will appear this month.

Francis McCullagh, the English war correspondent, is bringing out, through Herbert & Daniel, "Italy's War for a Desert," in which Italy appears in a very unfavorable light.

Dell H. Munger's "The Wind Before the Dawn," promised shortly by Doubleday, Page & Co., is a story of life on the prairies.

A series of modern German novels is coming out in small format neatly printed and bound in cloth, under the title of Ullstein Bücher. They are issued in this country by Brentano's, at the low price of twenty-five cents each. Five volumes which have already come to us are "Thomas Kerkhoven," von Korfiz Holm; "Gewitter im Mai," von Ludwig Ganghofer; "Georg Bangs Liebe," von Karl Rosner; "Frau Agna," and "Mutter," von Heinz Tovote.

From the sixtieth annual report of the trustees of the Boston Public Library we learn that the library now contains a million volumes with a circulation for the past year of 1,612,270 volumes for home use. Of these four hundred are sent every day by delivery wagons to branches, schools, engine houses, and institutions. The cost of maintenance was about $400,000, of which the city contributed $355,200, the remainder being the income from trust funds. The importance of the scholarship work of the library is shown by the fact that "nearly 20,000 students are pursuing their studies either within immediate reach or within easy access of the central library building." The value of the special collections is such as to make it the "Mecca of America for these men and women who are pledged to the service of learning." The retirement of worn-out employees and a pension fund for their support in case of need are recommended.

The dreadful conditions which Jane Addams sets forth, with frankness and sympathy, in "A New Conscience and an Ancient Evil" (Macmillan), are, after all, rendered only a little less hideous by the multiplying proofs of deepened public concern at their prevalence. To the well-known facts about the social evil in this country the volume confessedly adds nothing new. What stands out most prominently in Miss Addams's survey is the systematic exploitation of women for immoral purposes, the enormous financial returns to many of the persons involved, the demand for younger and younger victims, and the indifference of important sections of the public to the economic evils which create and foster vice. So long as employers trade, either deliberately or through perverse indifference, on the fundamental economic fact that a woman "has something to sell besides her labor"; so long as otherwise respectable landlords knowingly accept immoral persons as tenants; so long as the law and its administrators treat every woman who falls as though she had thereby become a hardened criminal; and so long as women, by their demand for luxury and their disregard of social responsibility, contribute to make marriage a long-deferred or fleeting relationship, so long, we may be sure, will the "new conscience" in sexual matters have a hard and unremitting fight. Miss Addams's volume is painful reading, but we heartily wish that it might be read and pondered by every man and woman who to-day, in smug complacency, treat with indifference or contempt the great struggle for social purity, or spend in charity the wealth which underpaid labor has made possible for them.

Nothing but citation will do justice to the profundity of Octave Uzanne's observations on "The Modern Parisienne" (Putnam):

> She is a Protean creature. She dresses to attract men. She does her hair herself. The Parisian cook is a middle-aged woman of from thirty-five to forty-five years of age. The *charcutière* is nearly always a fresh and attractive little woman. The *charcutière* is almost always a fat, sleepy brunette. The conduct of dressmakers is not beyond reproach.

In the introduction the Baroness von Hutton mentions some "exquisite little monographs, each a jewel in itself, which

Charles Dickens would have loved." Here is one of them:

The baker's assistant has no special age. She wears that curious sort of expression, often seen in her class, defying research. She is rarely good-looking or attractive. She is nothing in particular. Her figure is concealed in many folds of thick woollen material which itself is covered by her blue wrapper [*sic*]. On her feet are goloshes. Yet she is not heavy or clumsy; on the contrary, she steps softly and lightly.

Somewhat later, referring to books by Jules Simon, Paul Leroy-Beaulieu, and le Comte d'Haussonville, our author thinks these gentlemen "generalize too freely on the subject of the workwomen of Paris." Then through four chapters he "studies" four classes of unfortunate women. At the end of the book he tells us that all of this may be compared to the superficial foam on the sea waves; the true Parisienne lies hidden underneath. In the last sentence but one we learn that "the modest girl, the sober-minded wife, the wise mother, are to be found in Paris in greater numbers than in any other place." By this time we are glad to hear it, for we were thinking that M. Uzanne had confined his investigations to the pages of tenth-rate novels. The quotations illustrate sufficiently the quality of the translation.

Certain "scientific proofs" urged by Sir Almroth Wright against woman's suffrage receive elaborate attention in a monograph on "Feminism" from the pen of May Sinclair (the Women Writers' Suffrage League). On the question of militancy her position is a bit ticklish. She does not wish to defend or condemn it as a general proposal. She insists that "women hate and fear violence, hate and fear to commit it more than they hate and fear to suffer it. They have endured it as they have endured imprisonment, they have endured violent handling and all manner of outrage, over and over again, before they could bring themselves to commit a technical assault upon a window."

Recalling the nursery rule which forbids a girl striking her big brother because big brother cannot hit back, she thinks that in the case of the suffragist "it is the big brother who has violated the pact."

I am not forgetting Mrs. Pankhurst; how, in a "demonstration" in Westminster, she technically struck the policeman who obstructed the perfectly constitutional advance of the suffragists. She did it, if I remember rightly, at his cordial invitation. And the policeman was wiser than Sir Almroth Wright. He understood that this was not violence properly so-called. He said "Mrs. Pankhurst, you did it for a purpose." And he showed himself a most enlightened man.

In all the suffrage agitation she can remember no other "classic act of offensive, as distinguished from defensive, violence committed on the human person," except the assault upon Winston Churchill. "I admit that the 'Truce of God' was broken with regard to Mr. Winston Churchill's face, as he could not hit the lady back again. No doubt the lady considered herself the temporary scourge of God."

Prof. Edward L. Thorndike aims in "Education: A First Book" (Macmillan) to get at the bottom of things educational. The possibility of education lies in the neuromuscular system, our organ for behavior. This is an arrangement for being sensitive to situations, and producing responses which are exactly related, qualitatively and quantitatively, to those situations. This organ includes nerve-cells, or neurones, each one of which acts by receiving a stimulus at one end, conducting it to the other, and there discharging it. Now, each of these neurones is so connected as to receive stimuli from many others and discharge into many others. But these connections are in unstable equilibrium, and so we get the principle that "the physiological basis of education is the modifiability of the synapses between neurones." Incidentally, there are said to be about eleven thousand millions of neurones in the system, which makes the problem somewhat staggering when the author impresses upon us again and again the demand that the production of a given educational result with a child should be made a matter of just as exact and pre-determined scientific procedure as the procuring of some given result in the physical world outside of us, such as the tunnelling of a mountain. "The same situation, acting on the same individual, will produce, always and inevitably, the same response. . . . So the general rule of reason applies to education: *To produce a desired effect, find its cause and put that in action.*"

Now it is true enough that the same kind of lathe, working in the same way on the same kind of block, will produce the same kind of croquet ball always and inevitably, but to delude the young student of pedagogy with the belief that any such degree of sameness in materials and working conditions can be obtained in the field of human education as to make the analogy closely applicable is to lead him hopelessly astray. That education has much to gain from the application to its various problems of the same spirit and method that have characterized great scientific investigators in other fields will be granted by all, but the first condition of real progress must be the recognition of the essential difference between bridging the two sides of the Hudson River and bridging the chasm between the already attained and the attainable in a child's mind. The failure to appreciate that difference runs all through Professor Thorndike's book, in spite of the fact that it contains a mine of helpful suggestion to any intelligent reader. Real scientific progress is not to be promoted by applying identical methods of procedure to materials and conditions that are radically different.

"The Leading Facts of New Mexican History," Vol. I (The Torch Press), by Ralph Emerson Twitchell, gives the impression at first sight of being a work of industrious research, but Prof. Herbert E. Bolton of the University of Texas has made a careful study of the volume for the *American Historical Review*, and has furnished proof, satisfactory to scientific historians, that "the book is . . . purely a compilation, and of the simpler kind, most of the text being either a close paraphrase or a direct copy of two works"; and that this has been done without due acknowledgment of the sources, which are Lowery's "Spanish Settlements within the Present Limits of the United States, 1513-1561," and Bancroft's "Arizona and New Mexico." Besides these two, there has been a similar use of several other works.

"The Technique of English Non-Dramatic Blank Verse" (Chicago: R. R. Donnelley & Sons Co.), by Edward Payson Morton, is an excellent study of blank verse from Surrey to Swinburne. Along with Milton, Landor, Wordsworth, Shelley, Keats, Browning, Tennyson are included minor names from the seventeenth and eighteenth centuries, as representing tendencies of their time. Dramatic verse is excluded, because in the drama the verse-form is not primary. Comparisons with the heroic couplet, with dramatic blank verse, and between individual poets, are made in statistical form, and the tables are intelligently interpreted. Lines, Cæsuras, Feet are the leading chapter headings; a brief chapter of summary and comment follows, another comparing the individual poets closes the little book of 129 pages. The accuracy of the author's count can be tested only by recounting, but the care given to definition and the general air of good sense tend to give one confidence. The subject may not be inspiring to the general reader, yet serious students of verse-form will find the book interesting, even if one dissents occasionally.

Recent British scholarship has done not a little to draw the sting of the ancient charge that the study of the Germanic past is left too exclusively in the hands of its Continental inheritors. In the wake of Kerr and Chadwick comes R. W. Chambers with a handsome volume on what passes currently in the text-books for the very oldest considerable poetic monument in English ("Widsith, A Study in Old English Heroic Legend," Cambridge University Press; Putnam). Against this study no indictment of insularity can be laid; the scholarly labors of America and the Continent have been scrutinized and ordered with exemplary thoroughness, and drawn upon with excellent good sense. Indeed, the author's resolution of the poem into a seventh century "Ealhhild—Eormanric lay" and a still older "catalogue of kings," plus sundry interpolations, discerningly harks back to the methods of Müllenhoff and ten Brink, though his results, partly owing to a judicious appreciation of Heinzel's work, are not theirs. But the reader will be agreeably disappointed if he anticipates nothing more than a closely reasoned essay in the higher, and drier, criticism. So compendious a poem as "Widsith" demands for its proper illustration a goodly portion of all there is to know about primitive Germanic geography, history, and saga, and this the author supplies in a series of substantial essays which form an excellent introduction to the whole subject. The volume also contains a fully annotated text of the poem, appendices, and maps.

We are pleased to note the appearance of the first number of *Gaelica: A Journal of Modern-Irish Studies* (published by Hodges, Figgis & Co., Dublin), which promises to be a periodical of some importance in Celtic philology. It is to be a quarterly review, edited by T. F. O'Rahilly, and conducted by the Association of Modern-Irish Studies. Since the *Revue Celtique* and the *Zeitschrift für Celtische Philologie* deal with the whole range of Celtic scholarship, and *Eriu* contains chiefly material relating to early Irish, there is no learned journal primarily devoted to Irish philology of the modern period. Even the *Gaelic Journal*, which combined to some extent scientific articles with current

news and matter of a propagandist character, was discontinued three or four years ago. The field is therefore open for the now undertaking, and there is even urgent need of such an organ of modern Irish research. *Gadelica*, to judge by its first number, will rise worthily to its opportunity. The contents, as might be expected, are largely texts, for it will be a long time before even the more important Irish writings are all accessible in print But in addition to various interesting documents the journal contains notes and reviews bearing on various problems of linguistics and of literary history.

The larger part of the *National Geographic Magazine* for April is taken up with an account of the Taal volcano and its eruption in January last year by Dean C. Worcester, secretary of the Interior of the Philippine Islands, and is the result mainly of his personal observations. Among the forty illustrations are reproductions of some remarkable photographs taken at short range and at the risk of his life by the Government photographer, Charles Martin. The recent coronation of the King of Siam is described by our military representative, Col. Lea Febiger, U. S. A., with twenty-five exceedingly interesting illustrations. A chapter is taken from the Duke of Mecklenburg's "In the Heart of Africa." Among the illustrations are two showing the jumpers attaining the almost incredible height of 8 feet 5 inches. A brief sketch is given of the explorations in Peru by the expedition under the direction of Dr. Hiram Bingham of Yale University.

Dr. W. E. Knickerbocker has published his thesis, "Ellipsis in Old French" (for sale at the Columbia University Bookstore). He discusses in particular those phases of ellipsis which are presumably unconscious: the loss of words of one or two letters through coalescence with following identical sounds, and the "non-repetition of closely recurring words and syllables." Many of the conclusions are uncertain, as the preëlliptic stage is often hypothetical, but the book is none the less a valuable contribution to the study of Old French syntax. It is particularly interesting in its suggestions as to the origin of certain usages that have survived in modern French.

Mrs. Margaret Elizabeth Sangster died last week at her home in South Orange, N. J., aged seventy-four. As editor, she is, perhaps, best known, having been on the staffs of several periodicals, including *Harper's Bazar*, the *Christian Herald*, and the *Ladies' Home Journal*. Among her published works are: "Hours with Girls," her first pronounced success, which sold as well in England as it did in this country; "May Stanhope and her Friends," "Spiendid Times," "Miss Dewberry's Scholars," "Five Happy Weeks," "Poems of the Household," "Home Fairies and Heart Flowers," "On the Road Home," "Easter Bells," "Winsome Womanhood," "Little Knights and Ladies," "Janet Ward," "Eleanor Lee," "Lyrics of Love," "When Angels Come to Men," "Good Manners for All Occasions," "Little Kingdom of Home," "The Story Bible," "Fairest Girlhood," "The Queenly Mother in the Realm of Home," "The Joyful Life," and "From My Youth Up."

The death is reported from London, at the age of seventy-eight, of the Rev. John Sheepshanks, for many years Bishop of Norwich. Among his writings are: "Confirmation and Unction of the Sick," "Charge, Eucharist, and Confession," and "The Pastor in the Parish."

HOSPITAL-WORK AT THE CANAL.

Ancon Hospital looks down from the terraced slope of Ancon Hill upon Panama City, where the sun rises out of the Pacific. Its hundred and more buildings are so spaced as to combine practical compactness with abundant air, room, and comeliness. Cool breezes play over and through them, day and night, unceasing.

On the eighth of last February, 1,207 patients lay in the cots, while the newest case was card-catalogued No. 114,806. February, nevertheless, is among the most healthful months of the year; on July 22 of last year, the hospital housed 1,488 patients. This figure seems high, but, not only does Ancon receive virtually every case of injury and disease in the whole Canal Zone, from Colon to Panama, with the exception of emergency surgical cases at Colon, Cristobal, and Gatun, but also such Panamanian sick as can pay for service, all the Republic's insane, and a considerable number of outside pay and charity patients. Adding the Zone's population of about 88,000 to that of the Republic of Panama, it appears that Ancon ministers to the needs of some 155,000 people.

Of the total number of pavilions composing the present hospital, a considerable proportion were constructed by the French in the sad old harvest days of death and failure. In the single matter of ventilation these needed little change, but they entirely lacked protection from mosquitoes, and, incredible as it may seem, possessed neither bathrooms nor closets, the French water supply being planned only for drinking purposes, cooking, and scant and occasional spongings. All this has, of course, been altered. Each building is now thoroughly screened, has abundant water supply, closets, and baths, with tubs, showers, etc., and is fitted with electricity. The entire hospital is arranged on the separate pavilion system. The wards, each surrounded by its broad, screened balcony, are arranged in groups of various shapes, sometimes end to end, in line, sometimes on three sides of a square.

For administrative purposes, the plant is handled in two divisions—the hospital proper and the insane department. The former division is again subdivided into the medical clinic, the surgical clinic, the eye and ear clinic, and the board of health laboratory. An outpatient department, presided over by the chiefs of clinic, treats about 1,000 cases monthly. The medical group includes a separate tuberculosis ward and an isolation building. The surgical group, with its 420 beds, centres in the operating-room, a cement-floored, virtually open-air hall, supplied with modern equipment and with several tables, to permit as many simultaneous operations. The staff here consists of twelve or thirteen surgeons. They constitute the actual working force of the operating-room, being assisted therein by only three nurses, who never handle the instruments.

Under Col. Gorgas, chief sanitary officer, the superintendent of Ancon Hospital, is Lieut.-Col. Charles F. Mason of the Medical Corps, U. S. A. Col. Mason's staff, numbering about thirty physicians and surgeons, is composed without exception of paid civilians, brought from the States. His nurses, male and female, number from eighty-five to one hundred, and are all graduate, trained nurses of two years' experience, selected in the States by civil service examination. The male nurses, of whom there are from fifteen to twenty, are used in certain of the black male wards. The women of the force have the help of black West Indian maids at the asylum and in the ambulance service. To assist in the nursing and cleaning there are also about 150 attendants and 35 maids, all West Indian blacks. One feature of great significance in this pioneer institution is the Board of Health laboratory, so called because it performs not only the vastly important clinical laboratory work of the Hospital, but also equally vital work for the entire sanitary department, as well as for other departments of the Isthmian Canal Commission. The laboratory staff consists of a chief and two assistant physicians, carried respectively as bacteriologist and pathologist, a chemist, a physiologist, and the usual laboratory helpers. The field that these men cover, the variety and value of their labor, can scarcely be overestimated.

The Isthmus of Panama, before the Medical Corps of our army took it in hand, was easily one of the deadliest pest-holes on earth, chiefly owing to the virulence of its special demons, yellow and malarial fever. To-day, on the Isthmus, yellow fever has faded into an "historic disease," no endemic case having occurred in Panama since November, 1905, or in Colon since May, 1906. As for malaria, its annual average, in 1906, of 1,200 to the thousand (these figures include those who had the fever more than once in the year, each case being counted), had been beaten down in 1911 to a paltry 81. This virtual abolition of the two specific diseases of the place leaves two maladies of the Temperate Zone, pneumonia and tuberculosis, the chief offenders. And the death-rate of Panama, Colon, and

the Zone, for 1910 and 1911, respectively, was 21.18 per 1,000 and 21.46 per 1,000, that of New York city being 21.72 per 1,000 for the year 1909.

Much of its great success the Hospital owes to its laboratory. Dr. Darling, the chief of the laboratory, for example, taking an innocent young family of mosquitoes bred from larvæ and unspotted by the world, led them to the hospital ward and "bit" them on patients about to be dismissed as cured of malaria. Then he shut them up, and later on dissected their intestinal tracts under the microscope. By this test was established the highly important but hitherto unsuspected fact that men were being discharged from the hospital while yet enough malarial parasites remained in them to infect susceptible Anophelines, and therefore to spread that curse that cost the French their lives, their fortunes, and their enterprise. Malarial parasites in the blood of the patients had been so reduced in number by treatment in the hospital that the usual "blood-test" could not find them. Only this research with the mosquitoes betrayed them. Now not a man goes out of Ancon Hospital carrying the poison.

Searching dead rats for fleas sounds like the symbol of loathly futility. Yet Col. Gorgas's rat-catching brigade brings monthly to the hospital more than 3,000 of these creatures, and any fleas found on them are examined for the plague bacillus. Which, being interpreted, means that the hideous bubonic, so lately a terror in the land, is kept out by work indicated from the laboratory. When an epidemic of the sleeping sickness broke out among the commissary mules, it was the Ancon laboratory men who proved that the disease was transmittable, not by a biting horse fly, as had been previously supposed, but by the ordinary house fly. Then they showed the quartermaster's department what to do. By this and by many similar dealings the laboratory has saved the Government great inconvenience and large sums of money in the matter of live stock alone.

The Canal Zone draws its abundant water supply from six large reservoirs. This water is so pure that you may drink it from any tap as safely as if it bubbled from the rocky crown of Mount McKinley. Now the United States, of course, controls the watershed. And, equally of course, Col. Gorgas polices that shed to within an inch of its life. But, again, the ultimate check on all possible harm lies in Ancon Hospital laboratory. Of the six great reservoirs, some deliver their water directly, some through alum mechanical filters. But the waters of each of the six are examined bacteriologically, chemically, and microscopically once a month. The mechanical filters are examined chemically every month, two or three samples being taken, and bacteriologically every day or two. On occasion, special examinations of the various supplies are made more frequently.

No one who looks into the work of the department of sanitation as a whole can fail to appreciate its deep and far-sighted economy. Only one who knows the usual gait of private or governmental enterprise in the lower tropics can justly value the conscientious hard work spent on devising schemes to do Ancon's business while saving Government money.

To give an example or two, the most noteworthy economy evolved in Ancon is one of pure innovation. During the summer of 1910 the hospital's consumption of gauze and gauze bandages was very heavy, the number of surgical cases averaging 348 daily. Under the necessity of saving, Col. Mason then determined to try washing and re-using bandages from non-infected cases. The plan worked so well that it has now become the regular practice. This washed gauze the surgeons actually prefer to the fresh article, as softer and more absorbent. And the saving to the Government amounts to no less a sum than $5,000 annually.

A considerable and constantly growing source of actual income to the hospital is the influx of paying patients from Central and South America. Attracted at first by Ancon's fine record in surgical cases, some few wealthy persons from Chili, Peru, Guatemala, etc., who otherwise would have gone to Europe for operations, stopped off experimentally at Ancon. These went home delighted with the skill with which they had been handled, the comfort in which they had been housed, and the kindliness that had uniformly surrounded them. They rapidly spread the fame of Ancon along the whole coast, from Mexico to the Cape, and to-day nearly half the private rooms of the hospital are occupied by South or Central Americans, while a growing stream begs hard for space. Ancon Hospital, it is said, is helping to establish better relations between this country and our southern neighbors.

By far the greatest achievement of Ancon Hospital is its success in handling malaria. The sanitation department has so dealt with the Zone that the number of malarial cases brought into hospital, expressed as a percentage of the Isthmian Commission's entire working force, fell from a monthly average of 6.83 per cent. in 1906 to 1.55 per cent. in 1910, and in 1911 to 1.54 per cent. And Cols. Gorgas and Mason believe that the time is near when malaria will have become, like yellow fever, an "historic malady." But present conditions prevent its utter extirpation. Governed by the time at which the rains set in, the malaria rate shows a sharp rise in May. During the heavy downfall of June and July, pools form along the ever-changing areas of new construction faster than the mosquito brigade can get at them with shovels and machetes and larvicide. So the fever figure mounts rapidly. By August, however, the sanitation department has the whole range well in hand, and the percentage quickly drops almost to the vanishing point. Without going into details, it is enough to state—and the statement is based on long personal experience—that the most enlightened practice in other portions of South America and in the West Indies does not cure malaria, but at best merely subdues it till it gathers headway for another outbreak, which finds the victim always weaker than before. Now, Ancon cannot afford to have its patients coming back. So, by a procedure of its own evolving, it at once and completely clears the disease from the patient's system. And it handles the malignant type that kills in twenty-four hours as surely as it does the familiar old tertian variety, in which all South America has its being and which lets you live ten days if you do not bother it.

The other evening at Tivoli a famous German professor stood looking down the lobby at its crowd of notables and tourists. Suddenly he leaned forward while his eyes flashed.

"See him! See him there, by the second pillar! Quick! Look quick!" he urged his companion. "That is the Col. Gorgas. And Col. Gorgas, my friends" —here the big fist came down with a bang—"is a greater man—a far, far greater man—than Cæsar."

Drama

Compton Mackenzie is making a dramatic version of his novel, "Carnival," for the use of Gerald du Maurier.

Among the interesting incidents of the future, in London, is the promised revival by Charles Frohman of "The Amazons" of Pinero. The three girls will be embodied by Phyllis Neilson-Terry, Pauline Chase, and Marie Löhr. Some of the players in the original cast were Lily Hanbury, Ellaline Terriss, Pattie Browne, Rose Leclercq, and Frederick Kerr.

"Behind the Curtain" is the name of a new play by Michael Morton, which will be seen soon in London. It is said to tell a strong love story, and is written in four acts, with scenes in and out of England.

"Sumurûn" appears to have met with a cool reception in Paris.

M. Le Bargy has left the company of the Théâtre Français, after a membership of thirty-one years. He has been engaged, at a great salary, to act at the Porte St. Martin.

It is announced from London that Macdonald Hastings, the fortunate young author of "The New Sin," has agreed to rewrite the fourth act before the piece is produced in this country. The fact is not altogether reassuring, with regard to the

quality of the play or the convictions of the dramatist, but it is only fair to remember that the original ending was pronounced unsatisfactory by more than one critic. More disquieting is the report that Mr. Hastings has contracted to deliver four new plays, to as many managers, within the year. He cannot be blamed, of course, for wanting to make all the theatrical hay he can while the managerial sun is shining, but hasty production is not conducive to good work. Everybody knows what irreparable mischief it did to the artistic reputation of Clyde Fitch. Such reflections, of course, do not enter into the calculations of speculative managers, whose one idea is to get the name of a successful dramatist upon their bill-board as quickly as possible.

"The Norseman" (The Mosher Press), a drama in four acts, by Elizabeth Alden Curtis, is superior in quality to many recent essays of the kind. The blank verse in which it is written is not distinguished by any special brilliancy of diction or lofty flights of imagination, but is always clear, fluent, and rhythmical, contains many effective bits of pictorial description, and is not lacking either in vigor or sentiment. Doubtless the piece would require a certain amount of remodelling and compression to make it suitable for actual theatrical representation, but it is dramatic in spirit as well as in form. It tells the story of Frithiof and Ingeborg, as set forth in the ancient Frithiof saga, and in its details follows the original with notable fidelity. The principal personages are depicted vividly and with consistency. Frithiof is a heroic figure, and Ingeborg an attractive study of noble, devoted womanhood. The traitorous Helge, old Sigurd, and the trusty Bjorn—the Horatio to Frithiof's Hamlet—are all characters which would afford rich opportunities to good romantic actors. The later acts are full of stirring matter, and several of the scenes—such as those dealing with the venture of the disguised Frithiof into the banqueting hall of his successful rival and his subsequent discovery—are not only well imagined, but exhibit an appreciation of theatrical needs. Altogether the play, both on the literary and dramatic side, is an uncommonly promising performance.

Four volumes of the "Ben Greet Shakespeare, for Young Readers and Amateur Players" (Doubleday, Page) have come to hand. They contain "The Merchant of Venice," "As You Like It," "A Midsummer Night's Dream," and "The Tempest," in more or less condensed form and specially arranged for representation. The right-hand pages are devoted to the text, the left-hand pages to brief notes of explanation and directions for stage management. Few men are better qualified than Mr. Greet for work of this sort. For many years he has been identified with Shakespearean productions with and without scenery, on the regular stage, on the platform, or out of doors. He knows all the traditions and is master of all the tricks of the stage. Moreover, he is an enthusiastic and competent Shakespearean student. Therefore, in dealing with the rudimentary points of his profession, as he does now, he speaks with authority and his instructions are precise and sound. Much of his matter is, of course, old, but it is offered here in peculiarly convenient shape, and will be invaluable to beginners. The plays are printed in admirable type and are appropriately illustrated.

H. M. Beatty has written a translation of "Flachsmann als Erzieher" ("Master Flachsmann"; Duffield), the three-act comedy of Otto Ernst, in which the old red tape style of German schoolmaster is mercilessly satirized. He has done his work well, and the piece is well worth reading, not only for its enlightened views on youthful education, but for its clever character sketches. But it is too thoroughly Teutonic in its incidents and atmosphere to have any wide appeal here, in the theatre or out of it. The story, which tells how a vulgar impostor obtained the headmastership of a Government school, by exhibiting the papers of his dead brother, and thereafter, for thirty years, successfully defied the vigilance of inspectors and commissioners, until he was betrayed by an accomplice, is neither ingenious nor credible. But the characterization is vital and comic, and it is easy to believe that the play has had great popularity in many parts of Germany. All the minor schoolmasters—in their varying degrees of incompetency and subserviency—are cleverly and humorously drawn, while the peppery but thoroughly sane commissioner, Dr. Prell, the deus ex machinâ, who finally detects and deposes the rascally chief—replacing him with the one intelligent assistant whom he has systematically snubbed and bullied—is an admirably lifelike figure, which would be wonderfully effective in the hands of a good comedian. Perhaps the heaven-made tutor who at the last comes into his own, is somewhat overidealized, but he is completely human, at least, in his love for the piquant Gisa Holm, and his courtship of her provides some of the choicest episodes in the play.

Music

Paris had to wait more than two years for a first hearing of Puccini's last opera, "The Girl of the Golden West," and even then it was not the Grand Opéra's own company that gave it, but Raoul Gunsbourg's Monte Carlo Company, including, on this occasion, Caruso, Titta-Ruffo, and Carmen Mélis. Puccini was present at the Parisian première and shared the plaudits. The conductor was Serafino; the manager was praised for providing a picturesque scenic setting. There were no scenes of wild enthusiasm like those which occurred at the New York première of this mediocre opera. In its musical atmosphere the opera is much more Parisian and Italian than American, as we all know. The Parisian could hardly be expected to know it. The *Figaro's* critic remarks on this point: "We are poor judges to decide how far 'La Fille du Far-West' is 'American' or otherwise. But the rag-time of the banjo music plays a prominent part in it and produces some very happy effects." As a whole, this critic accounts it Puccini's best work since "Manon Lescaut," with the exception of "Madama Butterfly." The commentator of the *Écho de Paris* was so fortunate as to find the last act "intensely melodic." The *Comœdia* discovered the same characteristics that account for Puccini's previous successes. All of the critics praise Belasco's libretto.

By far the best news that has come from the other side of the ocean for many a moon is the fact that Humperdinck is completely restored to health, and is already at work on two new scores, one, an operetta concerned with German student life; the other, a musical fairy story. For both of them he made a number of jottings in his note-book before he was allowed to touch a piano. After spending some months in Rome and Frascati he made a Rhine journey, and before the end of the second week in May he was strong enough to undertake three-hour walks. His recovery was accelerated by the pleasant news that he had been elected vice-president of the Berlin Royal High School of Music.

The Titanic tragedy has been chosen by the Russian composer, Glazounoff, as the basis of a symphony. The "Nearer My God to Thee," which the band played as the ship went down, is to recur in it as a leading motive.

The three American managers, Dippel, Russell, and Gatti-Casazza, were all in Paris a few weeks ago seeking fresh recruits for their operatic armies. Dippel is particularly sanguine about his Pacific Coast tour. As not all of the towns included in it have large enough theatres for his purposes, he has obtained the huge tent, holding 10,000, which Sarah Bernhardt used during her last tour, and this he expects to fill, for he will have Tetrazzini and Mary Garden, and Sammarco, and other great stars. The open-air performance at Santa Barbara of Victor Herbert's grand opera, "Natoma," will begin at six o'clock, so that the sunset will provide a suitable scenic background. Among Dippel's new singers will be a young Italian tenor from Egypt, of whom he expects great things.

A number of friends and admirers of the Parisian composer, Théodore Dubois, gave a concert in his honor the other evening, with himself officiating at the piano. The performance was preceded by a speech, in which Maurice Emmanuel recalled the principal events in Dubois's life. As a student at the Conservatoire he obtained his first prizes (for harmony, fugue, and organ playing) in 1856 to 1859. Two years later he carried off the Grand Prix de Rome. On his return from Italy he devoted himself to composing and teaching. He became chapel master in turn of Saint-Clotilde and the Madeleine, and in 1871 he got an appointment as professor of harmony at the Conservatoire. In 1896 he became its director, having been elected two years previously a member of the Académie des Beaux-Arts. He has written a number of masses and cantatas, and also works for the stage, the most successful of which were "La Guzla del Emir," "Le Pain bis," "La Farandole," and "Eben Hamet." The programme of the concert referred to consists entirely of his own pieces and songs.

The discovery of a hitherto unknown Good Friday Cantata by Beethoven was announced some time ago by Professor Abert of Halle in No. 126 of the *Zeitschrift der Internationalen Musikgesellschaft*. Since then the professor has found out that the cantata is not by Beethoven, though it is based on one of his compositions—one of two quartets for

trombones (known as "Equale") which he composed in 1812 for the director of the town music in Linz. When Beethoven died, his friend, Ignatz Ritter von Seyfried, set these quartets for voices (supplying them with Latin and German texts) as a part of the musical service at the funeral on March 29, 1827. In this form they had a considerable vogue for a time. Subsequently, another musician, whose name is not known, took the liberty of elaborating these quartets into a Passion Cantata for mixed chorus and an instrumental score, including three clarionets, three horns, and three trombones.

A collection of musical autographs of rare value was bequeathed to the Paris Conservatoire by the late Charles Malherbe, who for years had been librarian of the Paris Opéra. Among them are a number of heretofore unprinted letters of Berlioz, written at various times in the period 1830 to 1855, from Italy, Germany, England, and Russia. Some of them have been printed by the *Revue Bleue*.

Art

Rembrandt's Etchings: An Essay and a Catalogue. By Arthur M. Hind. In two volumes: I, The Text; II, The Illustrations. New York: Charles Scribner's Sons. $7 net.

Mr. Hind has made the British Museum collection of Rembrandt etchings the basis of a chronological catalogue, filling the very few gaps in the London series from other sources. It was a happy inspiration to depart from the traditional classification by subjects, and the chronological arrangement, though naturally open to criticism in details, is on the whole singularly satisfactory. The album will be a delight to disinterested students of Rembrandt's art, while the catalogue is indispensable to collectors and curators. Mr. Hind has gone beyond the immediate task. He gives a brief history of the growth of the Rembrandt canon; an account of the vicissitudes of the original coppers, some seventy of which are still extant; an essay on Rembrandt's artistic development, and a study of the drawings, with thirty-three reproductions, as sidelights on Rembrandt's draughtsmanship.

Since critical estimates of Rembrandt's authentic etchings vary from about seventy to three hundred and seventy numbers, chief interest attaches to the make-up of the list. Mr. Hind gives as genuine 303 plates, admitting doubts as to half-a-dozen subjects, while he is inclined to consider the claims of a few plates relegated to the supplementary list of apocrypha, which includes eighty-six numbers. His personal opinion is that there are something less than three hundred genuine etchings. To weigh the evidence for authenticity is impracticable within the space of a review, but a word may be said on the principle of exclusion by which Legros and Seymour Haden made out their sparse selections. Admirable etchers both, they simply rejected all plates that seemed deficient in craftsmanship, Haden taking somewhat the more lenient view. They both adopted the simple formula: If Rembrandt etched such and such a plate, then he was not a great etcher. Their lists have the merit of all anthologies made by competent taste. The average art-lover might do well to confine his attention to these select lists. But the criterion seems dangerously subjective. It ignores the fact that in painting Rembrandt is of very uneven merit. And on the documentary side it utterly fails to account for a matter of two hundred plates, many of which literally bear Rembrandt's handwriting in his signature. These prints are contemporary, and in most cases there seems to be no reasonable accounting for them except as genuine. There could have been no motive for multiplying forgeries of Rembrandt in his slighter vein. His best prints were barely salable. And if the prints rejected by the purists are not by Rembrandt, they can only be forgeries. The many honest copies made for practice by his pupils and imitators are easily recognizable. Mr. Hind's chronological arrangement in almost every case vindicates the challenged etchings, and, subject to minor modifications, his canon seems likely to be definitive.

In the vexed matter of states, he pursues a conservative course. Nothing but new etched work or deliberate cancellation or change in the form of the plate constitutes a state. This is the opposite of the course of the Russian expert, Rovinski, for whom any palpable change, including that produced by accident of printing or wear of the copper, constituted a state. If this practice were rigorously carried out there would be as many states of the slighter dry-points as there are impressions, for with every printing the burr yields a little. Such collations of various impressions are in themselves interesting and worthy of record, but the conservative method of limiting states by the intention of the artist is certainly preferable. It is perhaps unreasonable to wish that more definite clues to the retouching of the plates in the eighteenth century had been given—it would perhaps have required inordinate labor—but such information would have been invaluable to the novice who is neither used to comparison of impressions nor yet versed in the subject of old papers. Blanc's catalogue retains its serviceableness in giving plainly the points of the finer impressions. A stranger omission in Mr. Hind's catalogue is the failure to note the plates entirely or mostly worked with the dry-point. It may be urged that even in the facsimiles the procedure is generally clear, but there are ambiguous cases upon which the verdict of an expert is desirable. Moreover, the discrimination, which is pretty obvious to a real student, is by no means plain to a beginner.

The album does not include the indecent subjects, and for a popular publication no other course was possible. But these subjects do, after all, concern the special student. The publishers of the "Klassiker der Kunst" meet the difficulty by supplying the "broad" subjects on request, and this compromise may be commended to the publishers of the present catalogue. In passing, it may be said that the early state of No. 130, with the plate corners unrounded, has recently been seen by the present writer. Rovinski has correctly described this rare first state.

Only continued use can test the accuracy of an elaborate catalogue. Your critic has worked through some thirty originals and old copies of various dates and impressions, and has found that the catalogue met every need and betrayed no errors. Its convenience, low price, and authoritative character make it a positive boon to the student and collector, and a most desirable possession for the unprofessional art-lover.

LOOKING AT BOTH SIDES.

It is sometimes interesting, when the middle of the year is nearly reached, to glance back at the predictions which were current when the year began, and see how far they have thus far been fulfilled. Such a test often gives a reasonably clear idea as to how things are actually drifting. Out of a considerable number of bank presidents at various points throughout the country, whose opinions on the outlook were published by the New York *Evening Post* on December 30, 1911, virtually all predicted that we should have no further reaction in general trade in 1912, but nearly all agreed that improvement would be slow and gradual during the first six months, and that the genuine expansion which most of them looked for would come after midsummer, and possibly not until the trend of the Presidential contest had been made clear.

So much of their prediction has certainly been verified. Business thus far in 1912 has undoubtedly been better; there have been some forward starts of real activity—as in the cotton-goods trade a month ago; home consumption in the copper industry was shown last week to be on the largest scale since 1909, and steel production has been of very unusual volume. Yet, for all this, most people in the mercantile trades will probably testify that improvement has been slow, and, if measured by the hopes entertained in December, disappointing.

Looking both backward and forward, it will perhaps be worth while to sum up concisely what are to-day the grounds for favorable expectations and what are the grounds of discouragement, and then to see what there is to offset them both. Most people would doubtless place first upon their list the remarkable movement in the steel trade. The expansion which has come since the opening of the year was confidently predicted by certain high trade authorities, so long ago as last November; but it was received with skepticism. It has come, however. The country's iron output in May was larger by 25 per cent. than in December, and this occurred in the face of a continuous decrease in unsold supplies; the steel mills have lately been turning out the largest volume of finished goods in their whole history, and the Steel Corporation's orders for future delivery, by its last report, were 14 per cent. above those of last December. As against this encouraging showing of the country's consuming power, the steel trade itself alleges disappointment at the slow advance in prices from their recent low level and at the consequently meagre margin of profit.

The huge excess of exports in our foreign trade is usually cited next; for the ten months last reported on, it was $43,000,000 above the preceding year, and in fact has never been exceeded save in the very abnormal American export years 1908, 1901, and 1898. It has resulted in a very unusual credit balance, loaned out by American banks on the Continental markets. The possibly less favorable aspect of this showing is that the greater part of that export surplus was achieved before 1911 was ended; that thus far in 1912, our outward balance does not greatly exceed the same months a year ago, and that even this result has been brought about largely by our enormous cotton exports, whereas the next cotton crop is much of an uncertainty.

Finally, it will be pointed out, as it was six months ago, that a period of prolonged retrenchment and economy has placed the country's general business in a strong position to benefit normally by trade revival. This is a sound and legitimate consideration; that it still applies, is shown by reports, from almost every industry, that no one is burdened by heavy stocks of unsold goods, carried on borrowed money. The other side is usually summed up in the statement that readiness for a forward movement of prosperity is not the forward movement.

Perhaps, after all, the best arguments for the strength of the present position are negative in character. People who look on the darker side of things point to the spirit of popular unrest and the numerous industrial troubles. But the most striking chapter in the experience of the present year has been the immunity of this country from such formidable industrial battles as the English coal strike, the success in applying the principles of compromise and arbitration, and the absence of any disturbance on financial markets, as a result of the threatened strikes. So, too, of the political commotion, and of the Presidential contest which so many financial prophets thought must be a blight on trade revival. The struggle began, in the most violent and radical shape, fully two months earlier than usual; yet financial markets refused to be disturbed by it, and the testimony from mercantile, manufacturing, and agricultural centres throughout the country has thus far been to the effect that politics was not an influence.

The pessimist will cite, last of all, the crop uncertainty, and there can be no doubt that hopes and expectations would have been pitched considerably higher now, if our winter wheat had started the season brilliantly, and our cotton had gone into the ground under ideal conditions. But except for the early wheat crop, the agricultural season has barely begun at the end of the first week in June. We may hear a very different story later.

If the first six months of 1912 have been disappointing to the enthusiastic souls, they have at least fulfilled the best predictions of the conservative prophets of December 31. History will remind us, moreover, that the first six months of 1879, of 1897, of 1900, and of 1904—four years which ended in a burst of reviving prosperity—made up in each case a period of profound discouragement.

These memoirs are interesting not merely as a brilliant and beautiful woman's *apologia* and autobiography. They are also enthralling as a picture of the elegant, daring, cynical, and cultivated Parisian society in which she moved, and they introduce familiarly many people of distinction in the social, artistic, and literary life of the French capital. Her relations with Pres. Faure throw strange sidelights upon contemporary French history.

John Brown: A Biography Fifty Years After

By OSWALD GARRISON VILLARD

SOME TRIBUTES TO THIS REMARKABLE HISTORICAL WORK.

Philadelphia PUBLIC LEDGER. "A tremendous book, more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesman Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with a great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

PORTLAND OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The NORTH CAROLINA REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy, and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able even to add anything of importance to Mr Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

Third Edition.

GARDENS AND THEIR MEANING

By DORA WILLIAMS

$1.00

"Miss Williams has done a good thing in writing this little book on 'Gardens and Their Meaning,' and doing it in such an attractive way that its reading is certain to accomplish what the author desired, namely, 'to show the importance of science in the use of spade and hoe, and to urge that a garden for education may be, not merely in substance, but in spirit, a corner of the great world.'

The book is designed for adults and the older of the school children. It should be widely read and discussed among earnest teachers, where it should do much good."

The Week

Col. Roosevelt chose his own battle-ground at Chicago, on Tuesday, and suffered a severe defeat in the first encounter. It was severe in cold fact, and it was much more severe in its moral effect. All the preliminary bluster and inflated claims of his managers—Senator Dixon proclaimed a "flat majority of 42" for Roosevelt on Monday—were submitted to the test of a roll call, and the event showed that he had 56 less votes than the Taft forces. Moreover, the support of his candidate for temporary chairman included 23 votes—13 from Wisconsin and 10 from Iowa—that would not be cast for himself. This was the result of his manœuvre in putting up, not one of his own following, but a La Follette man from Wisconsin. It is only fair to add, by way of offset, that a few Roosevelt delegates voted for Root. Making every allowance, however, the demonstration was clear that Roosevelt has only a minority in the Convention. Such was the upshot of what William Allen White grandiloquently described as Mr. Roosevelt's decision to change American history for the next fifty years by defeating Senator Root's election as temporary chairman of the Convention! The defeat was on the other leg.

The President would have done better to confine his veto message accompanying his return of the Army Appropriation bill to a clear-cut refusal to accept it because of its infringement upon his exclusive power to make appointments. His charge that the bill works extensive but ill-considered changes in the organization of the army is not borne out by the facts. The consolidation of the paymasters, quartermasters, and commissaries was recommended by Secretary Root ten years and more ago. Gen. Sheridan, at the beginning of his Civil War service, when acting as chief commissary of the Army of Southwest Missouri, asked that the duties of the quartermaster also be given to him, as the separation of the two made for inefficiency, and he demonstrated the truth of this. It has been mischievous ever since, including the period of the Spanish War. Even Gen. Wood was at first for this consolidation, until he changed his mind. So far as we recollect, there has been no House Military Affairs Committee of recent years that has taken its duties so seriously, its one mistake being the legislation in regard to Gen. Wood. It has held many hearings for a year past, and as a whole its bill contains the most noteworthy reforms since Secretary Root's. As to the proposed reorganization now being drafted by the General Staff—why should Congress have to wait for that? It does not follow that it will be acceptable to Congress or the country; for it is certain to be an advanced bit of militaristic scheming, insuring heavier financial burdens, more rapid promotions, and higher rank for officers—that has been the nub of all the General Staff's reform suggestions heretofore.

It will soon be necessary to offer a reward for knowledge of the whereabouts of Champ Clark, if the gas continues to leak out of his boom at the present rate. Even the Hearst papers have cooled in their once ardent support of this "Missouri Lincoln." The truth is that it is as apparent that Clark cannot lead the Democracy with any hope of success as it was that La Follette could not capture the Republican masses. The Democratic politicians may not throw him overboard with the frank brutality of the Rooseveltians in parting company with the Wisconsin Progressive; indeed, we are inclined to think Clark will be let down very easily by a handsome vote in the Convention—on the first ballot. But the emergency is too grave, the possibilities of victory too bright, to spoil all by a choice that would not even interest people for a week.

The news from Cuba is of a decidedly encouraging character, even though Gen. Estenoz still appears very much alive. But there seems to be no doubt that the revolution is beginning to peter out; and the Government is now to face the question of feeding the reconcentrados who are already reported to be suffering much as they were under Weyler. That there have been brutalities and deliberate murders on both sides is undoubtedly true. That the revolt whenever finally crushed will leave the beginnings of antagonism between races in Cuba is highly probable. Heretofore, they have lived together in peace and good will. The Government at Washington now seems confident that the worst is over; at least, this appears from the reports that the battleships will speedily leave Cuban waters. It may be that this outcome only postpones for a time the fall of the Gomez Government, but it does show that there is still considerable vitality in that Government and that the Cuban people as a whole are content to work along as they are. Had there been a widespread and intense discontent, the revolution must have spread beyond the possibility of its extinction, save by intervention. Meanwhile, it would be no mistake if a hint should come out of Washington that one term is enough for Gomez.

So much is heard of rough and tempestuous methods of dealing with the courts that the public often overlooks the quiet work of reform, not only in the change of procedure, but in fundamental judicial conceptions, that is steadily going on. A report read on Saturday, at the National Conference of Charities and Corrections in Cleveland, was entitled, "Socialization of the Court." It was presented by Mr. Bailey Burritt, and gave in instructive detail an account of the great improvements in the administration of the inferior criminal courts in New York. These have been brought about partly by legislation, establishing special courts to deal with particular forms of delinquency, but more by a changed idea of the whole function of criminal prosecution, and the punishment of wrong-doers, in connection with certain kinds of offences. The judge of a criminal court, that is to say, has come to feel that he is dealing not only with individuals but with society; that behind the prisoner at the bar there exist a predisposing cause, antecedents, and an environment, which must be understood before the crime itself can be understood or its punishment adequately meted out. This is what Mr. Burritt has in mind in speaking of the lower courts as now go-

ing through the process of being "socialized." It really means simply that a successful effort is being made to render the judicial function, in this respect, more intelligent and more effective.

The band of athletes that is to represent this country at the Stockholm games contains representatives of nearly every racial strain that has gone into the making of the American nation. At one end of the scale we have the American Indian, and at the other end the Italian, who is one of the latest comers among our immigrants. Between them are Anglo-Saxon and Irish and German and Scandinavian and Slav and Negro. The Olympic team reproduces conditions which make the reading of box-scores in baseball so interesting an exercise in the study of ethnological evolution. "Sangallo to Sheehan to Schultze" is the chapter heading in a recent baseball story which cleverly and vividly sums up a process of the highest meaning for the sociologist and the statesman. The effects of every successive wave of immigration are soonest felt in the playground and on the athletic field. Long before the new elements in our population have fought their way up in the social scale, they have won a place in the eye of the vast democracy that flocks every day in summer to the baseball parks. To the invading hosts of Europe this country holds out the advantages of the playground as well as of the public school. Sometimes there is even reason for believing that the playing field may push the school-house into the background as an assimilating force among the children of the foreign-born.

The remission of tolls to American vessels, as provided for in the Panama Canal bill now reported by the Senate Committee on Interoceanic Canals, is to be assailed by Senator Root, whose contention is that we are bound by our treaty obligations to accord equal treatment to foreign and American vessels. The treaty declares:

> The canal shall be free and open, in time of war as in time of peace, to the vessels of commerce and of war of all nations, on terms of entire equality, so that there shall be no discrimination against any nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise.

It is a desperate fight Senator Root is entering upon, this attempt to enforce the observance of international faith where we have repeatedly shown that we have no desire to do so. Broken pledges dot the entire history of the Canal. The Canal was made possible by a raid on a defenceless republic with whom we were in the act of negotiation. Its fortification was made possible by violating an implied pledge not to fortify it. Then why not be logical and round out the record by another act of broken faith? Senator Root must be a visionary.

Something in the chemical constitution of sugar apparently creates an irresistible tendency towards graft. A prolenged investigation by the Federal authorities at Philadelphia of custom-house practices pursued by the Sugar Trust and its competitors, has been productive of revelations almost as sensational as those brought to light in New York city, and dealt with, some time ago. What helps to make the Philadelphia disclosures dramatic is that the same game of bribery and cheating should have gone on in spite of the exposures in New York. Apparently, no attempt at defence is to be made by the Philadelphia interests, from whom has come an offer of restitution to any amount stipulated by the Government. No defence is forthcoming from the Trust, but a pathetic excuse to the effect that the independent refineries have been playing the same game of fraud. Ostensibly, it is all the fault of the competitive system. If the Trust had succeeded in doing away with all rivals, the cruel laws of competition would not have arisen to make cheating necessary. As it is, an old habit is hard to break.

Mr. Carnegie's Rectorial address to the Aberdeen students ranged from books to tobacco, from whiskey to efficiency. Amid the many topics touched upon, he found time to say a few words about taxation. To the income tax, "during life," Mr. Carnegie said that there are "some serious but still not overwhelming objections"; but he is apparently willing that the state shall go as far as it likes with the property of a citizen after he is dead. He flatly declared: "There is no objection whatever to one-half of the millionaire's hoard being taken by the state at his death." This is pushing the graduated inheritance tax further than it has anywhere been practiced. There is no likelihood of any such law being adopted in New York, but doubtless the State authorities would be glad to make a private arrangement with Mr. Carnegie to take half his hoard.

Meat riots which have broken out in some large cities and are threatened in others are notable for being women's affairs. In most riots women have a hand, but only seldom do they constitute the mob, and experts agree that when they do go into that sort of thing they are much harder to handle than an equal body of men, because one never knows what to expect of them. The way this infection has spread from city to city during the last fortnight recalls an incident in the spring of 1863, when the women in a chain of cities of the Confederacy, beginning with Mobile and ending with Richmond, were stirred to revolt by an alleged shortage in the food supply of the South. By the time the uprising reached Richmond, it had become so clamorous that neither the Mayor nor the Governor felt able to cope with it by peaceful dissuasion, and a body of troops was called out. But Jefferson Davis, having a keener eye for human weaknesses than the local functionaries, was able to disperse the mob in five minutes, and without firing a shot. He had noticed that, in spite of the cries for bread, these women had passed by well-stocked bakeries and markets with no show of violence, but had looted a jeweler's shop and one or two millinery and dress-goods establishments. Using this inconsistency for a text, he routed with his sarcasm a mob which had vaunted its contempt for powder and ball. The later woman-rioters have not exposed themselves to just this form of satire; but can one conceive a worse economic absurdity than an attempt to lower the price of meat by destroying great quantities of it?

From the Association of Harvard Clubs, which held its annual banquet in New York last week, all Cambridge expects a great deal. Organization being the trend of the hour, why should not our universities profit by it? Originally, the alumni association was satisfied to demonstrate its usefulness by meeting once a year at Commencement. But then came the Harvard Clubs of the cities, imitating or preceding those

of other colleges. That did not go far enough, so that there were soon many Harvard Clubs of the suburbs, the towns, and often of the counties. Even that did not suffice, and so there have appeared these federations of clubs or associations—Yale has one in the West. Thus has been created a new alumni machinery, the possibilities of which are well worth serious consideration, for the individual clubs have usually done something more than to bring men together for social purposes. They have given scholarships to the university or made other donations, and have also served as recruiting committees or centres for the distribution of information as to what the college offers, where the examinations may be taken, what it costs to live within the campus or without, what scholarships are available, etc.

The work of financial and administrative reconstruction in China is still held in abeyance, while negotiations among the six Powers who in principle have agreed to the necessary loan move on in leisurely fashion. For the present, the cause of the delay seems to rest with Russia and Japan. Originally the Chinese loan was to be a four-Power arrangement. Only upon direct insistence from St. Petersburg and Tokio was the number of co-partners increased to six.' Having gained their principal point, the two Governments are apparently of the mind that there is no reason to hurry. It is not necessary to find any ulterior political motives in their action. Neither Russia nor Japan is a creditor nation and the financial responsibilities connected with the loan may very well present them with a difficult problem to solve. If, however, it is the case that the conclusion of the loan has been delayed by bickerings among the Powers concerning political advantages in China, it is time largely wasted not only for the Peking Government, but for the participating Powers. The day has gone for any real fears over the issue of the Open Door. The domination of a single Power or an alliance of Powers at Peking was conceivable under the old palace régime. Under its present constitutional government, however imperfectly it may function at first, it is inconceivable that the Empire can be made the absolute monopoly of any group of foreign interests. And, in the second place, the new China is bound to offer such vast opportunities for commercial and industrial development, that surely there will be enough for everybody at the loan broker's table.

The general strike of English dock-workers has been a failure from the beginning, and its only result will probably be the collapse of the strike in the port of London. Once more the workers have been taught that the general strike is an exceedingly dangerous weapon to play with, and that at best it is an instrument whose edge is rapidly dulled with use. In revolutionary theory it may seem that the general strike is to win the victory by which the workers will ultimately come into their own. In practice it has been shown that only a mighty effort, born of long preparation, can set a general strike going and keep it going. To call upon the workers for repeated efforts of the kind in quick succession is to invite disaster, followed by a long period of exhaustion. Reason, of course, does not entirely decide the question. There is such a thing as strike fever. But the leaders should know better. Leaders who speak glibly of "paralyzing" an entire industry only too often succeed in "paralyzing" the organized strength of their followers for years to come.

In his first report on Egypt, Lord Kitchener remarks that "calm and well-considered interest in political affairs is good for both the governed and those who rule." But the soldier now in charge of the English representation in Egypt has scant patience with interest in political affairs which is not "calm" enough to suit him. Mr. Wilfrid Blunt, whose zeal and information in all that relates to the modern movement in Egypt are well known, writes a long letter to the Manchester *Guardian*, giving case after case of prosecution of Nationalist newspapers and the fining and imprisoning of their editors for offences which in England would be no offences at all. Kitchener has revived an obsolete press law, dating from 1881—a law then proclaimed by decree at the time of the Arabi rebellion, though never really put in force even then. It enables judges to proceed summarily against publications or speeches which express "contempt of the Government," or "incite to hatred of the Government." These are dangerously vague phrases. Fancy their being used against Conservative newspapers in England! The jails would be filled with Tory editors. But Kitchener has made use of this authority to proceed remorselessly against the Nationalist press in Egypt, having gone so far as to prohibit the "entrance, circulation, and sale" of the little English monthly, *Egypt*. The latter's chief offence was copying an article from the *Fortnightly Review*, which purported to give on authority Lord Kitchener's views on the ultimate aims of English policy in Egypt. Yet the *Fortnightly* itself circulates as freely as before. This kind of military censorship is only one of the evils which might be expected to arise from putting a soldier in power in a country where a strong national movement is seeking to make itself felt.

Anatole Leroy-Beaulieu, who died in Paris on Sunday, was an eminent example of the publicist, a type which was once upon a time better known in this country than it is to-day, but which we are now in the process of rediscovering. Anatole Leroy-Beaulieu was not so great a scholar in any one field as his famous brother, Pierre Paul, founder and editor of *L'Economiste Français*, was in his own. But the list of his works shows an extraordinary range of interests, and, in particular, the social questions of his own time and his own country had in him an indefatigable student. He was one of the little band of Frenchmen who, just about thirty years ago, took up the task of bringing the Russian people to the attention of Europe. In his "Empire of the Czars" and "A Russian Statesman" he did for the political and social life of Russia what the Vicomte de Vogüe did for Russian literature two or three years later. And to the present day his studies of Russia have remained, with Mackenzie Wallace's masterly book, the authoritative treatises on the subject. They represent the scholarly side of his life's work. On the publicist side we find him discussing the subject of church and religion in the modern state, as affected by such contemporary phenomena as anti-clericalism, Socialism, and anti-Semitism. The manifold aspects of democratic and social evolution have been examined by him from the standpoint of enlightened liberalism.

THE NEGRO DELEGATES.

The part played by the negro delegates at Chicago has been altogether deplorable. Every known temptation was put in their way to win them from their allegiance to the President, and the pressure brought to bear upon them by those of their own color was probably without precedent. It was not necessary for the delegates whose affidavits have been printed to assure the public that money was being offered. That is unfortunately a characteristic happening at every National Convention of the Republican party. It was, however, an unusual and a discouraging spectacle to find so eloquent and able a leader of his people as the Rev. Reverdy C. Ransom openly urging the negro delegates to break faith on the ground that Taft broke faith with them.

But the responsibility for this deplorable situation, which is bound to work great harm to the colored people as a whole, lies chiefly with the white Republican politicians. For more than forty years their money has corrupted the negro politician. Every four years the "stranger from the North" has gone South with his bag of money, or his flattery, or his promise of offices and what not, and the negroes have as readily yielded to the bribes offered as have the white men of Adams County, Ohio, in years past. In the South they have known no other way of doing things; the whole machine is a bogus one; the very delegates to Chicago may not be allowed to cast their votes at home. Yet the Southern negro clings to this Republican office-broking with an intensity which few not members of the race can understand; this not merely because of the money to be obtained and the offices to be gained. For it is often the only evidence they have down there that there is a Government at Washington, save for an occasional Federal grand jury, with its indictments for peonage. There are millions of men who are forbidden to take part in their own government in any other way. They cannot vote at school elections, nor pass upon bond issues, nor regulate their own taxes and assessments, nor help to choose their local or State officials. They have many aspiring leaders, and office of any kind, whether in a fraternal organization or in a life insurance company, bulks twice as large to them as to a white man with his greater opportunities. Hence participation in a National Convention or the holding of a Federal job in the South is one of the chief ambitions to the realization of which a colored man may aspire.

When, therefore, Mr. Taft announced his policy not to appoint a negro to office in a community which did not like such appointment, the whole colored race was chilled. It is easy enough to get a Southern white man to protest against any negro appointment, and the natural result has been that there are fewer negro officeholders in the South than since the war, whereas Mr. Roosevelt was particularly generous in this respect. Even officeholders in the internal revenue service—in one case, in Alabama, the man had done satisfactory work for more than thirty years—have not been reappointed during the Taft Administration. To the race this has seemed treason; so have the President's silence in the matter of lynchings, until the beginning of his campaign, and the Wilberforce statement—which has been interpreted as meaning that Mr. Taft believed that all education should be "Jim-Crowed." Then Mr. Taft promised to make J. C. Napier of Nashville Treasurer of the United States, only to change his mind later and give the place to a white man. That would have been the highest office ever held by a negro, and the disappointment was not overcome when Mr. Napier was made Register of the Treasury. When Mr. Taft thought of appointing Judge Hook, co-author of a Jim-Crow decision, to the Supreme Court, his own "black Cabinet" revolted and told him frankly that if he did so no colored man would be found to speak for him in the campaign. Events are showing that they were not exaggerating the dissatisfaction of their people.

As for Mr. Roosevelt, at the time of the Brownsville incident this volatile race was more indignant with him than it is to-day with Taft. But such intense emotions do not last long with either race, and Brownsville is being forgotten to-day in the memory of many straightforward and manly utterances and actions of Mr. Roosevelt in regard to the colored people. Just as he won back the white South after the Booker Washington luncheon incident—something most people believed wholly impossible—so he has won back the colored people as a whole. Of that there can be no doubt, any more than one can question a change of attitude in a part of Wall Street. It has ever been Mr. Roosevelt's luck to lose supporters and win them again in amazing fashion. His followers have even had the audacity to shoulder on Mr. Taft the Brownsville affair, though it has long been known to many people that Mr. Taft almost resigned as Secretary of War because of it. But he and Mr. Root are now paying dearly for their having compromised with their consciences so often for the sake of "holding Mr. Roosevelt down" during the last two or three years of his Administration, and thereby vouching in their own persons, as it were, for the mythical Roosevelt, who never existed.

All of this in no wise makes better the situation of the negroes in Chicago. Every well-wisher of the race can only hope that four years hence the evils of the Southern Republican misrepresentation will be done away with, and thereby the stream of corruption dammed at its source.

EXPLAINING WISCONSIN.

It is apparently as impossible to write about Wisconsin without indulging in superlatives, as it is, according to the story, to tell the truth about the Colorado climate without lying. The most recent book upon the subject, Frederic C. Howe's "Wisconsin: An Experiment in Democracy," is in this respect like those that have preceded it. "Wisconsin," he declares, "has become the most efficient commonwealth in the Union." "Scientific thoroughness characterizes politics" in Wisconsin "as in no other place in America." "Wisconsin has bred a spirit of service that is unique." In the dairy industry, it is the Denmark of America; in cattle breeding, it is our Island of Guernsey. One qualification Mr. Howe is forced to make: "Wisconsin has carried democracy farther than any State save Oregon." But even this limitation does not deprive that commonwealth of the honor of having been the pioneer in instituting reforms, or of its place now as "an experiment station for America." And yet twenty years ago "Wisconsin was not unlike Pennsylvania, New York, Ohio, Indiana, or Illinois." That is, it was ruled by bosses. "The biennial session of the Legislature was a carnival of legisla-

tion for the benefit of the few." Politics was "a privileged trade, into which ambitious men entered only when approved by the State machine." The press was muzzled or indifferent. "There was no organized protest."

What has brought about the revolution? Mr. Howe thinks the explanation is simple. Representative government had been made almost impossible by the complications of its machinery, by the division of responsibility. And so Wisconsin, first achieving her freedom by the passage of the direct primary law, has merely substituted democracy for oligarchy. Following the establishment of the primary, there has come a psychological change, not only in Wisconsin, but in the nation as well, that has sadly puzzled the old-time politician and confirmed his downfall. This explanation, however, leaves one wondering rather than satisfied. It is as if you were to ask a man who was no longer in bondage how he became free, and he were to reply: "When I had once thrown off the shackles, the rest was easy." How did Wisconsin get the direct primary? It must have been obtained under those very complications of political machinery and divided responsibility that Mr. Howe charges with corrupting Wisconsin for a quarter of a century preceding its adoption.

The answer may be given in Mr. Howe's own words early in his story: "Robert M. La Follette challenged this system almost immediately after he graduated from the University of Wisconsin." Not a law, then, not even an outraged people, was the primal force behind the blow that freed a State. It was a man. Nowhere is this more conclusively proved than in the pages from which we have been quoting. In 1894, for instance, La Follette "cast about for a candidate for Governor." In this search he sent out fifteen hundred personal letters requesting an expression of opinion on the candidacy of a certain one of his colleagues in Congress. The response was so satisfactory that the Representative consented to be a candidate, although he knew that it probably meant the permanent sacrifice of his seat at Washington. What followed?

For six weeks the lights were rarely permitted to go out in La Follette's office. He slept on the floor with his law books for a pillow, and, with dynamo-like energy, forced the fighting all over the State. Haugen was defeated, but the little band of delegates nominated every other candidate on the ticket.

Six years later, after a series of defeats, first for both his platform and himself, and then for himself but not for his platform, La Follette was elected Governor by a plurality of 100,000, and the primary law became a reality.

Thus it was not the primary that freed Wisconsin, but a freed Wisconsin that forged the weapon of the primary for more effectively defending its freedom. A similar programme has been carried out in "conservative" New York and New Jersey. In all this Mr. Howe, like many another, stands up stoutly for the people. "The people were honest, but those whom they chose to represent them at the convention betrayed their instructions." "Wisconsin assumed that the trouble with our politics is not with our people, but with the machinery with which the people work." But it was the same people, working with the same machinery, that in Wisconsin elected a Sawyer and a La Follette, in New Jersey a Smith and a Wilson, in New York an Odell and a Hughes. The only difference upon which one can put one's finger is the absence of a leader in the first part of each of these cases, and his presence in the second. As if to complete the demonstration, it is Wisconsin's perfected machinery that sent Stephenson to the Senate. This is no argument against improving the machinery, but it is something like proof that, without leadership, democracy is helpless. No matter what the obstacles, a determined leader at the head of a people he has aroused can surmount them. It is the business of the people to make the work of the leader, when he does appear, as easy as possible. And a tendency to lapse into apathy, and so to impose upon him as his initial task the awakening of the individuals for whom he is struggling, is hardly consistent with extravagant praise of our capacity for self-government.

KEEPING OUR MORAL BEARINGS.

Mr. Roosevelt's coming out for nation-wide woman suffrage has its amusing aspects. This is an issue in which, until very recently, he could take no interest whatever. He said that it left him "lukewarm"—though it seemed impossible that a man always intensely cold or fiercely hot could be that on any subject. But he showed the zeal of a late convert, and was to include a suffrage plank in the platform to be urged by him at Chicago. Into the motives for his change of front it is not necessary to inquire too closely. That it is an immensely significant change needs no arguing. What immediately interests us is the question which his sudden taking up of the cause raises, in much the same fashion as it was raised by the action of the social reformers in seeking Mr. Roosevelt's aid a week or more ago. That question is how far we are justified in accepting help politically from a man whose methods we abhor and whose character we thoroughly distrust.

The matter of the suffrage for women, now given Mr. Roosevelt's full endorsement, does not present the moral alternatives in their sharpest form. Here is a question of general public policy. Advocates of giving the ballot to women have not declined aid from politicians whom in general they condemned and opposed. They did not draw the line at Senator Sullivan, so why should they at Col. Roosevelt? There is no reason why they should if throughout they make certain moral distinctions. Accepting the vote of a Sullivan did not mean that they were ready to pardon Tammany, or to do anything but go on fighting it; nor did it mean that they cherished anything but indignation at the means by which the Sullivans had built up political power. And in a similar way suffragists may hail Mr. Roosevelt's conversion, provided always that they retain and express their clear moral judgment of the man.

This suggests the weakness of the position of the social reformers, whose flocking to Mr. Roosevelt we have mentioned. They were concerned, not with a party or political question, but with matters which go deep into the life and morals of our whole society. From their lips the words "right" and "justice" are all the while falling. They are bent on remedying great wrongs, and bringing in an era when truth and righteousness shall rule. Yet they were putting themselves in the hands of a man whom many of them in their hearts believe to be without either truth or righteousness. Some of them confess that they cannot escape the conviction that he has been crooked, but the appalling thing is that they say they do not care so long as they can get him to

array himself on the side of what they believe to be social justice. They are willing, too, to conceal their real opinion of him, and to flatter and aid him, if only he can be got to help in the work they feel to be so urgent.

Now, what is this except to import into a movement of the gravest public concern the doctrine that you are bound to win by fair means or foul? Is it not to snuff out those moral judgments which ought to be the light of all our seeing? Consider what it signifies. We are to strive for social justice. If that means anything, it means erecting the spirit of unselfishness into a rule of conduct. But to help set up that rule, we put ourselves under the command of a man whose unscrupulous self-seeking has been life-long! Social justice, if it means anything, means honesty between man and man, fidelity to promises, loyalty to friends. How can it possibly be promoted by a leader who has a long record of trickiness, falsity, and treachery? We have to get down to fundamentals in all these affairs. It is necessary to sit at the feet of the poets and the prophets, the sages and the saints, in order to keep our moral bearings. We cannot look upon evil and say to it, Be thou my good. "Doth a fountain send forth at the same place sweet water and bitter?"

We are well aware that all these questions are complex and full of difficulty. But there are certain things to which we know that we must hold. We must not deify success. It will never do to say that the man who "does things" is the man for us, no matter how he does them, for that would put Theodore Roosevelt into exactly the same category with Richard Croker. We have got to stick to principles even in politics. Property may be surrendered and even life itself given up, but morality must not be called upon to abdicate its throne. It is true that the wrath of man may be overruled to the praise of God, but that is no justification for confusing human wickedness with virtue. A sure word of guidance in all these matters of moral perplexity concerning public men and movements was uttered by the prince of political philosophers when he said: "There is no safety for honest men but by believing all possible evil of evil men, and by acting with promptitude, decision, and steadiness on that belief." He added that in the case of men whom we know to be wicked, "their fair pretences become new motives for distrust."

THE LOVE OF GOOD WRITING.

The recent birthday of Thomas Hardy—his seventy-second—was signalized by the presentation to him of the gold medal of the Royal Society of Literature. By its charter, dating from 1823, that society has among its aims the recognition and encouragement of good literature by public awards, and of these the gold medal is the most distinguished. It has been bestowed only fifteen times in all. Among Mr. Hardy's predecessors in receiving the honor are Walter Scott, Washington Irving, and George Meredith. In accepting it, Mr. Hardy remarked that he was rather an old boy to get a medal, and that, unfortunately, he had no boy of his own to whom to pass it on. He added that the distinction was one which he could not fail to value, but he had been led to wonder "whether prizes of some kind could not be offered to makers of literature earlier in life to urge them to further efforts."

The sort of efforts Mr. Hardy had in mind he proceeded to indicate by dwelling on the need of keeping alive a taste for "real literature." In the very spread of the reading habit, he saw a growing danger that such a taste might be lost. Millions are learning to read, but few are acquiring the power to discriminate in their reading. Mr. Hardy did not refer so much to the substance of books as to their form. He perceives a marked deterioration in style. As he looks over the field of current publishing, he sees "an appalling increase every day in slipshod writing that would not have been tolerated for one moment a hundred years ago." He adduced the familiar causes. There is the vast amount of "hurried" writing in the press. There is, of course, the American literary invasion—especially of American journals, "fearfully and wonderfully made"—lowering the standards of English newspapers. Indifference to literary form is gaining ground on all sides. Hence, concluded Mr. Hardy, "every kind of reward which urges omnivorous readers and incipient writers towards appreciating the splendors of English undefiled, and the desire of producing such for themselves, is of immense value."

By itself, this sounds futile. Prizes alone have little creative power in literature. In France the "Grand Prix" for a literary work of lofty idealism has not always found a worthy recipient. The similar Nobel prize has a range as wide as the civilized world, and it has been fittingly bestowed, but it remains more a recognition of mature genius than a stimulus to budding talent. Of this Mr. Hardy is naturally aware, and in the short address which he made at the time of his being presented with the gold medal, he did not fail to indicate the need of appealing to the conscience and the artistic honor of the literary craftsman. Deeper than the joy of rapid production and of ephemeral popular appreciation is the satisfaction which springs from good work. The writer must somehow be got to put an ideal before him, and to labor unceasingly for at least some approximation to it. William Morris once spoke of the "grin of delight" which comes to the true artist, whether in language or some other medium, when he perceives that he has come somewhere near attaining the form he was striving for. These inner joys must be put by the literary worker above any species of outward reward if we are really to get the genuine and lasting motive for the production of good writing.

One counsel which Mr. Hardy gave will strike some ears oddly. He said that the shortest way to good prose is by the route of good verse. What he meant was that the best poets seek not only beauty of phrase but precision and delicate accuracy in the use of words. The test would be to take any fine line of poetry, strike off the fetters of rhyme or melody which seem to bind the poet, and then see if you can express his thought more freely or exactly in other language. It will usually be found that the words selected are the only ones in which the idea intended can be best conveyed. Poetry is dead, we are often told. In the suit which Winston Churchill recently brought in London against a publisher for having printed a poetical libel on him, the defence—or apology, for the libel was admitted—was that the editor had not read the verses before printing them, carefully enough to detect the offensive lines. Thereupon, the presiding Judge, the well-known wit of the bench, Justice Darling, remarked that he had often heard that nobody read poetry nowadays, but that he did

not know that things had got so bad that even editors did not read the verse they printed. Poetry will undoubtedly take care of itself, in the long run. Paradoxically, the world never thirsted more for a great poet than at the very time when it seems to have none. But Mr. Hardy's suggestion—for which, of course, he did not claim originality—of the use of the finest poetry as a medium for training in the best prose, may serve as one argument more for clinging to the reading of the great poets. The chief hope that love for good writing may be preserved lies in the conviction that, in the end, the best literature will vindicate itself, that low and crude taste will be converted into a longing for something better than the husks upon which the swine do feed. In a word, the basis of confidence in the future of pure literature is that, in the circulation of books, contrary to the law which governs the circulation of different kinds of currency, the bad does not drive out the good, but the reverse.

THE JEWISH RACE.

The interest in race distinctions is as old as humanity, but not until the middle of the nineteenth century was a systematic effort made to place these distinctions on a scientific basis. Gobineau's "Essai sur l'inégalité des races humaines" was the first attempt to study the subject historically. Starting with the assumption of the inequality of races, he adopted a division into strong and feeble races and endeavored to prove that all the great achievements of mankind were traceable to the one supreme race, the white. This may be said to have been the origin of the political race theory. Since then the natural sciences have been enlisted, largely in the interest of factional and mischievous theories, to point the contrast between the predominant white race—variously called the Aryan, or Indo-European, Indo-Germanic, Indo-Celtic—and the inferior Semitic race. Anthropology was supposed to have demonstrated not only the diversity of cardinal racial types, but their fixity from the dawn of history. Gradually, disinterested scholars began to express doubts as to the infallibility of such conclusions, foremost among them Professor von Luschan, director of the Berlin Anthropological Museum. But in dealing with those who for purposes of their own turn superficial race differences into conclusive arguments in favor of race prejudice, the scientist is at a disadvantage. The lessons of anthropology avail little in the face of antagonisms which would array not only Aryan against Semite, but white against black and yellow, Germans against Latins and Slavs, Briton against Teuton, etc. To grapple, therefore, with race problems requires an investigator of unusual equipment, of varied knowledge in many fields, of sound judgment, and conspicuous fairness in argument. These qualities are found united in the author of a recent German work on "The Race Problem."*

I.

Dr. Ignaz Zollschan has furnished in his treatise a model of dispassionate discussion of a most complicated question. A man of vast learning, who has seen many lands and studied many peoples, he approaches his subject well armed as an anthropologist, historian, philosopher, and sociologist. Let us see, he says, what basis there is for the belief in the existence of an Aryan race, for the assumption that other nations are inferior to the Germanic stock, what justification for race prejudice in general and anti-Semitic prejudice in particular. Having summed up the arguments of the most prominent spokesmen of race superiority and race prejudice, he answers them quietly, with an array of incontrovertible facts and with irresistible logic. The salient points of his thesis may be summed up as follows.

When Friedrich Schlegel, in 1808, first discovered certain resemblances between the languages spoken in India and those of the Germanic countries, he proposed for this group the name of Indo-Germanic languages. In the enthusiasm engendered by this discovery, it was at once assumed that a new light had been shed on racial relationship and the origin of modern civilization. Science, not least of all philology, soon made short work of this assumption. Max Müller, originally an ardent supporter of the Aryan race theory, later on held an ethnologist who spoke of an Aryan race, of Aryan blood, etc., to be as great a sinner as a philologist who spoke of a dolichocephalic dictionary or a brachycephalic grammar. Similarly, Robert Hartmann and other eminent anthropologists of a later day looked upon the doctrine of an Aryan race as a mere figment of the imagination. With the appearance, in 1884, of Otto Schrader's "Sprachvergleichung und Urgeschichte" and Penka's "Origines Ariacæ," the Aryan question entered upon a new phase. Scholars turned their inquiries to the probable birthplace of the Aryans and their physical prototype. The discovery was made that their aboriginal home was identical with the land whence sprang the Germanic peoples, and hence it was argued that the Aryans were in their origin a blond Northern type, from which flowed the Aryan languages and Aryan civilization. This type, it was conjectured, left its mark, through migration and intermarriage, upon other races, erroneously called Aryan, though with little of the blood of the blond race in their veins. With such reasoning the theory of the superiority of the Germanic race was established. Woltmann, starting from this basis, maintained that, since the Renaissance, all the important scholars and artists in the Romanic countries had been of Germanic descent, and Chamberlain, applying the theory to the Jews, argued that all their great achievements emanated from the fair-haired original components of their race, that is to say, from the "Indo-Germanic" Amorites.

The German type, however, as Hertz says, in his book on "Moderne Rassentheorien," has maintained itself in its greatest purity among the Scandinavians, who by no means represent the highest development of Germanic culture. The aristocracy of Germany preserves the racial type more clearly than the rest of the population. Yet German genius is recruited almost exclusively from the lower classes, whose supposed race characteristics are far less marked. The centre of Germanic culture is not in fair-haired dolichocephalic Pomerania, but in darker-haired, brachycephalic Swabia and Franconia. These facts have their bearing on the problem of the Jewish race. There has been for two thousand years no Jewish nation. Leading ethnologists are agreed that the Jews of Western Europe are merely Germans, Frenchmen, Englishmen, or Portuguese of the Mosaic faith. Anthropologists, again, foremost among them authorities like Luschan, distinguish among the Jews three different types, the unmistakably Semitic, the possibly Aryan Amorite, and the Hittite type. To these elements must be added the admixtures resulting from a diaspora of several thousand years. The Dührings and Chamberlains, however, conveniently recognize only the higher, Sephardic (Spanish), and the lower, Ashkenazic (German-Polish) types, which serve all their purposes in characterizing Jewish traits. That the Jews of the present day exhibit, in overwhelming numbers, as regards the shape of the head, characteristics opposite to those of the Semitic type; in other words, that they are brachycephalic and not dolichocephalic, is an anthropological fact of which Chamberlain takes account only in order to find support for his craniological vagaries. A long head is to him and his school the *conditio sine quâ non* of all manner of genius. Given that, and Rameses becomes a Germanic progenitor of the purest type.

Every dogmatic inference from prevailing race theories leads, in its application, to inevitable fallacies, for there

*Das Rassenproblem. Unter besonderer Berücksichtigung der theoretischen Grundlagen der jüdischen Rassenfrage. Von Dr. Ignaz Zollschan. Wien: Wilhelm Braumüller.

is no agreement among scholars as to what constitutes a race. Cuvier recognized only three races, Linnæus four, Blumenbach five, Kollmann speaks of eighteen, Haeckel of thirty-four, etc. All rules of race classification, based on skull measurements, on deductions from the color of the hair and eyes, from pigment and tissues, etc., must take account of the frequent exceptions presented by every race. Racial interrelations are as numerous as racial differences. As between white and dark types, the lines of anthropological and genealogical demarcation are often blurred. On the other hand, as Huxley has shown, isolation and one-sided development along uninterrupted lines, may lead in the case of the black Bantus of Africa to an extreme prevalence of pigment, and in the case of the fair-skinned peoples of Northern Europe to extreme lack of it. In the face of such perplexities it becomes hazardous to speak of a characteristically Jewish type. As to the prevalence, however, of certain emotional traits, observed by Zollschan among the Jews of four continents, he is in agreement with other investigators, though explanations of the fact vary. According to Ripley, the general Jewish type of to-day presents almost everywhere direct evidence of intermingling with surrounding races, and he, like Zollschan, regards sexual selection as potent among the influences that have left their imprint upon the Jewish physiognomy.

II.

The Aryan theory, like other race theories, started with the assumption of the existence of superior and inferior races. It involved a juxtaposition of Eastern and Western, ancient and modern civilizations. The German propounders of the theory were at first willing to share in the triumphs of England, in the material successes of the United States, but from the superiority of the Germanic races there was but one step to the gospel of the superiority of Germany. German love of freedom, and German loyalty are, according to Chamberlain, at the foundation of the Germanic character. But we need only open the pages of so stanch a Teuton as Felix Dahn, to learn that these qualities were not always a German characteristic. Arminius himself was guilty of one of the most flagrant violations of faith in all history. The Franks, according to early chroniclers, were emphatically a "slippery and false" people (*lubrica fallaxque*). The history of the Longobards, Burgundians, and Thuringians recks, as Dahn, says, with murder, regicide, and the grossest immorality. Nor were the early days of other Germanic tribes much better. According to Green, Northumbria presented a terrible picture of lawlessness and bloodshed. If, in accounting for the modifications which racial character undergoes in the course of time, we are thrown back on Buckle's theory of the influences of natural surroundings, it is clear that the jaunty assumption of Semitic immutability must fall to the ground. Even admitting the existence of psychological idiosyncracies as inherent in every race, it is absurd to conclude that any one must retain its peculiar stamp unchanged for all time. Nothing is more evident than that the modern Jew of Germany, France, England, and the United States, is, like his Christian neighbor, the product of his age and environment.

Renan's fanciful "race instinct" is in great measure responsible for the spread of anti-Semitism. Nothing was further from his mind than the brutal manifestations of the prejudice with which we are familiar; but it was a fatal lack of imagination on his part not to foresee the consequences of a philosophy of history which denied to the Semite every political, military, and administrative instinct, the epic and dramatic instinct, and even the instinct for commercialism on a large scale.

Not often has the vagary of a fine mind become so fierce a weapon in the hands of the unthinking. Linnæus's division of the world into the four "temperamental" races—the choleric American, the sanguine European, the melancholy Asiatic, and the phlegmatic African—was, in its consequences, a harmless bauble compared with the imaginings of the French scholar.

Every nation has at various times in its history exhibited characteristics which in their day were regarded as typical. Where is the lust for conquest and wealth that animated mediæval Spain, where the preëminence of Holland in science and letters? The maritime greatness of modern England, supposed to be of the very essence of the Anglo-Saxon character, was unknown before Elizabeth and Cromwell. Germany, in the period of her political impotence, produced her greatest poets. Is the idealism of the Schillers and Goethes, is Bismarck's policy of blood and iron, or is the striving for industrial supremacy typical of the Germanic race? What were the dominant racial characteristics of Germany two hundred years ago, what will they be two hundred years hence?

We look in vain for an answer to such questions. Biology has been called upon to explain supposed psychical differences of race. Were the doctrine of the continuity of the germ-plasm, which Weismann has done so much to spread, a generally accepted scientific principle, the factor of heredity in the race problem would be decisive. But as Zollschan says, not all the great men of Greece were philosophers and artists, not all great Romans generals and lawgivers; nor are all the important Frenchmen distinguished for *esprit*, all the eminent Germans, poets and thinkers. The statesmen of the East are not always Asiatic despots, the Mongolian races not invariably passive. That races who have preserved their purity, transmit their virtues and talents more readily than those of mixed blood may be theoretically true, but it would be difficult to determine the degree to which, in mixed races, the foreign element has been potent for good or evil.

III.

In the Jews we have a race whose substantial purity for two thousand years is a generally accepted fact, and whose adaptability to climatic and other environment has given them their cosmopolitan character. They are everywhere long-lived, able and energetic. In popular estimation they are the Semitic race *par excellence*. Anthropology and Assyriology agree that the Semitic and Hittite ancestors of the Jews were a race of most extraordinary vigor and intellectual ability. The Hittites were the founders of that Mesopotamian civilization which is the cradle of all modern culture. In architecture and sculpture they were the teachers of both Assyrians and Greeks. The Semites, as Professor von Luschan says, had their epic poets long before Homer and dwelt in palaces at a time when Germans lived in caves. A thousand years later all Europe thronged the Arabic seats of learning in Spain, in order to study, at their sources, mathematics and astronomy, medicine, philosophy, and history. Assyrian kings founded the first great empire the world had seen. Rome trembled before Carthage. Civilization owes to the inferior Semitic race not only many sciences, but the arts of building cities, regulating rivers, and founding libraries. Yet, Renan asserts, and Chamberlain repeats, that the Semites have created nothing positive, and that the Arabs were merely interpreters of the genius of the Greeks.

It has become the fashion to speak of the Jews as primarily a trading people. But they tilled the soil in Palestine and were artisans in the cities during the Greek diaspora. In the East and on the shores of the Mediterranean they pursued for centuries their various vocations, and only in the empire of Charlemagne, in times of primitive social conditions, did they begin to fill a vacant place in the state and turn to trade. To this day, in the Slavic countries of Eastern Europe, artisans and factory hands are recruited from the ranks of the Jews. The textile laborers of Lodz, the Manchester of Russian Poland, as well as the miners of Boryslaw, in Galicia, are almost exclusively Jews. When, a few years ago, the Jews began to emigrate from Rumania, the building industries of Bucharest and Jassy came to a standstill, because it was almost impossible to find Christian masons and

roofers. In Odessa Jews are porters, in Salonichi dock laborers and boatmen, in Arabic countries they are armorers. During the later period of the Roman Empire the Jews became great international merchants, and they continued so in the new Germanic kingdoms. In Marseilles, Arles, Genoa, Palermo, Naples, commerce on the largest scale was in their hands, and their ships traversed the seas as far East as China. A papal bull of the year 1213 speaks of the great Jewish commerce of Cologne. Wherever German cities arose, Jewish coöperation was welcomed. Bishop Rüdiger of Speyer wrote, in 1084: "Since I wished to make a city out of the village of Speyer, I asked the Jews to come, thinking to increase the honor of our place a thousandfold by congregating Jews within its walls" (*Putavi milies amplificare honorem loci nostri, etsi Judæos colligerem*). The Archbishop of Cologne, in 1252, says that "it would conduce not a little to the prosperity and honor of our see" if the Jews were to submit to his rule. Imperial decrees acknowledged that the social position of the Jews corresponded to their commercial importance. They were singled out, as a superior class, in an edict of Charles the Bald; Charlemagne sent a Jewish ambassador to the Caliph; in an Imperial decree of 1074 (*Judæis et ceteris Vormatiensis*) the Jews of Worms were praised as models of all virtues. It was largely commercial rivalry and envy that later on led to a revulsion of feeling towards them, though religious hatred quickly intensified the prejudice. The Jewish persecutions of the Middle Ages characteristically started in the large cities which Jewish enterprise had so largely helped to develop.

IV.

In estimating the ethical and intellectual significance of Judaism, Dr. Zollschan ranges himself on the side of those who, while seeing the good in every race, do not concede superiority to any one. None, in their opinion, may lay claim to the principal share in the sum total of human achievement. Temperate, throughout his argument, in the defence of the Jewish race against anti-Semitic prejudice, Zollschan concludes with a plea for the preservation of the cultural potency of the Jews. Race purity he considers the essential factor in race efficiency. While specific racial gifts are not necessarily inherited by the individual, the general racial quota of endowment is, in his opinion, fixed, and ought not to be endangered by race intermixture.

It must be admitted that, in thus finally insisting upon race purity, Dr. Zollschan departs somewhat from his main argument. Nor is his plea in full accord with the views of scientists, who, like Humboldt, have expressed a belief in the variability of racial traits, particularly of mental and moral endowments, aside from the question of race purity. Friedrich Ratzel is similarly skeptical with regard to the possibility of drawing hard and fast racial lines. Race purity, according to such thinkers, does not necessarily involve the unimpaired maintenance of those physical and mental characteristics which we have become accustomed to consider typical. Prof. Franz Boas, among others, has said that anthropology does not sustain the pride of European nations who like to boast of their race purity.

Considerations of space prevent us from entering into a discussion of the means by which Dr. Zollschan would wish to perpetuate the purity of the Jewish race. Evidently he sees in Zionism an ideal which tends towards this aim, but he is too cautious a reasoner to commit himself to definite methods of rebuilding the Jewish state. His prognostications as to the future of the Jewish race are, however, exceedingly sombre. He regards the increasing frequency in all civilized countries—including the United States—of intermarriages between Jews and Gentiles as an ominous sign of the inevitable submergence of the race. In the words of an eminent scientist, Prof. Edward Suess of Vienna, who is in full sympathy with the author's main thesis, Dr. Zollschan shows

how in the East of Europe a portion of the Jewish race, hemmed in by persecution and unjust laws, wastes away in hopeless misery, while in the West, free from fetters, it surrenders, step by step, with the last vestige of its language, all its historic characteristics until its individual remnants shall disappear in the world's currents.

GUSTAV POLLAK.

NEWS FOR BIBLIOPHILES.

Horace advised that poems should be restrained from publication by their authors for a period of nine years, but he would probably not have offered such a counsel of abstinence to the preachers of funeral sermons if he had been acquainted with that melancholy section of literature. Yet one instance there is where a sermon preached in 1608 was not printed until eight years later. There is a certain picturesque and pathetic interest attaching to this In Memoriam oration. Although there are two copies in the British Museum, the tract is now a rare one, and deserves a fuller notice than the meagre entry in the catalogue of a national library of England. The mere title page is noteworthy:

A
SERMON
PREACHED AT
CONSTANTINOPLE, in the
Vines of PERAH, at the Funerall of the vertuous and admired
LADY ANNE GLOVER, sometime Wife to the Honourable Knight Sir Thomas Glover, and then Ambassadour ordinary for his Maiesty of Great Britaine, in the Port of the Great Turke.

By WILLIAM FORDE *Bachelour in Diuinitie, and lately Preacher to the Right Honourable Ambassadour, and the rest of the English Nation resident there.*

Of { Death. / Teares. } Of { Pilgrimage. / The Graue. }

London,
Printed by EDWARD GRIFFIN for *Francis Constable,* and are to be sold at his shop at the white Lyon, oeur against the great North doore of *Saint Paules. Anno. Dom.* 1616. Sm. 4to pp. [S.] 82.

George Sandys in the "Travels" that began in 1610, speaks very handsomely of Sir. Thomas Glover: "For this place none can be more sufficient; expert in their language, and by a long experience in their nature and practices; being moreover of such a spirit as not to be daunted. And surely his chiefest fault hath been his misfortune; in the two violent, chargeable and successless soliciting of the restitution of the Prince of Moldavia (whom adversity hath rather made crafty than honest); whose house doth harbour both him and his dependents; being open to all of our nation: a sanctuary for poor Christian slaves that secretly fly hither, whom he causeth to be conveyed into other countries, and redeemeth not a few with his own money." Sandys was the guest of Sir Thomas for nearly four months in his house at the Vines of Pera.*

The reference to Glover's patronage of a Prince of Moldavia is perhaps explained by another passage in Nabbes's "Continuation" (p. 1385), where he details the career of Gasparo Gratsiani, a native of Gratz. At Constantinople he entered the service of Glover, with whom he came to England and then was employed in arranging the ransom of Sir Thomas Sherley. When at Venice with that notable person he heard that Glover was appointed Ambassador; he returned to Constantinople and was employed in the exchange of captives. He attracted the notice of the Sultan, who made him Vayvod of Moldavia; later falling into disgrace, he was ordered to be strangled, but the force sent to execute him was cut to pieces by the men of Gasparo, who kept up a guerrilla warfare against the Turk.

Before Glover was appointed Ambassador, he was secretary to the Embassy, and in 1596 wrote an account of the journey of Sir Edward Barton, the then ambassador, who accompanied the Sultan in his expedition against Agria in Hungary. This is printed by Purchas, who observes:

If any think it ill that a Christian Ambassador should accompany the Turk in this war against Christendom, they may please to understand that his intents were to do service to the Christians, if occasion were offered for peace; as also he did in delivery of the Emperor's servants.

Glover was knighted at Hampton Court

*See the new edition of "Purchas his Pilgrimes," Vol. VIII, p. 110, 259, 304. For an anecdote of a rascally friar to whom Sir Thomas Glover had been a benefactor and who tried to repay good with evil Sandys's "Travels" (1658), p. 67, may be consulted. Another anecdote in which Glover's name is mentioned is one in which an English merchant seeking redress for the rifling of his ship is met by a denial of the fact, and establishes his case by bribing a Moslem to perjury. This in the eyes of Nabbes shows the corruption of the Turks in taking false oaths for money. But he is silent as to the Christian suborner. (See continuation of Knolles, anno 1610.)

in 1606. There were two Thomas Glovers knighted by James I. The future ambassador appears to have been the grandson of John Glover of Mancetter, who was the brother of Robert Glover, the Protestant martyr burned to death at Coventry (Notes and Queries, 3d S. I., p. 192). Nabbes, in his continuation of Knolles's "General Historie of the Turkes" (1638, p. 1313) records the funeral of Lady Glover, but dates it as occurring April 14, 1612. She was buried, he says,

with very great solemnity, the like had not bin seen in that countrey since the Turks conquered Constantinople. . . . The sermon was preached in a large garden under a Cypress tree. . . . The sermon being ended, the body was carried from Pera unto the English graves, which were almost a mile from the place; it was closed in lead, and laid in a caroch covered over with black velvet, and the horses with black cloth. The Dutch Embassador, the Hungarian Agent, the French Colonell, with a great number of all nations, both men and women, followed her to her grave. The tomb was of fair marble, built four square, almost the height of a man, having an epitaph engraven thereon.

Forde declares that among his hearers there were "English, French, Dutch, German, Italian, Polish, Hungarian, Transylvanian, Molla, Wallachian, Russes, Greekes, Armenians, Bedowines, Turkes, Jewes, &c."*

The sermon is learned—and long-winded, extending to nearly seven thousand words. This must have been somewhat of a trial to the cosmopolitan horde who listened to this discourse in a tongue to most of them unknown. From the sermon, which has something of the flavor of Elizabethan English, we learn that Anne Lamb was born at Padley, in Suffolk, of lineage "ancient and worshipful," and had part of her training under Lady Croft and her daughter, Lady Wentworth. Lady Glover died November 2, 1608, after a married life of "full five years and somewhat more." Her affectionate relations with her husband and the faithful resignation with which she met her death are told with unaffected pathos. Sir Thomas died suddenly at London in May, 1625.

The sermon ends with these words:

And thus dyed Anna, as dyed Sarah; Sarah in her old age, and yet so beautifull at a hundred yeeres old, as shee was at twentie, so say the Jewish Rabbins, and Anna in her young age; and yet so wise and vertuous ate twentie yeeres, as if she had liued an hundreth. Sarah dyed in a strange countrey, farre from her kindred and parents. So did Anna from hers. . . . What remayneth now: but as Sarah was honourably buried, so Anna should be buried too. Up let us bee going.

Though Forde makes no allusion to it, the young wife may have been familiar with one tragic incident at the British Embassy. A party of Sir Thomas Glover's servants "being abroad recreating themselves" got into a squabble with some Turks, and the quarrel passed from words to deeds. A stone thrown by one of the Englishman struck a Moslem behind the ear and killed him. The Turks threatened to pull down the Ambassador's house unless the man who threw the stone was delivered up to them. This he agreed to do, and the servants were paraded for identification. The Turks unhesitatingly pointed to a man as to whom there was ample evidence that he had not left the house on the day of the encounter, but they would listen to no proof, and in the end the man was delivered up to them and hanged at the Ambassador's gate. But the most curious part of the story is that the victim confessed to the Ambassador's chaplain that when in England he had committed a malicious murder, and regarded his sentence as a punishment for this long-past crime. Such is the story told in Dr. Thomas Taylor's additions to Dr. Thomas Beard's once famous book of "The Theatre of God's Judgments" (p. 46).

THE TREATY-MAKING POWER.

TO THE EDITOR OF THE NATION:

SIR: Among the memoranda and notes of the proceedings of the Federal Convention of 1787 preserved by James Madison were a few which were retained by Mrs. Madison, and which have occasionally found their way from her descendants to the auction mart, whence the most important items have, happily, been acquired by the Government and added to the great collection of Madison MSS. In the *Nation* of August 24, 1911, I communicated certain notes of George Mason and James McHenry which had been thus acquired. At a recent sale in Philadelphia another memorandum was sold. It pertains to the subject of the treaty-making power, and shows that Madison, in common with several other members of the Convention, thought that the House of Representatives, as the direct medium for expressing the popular will, should have a voice in treaty-making, Madison's idea being that at any rate there should be such participation when the question affected national rights and boundaries.

On September 7, when the clause providing that the President, by and with the advice and consent of the Senate, should have power to make treaties, was under consideration, James Wilson moved to add after the word "Senate" the words "and House of Representatives." As treaties, he said, are to have the operation of laws, they ought to have the same sanction which laws have. Thomas Fitzsimmons, also of Pennsylvania, seconded the motion, but on the vote it was lost, only Pennsylvania and Virginia being recorded for it. Probably this evidence of the sense of the Convention prevented Madison from moving the following amendment, which he had prepared:

By J. M.

But no Treaty shall be made without the concurrence of the House of Representatives, by which the territorial boundaries of the U. S. may be contracted, or by which the common rights of *navigation* or *fishery* recognized to the U. States by the late treaty of peace, or accruing to them by virtue of the laws of nations may be abridged.

7 September 1787

The subject was then debated, but the motion does not appear to have been made.

The motion was written when the Convention was sitting, but the date and final sentence were added many years later at Madison's dictation by his brother-in-law, John C. Payne, who was his amanuensis when he prepared his journal of the debates for posthumous publication.

THE SECRET OF ROOSEVELT.

TO THE EDITOR OF THE NATION:

SIR: A lively historian of ancient Rome has recently reassured a troubled world that Mr. Roosevelt has no intention of imitating Julius Cæsar, and that the American republic is in no danger of having to beware lest it suffer harm. Foreign eyes and opinions are always more discerning than those of our own domestic Sullas, who see too many Mariuses in a budding Cæsar. Surely since the first disappointment of Roosevelt in Taft we can see timidly shaping itself from a listening hope to a vociferous ambition the third-term candidacy. The highly respectable body of citizens who have venerated the pronouncement of Washington at first scoffed at the idea of any sane man defying a well-established precedent and inviting innovation and revolution. Roosevelt has successfully dared. The third-term bogy has scared only tremulous politicians and long-faced professors of history. A candidacy which a few months ago was a preposterous joke has taken a grim turn for any wiseacre in matters political.

This is a very natural result, however, for the most adroit politician of our time has met and beaten into insensibility the others. He has known when and how to make the issue one of flesh and blood, not of abstract principles. Notwithstanding the fact that nobody can tell you what he definitely expects of Roosevelt's return to power, the singular truth is that few care or think about it. Like the modern reader of novels, we demand action in our heroes. The action may be sensational and immoral; it must be picturesque and continuous. Native endowments of temperament and mind have created Roosevelt such a hero. Mankind will credit much more in flesh than in programme, no matter how alluring the latter may be. So the masses believe in Roosevelt. Fidelity to one's word, courtesy to former friends, have become the silly graces of mollycoddles. To dare to be inconsistent and yet mock greatness has so marked the present feud that Emerson ought to tear his perfect shroud. Does anybody doubt what the next cry will be if the Republicans decline to nominate Roosevelt? Will not the people have been cheated of their choice if another is finally preferred to Roosevelt? Is not Roosevelt astute enough to see that the present discontents favor his candidacy on a third ticket without letting his ambition wait a moment?

How, therefore, is it possible for thinking men of mature years to find in the situation anything but the ceaseless goading of ambition, pronped on the one side by the superlative egotism of the man and on the other by the kindling adulation of the mob? One needs no Roman echoes to trace the cause of our discord and impending disaster. The personality of Roosevelt, the pitiable plight of Taft, the wretched manners, the threatening of the Constitution, ugly though they appear, account in no way for the situation. The cause is far deeper. America is feeling but a part of

the huge wave of mass distrust and hatred which is gathering force the world over. Socialism in Germany, syndicalism in France, riots in Belgium, commotions in England are merely symptomatic of the unbroken storm. No previous time in history matches for a moment the possibilities of this universal disturbance. The mighty duel of mass and class is before us, and the former has been singularly foiled in leaders. For a man of splendid powers and sympathy and courage what more marvellous opportunity than that of leading the downtrodden of immemorial ages into the Promised Land? And when the potentates of empires, states, and jungles have willingly sat at one's feet to learn wisdom, ought anybody to doubt that such a one is the destined leader?

That is the question. To localize the problem is to lose the inner significance. Roosevelt has scented the battle from afar, and has volunteered in the roughest riding that we are likely to behold. He has been lavish of his service hitherto, and he fronts unabashed the gravest modern war. He honestly believes that he alone can save the nations. To those who believe in the supremacy of moral law and its ability to correct industrial evils, Roosevelt is not the steadfast leader the people need. He has wrested and voiced the brute hatred of the masses. Therein lies the secret of his influence over credulous citizens. Alexander, Cæsar, and Napoleon could not have coped with this stupendous task. Can a self-appointed dictator prove anything but a fatuous failure?

THE SUPREMACY OF THE LAW.

TO THE EDITOR OF THE NATION:

SIR: Appropriately associated with Dr William C. Collar's quotation from Grover Cleveland, on "the supremacy of the law" (*Nation*, May 23), are two others which have been taken from his first "Letter of Acceptance of the Nomination for President." The first is:

We proudly call ours a government by the people. It is not such when a class is tolerated which arrogates to itself the management of public affairs, seeking to control people instead of representing them.

And the second is even more pertinent to existing conditions:

When an election to office shall be the selection by the voters of one of their number to assume for a time a public trust instead of his dedication to the profession of politics; when the holders of the ballot, quickened by a sense of duty, shall avenge truth betrayed and pledges broken, and when the suffrage shall be altogether free and uncorrupted, the full realization of a government by the people will be at hand. And of the means to this end not one would, in my judgment, be more effective than an amendment to the Constitution disqualifying the President from reëlection. . . . We recognize in the eligibility of the President for reëlection a most serious danger to that calm, deliberate, and intelligent political action which must characterize a government by the people.

It seems to me that none of us can ponder these words too attentively or too long.

A PARALLEL.

TO THE EDITOR OF THE NATION:

SIR: In reading Mr. Roosevelt's life of Gouverneur Morris, in the American Statesmen series, several passages have attracted my attention as having particular interest at the present moment. One of them seems worthy of mention, because it shows that its author has not always held and expressed his present extreme democratic views.

On page 299 of the work referred to Mr. Roosevelt gives emphatic approval to the views held by Morris as to the practical operation of our republican system. He says:

[Morris] denounced, with a fierce scorn that they richly merit, the despicable demagogues and witless fools who teach that in all cases the voice of the majority must be implicitly obeyed, and that public men have only to carry out its will, and thus "acknowledge themselves the willing instruments of folly and vice. They declare that, in order to please the people, they will, regardless alike of what conscience may dictate or reason approve, make the profligate sacrifice of public right on the altar of private interest. What more can be asked by the sternest tyrant of the most despicable slave? Creatures of this sort are the tools which usurpers employ in building despotism." Sounder and truer maxims never were uttered.

As surely as Mr. Roosevelt was right when he penned those words, so surely is he wrong now. For all this nonsense about the recall of judicial decisions, the government of the people by themselves, and so on, is simply a declaration "that in all cases the voice of the majority must be implicitly obeyed." How does he absolve himself now from that same "fierce scorn" with which he denounced other men? "For with what judgment ye judge, ye shall be judged; and with what measure ye mete, it shall be measured unto you."

MARCELINO MENÉNDEZ Y PELAYO.

TO THE EDITOR OF THE NATION:

SIR: In the death of Marcelino Menéndez y Pelayo, Spain has lost her greatest scholar and critic. It may be doubted whether, for extensive and profound knowledge of European literature, ancient and modern, he has ever had a peer. Born in 1856 at Santander, Menéndez at a very early age attracted attention by his phenomenal memory and bibliographical knowledge. His native city and the state provided him with funds to pursue his studies in Spain and abroad. At twenty-one he succeeded Amador de los Ríos as professor of Spanish literature at the University of Madrid. A grateful nation lavished honors upon him, and finally appointed him director of the National Library. In 1899 native and foreign scholars paid homage to his erudition by publishing two volumes of valuable studies in his honor. A list of his works, compiled by one of his pupils, Bonilla, fills thirty-three quarto pages, and not one study enumerated there can be neglected by students of Spanish and comparative literature. His most important works are, perhaps a "History of Heterodoxy in Spain" (1876-1881, 3 vols.), "A History of Æsthetics in Spain" (1883-1891, 14 vols.), "Horace in Spain" (1877), an Anthology of lyric poets (1890-1908, 13 vols.)—which is in fact a history of Spanish literature down to the middle of the sixteenth century—"Origins of the Novel" (1905-1910, 3 vols.) and an edition of Lope de Vega's novels (1890-1902, 13 vols.), the introductions to which are doubtless his greatest work. Material for several additional volumes was prepared, but not published. A collected edition of Menéndez y Pelayo's writings was begun some years ago by Suárez. Thus far two volumes have appeared. The first provides an altogether new introduction to his work on heterodoxy, and deals with rites in prehistoric Spain and the religious cult in Roman times. It is interesting to note that the demand for his books was unusually great. Several editions appeared of most of his works. No less than 4,000 copies of the "History of Heterodoxy" were sold in a few years. Although official duties often took him to Madrid, he was happiest in his private library at Santander. There he had gathered together a valuable collection of 40,000 volumes, bequeathed on his death to his native city. The secret of his success lay in his extensive knowledge of world literature, his keen æsthetic sense, and a charming literary style. His erudition was vast and accurate, but his almost naïve interest in literature never became disillusioned, and he wrote of books with an enthusiasm that communicated itself to the reader.

SPELLING IN COLLEGE.

TO THE EDITOR OF THE NATION:

SIR: You are always interested in things that concern the welfare of colleges. In this week's issue you have an interesting editorial headed, "Let the Pupil Rule." I should like very much to see discussed in your columns the questions which are here subjoined:

(1.) Should an applicant for admission to college, when his preparation is satisfactory in other respects, be refused admission on account of serious deficiency in spelling?

(2.) If such an applicant is admitted, conditionally or otherwise, and fails to remove the deficiency, should the college refuse to grant him a diploma at the end of his course?

The Light That Shines in Darkness: A Drama. The same. $1.20 net.

At the present time the unseemly quarrel between the widow and the

daughter of Tolstoy makes it impossible to publish more than a small portion of his very extensive literary remains. His huge "Diary," the earlier portions of which, up to the year 1900, are now in the care of the Countess Tolstoy, will probably not see the light for many years. The "artistic productions" written since 1881, of which Tolstoy had sent copies to Mr. Chertkov, but the printing of which he wished deferred until after his death, have now been published in Berlin (3 vols., Ladyschnikow Verlag), and, with important excisions caused by fear of the censorship, in Moscow (3 vols., Sytin). The volumes contain only two tales of an earlier date, "An Idyl" and "Tikhon and Malanya," which were written before 1862, in the first period of Tolstoy's literary activity.

Of these works edited by Chertkov, the greater number have appeared at the same time in English translations. For the omissions in the English version it is not easy to account. Two stories, "The Devil," which in its drastic handling of a sexual theme suggests the "Kreutzer Sonata," and "An Idyll," which treats of a rather unelevating episode of village life in a detached, impersonal fashion hard to parallel in Tolstoy's other works, may have been set aside out of regard for Puritan readers. Why other tales and fragments, quite equal in interest to some of those translated, have been omitted, it is impossible even to guess.

Of the pieces now presented to the English public, the most important are three long stories, "Hadji Murad," "Father Sergius," and "The Forged Coupon," and a drama, "The Man Who Was Dead," which are complete in plot, though not revised with the attention that Tolstoy would have liked to give them, and a drama, "The Light that Shines in Darkness," unfinished, but clear in its general action. All these works, as might be expected, are penetrated with their author's religious and social views; they are of the same type as "The Death of Ivan Ilyich" and "The Power of Darkness." Yet in several ways they enlarge our knowledge of Tolstoy's genius; they show his varied powers and the breadth of his sympathies.

In "Hadji Murad," which he wrote mainly in 1902, when recovering from a serious illness, Tolstoy tells the story of a Caucasian warrior, who deserted his leader Shamil owing to a personal grievance, and later attempted to rejoin his countrymen in their struggle for liberty. In this tale there breathes again the passion for the open air, for free movement and action, that is so important an element of Tolstoy's earlier work. The story opens with as poetic a passage as can be found in his writings. Returning home through the fragrant fields with a nosegay of blossoms, the old man attempts to pluck a crimson thistle that has been crushed by a cart wheel. The flower eludes his grasp, and, once gathered, has lost its charm. The energy and tenacity of the thistle stir Tolstoy's imagination: "And I remembered a Caucasian episode of years ago, which I had partly seen myself, partly heard of from eye-witnesses, and in part imagined." In this fierce story the moralist shows himself only in the picture of the corrupt, vain, frivolous Russian officers, and of the cruel, licentious, stupid Emperor Nicholas I.

"Father Sergius" is impressive in a different fashion. A young officer, finding that the girl whom he loves has been the mistress of the Emperor Nicholas I, becomes a monk. Humble and gentle, he refuses to seek a high station as an ecclesiastic; in his hermitage he triumphs over a temptation like that of St. Anthony. His holiness wins him fame as a healer of the sick; he begins to glory in his own powers, and succumbs to the same sin that he had before resisted. He wanders away, is "numbered among the tramps, and sent to Siberia." "There he settled down on the estate of a rich peasant, where he still lives. He works in the vegetable garden, teaches the children to read and write, and nurses the sick." By his vividness of presentation, Tolstoy has made this treatise of humility a work of art.

The same vividness raises "The Forged Coupon" to the rank of something more than a Sunday-school tract. A boy forges a coupon; the small sin brings in its train a series of robberies and murders. One of the men whose lives have been ruined by the boy's act repents, and his change of nature brings bliss to those about him. The artificial framework is filled with a series of scenes described with Tolstoy's usual naked simplicity of utterance; hardly a word of direct moralizing is intruded into the story.

In "The Man Who Was Dead" Tolstoy tells of a hopeless drunkard, who, feeling himself unworthy of his respectable wife, decides to commit suicide in order to free her from his presence. At the last moment his strength fails him, and he merely disappears, causing reports of his death to be spread abroad. His wife marries a former lover. When the secret is discovered, owing to a "blackmailing blackguard," the drunkard does his best to save the situation by actually shooting himself. The drama, with its evident sympathy for the reprobate hero, is of a moral tone not found elsewhere in Tolstoy. A speech by the weak Fedia gives the key to the play:

> In our class three courses only are open to a man: the first is to go into the Government service, to make money, and to increase the ugliness of the life round you. This was disgusting to me, or perhaps I was simply unfit for it, but disgust was the stronger motive. The second course is to destroy the ugly conditions of life. But only heroes can do that, and I am not a hero. The third issue is to drink in order to forget, to indulge in dissipation, and to sing. That was my choice—I sang, and you see what end my singing has led me to. (*He drinks.*)

Here alone Tolstoy has taken his principal character from the third class, that beloved of Gorky, and, in a different fashion, of Dostoevski; that he has been able to create a living man is a proof of his artistic sympathy.

"The Light that Shines in Darkness" is essentially a piece of autobiography, presenting Tolstoy's relations with his family after his religious conversion had made him feel the unrighteousness of private property, particularly in land. Unable to bring his wife to share his opinions, and unable himself to rise to the height of his convictions and wander forth as a religious mendicant, he first refused to have anything to do with the property that legally belonged to him, and later made it over to his wife, while he remained at home, striving to live the life of a laborer, though surrounded by a "luxury" that he detested. The ludicrous incongruity of his position, more patent to him than to any of his critics, he draws in this comic tragedy, which reads like a pendant to Molière's "Misanthrope." Alceste has married Célimène, who has laid aside her coquetry and become a devoted, if somewhat philistine, wife and mother, while he himself, from a mere critic of the follies of society, has developed into a preacher of a new religion. To leave our comparison, the hero Saryntsov is finally murdered by the mother of a young man whom he has led by his teachings to reject military service, and who has been sent to a punitive battalion. Dying, Saryntsov takes his murderer's guilt upon himself, and in his last moments realizes the true meaning of his life. This we learn from a summary of the last act; the author, who, intentionally or unintentionally, had for four acts treated his double with something like mockery, could not or would not write the dialogue that should invest him with tragic dignity. The unfinished piece is of interest chiefly to students of Tolstoy's personality. Against humorous pictures of society that have something of the comic force of "The Fruits of Culture," the religious enthusiasm of Saryntsov stands out as whimsical or even self-righteous; it may sometimes become pathetic, but is never really impressive, and wins the reader's sympathy, if at all, only through his recollection of Tolstoy's other works. Yet, feeble though the drama may be, it aids one in understanding the tragedy of Tolstoy's final flight from home. Human weakness, not hypocrisy, prevented Tolstoy from becoming

earlier a martyr to his religious scorn of modern civilization.

Taken as a whole, these volumes fill one with new respect not only for Tolstoy's religious sincerity, but for his artistic instinct. They are full of passages worthy of his greatest works, and they show new sides of his powers, but none of them has the harmony and completeness of even the slighter pieces that he himself sent forth into the world; like "Resurrection," but in a far greater degree, they are imperfectly developed fragments of great themes.

CURRENT FICTION.

The Turnstile. By A. E. W. Mason. New York: Charles Scribner's Sons.

It is no mean achievement to write a story dealing with Parliamentary life in England and escape dreariness. As it is, Mr. Mason has a close call. We are frankly tired of the young politician who storms the House of Commons. He is elected by a smashing majority. His maiden speech catches the ear of the House, not by its brilliancy, but by that indefinable "something" which reveals the strong man who knows his subject—and what he wants. He draws the attention of the Government; he is marked as a coming man; he brings forward a troublesome amendment and cuts down the Ministerial majority, and he refuses to be bribed with an Under-Secretaryship. All this is traditional. Where the author has avoided tedium is in making the Parliamentary career of his hero an interlude, though a very prolonged interlude, in a life that tends towards higher things. It is a novel idea to have a man lead an expedition to the South Pole with the sole aim of laying the foundation for a political career. But the frigid spaces of the South, wooed by Capt. Rames, in a spirit of cold calculation, develop into a grand passion before which the petty triumphs of party politics must give way. Something also must give way before the *idée fixe*, and that is the love of woman, a motive Mr. Mason has cleverly worked out. There is little in Cynthia Daventry to distinguish her from the horde of "nice" women in British fiction, and the figure of Benoliel the Jew is quite absurd. In James Challoner we have a vigorous, consistent bit of character drawing. An easy, agreeable narrative style contributes noticeably to the rapid turning of the pages.

Among the Idol-Makers. By L. P. Jacks. New York: Henry Holt & Co.

The striking trait of the modern writing Englishman is his versatility. To do one thing, and do it well, no longer suffices. That energy lauded by Mr. Bennett in "How to Live on Twenty-four Hours a Day" is a surprisingly frequent asset among his fellow-countrymen of letters. To write all the time and to write all sorts of things seem to be the chief rules. Essayists are not contented with the essay, or novelists with the novel. Philosophers take to fiction, and scholars to the drama. In general, the novel is the common meeting-ground. That grim old warrior of Positivism, Frederic Harrison, took to romance in his later years; and now Professor Jacks, the learned editor of the *Hibbert Journal*, chooses to exercise himself in the field of the short-story writer. He is at no particular pains to hide his tracks. These are undisguisedly the tales of a philosopher. We do not mean by this that they are dull, but that each of them contains an idea, and would hardly have existed but for that idea. One group of stories, "The Tragedy of Professor Denison," contains so much philosophizing that the narrative is altogether overshadowed. "The Self-Deceivers" is an account of the humors of two university dons, one a Determinist and the other a Libertarian. They are excellent friends in their private capacity, but at sword's points in all matters relating to philosophical theory. The upshot of it is that, when the test comes, each of them acts precisely as he should not if he were to practice what he seems to preach. But the difficulty of the situation is put neatly by the chronicler: "If the argument for Free-will were quite conclusive, it would make Determinists of us all. Whereas if the logic of Determinism were to triumph, we would all be compelled to embrace Free-will." Altogether the best story in the volume, as a story, is the last one, "Helen Ramsden"—in which a simple human poignancy of feeling keeps the underlying mental theme in its place. Mr. Jacks is least happy in his attempts at broad humor; they are a little conscious and school-masterish. He writes with too stiff a shoulder to be a story-teller of a high order. Nevertheless, the hand of little enjoyment hath the daintier sense; our philosopher is superior to the mere tricks of the professional short-story writer. Approached as little studies in life by a don and a lover of life, these sketches have a charm of their own.

The Fugitives. By Margaret Fletcher. New York: Longmans, Green & Co.

After carefully reading the book we are not quite sure who the fugitives are, or what they are running away from. At the start there are apparently to be three heroines, English girl students in Paris. We become more or less interested in them all, and then Elizabeth has to go home to nurse younger brothers and sisters through chicken-pox, and we hear of her no more. The rest of the book is divided between the other two. Patricia, a Catholic, becomes engaged to a supposed widower, only to find that his divorced wife is living, and to renounce him. After his wife's death they are reunited. Stéphanie, sceptical, headstrong, and proud of her independence, is brought by experience to feel the need of religion and of protection. We are not told what becomes of her. The same uncertainty prevails with regard to the men in the story. The young Polish artist who is most prominent at the beginning disappears and is rarely heard from in the latter part. Two other men, an Australian and an American, enter the story. There is no plot and of course no conclusion; only a series of loosely connected episodes. Yet in spite of these lacks the book is not uninteresting. It presents a picture, free from sensationalism, of the life of the better class of students in the Latin Quarter. In various ways it suggests a transcript from experience and perhaps its purpose is merely reminiscence. The style has both ease and point.

The Noble Rogue. By Baroness Orczy. New York: George H. Doran Co.

If a vacuum-cleaner could exercise its kindly functions through this volume, extracting the fine writing, there would remain a story improbable to the point of fable, yet a story that valiantly marches and stirringly rattles. A marriage contracted by two children, French and English, sets a ball rolling through the reign of Charles the Second, and gathering bulky material in the laws of marriage and of inheritance, the conspiracies of Titus Oates, and the gentlemanly blackguardisms of the day of the Merry Monarch. To set aside a wife who refuses to be set aside, to be at once a scoundrel and a Don Quixote, was perhaps never yet described with entire plausibility. But in reading this romance one must not question; one must spread the wings and hope for the best. As indicated, matters are made harder than they need be by the inordinate language. We do not complain of "'Sdeath! an I mistake not," nor of "By the Mass I call you right welcome." The era, or the conventional view of the era, demands it. We are not so sure that it demands "He'll quieten down anon." We do object to unbroken pages of flowery allegory spoken by a lover to his lass; and to being drawn into the dialect in the character of the plain reader. It is uncomfortable to be asked by the author, "think you" this and that; to find her saying, "O Time, why dost not stop at moments such as this?" While "Great God! Did you not know that Papa Legros had learned to love this man like he would his own son?" addressed to space as it were, shows that enthusiasm and grammar do not always go together.

PITT AND NAPOLEON.

Pitt and Napoleon: Essays and Letters. By J. Holland Rose, Litt.D. New York: The Macmillan Co. $3.50 net.

Essays on certain disputed historical questions and a considerable body of documents, which would have weighted too heavily his excellent biographies of Pitt and Napoleon, Mr. Rose has now published as a separate volume, supplementary and yet complete in itself. Only three of the essays have been previously printed—the centenary paper on "The True Significance of Trafalgar" appeared in the *Independent Review* (November, 1905), and the critical and humorous dissection of "Marbot and his Memoirs" in the *Cornhill Magazine* (July, 1906). The memoirs of Marbot he finds to be probably genuine, but "vitiated by the persistent efforts of the writer to represent himself as the chief figure in events where he was little more than an insignificant accessory." Also the vivacious and picturesque interview, part French and part English, which a certain Major Vivian had with Napoleon at Elba a few weeks before the escape, was privately published in 1839, but has long been out of print; Mr. Rose has rightly judged it to be worth printing again where it will have a wider audience. One of Napoleon's observations to Major Vivian was: "The Americans want a ten years' war to make them a nation; they at present have no noblesse which they would acquire by a war; they are now a nation of merchants as is shown in the case of the sale of Jefferson's library to the highest bidder." He also prophesied that the English would lose Canada, an ominous remark which Vivian reported to the English Cabinet, and which probably accounts in part for their anxiety to prevent Napoleon's escape to the United States.

In the graceful opening essay, "The Oratory of Pitt," Mr. Rose analyzes the wonderful qualities that gave this slender youth his power to sway and control for a quarter of a century a House of Commons which had listened to Chatham and Burke and which had vibrated also to the tones of Sheridan and Fox. He compares him favorably with Gladstone, and concludes that the great merit of Pitt's speeches was in the balance of their qualities. "They took a middle course between the Pegasus flight of Burke and the pedestrian efforts of Grenville. While his sonorous cadences satisfy the ear of the artist, his periods, like his thoughts, were rarely, if ever, too complex for the halting wits of the country squires who formed the bulk of the members."

"Was Pitt Responsible for the Quiberon Disaster?" sheds a good deal of new light on a vexed subject. Fox and the French royalists accused Pitt, and the accusation has often been repeated, of perfidiously sending French noblemen to be massacred. Sheridan, with the reckless ignorance and eager spite of a partisan, declared that though British blood had not flowed at Quiberon [which was false], yet "British honor had bled at every pore." Mr. Rose shows conclusively that Pitt's plans were reasonably wise and absolutely single-minded. The disasters which followed on the beach and in the meadow by Quiberon were due to the discord between the English admiral and the French royalist leader, Puisaye, and also between the nobility and the peasantry of the French royalists themselves. They were also due to Puisaye's military inexperience, bad judgment, and unpardonable carelessness, which were rendered all the worse by the fact that the opposing Republican commander, Hoche, was a genius second only to Napoleon; to the treachery of some of the French prisoners of war who had enrolled in the regiments for Quiberon as a means of getting back to France; to Charette, the idolized Vendean chief, who refused to bring his bands of peasants to cooperate with an untrusted noble like Puisaye, who was eating oysters on the beach when he ought to have been attacking the enemy; and, finally, to an unforeseeable and spiteful dispatch from a royalist secret committee at Paris which led astray one of Puisaye's detachments intended to assail Hoche in the rear.

As to the paper, "Did Napoleon Intend to Invade England?" we also accept the affirmative conclusion which Mr. Rose bases partly on an estimate of Napoleon's general character, his daring enthusiasm, his magnificent self-confidence, and his conviction of the value of waging offensive warfare, and partly on an examination of Napoleon's daily dispatches from 1803-05. Napoleon always regarded the Boulogne fleet as a convenient way to worry and intimidate the English and compel them to keep a large part of their fleet in the neighborhood of the Channel, and also as a valuable means of stimulating the French army, the French navy, and the whole French nation to their utmost exertion by holding out to view a glorious enterprise. But, more than this, he really did intend, at midsummer, 1804, to attempt the crossing with the assistance of the Toulon fleet; he went to Boulogne, pushed on the preparations with feverish haste, and had struck the famous medals which were to be distributed after landing and which showed him as Hercules strangling a merman, with the legend, *Descente en Angleterre: frappée à Londres*, 1804; but in September he abandoned all thought of an immediate invasion, owing to unexpected difficulties which arose at Boulogne and to the sudden death of Latouche, the commander of the Toulon fleet. In the spring of 1805, however, he returned again to his fixed resolve to attempt the crossing with the aid of Villeneuve's squadron. "If we are masters of the Straits for six hours, England is no more," he wrote to Decrès, August 4. But as Austria had meanwhile assumed a warlike attitude, he quickly developed other plans and suddenly astonished the world by his march from Boulogne to Ulm and Austerlitz. The fact that nearly all naval authorities pronounced his naval schemes impracticable, does not prove that the daring, self-confident Emperor so regarded them himself, or that he did not really intend to attempt them. Also, all his later assertions and those of Méneval, Bourrienne, and the others on this subject are of little value in comparison with the strictly contemporary evidence which Mr. Rose has so carefully sifted. Other essays discuss the British rule in Corsica, the relief of the poor under Pitt, and Napoleon's failure to understand why he lost Waterloo.

The second half of the volume contains some of the more interesting parts of Pitt's correspondence with George III, Portland, Windham, Harrowby, and others. This has hitherto been unpublished, though it was used by Mr. Rose for his life of Pitt. There are more letters to Pitt than from him. Though Pitt's letters have not the highest literary merits, they are of considerable interest as the outcome of a cultured mind and of a noble and patriotic nature. His earliest letters, of which Mr. Rose gives some interesting specimens in the first half of the volume, display the intolerable pomposity which he learned from his father. But he soon freed himself from this and adopted the simple and direct epistolary style natural to him. As he never forgot his position as Prime Minister, he never shook off entirely the cautious reserve congenial to Downing Street; and as he often preferred to trust oral rather than written communications, his correspondence rarely reveals startling secrets. We quote a single characteristic letter, which illustrates how neatly he could return a courteous and crushing answer, and which also betrays his indefensible carelessness in failing to answer, or even to read, some of his letters:

> My Lord: I received yesterday from your Lordship a paper reminding me that I had omitted to notice a former letter from you on the subject of finance. You must give me leave to observe that in such cases the *right* which your Lordship is pleased to state of being listened to will always depend, in my opinion, more on the apparent merits of the project than on the rank of the projector. I should certainly most readily have acknowledged the zeal for the public service which dictated your first letter, if, in the midst of other business, it had not inadvertently escaped me; but I own that I have not the good fortune to enter sufficiently into your ideas, as stated in either paper, to lead me to trouble you further on the subject.

A History of Witchcraft in England, from 1558 to 1718. By Wallace Notestein. Washington: American Historical Association.

This work was originally a dissertation submitted for a Yale doctorate, and still shows signs of its origin in a certain crudity of presentation and absence of coördination. It is, however, a careful piece of work, displaying much research and giving in detail and in chronological order most of the trials for witchcraft and the controversies to which they gave rise between the reigns of Queen Elizabeth and Queen Anne. To it has been awarded the Adams prize in European history by the American Historical Association, under whose auspices it is published.

After a perfunctory sketch of the earlier history, Professor Notestein goes through the most prominent cases in Elizabeth's reign and then devotes a special chapter to Reginald Scott, the author of the first attack upon the belief in witchcraft in England; though, curiously enough, he omits all reference to Shakespeare's use of Scott, which caused the book to be reprinted some few years ago by Dr. Nicholson. In dealing with James I's reply to Scott, the writer produces plausible evidence to show that the King, after the publication of his "Dæmonologie," found reason to change his views owing to several cases investigated by him, in which the fraudulent character of the supposed acts of witchcraft came to light. In the well-known case of the Lancashire witches under Charles I an interesting point is made of the intervention of William Harvey, in one instance, on the rational side.

A lengthy chapter is devoted to the career of Matthew Hopkins, the great witch-finder, whose career is central in the history of this superstition. The increased activity of the courts under the Commonwealth and the later Stuarts was possibly due to his influence. But public opinion was aroused on the right side by a whole series of writers of distinction, from Francis Osborne and Sir Robert Filmer through Hobbes and Casaubon down to Francis Hutchinson, whose historical essay, published in 1718, was the final blow to the superstition in the minds of all right-thinking men. Mr. Notestein unfortunately gives no detailed account of Hutchinson's work, which would have formed a suitable conclusion to his own treatment. It is curious to find the skeptical Glanvil a strenuous supporter of the belief in witchcraft, while Selden and Hobbes, though skeptical as to the reality of witchcraft, agreed with the then state of the law which declared that witches should be punished.

From this brief summary of the main points discussed in Mr. Notestein's essay it will be seen that he has treated all the main topics of interest, both in the trials and in the literature, during the period with which he is dealing. But it cannot be said that his treatment is at all effective considering the romantic interest surrounding his subject. Both trials and pamphlets are analyzed and discussed in the driest possible manner. He has carefully avoided the more general bearings of the matter, which he reserves for treatment elsewhere, but by thus restricting the use of his very extensive materials, he has robbed his essay of attractiveness and interest. In fairness it should be added that the book throughout shows great industry and complete command of all the literature. Elaborate appendixes at the end give lists of rare pamphlets on the subject, as well as a fairly complete chronological enumeration of the various witch trials.

Notes

W. Morgan Shuster is bringing out this month, through the Century Company, "The Strangling of Persia."

The Outing Publishing Co. has in press "The Law-Bringer," a novel of the Southwest, by Charles Alden Seltzer.

Spanish and English translations are promised of a recent work in French by the Danish historian, Mr. Bratli, on Philip II of Spain.

W. J. Henderson, the musical critic, has written a novel, "The Soul of a Tenor," which Holt will bring out in the autumn.

The same house will have ready at the end of this month a "French Grammar," by W. B. Snow, and "Elements of Geography," by Profs. Rollin D. Salisbury, Harlan H. Barrows, and Walter Sheldon Tower of the University of Chicago.

The following Dutton books will appear shortly: "Life's Chance," a searching of the Christian faith by Bishop G. H. S. Walpole; "Posthumous Essays," by John Churton Collins; "The Good Girl," a novel by Vincent O'Sullivan; "The Roll Call of Honor," being biographies of brave men and women for young readers, by Sir A. T. Quiller-Couch, and "An Introduction to the History of Life Insurance," by A. Fingland Jack.

Included in Stokes's list of books to be issued this summer are several volumes of fiction: "The Long Portage," by Harold Bindloss; "Between Two Thieves," by Richard Dehan; "Lifted Masks," by Susan Glaspell; "The Whistling Woman," by Robert Halifax; "Miss Wealthy," by Elizabeth Neff, and "The Bride's Hero," by M. P. Revere.

Houghton Mifflin Co. will publish shortly: "The Blue Wall," a novel by Richard Washburn Child; "An American Wooing," a novel by Florence Drummond; "The Loss of the SS. Titanic," by Lawrence Beesley, one of the survivors; "Direct Elections and Law-Making by Popular Vote: The Initiative, the Referendum, the Recall, Commission Government for Cities, Preferential Voting," by Edwin M. Bacon and Morrill Wyman; "The Robert Browning Centenary Celebration," a volume edited by Prof. William Knight, containing the centenary addresses delivered at Westminster College Hall, London, May 7, this year; "The People's School," by Ruth Mary Weeks; "Winter" and "The Spring of the Year," both by Dallas Lore Sharp, and "The Riverside Fifth Reader," edited by J. H. Van Sickle and others.

The Oxford University Press (Frowde) is about to publish a study by Dr. H. P. Cholmeley of John of Gaddesden, who was the first English Court physician, and of his chief work, known as the "Rosa Anglica." It was written in 1314, was first printed in 1492, and is mentioned by Chaucer. John of Gaddesden was a graduate of Oxford in arts, medicine, and theology; he died in 1361, and is supposed to have been born about 1280.

The fifth volume of "The Vulgate Version of the Arthurian Romances" (Washington: The Carnegie Institution), edited from manuscripts in the British Museum by H. Oskar Sommer, contains the concluding portion of the "Lancelot" proper—"Lancelot, le très plaisant menteur," to use the words of Clément Marot. This concluding section of the romance is generally known as the "Agravain," and it is usually found in the manuscripts entirely separate from the rest of the "Lancelot" proper. In his "Romans de la Table Ronde" Paulin Paris gave only a partial analysis of it, so that until the publication of the present volume its contents were less known than those of any other portion of the Vulgate cycle of the prose Arthurian romances. It is essentially a continuation of the "Lancelot," planned so as to connect that romance, which was already of enormous length, with the "Queste del Saint Graal." The "Agravain" is, no doubt, itself a composite work, and this probably accounts for the inequality of workmanship which it displays in different parts. The first half of the book is decidedly superior to the second half, if we except certain episodes towards the end of the volume. Perhaps the romance, as originally written, was subsequently enlarged by interpolation on an extensive scale. It will be the task of criticism—no easy one—to determine the truth about this matter, but, first of all, a collation of the text now published by Dr. Sommer, with the numerous manuscripts at Paris, will be necessary. Until such a collation is made, it is, of course, impossible to assert positively that the manuscript tradition throws no light on the problem. To be sure, there would be nothing surprising in it, if the search proved barren, for it is virtually certain that at least fifty years elapsed between the completion of the latest member of the cycle and the date of our earliest extant manuscripts. There was accordingly plenty of time for interpolated versions to supplant completely the original ones. Two more volumes will conclude Dr. Sommer's work, viz., a volume containing the "Queste del Saint Graal" and the "Mort Artu," both of which, however, unlike the "Lancelot," have already been edited, and, finally, as we understand, a volume containing a full Index of Names.

"A Chautauqua Boy in '61 and Afterward" (Small, Maynard) is a book of some 400 pages, containing the recollections of

David B. Parker of Chautauqua County, New York, who served throughout the war, and was afterwards marshal for Virginia, and for many years inspector in the Post Office Department. The stories, anecdotes, and adventures which make up the book are told in a simple, direct style; it reflects the character of the author, and at times is not without real effectiveness and charm. The first chapters, dealing with the war period, are, perhaps, the least interesting. Those dealing with Parker's service as marshal for Virginia and as inspector in the postal service are more entertaining, and probably of more value for the historian. From the account of conditions in Virginia, one may gain some sidelights on the reconstruction period, and from the later chapters much to illustrate the spirit of the generation which began that industrial development that has culminated in the problem of the "special interests." Not that the book deals directly with industrial enterprises or the methods by which "big business" was built up; but one is somehow made aware that the twenty years from 1870 to 1890 was a period when men were rather intently occupied with the material side of life, a period of intellectual and spiritual apathy, following naturally enough upon the tremendous emotional strain of the Civil War, and containing little hint of the "moral issues" which are now producing a great awakening. The accuracy of Mr. Parker's recollections it is difficult to estimate, but he had that clear-headed, precise type of mind which generally recalls things pretty much as they happened, or else not at all.

"Myths and Legends of California and the Old Southwest" (McClurg), compiled and edited by Katherine Berry Judson, is similar to the author's "Myths and Legends of Alaska" and is to be estimated by the same standard. That is to say, it is less scientific than literary. The author specifically denies any effort to make it more than a faithful and pleasant recital of certain selections from the numerous native stories of California and that region. As such, the book is to be commended. There seems to be little or no tampering, in this volume, with the original thought, and the stories consequently have much of their original color. The illustrations are not quite adequate. They are good enough reproductions of photographs, but they are mainly landscapes and neglect the people described. It is not sufficient either to speak of "Indians" in so vague and general a way as is done in the titles of some of the illustrations; for example, "Indians in the Grand Canyon" (p. 91). The tribe should be specified—in this case Navajo. And it is also important that the popular mind should learn to distinguish the numerous stocks of Amerinds as is done with other races. The picture of the "Little Basket Maker" is excellent, but it would have been more interesting and valuable if the tribe (evidently Hopi) had been stated. These are slight defects, yet they mar an otherwise admirable little book

"Readings on Parties and Elections in the United States" (Macmillan), by Chester L. Jones, is a useful and discriminating collection of extracts from formal treatises, speeches, newspaper and magazine articles, official publications, etc., illustrative of the development and present-day workings of party organizations, the convention system, Federal and State elections, the treatment of corrupt practices, and direct legislation and the recall. While a good deal of the material is, in the nature of the case, ephemeral, the book as a whole is one which the thoughtful voter, as well as the teacher and student, will find worth while. The lack of an index is to be regretted.

The Thomas Y. Crowell Co. has brought out three reading books in English history—"The Dawn of British History," by Alice Corkran, and "The Birth of England" and "From Conquest to Charter," by Estelle Ross—which are superior to anything of the sort that we have seen. The authors evince marked skill, not only in framing a straightforward narrative sufficiently full of well-chosen detail, but also in maintaining throughout a literary form which is at once simple, dignified, and attractive. The numerous illustrations in black and white, by Evelyn Paul and M. Lavars Harry, are of a high order. The books can be heartily commended to teachers and to libraries.

The Roycrofters of East Aurora, N. Y., issue in handsome form "The Long Roll," by Charles F. Johnson, a young Swede, whose Civil War diary, during two years service in the Ninth New York Volunteers, makes up the book. The author was a spirited, fairly intelligent youth, well Americanized before his enlistment. He had a knack with the pencil, the fruits of which are profusely scattered among his pages. The volume, however, contains nothing about a private's service which has not been better told before, many times over. Book-buyers must note that C. F. Johnson's "Long Roll," copyrighted by Mary S. Johnson, is not Mary Johnston's "Long Roll," the well-known novel. The coincidence is curious, and we hope not intentional.

"Social Aspects of Education" (Macmillan), by Irving King, is a plea for the conscious use of the public school as a "social centre," to bring about desirable social ends not obtained through the family life, to which the social guidance of the child is for the most part left. A large portion of the volume is devoted to the republication of extracts from various authors who have written on one phase or another of the subject, and lists of topics for further study, together with bibliographies, are appended to the various chapters.

Henry Demarest Lloyd died in 1903, just when his work was commencing to bear fruit. And already he is but a name hardly remembered by the older members of the present generation, and entirely unknown to the younger, although we are all travelling swiftly and with comparative ease upon paths in whose making he bore the pioneer's part. The historian who in the future engages in the task of tracing the beginnings of the movement which we now call the "social unrest" will find one great landmark to guide him, and that will be Lloyd's work, "Wealth against Commonwealth," which appeared in 1894. That book was the first—and, even to-day, may, perhaps, fairly be called the greatest—specimen of the "literature of exposure" in this country. It is a pity that in those days it could not receive the extraordinary publicity given only a few years later by the popular magazines to far less worthy efforts. But it should not be forgotten that Henry Demarest Lloyd showed the way. For this reason, his biography, now published by his sister ("Henry Demarest Lloyd, 1847-1903: A Biography," by Caro Lloyd, with an introduction by Charles Edward Russell; Putnam), deserves to be read by all who are fighting to-day for the common good. The tendency to idealize one's subject is, no doubt, irresistible in cases such as this. It would be an easy task to show that Lloyd was no great thinker, that he had no absolutely new message of his own for humanity, and that his reflections upon many of the great abstract questions of the day and of all time were neither very original nor very deep. But that would be to miss the whole value of both the book and its subject. Henry Demarest Lloyd was a generous, whole-souled, self-sacrificing man, who devoted his life to the cause of the people, as against monopoly and special privilege, and who gave abilities of no mean order to the work. Barely of age, he went into the Free-Trade fight of 1868, and from that day to the day of his death he was active on the side of the people. The keynote of his life is to be found in a statement many times reiterated by him: "In all issues, the principle of but one side can be right. The workingman is often wrong, but his is always the right side." It is not necessary here to recount the various stages of a career of public service in a private capacity, which finally led him into the Socialist party at the close of his life. After all, it is not Lloyd's opinions which are of importance so much as are his character, his keen sense of justice, his violent passion for the right as he saw it, and his utter disregard of self when service was to be rendered to the cause he loved. One may very easily disagree fundamentally with many of his views, and at the same time feel strongly attracted by the chivalrous personality, which is on the whole well depicted in this biography.

Few books of travel are more delightful than Fromentin's "Une Année dans le Sahel." Fromentin is best known as a painter of Algerian subjects; here he recounts his Algerian experiences in admirable prose. The descriptive passages, as one would expect, are unusually vivid, but they show no encroachment of the methods of pictorial technique. The writer is less concerned with the momentary aspects of things than with their changes and their human significance. Characters as individual and as interesting as those of the best fiction appear and reappear in the course of the narrative. Some of them add comic touches; others converge in a strange tragedy. The work is well edited, in the Oxford Higher French Series, by Prof. Léon Morel, who writes as introduction a long and valuable essay on the life and work of Fromentin.

"Ma Tante et mon curé" (Jenkins) is a comedy written for American consumption by Mlle. Eugénie Piffault. According to the preface, which is apparently by the author, "the play is a perfect jewel of delicacy, grace, and wit." In the pages the reviewer has read the heroine's aunt beats her once, shakes her twice, slaps her thrice, and the niece covers her aunt's cheeks with jam and receives a spoonful of dough in her own face in return, while the twain ex-

change insults by the dozen, and the onlooking curate takes pinches of snuff by the score.

It cannot be said that Mrs. Lion Phillimore, the author of "In the Carpathians" (Holt), has made good use of her opportunity. Travelling by wagon from Zakopane, in Galicia, to Kronstadt, in Transylvania—a distance of some 500 miles—and camping out almost every night, she has little enough to tell of the interesting country she traversed and the picturesque people she met. She started with a good stock of British prejudices and did not altogether divest herself of them in her contact with Poles, Ruthenians, Magyars, Rumanians, Jews, or Gypsies. She had but hazy notions of the political relations of all these motley people, evidently believing that a war between Austria and Hungary was quite likely, and, in general, troubled herself little about verifying what she saw or heard. She finds that Wallachs speak "a sort of" Rumanian, that "Kukuruz" (the same as maize) is made of maize meal, and believes that a Polish peasant boy of eighteen who offered himself as a guide, had been "to Cracow University and spoke Latin and Greek, Polish and German." The book shows throughout an affected naïveté, which becomes tedious, as does the ever-recurring talk about the morning bath. Of the author's generalizations, the following is a fair sample: "Poles and Slovaks, we decided were among the lovable races of the world; Ruthenians and Jews were to be esteemed but not beloved; while gypsies were too flighty and flippant to be recipient of any responsible emotion." There is no *raison d'être* for this volume, except that the author wanted to possess a printed record of a journey which, on her own showing, she did not always fully enjoy.

In the death of William Watson Goodwin, on Sunday, Harvard has lost another representative of that stalwart community of scholars of an earlier day which included such men as Child and Norton and Shaler. Professor Goodwin was a native of Concord, Mass. He was born May 9, 1831, and graduated from Harvard in 1851. He also studied at the Universities of Berlin, Bonn, and Göttingen, and received the degree of Ph.D. from the last-named university. The degree of LL.D. he received from Amherst, Cambridge, Edinburgh, Harvard, Columbia, Chicago, and Yale Universities. Oxford gave him the degree of D.C.L. Dr. Goodwin was professor of Greek literature at Harvard from 1860 to 1901, and professor emeritus since 1901. He was a Knight of the Greek Order of the Redeemer and first director of the American School of Classical Studies at Athens; president of the American Academy of Arts and Sciences, 1903; an overseer of Harvard University, 1903-09; an honorary member of the Hellenic Societies of London and Constantinople, Philological Society of Cambridge, England, Archæological Society and Academy of Science of Athens; and a member of the German Archæological Institute of Berlin. His Greek grammar and other grammatical treatises are widely known. Fuller mention of Professor Goodwin will be made in the *Nation* next week.

The death is reported from Paris of Frédéric Passy, the economist and apostle of peace, aged ninety. He was commander of the Legion of Honor, a member of the Institute, and one of the founders of the International and Permanent League of Peace. M. Passy wrote several treatises on economic subjects, besides occasional poems.

Anatole Leroy-Beaulieu, the French writer, who is mentioned in another column, died in Paris on Sunday, at the age of seventy. Among his best-known works are: "L'Antiprotestantisme," "Etudes russes et européennes," "Les Congrégations religieuses et l'expansion de la France," "Christianisme et Socialisme," and "Les Juifs et l'antisemitisme." He was a Chevalier of the Legion of Honor and director of the Institute.

A List of Books on Domestic Science in the Public Library of Boston. Published by the Trustees.

It has been said that in Germany, and still more in Austria, novels which include alluring descriptions of banquets are sure of success. The French can hardly be accounted second to the Teutons in their addiction to the pleasures of the table, or their eagerness to read about them; and that English writers also are not altogether indifferent to such savory topics is shown by Mr. Hackwood in Good Cheer in Fiction, which constitutes the last chapter of his book. The greater part of this volume is concerned with gastronomy in England, past and present, though there are brief excursions to other European countries. Of American specialties he seems to be singularly ignorant; the only reference to our country is this: "If America has a national dish, it is the favorite pork and beans of the New England States, which patriotic Americans order at the hotels and restaurants as 'Stars and Stripes'!" He is much better informed regarding the ancient Greeks and Romans; tells about the Homeric heroes who did not disdain to prepare their own simple meals; about the composition of the Spartan black broth which made the men of this tribe fearless of death in the battlefield; of later days of luxury and gluttony, especially in Rome; and many other things likely to interest those not familiar with them from their school and college days.

Of genuine value is the bulk of Mr. Hackwood's volume, bringing together as it does a greater amount of curious information regarding food and eating in England, particularly during the Middle Ages, than can be found between the covers of any other book. He is thoroughly at home on this ground, having previously gathered similar material for two other volumes, "The Good Old Times" and "Inns, Ales, and Drinking Customs of Old England." British inns are pretty bad even now, from the culinary point of view, but they are probably like restaurants of the Parisian boulevards as compared with the mediæval inns, on the miseries of which Erasmus and others expressed themselves so forcibly. Of those days, when travellers of all ranks were obliged to resort to the monasteries in order to make sure of good fare and comfortable lodging, the author unfolds a picture which justifies the use of the word "romance" in his title.

While on the whole there was gradual progress in the arts of cooking and eating, there were ups and downs which are duly noted in these pages. Perhaps the most interesting chapters are those on the great influence of the introduction of forks on not only the table etiquette of the English, but on their way of cooking meats, the mortrewes, hashes, and other messes of "spoon meat" giving way to chines of beef and other large joints. Gradually the whale, porpoise, seawolf, and other impossible creatures were eliminated from the bill-of-fare, and the English became known the world over as the beef-eaters, an appellation in which they take pride to the present day, attributing their supremacy among nations partly to their meat diet. The author admits the lack of imagination in British culinary art. It is shown chiefly in the treatment of vegetables, of which England always has had a scant variety as compared with France, Italy, and Germany. One notes with some amusement, in perusing these pages, that some food questions which are commonly supposed to be the special outcome of present-day conditions, agitated the public hundreds of years ago. As early as the thirteenth century the city of London curbed the greedy middlemen by not allowing them to charge more than three half-pence for the best hen, a penny for a pigeon, three shillings for a swan, five pence for a goose, and so on. As for the fireless cooker, supposed to be of yesterday, Charles XII anticipated its principle when he cooked a fat hen while on the march by inserting within it a piece of hot steel, the whole being placed in a tin box which was wrapped in a woollen cloth and strapped on a soldier's back. Possibly, too, the acid preparation of milk demanded by the old monastic rule was an instinctive an-

ticipation of the doctrines of Professor Metchnikoff.

Popular fallacies of a different kind are exposed by Mr. Murray in his book on "The Economy of Food." He thinks the usual distinction made between foods as flesh-formers and heat-producers is radically unsound. Another mistake is to suppose that raw, or semi-raw meat is more nutritious than that which has been moderately cooked. "The latter is more easily masticated, and probably on that account more readily digestible." The oft-repeated statement that skim-milk and buttermilk are more nutritious than fresh whole milk is absurd. Eggs do not contain so large a proportion of nutriment as they are credited with; compared with many other foods they are dear; yet they contain a larger proportion of phosphorus than does fish, which, in turn, is good for brain workers, not because of its phosphorus, but because it is more digestible (with some exceptions) than meats. Among meats, beef is not always more digestible than pork; it depends on the age of the animal and the part of its body from which the meat is cut—a consideration sometimes ignored by those who make tables of the comparative digestibility of various viands.

These points, gathered here and there from the pages of Mr. Murray's book, show that it is of interest and value to all who eat, as well as to the students of domestic science, the cooks, caterers, housekeepers, and managers of institutions for whom he says he wrote it. He uses the word "economy" not only in the sense of thrift or saving, but in a general sense which enables him to include in his discussion the nature, sources, composition, and functions of various kinds of food. At the same time the money side of the question is duly considered. As the writer sagely remarks, it is not economy, but the reverse, to provide food, however cheap, "which the person for whom it is intended can't or won't eat." He weighs various foods in the balance—explaining, for example, that bread contains four or five times as much nutritive matter as an equal weight of potatoes—and gives directions as to what kinds are best for workers, for infants, and so on. There are special chapters on butcher's meat, poultry, game, and fish, dairy produce, cereals, fruits, prepared foods, spices, and the effects of cooking, followed by others in which diets are computed mathematically. National diets are also briefly noticed.

Antonia Isola's little book on "Italian Cookery" would have gained in interest had it been prefaced by a few pages summing up the gastronomic peculiarities of the people of her extraction. However, the professional cook or the mistress who does her own cooking and wisely craves variety, will soon discover from a perusal of the recipes given what are the national and local flavors of the peninsula which gives us the best macaronis and oils, and some of the best cheeses and wines. Not a few of the dishes described in these pages are international. In the second section, however, we plunge in *medias res*—the spaghetti, vermicelli, and other varieties of maccaroni, among which, strange to say, the best of them all, the tagliatelli, is not mentioned. Equally Italian are the risotto and other rice dishes, the ravioli, the polenta, the gnocchi of farina or potato. Eggs, fishes, vegetables, meats, can be cooked in many tempting Italian ways by following the directions of the author. She also pays due attention to the national desserts, among which chestnuts figure so prominently and appetizingly.

The "New England Cook Book" of Helen S. Wright (most cook books in America are written by women, which is not the case abroad) naturally has less local flavor than Antonia Isola's. It is a more comprehensive collection of recipes, some of them modern, others direct legacies from Puritan ancestors. Because of New England's proximity to the ocean, fish and shellfish take up many pages. Just to look at the list of preparations of them whets the appetite. We find the fishes in soups and salads, as well as by themselves. Preserves and pickles also play prominent rôles in that part of the country; in the wealth of recipes for these lies perhaps the book's chief value. Many pages are devoted to breads, biscuits, and cakes, of which New England has not a few varieties peculiar to itself. The directions given are always clear and succinct.

The rapidly increasing importance assigned to the discussions of dietary and other domestic questions is illustrated by the publication, by the trustees of that admirably managed institution, the Boston Public Library, of a list of its books on Domestic Science. It consists of 65 pages of two columns each, followed by an elaborate index. Considerable difficulty was encountered in the matter of classification, but the arrangement adopted is satisfactory and serviceable. The books are grouped under Household Management; Food, Nutrition, Diet, Digestion; Beverages; Cookery; The Table, Gastronomy, Dining; Dress, Clothing. There are subdivisions; under cookery, for instance, the different nations are classed separately; also, camp cookery, the chafing-dish, etc. Altogether, it is a catalogue which will be found useful by all who are concerned with good housekeeping, including, particularly, the teachers and students of the 125 institutions which in this country are now ready to grant diplomas in domestic science.

Among Houghton Mifflin's forthcoming books is "Observations on Borzoi," an account of the Russian wolfhound, by Joseph B. Thomas.

The appearance of a volume on a topic such as "The Physiology of Faith and Fear; or, The Mind in Health and Disease" (McClurg), by William S. Sadler, M.D., intended for the general public, is in itself an unpleasant sign of the times. "The natural, unconstrained human being," says Feuchtersleben, "feels himself to be complete and leads an existence unconscious of itself." But in the 500 pages into which Dr. Sadler has packed a miscellaneous amount of medical, semi-medical, pseudo-philosophical, emotional, and religious talk, there is more than enough to confuse the well man and far too much to cure the sick. Written, partly, to confute the fads of the day, this book inevitably furnishes convenient arguments for Christian Scientists and devotees of other cults, who will not fail to select from its pages what suits their purposes. The author cites, from his own practice, cases in which conversion to faith effected cures, and though he disclaims having "discovered a method whereby it would be possible to determine by material tests as to whether or not a person was sincere in his profession of religion," his stories of the "somewhat disagreeable married woman" and the "unfaithful husband" whose blood-pressure was reduced after conversion, will lead immature minds to draw wrong conclusions. It must be admitted that there is much sound information of one kind or another in Dr. Sadler's book, but there are also not a few debatable medical statements. Judicious members of his profession will not all consider it useful to proclaim that "there are some physicians who believe that constant thinking of the appendix, coupled with the incessant fear of appendicitis, has had not a little to do with actually bringing about a nervous and circulatory condition which greatly favors infection and disease in this particularly predisposed locality," and that "whatever may be the influence of the mind in causing warts, it seems probable that the mental state has, in some cases, had much to do with their removal." And neither the physician nor the layman will be the better for Dr. Sadler's fervent expression of his personal belief that "he recognizes the sublime power of the true Christian religion not only to accomplish all the desirable physiological and psychological effects herein noted, but in addition to bring about a host of other and marvellous spiritual manifestations and mighty moral transformations." The book, with its diagrams illustrating "the action of the mind in the elaboration of thought," "the three planes of consciousness—conscience, reason, and instinct," "the relations of the parts of the human body to the signs of the zodiac," "woman with a spirit of infirmity," etc., etc., has an antiquated, phrenological look, but it is ultra-modern for all that. It chimes in with the popular demand for second-hand medical knowledge and psychotherapeutic twaddle. All that Dr. Sadler, aside from strictly medical advice, might profitably have communicated to the general reader, he could have found in the few pages of Kant's little treatise on "The Power of the Mind to Conquer Morbid Feelings by Sheer Determination" ("Von der Macht des Gemüths, durch den blossen Vorsatz seiner krankhaften Gefühle Meister zu sein"). Had he himself benefited by its reasoning, he could not possibly

have penned such truisms as that "most hypochondriacs would speedily recover if they would but become confirmed optimists."

Drama

"King John" (Duffield), edited by the late Dr. Furnivall, with introduction by F. W. Clarke, is the latest issue of The Old-Spelling Shakespeare. The main advantages of this series are its cheapness and the fact that it reproduces the typographical peculiarities of the original editions. The present volume contains only seven notes—on matters selected at random. The Introduction calls for no comment, except that the dating of the play which it offers—1596—is manifestly too late. This would be grouping it with "The Merchant of Venice," with which in maturity of style it cannot stand comparison.

The class of 1895 of Smith College announces the publication of "Love in Umbria," a blank-verse drama of the first Franciscans in a prologue and three acts, by Lucy Heald, a member of the class.

Two special matinées of dramatic, musical, and scenic illustrations of the works of Keats and Shelley will be given at the Haymarket Theatre, London, on Tuesday, June 25, and Friday, June 28. The performance will be for the benefit of the Keats-Shelley Memorial House in Rome.

The American and colonial edition of "Shakspere, a Critical Study of his Mind and Art" (Dutton), by Edward Dowden, is a reprint of this well-known work with a new preface addressed, "To my Trans-Atlantic Readers." The book has an established place in Shakespearean criticism, and we believe that the author is right when, in this brief preface, he expresses his conviction that the course taken by Shakespearean study since it was written has not invalidated any of its main conclusions. It is a pity that Professor Dowden has not undertaken to bring his "Shakspere Primer" up to date. In respect to critical insight and charm of style no other work of similar scope can compare with it. Even his own "Introduction to Shakespeare" does not quite take the place of such a revision.

Rhys Carpenter wisely describes his "Tragedy of Etarre" (Sturgis & Walton) as a poem, for, although it is written in dramatic form, with a prologue and four acts, it has few of the qualities essential to the theatre. It required courage to challenge inevitable comparison with Tennyson's treatment of the same subject, but, if Mr. Carpenter fails to pass through his self-imposed ordeal triumphantly, he at least avoids disaster. His version of the old Arthurian legend contains passages of true poetic beauty, but as a whole is marred by over-elaboration of metaphors and epithets, an excessive insistence upon contributory details, and, especially in some of the more passionate scenes, a lack of artistic reticence. All the variations upon the Tennysonian idyll are not improvements. Here Gawaine is the victim of enchantment. In the prologue the Knight, like Macbeth, meets three weird sisters, representing the Past, Present, and Future, who show him visions in a magic pool and bid him choose one of them as the ruling spirit of his life. He chooses the Present, and so becomes the creature of opportunity, and, apparently, is foredoomed, not only to succor the wretched Pelleas, but to play him false when tempted by the prodigal loveliness of Etarre. This, in a way, lessens the trial and the perfidy. But the encounter between Gawaine and Etarre is one of the most striking episodes in the poem, and the subsequent love scenes are luxuriant, not to say tropical, in imagination. But the legitimate dramatic effect of the discovery of the sleeping lovers by the abused Pelleas is greatly weakened by the rhetorical soliloquies in which he indulges. They are eloquent and poetic, but not human. The outraged knight should be more contemptuous or less magnanimous. The situation here is melodramatic, although the method is literary. But there is, nevertheless, true tragedy in the fate of the desolate Etarre, bereft of both lovers, and this is finely emphasized in the concluding act, which ends upon a dignified and pathetic note.

Mrs. E. M. Evarts is the translator of "The Living Corpse" (Brown Bros.), the six-act drama which was one of the latest productions of the great humanitarian, Leo Tolstoy. If it had been the work of a less eminent man it is not likely that it would have attracted much attention. As a tract, denunciatory of the orthodox clerical attitude towards divorce, it is too manifestly a bit of special pleading to be very effective, while regarded as drama it is constantly suggestive of the amateur, in the looseness of its construction and the conventionality of its expedients. Whether it was intended, as has been asserted, to be, in some sort, an explanation of his own domestic difficulties, a kind of *apologia pro vita sua,* is a question that need not be discussed here. Obviously it was inspired by sincere purpose and profound conviction. The philosophy of it is liberal and altruistic, even if its social morality be short-sighted. But considered either as a manifesto or a play, the composition is made abortive by two radical defects. In the first place the principal characters are idealizations, not credible human beings; in the second the catastrophe in which they are involved is, on the surface at least, due primarily, not so much to the theological or governmental systems attacked, as to the hero's conduct, of which —to be consistent—he must have been constitutionally incapable. There is the usual triangle, but the persons concerned are all of flawless purity. Victor, a paragon of all the virtues and a devoted churchman, has loved Liza from infancy, but resigns his pretensions in favor of his friend and rival Fedya. Liza loves Victor also, but loves Fedya a little more and marries him. Fedya, a man of the loftiest instincts, who worships his wife, is a hopeless drunkard. He deserts his bride habitually to associate with gypsies and to revel in the society of a beauty, named Masha, who adores him and whose singing enchants him. Again and again he is welcomed home as a prodigal, and forgiven. Again and again he promises amendment and relapses. At last, perceiving that life with Liza is impossible, and that Victor would marry her if she were free, he offers her a release, which she accepts, on the understanding that she shall have a divorce. But to obtain this there must be proof of infidelity, and this Fedya will not give, maintaining that his affection for Masha is platonic and that he cannot lie. Nor will he commit suicide. Masha shows him a way out of the dilemma by pretending to drown himself, and to this plan he assents, acting a lie, if he will not utter one. Soon afterward a stray dead body is identified as his, and the marriage of Liza with Victor quickly follows. Presently Feyda betrays himself to a police spy, and Victor and Liza are arraigned for bigamy. Then Fedya shoots himself. It is not needful to dwell upon the weaknesses and inconsistencies of such a tale as this, which, at the best, is but sentimental melodrama. The only apparent moral—that sentimental young ladies should beware of rhapsodical Bohemians with Bacchanalian tendencies—is sound but not new, whereas the implied one that marriage contracts ought to be dissoluble, at any time, by mutual consent, will not commend itself to any sane thinker. Mrs. Evarts's translation is not well adapted for stage purposes.

Music

"The Symphony of the Thousand" is the name now given in Germany to the late Gustav Mahler's eighth, which calls, according to his directions, for eight vocal soloists, three separate choirs (two of mixed and the other of boys' voices), and an orchestra of 150 instrumentalists, as well as organ, harmonium, piano, celesta, and mandoline. A separate force of trumpets and trombones is also prescribed. But, in spite of these exacting requisitions, the work, which was first produced at Munich in September, 1910, under Mahler's own conductorship, has since been given in half a dozen different cities, always with brilliant success. In Berlin it was given three times last month on three consecutive days, and it was generally agreed that it marked the climax of the musical season.

The recent revival in Paris of Debussy's "Pelléas et Mélisande" brought forth some figures regarding the performances of this strange opera during the ten years since its première on April 30, 1902. During the first three years it was sung 36 times; in 1905 there were six performances, in 1906 there were 9, and the same number in 1907. Eight were given in 1908, 10 in 1909, 11 in 1911. The total for the ten years—eighty-nine—must seem lamentably small to those who know that a work which is a success at the Opéra-Comique is sure of hundreds of performances during the first few years. The recent revival included Marguerite Carré and Jean Périer.

Leipzig, the city in which Wagner was born, treated him shamefully till towards the end of his long life. His operas were cruelly maltreated, and when he gave concerts there the hall remained empty. On May 22, 1913, the same city will celebrate the Wagner centenary by laying the corner-stone of a grand monument to be chiselled by Max Klinger. The music for the occasion will be celebrated at the Gewandhaus (which for decades tabooed his works) by a special Wagner concert under the direction of Arthur Nikisch. The Stadtthe-

ater will contribute to the celebration a cycle of Wagner's operas and music dramas under the leadership of Otto Lohse.

Notwithstanding the increase of the price of the tickets for this year's performances of "Parsifal" and the "Ring of the Nibelung" at Bayreuth from $5 to $6, all the seats for the twenty performances were sold as long ago as last October, as Siegfried Wagner informed the press in Vienna, where he went a few weeks ago to attend the first Austrian performance of his opera, "Banadietrich." Evidently he does not agree with his mother that this summer's festival will be the last one at Bayreuth. The next, he said, would be in 1914. Richter, Muck, and Ballinger are the conductors this year.

Concerning his own activity, Siegfried Wagner said that he had almost completed his seventh opera, which will have the name of "Schwarzschwanenreich." The eighth opera, which will be more fortunate in going by the name of "Sonnenflammen," is also under way. Like all the others, it is based on a German fairy-tale. His predilection for these tales may be traced back partly to the influence of his father, partly to that of his teacher, Humperdinck.

There was reason for giving an open-air performance of Verdi's Egyptian opera, "Aïda," at the foot of the pyramid near Cairo. There was less for following this up with Mozart's "Magic Flute," as was done a few weeks ago. The public evidently did not see the reason for it, and the attendance was not very large. Mozart's orchestration is not sufficiently sonorous for such an experiment.

When an American firm published a life of Massenet, two years ago, the *Saturday Review* of London expressed its surprise that any one should waste his time writing about so insignificant a composer. As a matter of fact, Hammerstein owed his New York success chiefly to the operas of Massenet, and in France this composer's popularity has for several decades been second to no one's, and deservedly so, for he has the rare and divine gift of melody. Recently, at the time of his birthday, the papers of Germany, as well as of France, had appreciative articles on him. England is beginning to recognize his genius, as was shown by the comments on the recent production in London on his "Don Quichotte." In Paris, his "Hérodiade" has just had its hundredth performance, and his latest work, "Roma," has been successfully produced at the Grand Opéra, while at the Opéra Comique Clément has been delighting large audiences with "Manon" and "Werther."

The latest musical "find" is a song by Rossini with orchestral accompaniment by —Richard Wagner! In 1835 Rossini gave to the world a collection of twelve songs with piano accompaniment. The last of these is a duet, and this Wagner seems to have liked well enough to arrange the piano part for orchestra. He was only twenty-five at the time, and his income as conductor of the opera at Riga was so small that he could not afford to engage a copyist, but was obliged to write out all the separate orchestral parts himself. The duet was sung at a concert he arranged in 1838, for the first and probably only time. What gives it a particular interest is the fact that the text depicts a storm at sea, and Wagner was at that time busy with the story of his marine opera, the "Flying Dutchman." The manuscript of this song is now in the hands of a Munich antiquarian. It belonged for years to the tenor Tichatscheck, the first Tannhäuser and an intimate friend of Wagner, who, strangely enough, believed it to be a Rossini manuscript which (he wrote on the cover) he had received from Conradin Kreutzer in Vienna, in 1830. Had he examined it, he would have seen that it is in Wagner's own elegant and legible handwriting, as Dr. Alfred Weinstein attests.

Much has been written lately about the surprising influence Liszt had as a harmonist on Wagner; an influence which Wagner was the first to admit, in a letter to Bülow; and on the harmonies of Liszt and Wagner all modern music is based. But the harmonics and modulations of Liszt and their root in Schubert, as Germany's leading theorist, Dr. Hugo Riemann has pointed out. The latest evidence of the ever-growing interest in Schubert is the announcement of the impending publication of a monumental biography, in three volumes, with 500 illustrations. Years have been spent in collecting the material, and the city of Vienna gave its support to the undertaking. The authors are Hans Effenberger and Otto Erich Deutsch. If any Americans are in possession of original documents available for this biography, Mr. Deutsch would be greatly obliged for information regarding them. His address is 102 Hadigasse, Vienna (XIII), Austria.

Art

The Post-Impressionists. By C. Lewis Hind. Illustrated. New York: George H. Doran Co. $2.50 net.

Taking the occasion of the much-discussed exhibition at the Grafton Galleries, London, Mr. Hind has brought together thirteen chatty essays and dialogues touching as many phases of what he chooses to call the Expressionist movement. Cézanne he reckons among its founders, it seems to us quite falsely, for Cézanne always remained in intention a naturalist. What he wished was to lend classic stability to the rather attenuated visions of the Giverny school. In this he succeeded admirably. No modern painter has so keen a sense of mass. Really to see a fine Cézanne is to have one's eyesight permanently improved. But the provincial conditions under which he lived and the episodic character of his art prevented him from applying his discoveries widely, and his importance is chiefly technical. Paul Gauguin has a better claim to the paternity of the school. A vehement, not to say violent, temperament, he paraded his social dissent through the West Indies and the Pacific islands, consorting with the natives and producing barbaric canvases of a singular raw power. Color is for him largely symbolistic, an expression of passion and vitality. He loved the largest and most summary contours, and often attained to a remarkable nobility and simplicity of silhouette. It is as if a savage had paradoxically mastered the linear method of the Olympia marbles, retaining his own subjects and color. Gauguin's friend, the Hollander Vincent van Gogh, is the purest type of the Expressionist. In youth he poured out his enthusiasm as an evangelist among the Norman fishermen and the Welsh colliers. As a result of a sunstroke, he was soon overtaken by madness, and some of his best pictures were painted when he was an inmate of the asylum at Arles. His line has the crispation of abnormal emotion; his color recalls the incandescence of his friend Gauguin. The work has an appalling fascination.

Such are the founders of the school. The unformulated platform of many followers is the fullest indulgence of the creative impulse, regardless of so-called objective reality, and the most immediate expression of such impulse. Color is merely a token of mood; contour must be of a simplicity to admit of execution before the creative passion fades. Thus the models for the school are never the reflective artists of classical type, but savage craftsmen, or child-like artists of the dawn of the great historic schools. This programme is interblent of sound precept and psychological absurdity. The cult of simplification is traceable as a vivifying tendency for a half-century and more past. Daumier and Millet are real ancestors of Gauguin and Matisse; Manet even more so. Puvis is the very apostle of the generalized contour. Rodin's drawings anticipate most of the Expressionistic novelties. In such technical regards, the Expressionists are legitimate inheritors of much that is best in the modern tradition.

Their peculiar and most debatable tenet is the cult of untempered impulse, coupled with hatred of all realism. The cult of impulse is, of course, the central doctrine of romanticism. The Impressionists, stemming from Manet, quite logically reduce the æsthetic and creative impulse to a momentary emotional state, requiring naturally the swiftest expression. To set down with masterful dispatch one's reactions to the visible world became the whole duty of the artist. This involved the sacrifice of the reflective beauties of art, and necessarily caused a deficiency in broader interest. But it will also be observed that this uncompromising reduction of the creative impulse to a momentary state carried with it a regulative principle in fealty to natural appearances. Romanticism thereby accepted the balance wheel of a genuinely scientific analysis of vision. In short, the true Impressionist is as humbly realistic in working out his impression

as he is romantically individualistic in conceiving it.

Expressionism, on the contrary, has nothing to do with specific natural appearances. It rejects incontinently all external checks. It regards the creative impulse as an unconditioned urge arising spontaneously in the artist and almost automatically projecting itself in the work of art. Such is the fair induction from the occasional writings and interviews of Henri Matisse, the most prominent representative of the movement. To show that this is quite vile as psychology is not difficult. There can be no visualization of emotion completely or even largely detached from the whole of the artist's experience. To reject our stored impressions of the visible world is impossible. When an artist pretends to do this, he is at best self-deceived. He may seem to be offering individual symbols that have never been sifted through his retina into his brain; what he is really doing is arbitrarily assembling and distorting more or less incongruous parts of his visual experience. Such a *potpourri* might be most ingenious, and not devoid of pleasure-giving quality; it would inevitably lack the seriousness and inner consistency that go to make a great work of art. And so far from being naïve, such an attitude is merely an exaggerated variety of sophistication.

But it is seldom safe to judge any art movement by its theories. Artists rarely have the analytical gift that makes them good programme makers, and there is a restraining principle in work itself. Our fairest course would be to judge merely the work in such artists as the sculptor Maillol, the stylist Picasso, and the temporary leader Matisse. For Maillol, who carries very far the practice of the great unifying contour, apparently under the leading of ancient Egyptian sculpture, the reader is referred to the excellent essays of Meier-Graefe and Roger Fry. In a very learned kind of primitivism Maillol revives the austere grace of archaic sculpture while retaining, after all, a feeling essentially modern. His is merely an extreme and uncommonly successful phase of the archaism prevailing throughout the recent sculpture of Europe. Whether he will have greater success than Pasiteles, a delicate artist who tried the same experiment in the first century B. C., seems doubtful. Picasso reduces his elements of design to cubes, imposing upon the free art of painting the conditions that normally hold in the ruder types of basket weaving. The impression of the work hardly justifies the monotony of its fundamental convention. Matisse is the freest of the group, the most discussed, and the most interesting. The apostle of pure impulse, he professes to seek serenity, which at the outset seems a sentimental fallacy of Rousseau type. For serenity consists in some kind of balance between impulse and intellect. His draughtsmanship is wilfully inaccurate and highly abridged. In the study of the single figure he has a power which seems to desert him in elaborate compositions, headlong impetuosity being replaced by a rather puerile sort of eccentricity. He is said to be quite ignorant of the facts of the figure. This may be admitted without denying to his drawing a kind of dæmonic energy and interest. Such qualities are, after all, rarer than a topographical acquaintance with the human form. To the present writer all these three artists seem tinged with eccentricity and to be striking merely for directing the prevailing archaism in new and barbaric directions. Maillol perhaps stands best on his own merits, needing less apology as a pioneer. To any one amazed and disquieted by the rugged and spasmodic assertions of Matisse, and possibly exhilarated by the hope of an artistic revolution, the best advice would be to turn over an album of facsimiles of Rembrandt drawings, or a volume of Hokusai's "Mangwa." First, it will appear that in these old masters syncopation, simplicity, and the single contour are practiced with immensely greater energy and ability. And then it may be profitable to recall that Rembrandt spent years in the minutest analytical study, and that Hokusai passed through a rigorous course of tracing and copying old masters before indulging these audacities. In other words, they had earned their liberty, and it is doubtful if Matisse, prematurely upborne by a cult, has ever really earned his. On this whole matter of spontaneity Camille Mauclair has well said, "the fear of formulas, if exaggerated, may lead to other formulas, to a false ignorance which is as dangerous as false knowledge."

Unquestionably the new movement sets a premium on undisciplined individualism, and offers a danger to young artists. It has also powerfully influenced men of sound training. It is interesting and a little appalling to see an admirable draughtsman like Maurice Sterne cast tradition to the winds, repudiate a definite accomplishment, and accept newest and most doubtful hazards. Yet it is by such adventures that art is kept fresh, and the conservative detractors of Expressionism may do well to note that few of the younger and stronger artists of England and America have not in one way or another responded to this influence. And, surely, the cult of immediacy and simplicity can do only good so long as it draws well-balanced people. The hope of a complete anti-realistic revolution entertained by the extreme Expressionists will probably never be realized. Such highly symbolic and conventionalized an art as that of the Far East is not likely to supplant a millennial Western tradition of selective realism. But the gospel of simplicity and immediacy may be and is a useful leaven in an art ever threatened by a narrow doctrine of imitation and a false practice of unreflective realism. Only, in weighing the more assertive works of the Expressionists, we may well insist that vehemence and sincerity, brusqueness and immediacy are not necessarily equivalent. A drawing by Rembrandt is far more simple and immediate than a drawing by Matisse, and also far more refined and powerful. With all Gauguin's energy there is a certain blatancy involved. We should be careful not to mistake the mere assertiveness for the power. A figure by Veronese or Corot is technically just as immediate and simple as a Gauguin. Why should we deny the objective simplicity of such artists merely because they possessed cool heads? Simplicity with these men, as with Puvis, was largely a matter of light. It may be doubted if it be really a gain to make it exclusively a matter of heat.

Thomas Pollock Anschutz, the artist, is dead at his home in Fort Washington, a suburb of Philadelphia. He was born, in 1851, of a family of German origin and was distantly connected with the Munich painter, Prof. Herman Anschutz. He was a member of the Pennsylvania Academy of Fine Arts, and won many prizes, including the gold medal of the South American Exposition in Buenos Ayres in 1910. One of his best-known pictures is The Ironworkers' Noontime.

The death is reported, at the age of sixty-eight, of the Danish sculptor, Louis Hasselriis.

Finance

"NOMINATION WEEK."

In asking, as most people are now asking, what the financial markets are likely to do after the nominations of the Republican Convention, and after those of the Democratic party, later in the month, discussion naturally centres chiefly on the political issues and the individual personalities involved. But it is also profitable, on occasions of this sort, to glance back over the record of other Presidential years, and see what the markets then did, under the more or less similar circumstances of nomination week.

A good many people have forgotten what happened in Wall Street during the last Presidential conventions—those of 1908. It was an "after-panic year"; Stock Exchange values had been moving downward in the week before Mr. Taft was nominated. The day after his nomination, prices broke again; in the next two or three days the break became violent. The Democrats met at Denver three weeks later, and on the 10th of

July they nominated Bryan; when that had happened, the market, after very brief hesitation, swept into an active upward movement, with advances of 5 to 10 points within a fortnight. That was the end of real political uneasiness in Wall Street.

There probably was never an occasion when the nominating conventions had so little unsettling influence on the markets as in 1904. Mr. Roosevelt's renomination had been taken for granted, and his Attorney-General, only a few weeks before, had assured the markets, when the Northern Securities suit was won, that the Government would not "run amuck"; while the Democratic nominee, Judge Parker, had promptly telegraphed the Convention, on learning of its proposed financial shuffle, that he would not accept its nomination except with the plain understanding that he regarded the gold standard as irrevocably established. The markets very naturally rose.

It cannot be said that the nominations of 1900 had any effect on financial sentiment. As a matter of fact, the renomination of both Mr. McKinley and Mr. Bryan was foreordained. But in the view of observant financiers, the election results were quite as much foreordained as the choices of the Conventions, and this was more particularly true when Bryan's demand for a free-silver-coinage plank in the Kansas City Convention's platform was adopted, after an angry controversy, only by a majority of two, contributed by Hawaii and the Indian Territory. There was much to worry the financial markets at that time, in the foreign news and the news from the grain and cotton crops. Yet, with all that, the markets, which had been well sold out in May and April, refused to decline any further in the political convention months. By August a forward movement was in progress, which eventually swept the markets into the great boom of November and the ensuing year.

The political atmosphere in the two or three months before the Conventions of 1896 was as highly charged as it has been this season. As in 1912, so in 1896, the eyes of the anxious political watcher were turned alternately from State to State, to see the beginnings of the struggle which was to shake the whole country later on. One after another, State Conventions of the Southern and Western Democrats were captured by the extreme free-silver-coinage school. People began to be doubtful even of the Republican Convention, and in the week before that Convention met, on June 16, the Stock Exchange situation bordered on panic. The sharp and bitter fight in the platform committee, resulting in two conflicting reports; the Convention's adoption of the "gold plank," promptly followed by the bolt of twenty-one silver delegates from the party, did not allay misgivings. At the end of the first week of July the Democratic Convention assembled at Chicago.

The Democratic National Committee had selected Senator David B. Hill of New York for the temporary chairman, who should deliver the Convention's "keynote speech." By a vote of 556 to 349, the radical element in the Convention rejected him and chose a thoroughgoing free-coinage man instead. The Convention next voted down, by 2 to 1, a conservative "sound-money" plank proposed by the platform committee minority; it defeated with an uproar of shouts and cat-calls, by a vote of 564 to 357, a plank commending the Cleveland Administration. The radical platform of the majority was adopted by 628 to 301, and it was in the debate on its money plank that Bryan, a young and little-known ex-Congressman, barely seated in the Convention as a contesting delegate, delivered his famous "cross-of-gold" speech. No one had even a majority on the first ballot for Presidential nominee, though Bland, the conservative bimetallist, who had been expected as the nominee, was 116 votes ahead of any other candidate, but on the fifth ballot Bryan received the requisite two-thirds majority. This was a sequence of events which no financial market could ignore. For a week the Stock Exchange stood almost motionless, as if stunned by the situation. Then began the convulsive break which introduced that agitated summer. Not until August 12, when Bryan spoke at New York in the great Madison Square Garden meeting, and it at once became plain that the East was not to be hypnotized by him, did the market lift its head.

There were certainly some resemblances between the circumstances of that Convention at Chicago and the extraordinary situation which now exists in the same city. What the markets will or will not do, is an open question, now as it was then. There is at least this much to be said: that in 1896 the election involved a vital question of financial policy, as it does not do to-day, and that the economic situation was as fundamentally unfavorable then as it is favorable now.

Price $3.00 *net, postpaid* $3.20. *Octavo. Fully Illustrated. Gilt Top, Boxed.*

A Mysterious and Absorbing Human Document.

These memoirs are interesting not merely as a brilliant and beautiful woman's *apologia* and autobiography. They are also enthralling as a picture of the elegant, daring, cynical, and cultivated Parisian society in which she moved, and they introduce familiarly many people of distinction in the social, artistic, and literary life of the French capital. Her relations with Pres. Faure throw strange sidelights upon contemporary French history.

MY FRIENDSHIP WITH PRINCE HOHENLOHE

By Baroness von Hedemann

8vo. *With many hitherto unpublished letters and original illustrations.* $2.00 *net. By mail,* $2.20.

The Baroness, who, after a gloomy and neglected childhood, made a loveless marriage, found herself some years later the victim of a divorce scandal and a social outcast. At this critical time the man of her destiny, the great Prince of Hohenlohe-Schillingsfurst, entered her life. Their attachment was as lasting as it was spontaneous. The book contains many intimate sketches of, and allusions to people of prominence.

RAILWAY ECONOMICS

A Collective Catalogue of Books in Fourteen American Libraries

Prepared by the Bureau of Railway Economics, Washington, D.C.

MUCH of the literature relating to railways is scattered through books, pamphlets, and other publications which have been privately issued, and much is buried in official reports, committee hearings, and government documents. There are comparatively few comprehensive treatises. The student of railway transportation finds it impossible to secure access to any all-embracing sources of information in any one of even the largest general libraries.

In the present volume the Bureau of Railway Economics has undertaken to list the works relating to the economics of railway transportation that are catalogued in thirteen of the principal libraries of this country, together with those in its own collection. Except for material existing in these libraries but not catalogued, and for the literature to be found in periodicals, in collections of miscellaneous papers, in general works containing railway material, and in some of the less important state and federal documents, this work can fairly lay claim to being a representative bibliography in the field of railway economics.

The Table of Contents is very comprehensive, and makes easy an almost instant reference to any subject or class of works that may be desired. The value of the book as a work of reference is greatly enhanced by a complete index (25 pages) of the names of all authors.

It is confidently believed that the work will prove valuable to all who are interested in the literature of the various phases of railway transportation. It is recommended alike to the economist and to the practical railroad man as a guide and an aid in his work for which the need has long been felt. *450 pages, 8vo, cloth. Postpaid $3.28*

John Brown: A Biography Fifty Years After

By OSWALD GARRISON VILLARD

SOME TRIBUTES TO THIS REMARKABLE HISTORICAL WORK.

Philadelphia PUBLIC LEDGER. "A tremendous book, more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesman Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with a great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

PORTLAND OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will berald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The NORTH CAROLINA REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy, and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able even to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

Third Edition.

DRYER'S HIGH SCHOOL GEOGRAPHY

Physical, Economic and Regional

By **Charles Redway Dryer**, F.G.S.A., F.R.G.S., Professor of Geography and Geology, State Normal School, Terre Haute, Ind.

$1.30

This textbook represents a new departure in geography for secondary schools—the correlation of physical and commercial geography. It is an effort to afford a clear idea of the relation between the earth and man; showing both the dependence of human life upon natural conditions, and the influence of those conditions in turn upon human life. Part I. is devoted to a brief account of physical geography, which forms the necessary basis of study, only those features and processes being emphasized which have directly affected man in his progress. In Part II., economic geography, the outlines of household management practiced by the great human family are presented against the background of the natural earth already shown. Part III., regional geography, furnishes a more detailed, intimate, and graphic study of economic geography, arranged according to the different types of environment, with reference to the economic adaptations of human life. The book contains an unusually large number and variety of maps and illustrations, which are given in close connection with the text.

LETTERS AND MEMORIALS
OF
Wendell Phillips Garrison
Editor of The Nation, 1865-1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

A Candidate for Truth

By J. D. BERESFORD

To that group of contemporary English writers who, by their ability to depict realistically the life of today and by their power of subtle character analysis, form a distinct school of fiction, the name of J. D. Beresford must now be added. His first book, "The Early History of Jacob Stahl," issued a year ago, was pronounced by the critics, " a brilliant psychological novel."

A CANDIDATE FOR TRUTH, the *London Standard* asserts, "Raises its author quite definitely to the front rank of living novelists," and the *Chicago Evening Post* editorially says,"More than by any novel we have read for months we are captivated by 'A Candidate for Truth.' "

AGRICULTURAL EDUCATION IN THE PUBLIC SCHOOLS By Benjamin M. Davis.

In this book Professor Benjamin M. Davis has attacked the problem of the co-ordination of all the agencies now at work on the problem of agricultural education. He has performed a service which will be appreciated by all who have any large knowledge of the problem and of the difficulties which the movement encounters. He has made an effort to canvass the whole field and to give a detailed exposition of the forces employed in building up a rational course of agricultural education. He has presented more fully than anyone else the materials which define the problem and which make it possible for the teacher to meet it intelligently. The annotated bibliography at the end of the book will do much to make the best material available for anyone desiring to get hold of this material through independent study. The book serves, therefore, as a general introduction to the study of agricultural education.

SCIENTIFIC MANAGEMENT IN THE CHURCHES. By Shailer Mathews.

Why not apply "scientific management" to the varied activities of the church? This question is asked by Dr. Shailer Mathews in his book. The crying need for it is almost startlingly portrayed, and the broad lines of the plan—the adaptation of "scientific management" to an institution such as the church—are inspiring in their suggestiveness. The book is of the utmost value to all who belong to the active organization in their church—or who are, in the language of the author, "spiritual workmen."

AN EXPERIMENT IN ALIEN LABOR. By E. George Payne.

The author deals with the situation in the South African Rand, where numbers of gold mines were lying idle and undeveloped because the natives could not be induced to work. While the subject appears to be local, in the sense that the book relates the history of the importation of Chinese coolie labor into a British colony by a South African government, the outcome of the "experiment"—for such it was—affords information of extreme value to all who are interested in the application of cheap labor to large enterprises. The previous introduction of coolie labor from India into the neighboring colony of Natal for agricultural purposes had resulted in later encroachments and competition in enterprises regarded as belonging to the white race, and had been discontinued. Profiting by this experience, the colonial government sought to surround the importation of Chinamen with such restrictions as to prevent any injury to white labor.

AMERICAN PERMIAN VERTEBRATES. By Samuel W. Williston.

This work comprises a series of monographic studies, with briefer notes and descriptions of new or little-known amphibians and reptiles from the Permian deposits of Texas and New Mexico. The material upon which these studies are based was for the most part collected during recent years by field parties from the University of Chicago. The book is offered as a contribution to knowledge on the subject of ancient reptiles and amphibians, with such summaries and definitions based chiefly on American forms as our present knowledge permits. The work is illustrated by the author.

JOHN BROWN: A BIOGRAPHY FIFTY YEARS AFTER

By OSWALD GARRISON VILLARD

Some Tributes to this Remarkable Historical Work

Philadelphia PUBLIC LEDGER. "A tremendous book; more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative, often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesmen Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

Portland OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the TOPEKA CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The NORTH CAROLINA REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able either to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

The Nation

NEW YORK, THURSDAY, JUNE 27, 1912.

The Week

It was predicted by the most sagacious newspaper correspondents on the spot that the Baltimore Convention would be "unbossed," and this prophecy is borne out by the first day's proceedings. No one man, no one group, is in control. The debate and the roll-call on the temporary chairmanship went on as in a real Convention. The great mass of delegates were free to speak and vote as they pleased. Naturally, the National Committee had an advantage in appealing for support of the regular programme, but its victory was so narrow as to show the impossibility of dictating to the Convention either a platform or a candidate. Even Mr. Bryan was not permitted to dictate! His defeat on the personal issue which he raised was partly due to the desire to rebuke his domineering spirit, and to show that neither he nor any other man could impose his single will on the Convention. It seems clear that the majority is made up of men who will insist upon a full and free conferring together for the good of the party.

Mr. Taft's bad luck in politics pursues him even in his hour of victory. He has won a renomination, after a desperate struggle, but the universal opinion is that the honor which has come to him is empty. It scarcely needed the open split in his party to accentuate the general belief that the chances are enormously against his being elected in November. Of all this he must be fully aware. The experience he has had to undergo has been of a sort to strike through even official optimism. The President knows what has happened. There was no genuine enthusiasm for him at Chicago. The great fight was not for him, but against Roosevelt. So hopeless appeared the outlook for the Taft ticket that no attractive candidate for the Vice-Presidency could be got to go on it, and the Convention fell back on Sherman again. This was tantamount to a confession of despair. Doubtless, President Taft will face his sea of troubles with a stout heart. And one consolation is fairly his. At whatever personal or political cost, he has succeeded in preserving his party organization from capture by a man who would have used it for his own greater glory and for the shaking of our institutions to their foundation.

President Taft's friends are, no doubt, justified in their feeling that he has been treated with gross unfairness throughout the campaign. He has been misrepresented in point after point; his good deeds have been belittled; his blunders have been malignantly exaggerated; his personal character shockingly impugned. All this must be admitted by the impartial. Yet they must admit, too, that he deliberately exposed himself to abuse and betrayal by Roosevelt when he permitted the latter to make him President in 1908. It was a brutal thing for Roosevelt to say, but there was truth in it, that Mr. Taft had bitten the hand that fed him. All the trials and humiliations which Mr. Taft has had to suffer in 1912, were really in preparation for him in 1908. This is no new opinion for the *Nation*. We said at the time that Mr. Taft, in allowing President Roosevelt to force his nomination upon the party, was putting himself under a greater personal obligation than any man ought to assume, and that the fruits of it could not fail to be bitter. How bitter, everybody can see to-day.

Wonders are happening, politically speaking, every moment. But the most amazing phenomenon that has yet come to our attention is that Lodge has spoken. Yes, we mean Henry Cabot Lodge, the Massachusetts Senator, who was suddenly stricken with lockjaw the day that Theodore Roosevelt announced his candidacy. Since then no physician, however skilful, has been able to relieve him; and no friend, however kindly disposed, could bring him down from that topmost fence-rail upon which he insisted upon perching. But now what science and affection failed to bring about has come to pass: Lodge has spoken. "I regard," he says in his sudden burst of pent-up language, "the declared determination of the party to stand firmly for the Constitution, and for the independence of the courts, because they are vital to the maintenance of free government, as of the last importance. I shall give to the Republican party and to its candidates and policies the best support of which I am capable in the coming campaign." My, how relieved he must feel, and how happy he must be, to descend from the fence, now that the cat has jumped! One hundred and four days in such a position would cramp the most agile, and Lodge is no longer as young as he was, though supple enough yet.

Gov. Hadley of Missouri states, as one reason for his refusal to bolt with Roosevelt, that the platform adopted at Chicago is the most progressive ever put forward by the Republican party. This is true. It is vague and weak in some particulars—especially in what concerns the tariff—but it accepts and endorses a long list of the doctrines for which the Progressive Republicans have been standing. Some of their demands were, of course, ignored. The recall, with the initiative and referendum, was omitted, and strong ground was taken against any impairment of the authority of the courts. But these matters would not have been included in a Roosevelt platform. They were to be left to the States. But many other progressive views are heartily approved by the Chicago platform. Thus we find it endorsing successively legislation to limit the labor of women and children; the enactment of workmen's compensation laws; the simplification of judicial procedure and shorter ways of removing from office derelict judges; the upholding of the conservation policy, and even the creation of a Federal Trade Commission—one of Roosevelt's pet ideas. He, indeed, if he had chosen to be, we will not say as magnanimous, but as constructive, as Gov. Hadley, could have hailed the platform as a great victory for his principles. But he set out to get the nomination or to smash the party, and will not allow a little thing like a satisfactory declaration of party principles to stand in his way.

Writing in the *Journal of the Military Service Institution*, Major W. H. Hart of the army comes back to an old topic: "The Blight of Favoritism." He

meets fairly and squarely the argument that promotion by seniority as at present established is a gross injustice to the brilliant men of the service who should be favored with extraordinary promotion by reason of exceptional merit. So great does Major Hart believe the injury done to the army by favoritism that he even desires a law providing that, subject to physical and mental examination, no promotion shall be made in the service in any branch save by seniority. This law he would have include colonels and brigadier-generals. He thinks that the result would be the removal of the present "cross-purposes, personal issues, and brooding over the malignant effects of favoritism," to such an extent that it would be possible for the army to concentrate its efforts for a proper solution of its harassing problems of organization and administration. These are now sadly hampered by the personal element. As long as this republic is a republic, we believe that the policy which Major Hart outlines will be best for the service. It ought to be axiomatic, for instance, that the senior colonel, if he is not fitted for promotion to brigadier, is not fit to command his regiment and should be retired for mental or physical deficiency. Elimination of the unfit is provided by law now, and therein lies the true remedy for the removal of dead-wood and men of bad habits.

The project of the New York Reform Club to start up tariff associations or clubs the country over, cannot be too highly commended. This is the time for such a movement. Never, in our judgment, was there a period when the frauds and follies of the protective system were evident to more people than at the present hour. Republicans themselves have been pulling down the pillars of their sacred temple of protection, and not often has the system had a worse blow than that given to it by the revelations as to conditions among the highly protected "American" laborers in the mills of Lawrence, Massachusetts. And never since the war was there a Republican Convention at which so little was heard of the tariff. Certainly, the jeering at Mr. Payne when he appeared on the platform, the insults and ridicule heaped upon him by hundreds of Republican delegates merely because he was the author of a great Republican tariff bill, are without parallel in Republican history. To imagine such treatment of Dingley or McKinley is impossible. As well might one have expected an attack on the Bible, on the Deity, on the existence of the Republic itself.

We have received a copy of the forty-one amendments to the Ohio Constitution agreed to by the Constitutional Convention, to be submitted to popular vote on September 3. It is to be a special election, and broadsides containing not only the amendments, but explanations thereof in large type, and a sample of the official ballot, are now being sent to all voters. No one can assert, therefore, that he goes to the polls in ignorance of just what he is voting on. There is much that is extremely interesting in these forty-one amendments; the abolition of capital punishment, the initiative and referendum, a limiting of the veto of the Governor, woman suffrage, the abolition of prison-contract labor, the use of voting machines, the regulation of expert testimony in criminal trials, are but a few of them. The voters must also pass on licensing the traffic in intoxicating liquors, but even if the license to traffic is granted there are certain restrictions that come into effect; for instance, there shall not be more than one saloon to each 500 population in a municipality or township. Municipalities may determine their form of government by one of three ways; they may acquire, construct, own, lease, and operate any or all of their public utilities, if the section conferring this power is carried, and the right of excess condemnation will also be given to them. Altogether, this is to be a searching test of intelligent democracy, and the outcome is certain to be awaited with keenest interest in many States. It will throw no little light on the ability of an average American State to handle a complicated and difficult referendum.

Announcement of a special course of instruction for the training of parish workers is a sign of the times. As it used to be held that any foolish girl was fitted to be a teacher in a Sunday-school, so the common idea—and the too common practice—was that anybody with a sufficiently kind heart was qualified to go out among the poor and unfortunate and attempt to "do them good." But the School of Philanthropy has seen a new light in all these matters, and proposes to act upon it. In coöperation with professors in the Union Theological Seminary, it is to undertake the sifting and training of men and women who wish to engage in parish activities. The course of instruction proposed will cover both religious and social subjects, among the latter being "Child Welfare," "Family Rehabilitation," "Neighborhood Activities," and so on. The whole scheme seems well conceived and should yield valuable practical results. Haphazard and blundering work is going out of fashion even in charity and religion. The duty of knowing what one is doing, and of being efficient, is really just as imperative in labors for the good of society, and in saving souls, as it is in work in an office or factory.

Yale's defeat at New London was not unexpected. A university which takes up a new system of rowing can rarely hope to win in the first contest thereafter. What Yale expected to do she accomplished: she put up a game race and lost honorably. Next June's race, when Mr. Cook has had a full year of trial, will be a genuine test as to whether his modified system of rowing is the equal of Wray's, whose splendid record in Harvard rowing has been unsurpassed since the days of Bancroft. Mr. Cook in his prime used to be the best of American coaches, and his crews were as invariably successful as Wray's. He has, however, not returned to his former stroke, but has modified it after some months spent in watching this year's Oxford and Cambridge crews. Rowing in this country is now almost entirely a question of the teacher. True, Harvard's development of boating through its many rowing clubs tends to give the coach a wider choice from among men who know something about rowing, but, after all, the material to draw oarsmen from is about the same in Harvard, Yale, and Cornell; it is merely a matter of drilling the crew to row a good stroke well. Courtney does this to perfection year in year out, and his crews win nine times out of ten. Wray has done nearly as well. At Yale the problem is: how soon can a similarly able teacher, professional or amateur, be developed? It may take some years yet, precisely as at Harvard many years of defeat preceded the coming of

Wray, years spent in weary experimenting with one system after another.

In publishers' notices we find the statement that the trend is away from the traditional belief that summer reading must not be serious reading. There never was any theoretical basis for a practice in which publishers acquiesced because it was a rule of the trade. In the first place, it is plain that serious reading, by which we mean every kind of book other than fiction, must appeal to a serious audience. Essays, biography, history, sociology will appeal primarily to the man whose taste and interests lie in that direction—college professors, teachers, clergymen, and professional men in general. To all of these the summer is the season of leisure, the convenient season, in fact, to which serious reading has been postponed from the crowded programme of the rest of the year. As for the general public, the same argument from increased leisure will hold. It is all well enough to speak of the long winter evenings by the fire. Winter evenings in the city are apt to be monopolized by social duties and the rival attractions of the theatre and music. One reason why people will not pick up a serious book is the knowledge that it will take a long time to finish it amidst the distractions of everyday life. The vacation season is eminently a time for quiet-paced and reflective reading.

A notable difference between the American and the English view of the functions of the school as a rival of the home is brought out in a monograph dealing with the development of the country school for city children, prepared by Professor Myers of Princeton and published by the Bureau of Education at Washington. The advantages of the open country over the city as a site for boys' schools are obvious. But the boarding school has its drawbacks:

> It cuts off the boy from home when twelve or fifteen years old, the very age of all others when he needs the influences centring around home and family, which are of greater importance than any other in the life of a normal, well-trained, healthy child. The influence of a teacher is tremendous, but at best it can only supplement and add to that of a conscientious father and tender mother.

This is utterly different from the English ideal which deliberately removes the public-school boy from the home for the greater part of the year and the entire period of his school life. Underlying the practice is not, one is inclined to believe, that mere belief in the efficacy of the "hardening" process which is supposed to make rulers of empire. British common-sense probably perceives that, while in theory no educational influence can supplant that of the home, in practice far too many fathers and mothers fail completely as trainers of the young mind.

The Unionists are in a quandary over one aspect of the Home Rule bill. It has been the contention of the militant Ulstermen that if the Government persisted in forcing a separate Parliament upon Ireland, Ulster would demand to be exempted from its authority and to be allowed to remain, in its present position, as a part of the United Kingdom, represented in the Parliament at Westminster. But when an amendment to the Home Rule bill, excluding Ulster from the provisions of the bill, was brought forward by a Liberal member, the Unionists suddenly discovered that to split up Ireland would work injury to both sections of the country. Sir Edward Carson, principal fire-eater from Ulster, had a dreadful time defining his position the other day in the House of Commons. At one moment he was arguing that if the separate colonies in Australia or South Africa were given the free choice of joining the new federal commonwealths erected there, Ulster should have the same privilege. And the next moment he was asserting that it is folly to think of separating Ulster from the rest of Ireland. So the burden of it all is that Home Rule must go by the board, and Ulster's domination over the rest of Ireland be preserved.

It is characteristic of the French temper in general, and of French party spirit in particular, that the personality of a man who has been dead 135 years should lead to an acrimonious debate in Parliament. It is true that the man in question is Jean Jacques Rousseau, the two hundredth anniversary of whose birth falls to-morrow. The Chamber was asked to appropriate the sum of 30,000 francs towards the expense of the celebration, and the Monarchist-Catholic minority, led by Maurice Barrès, protested against public recognition of one whose social, political, and educational principles were rooted in anarchism. The money was voted by 427 to 112; but it seems extraordinary that there should be even 112 men of leading in France who would stigmatize the memory of the man whose work, probably more than any other single influence, has shaped modern thought, and whose ideas are to-day vital in many fields of human interest. M. Viviani, in defending Rousseau, countered cleverly upon M. Barrès:

> They could agree to forget the defects of great men in French literary and political history and unite in celebrating their greatness. They could forget Bossuet's abominable praise of the Revocation of the Edict of Nantes and remember his "Oraisons Funèbres." They could forget the brutal and almost bloody reaction in which Chateaubriand, that true son of Rousseau, bore a hand and greet, behind and above the Minister of Louis XVIII, the immortal man of letters.

But modern Bourbonism in France apparently retains its ancient gift of never forgetting and never forgiving.

Despite many reports and some evidence to the contrary, French art is not given up wholly to fads and innovations. Above the chatter of "Cubists" and "Futurists," is heard now and then a calm voice like that of M. Henry Farge, a rising young painter. In a statement given to a Paris review, he declares that the present generation ought to take as its motto the saying of Théophile Gautier: "Above everything, a painting ought not to cause disgust (*faire horreur*)." Thirty or forty years ago the cry was that artists must startle the average man; latterly, the effort has been to fill him with nameless fear. But M. Farge declares that all these things are off the trail; that there is no need of attempting a revolution in art, but that artists must forever strive to perfect themselves, and to become students again. In a word, his advice is: "Let us go to school." Counsel of like tenor comes from a young musician, M. Jean Déré. "Teaching," he declares, "is the necessary foundation of art. Shall we not seek to produce a healthy and virile music by going back to the purest sources of our national art? We have had in France, and, thank Heaven, we still have, admirable masters to show us the true path to follow." Such utterances encourage the belief that the great art tradition has not been incontinently abandoned by the French.

THE CONFUSION.

After scenes of violence and a turbulence that would have passed into riot but for the repressive hand of the police, the National Convention of the Republican party came to a close late Saturday night under circumstances that prompt thoughtful men to ask whether that party is now to go to pieces. The resulting confusion and uncertainty are as great as the apprehension. Those who fought for months to beat Roosevelt finally accomplished their purpose, by means of extraordinary skill in political management, but now stand wondering whether the strain has not broken the party down. Victory was swiftly followed by open revolt. The defection of the Silver Republicans in 1896 was a trifle compared with the formidable bolt which Roosevelt has already set on foot. Internecine warfare is threatened in every State. Regular Republicans will be slaughtered. The bolters will be proscribed and massacred. Political passions have mounted to unexampled heights. The most ferocious spirit is still displayed by the two Republican factions, and the most insulting epithets continue to fly back and forth between them. There are, in fact, on every hand, such signs of party break-up and political demoralization as have not been seen in this country since the Civil War.

Two nearly equal forces struggled for supremacy at Chicago. The narrow majority was held together by masterful tactics which extorted the admiration even of those who were crushed by them, but the minority would not submit in the usual way. To the end it maintained its uncompromising spirit, sitting sullen during the closing hours of the Convention, and immediately going off to start a third-party movement. This last, it is true, still remains a bit amorphic. There was a spontaneous nomination of Roosevelt, and an apparently whole-hearted, but really guarded, acceptance by him; but all confess that much remains to be done before the grand new people's party meets in August in "mass Convention"—that is what the Colonel favors, where there will be no trouble about rules and regularity—to give this fair land a new birth of freedom under Roosevelt. It will be shrewdly suspected that the new party will wait to see what happens at Baltimore and elsewhere, before deciding to be born. Yet this very uncertainty only adds to the confusion of the political situation. Men look at one another in wild surmise, querying whether this is the country they have known before, and all in a daze as to what candidate or what party they may think it their duty to support when election day rolls round.

The Republican bolt, if there is really to be one, will proceed upon the assumption that the Chicago Convention was tainted with fraud. This has been violently asserted for a week past, with every form of offensive language known to experts in scurrility, but what has been the proof? The public knows very little about it. But it will have to receive precise and detailed information if it is to be asked to vote for men simply because they have been cheated. There has been an immense amount of crying "stop, thief," but the evidence of thievery has been meagre. We know that Roosevelt was just as vociferous about frauds in New York, after the primaries in this State, as he is now about frauds in Texas or Washington, but he had no proof whatever in the former case, and soon left off talking about it. Is there any reason for thinking he has better warrant in the other cases? What is known is that his managers brought a great number of ridiculous contests. They were so absurd that even Roosevelt committeemen voted to throw them out of court summarily. But the preliminary cry of fraud was just as shrill in these instances as in the others. Was it any less valid? We think the country is ready to be convinced. But it must have the facts, and have them impartially sifted. Mere assertion, however loudly shouted, is no proof of fraud. The Roosevelt managers at first insisted that some 200 of their contestants were lawfully entitled to be seated. Then they whittled the number down to 100; now it is put at seventy. But even seventy added delegates would not have been enough to nominate Roosevelt, though, taken from Taft, they would have left him short of a majority. But what honest men will demand is conclusive evidence that even this irreducible minimum of seventy delegates, or any part of them, was "stolen." The testimony is available. It was all passed upon by the Credentials Committee. Are we bound to believe that the defeated litigant who "cusses" angrily enough, necessarily has the truth on his side? Certainly, if he is going to found a new party on the strength of his grievance, he has got to show that it is substantial and not wholly imaginary.

All this divided and distraught condition of the Republican party naturally fills the Democrats at Baltimore with good cheer. But they must not allow themselves to be flattered into a fool's paradise. The spirit of revolt is abroad, and the Democratic party could easily provoke it against itself. Never did party ties sit so lightly. Never was a kind of iconoclastic political independence so rife. The Democrats should perfectly understand that they must walk warily and correctly estimate their opportunity. They must not forget that a vigilant and resourceful man, Theodore Roosevelt, is watching for them to blunder. If they nominate a candidate who can be called a reactionary or a tool or an ignoramus, Roosevelt will instantly raid their left wing and wage a battle, North and South, in the name of progressive policies. So obviously is it Democratic wisdom to choose a man for the Presidency who can hold the progressives of his party that it is not surprising to find men in all parts of the country, and of all shades of opinion, declaring that the events at Chicago point to Woodrow Wilson as the man of the hour at Baltimore.

EDUCATION OF A PRINCE.

The sensation created in England by Sir Sidney Lee's memoir of Edward VII in the latest supplementary volume of the "Dictionary of National Biography," has been described in the daily press. Three main features of Sir Sidney Lee's biography have been much discussed—the mistaken educational régime to which Albert Edward, as Prince of Wales, was subjected by his father; the unwise attitude maintained by Queen Victoria towards her son after the death of the Prince Consort, in a mistaken endeavor to carry out the latter's intentions; and the rôle played by Edward VII as King in the shaping of British foreign policy towards the form it holds at the present day. The writer explodes the legend of Edward the Peacemaker to which the English people seem to have subscribed in a sentimental mood, especially after it had gained currency on the Continent. It is shown that the King, in this matter of the French *entente* and succeeding

international arrangements, was not the powerful motive force he was supposed to be. Here, as in his attitude towards home affairs, he followed where his Ministers led, contributing, in the case of France, the influence of his well-known friendliness for that country and his wide popularity.

As to imposing his own will on his Ministers, Sir Sidney Lee argues that Edward VII was hardly qualified to do so by temperament or intellectual abilities. And that brings the story back to Edward VII's training, from infancy to within a few years before he succeeded to the throne. One cannot help feeling sorry for the young lad whose education has thus been summarized:

> From the time he was six months old it rained portentous memoranda about and upon him. Tutor was to stand over tutor, and governor over governor, each passing on platitudinous injunctions to the next, and Prince Albert fed the stream of moral commonplaces at its head. The boy was never to read a novel, not even Scott's. He was to be kept away from boys of his own age, or at most a few picked Eton boys, dragons of niceness and goodness, were to come across the bridge to play with him for a couple of hours. He was never to be out of sight of elderly wisdom. His life and thoughts were to reflect themselves in a diary for paternal inspection. Till he was seventeen he was not to choose any of his own clothes, and then they were to be chosen by him in accordance with a formal minute of parental instructions on the choice of material.

This Spartan system, in a modified sense, was carried on, strange as it may seem, till 1892, when Albert Edward was fifty. He no longer had tutors over him, but his mother had kept him jealously from all real participation in affairs of state, always on the assumption that here was an indiscreet lad who had to be held firmly in check. Little wonder that Englishmen are now inclined to believe that Prince Albert and Queen Victoria were far from being wise parents.

And yet there is one curious aspect of the case. A prince is thought to have been educated in the wrong way, if his subsequent career shows it; in other words, if he makes a bad King. In so far as Edward VII as an individual is concerned, it may be regretted that the rigorous and ill-planned schooling of his boyhood and youth should only have left him with a profound distaste for books of any kind; in his maturity he never read anything but the newspapers. But as Edward VII, constitutional King of Great Britain, he conducted himself in a way that might have presupposed the very wisest kind of education. All that Sir Sidney Lee brings out concerning Edward's demeanor after he succeeded to the throne shows the full recognition on the King's part of his proper rôle in the English scheme of government. The very fact that he did not take the lead in creating the system of Continental alliances, which is the present basis of British foreign policy, is in his favor. He worked in harmony with his Ministers, seconding their efforts only with his personal popularity. As the *Spectator* says, he contented himself with injecting, now and then, a drop of oil into the machinery of politics and diplomacy. It is now shown that during the recent Constitutional crisis in England, Edward VII exerted himself on the side of peace. In 1909 he tried to dissuade the Unionists from the suicidal policy of rejecting the budget. He was opposed to the stirring up of class opposition. He wanted peace and devoted himself towards that end. What more could be asked of a Constitutional King? The Manchester *Guardian* alone seems to have recognized the inconsistency of blaming Prince Albert and Queen Victoria for a system of education that resulted in the training of an ideal Constitutional King. The *Guardian* argues that there was in Edward VII one fault—his predilection for the French people. If Edward had been as tactful in his relations with William of Germany, the present tense situation on the North Sea might never have come about. But that is highly speculative.

Thus the conjecture arises whether the education of Edward VII, as initiated by his father, had not in it, after all, an ideal that might explain its excess of pedantry and moralistic rigor. It may be that the rôle of a Constitutional King in England was very acutely present to the mind of the Prince Consort. The British monarch is not a prime force in politics, domestic or foreign. His influence, like that of Queen Victoria, is one of character, and is chiefly exerted in the moral sphere of the national life. It was a natural mistake, therefore, to set out with the idea of making the future King of England a studious, hard-working, sober-minded Prince—and a bit of a Puritan; one who should give the moral tone to his age as Queen Victoria did to her own.

PROFESSIONAL REWARDS.

In his introduction to Dr. Abraham Flexner's report on medical education in Europe, President Pritchett of the Carnegie Foundation lays stress on one cheerful aspect of the medical profession in this country: the practice of medicine does not "pay." There is, at first sight, no striking reason for optimism in this fact, but that is because we look at the question from the narrow position of the market-place. Fear of being smug keeps men from speaking of the ideal of service as opposed to the ideal of large fees. Others may hold that no such ideal of service exists in these degenerate days. But Dr. Pritchett has neither doubts nor fears. He says:

> Under pressure of public opinion, it is becoming each year more and more of a profession to which men give themselves from ideals of service, recognizing that in this calling the average practitioner is to obtain little more than a comfortable living, and in many cases not even that. . . . The man who actually accumulates a fortune in medicine is so rare that he may practically be neglected. As the commercial medical school disappears, and the profession comes to be composed of educated men, alive to the ideal of service to their communities and to humanity, the opportunity to exploit medicine for gain will disappear. The youth who is looking for a fortune, or the parent who seeks for his son a remunerative occupation, should look elsewhere.

But where, among the professions, is a man to look for this elusive, comfortable income? There is the law, of course. Here the fortunate exceptional cases are not so rare, and the fortunes themselves are larger than the same degree of success will bring in any other profession. Standing in close connection with the world of business, and imitating its methods, the lawyer may occasionally enter the sacred circle of millionaires. But, after all, we are dealing with unusual cases. Take the average income for the legal profession throughout the country, and there is apparently much reason in the complaint that the law is overcrowded. And as for the remaining professions, they are in even worse case than the doctor and the lawyer. The clergyman has long been the classical illustration of the alliance between learning and poverty. His economic position in the community has reached the dimensions almost of a crisis. So there are left the school-teacher and college professor, of whose economic status it may only be said that it is not so bad as the mini

BURLINGAME PUBLIC

ter's and the writer's profession, of which the less said the better.

Here is a state of affairs which, in one respect, presents an interesting parallel to conditions among the great mass of workingmen as interpreted to them by their radical leaders. The American workingman is being assured that, whatever may once have been the case, America is to-day no longer the land of opportunity. The traditional route from overalls to millions is closed. The laborer's lot is permanently cast with the laboring class, and the solitary exception which flashes across his horizon is a phenomenon that only dazzles his eyes to his own helpless position. The workingman must think of his income as circumscribed within the limits which the statistical average fixes for his class. The chances of the laborer's rising in the economic scale are, in other words, as poor as the clergyman's or the teacher's or the doctor's. Dr. Pritchett's dictum, only slightly changed, would assert that in all the professions, including that of working with one's hands, "the man who accumulates a fortune is so rare that he may practically be neglected."

Yet the fact remains that, in spite of the meagre reward that the professions offer, there is no dearth of recruits for all the professions, including even the ministry, which suffers to-day under the double handicap of being poorly rewarded in money and of misconception as to its aims and its usefulness. The low average of income is even explained by the fact that the professions are overcrowded. What is it, then, that draws the recruits? The ideal of service, says Dr. Pritchett. There will be plenty of people to scoff at that opinion. It seems that we have only to think of the sordid scramble for income that goes on among our hordes of ill-trained lawyers and physicians to admit that altruism hardly enters into the problem. But that is to lay too much stress on the obvious. The ideal of service, like most human motives, is apt to manifest itself in complex form. A man's ideal may be higher than he himself sees it. Though the motive of self-advancement may be acutely present to his mind, he is subscribing to the other, unselfish ideal in the very act of affiliating himself with a calling whose economic rewards, at their best, fall far short of what may be obtained in other fields.

The desire to serve remains, therefore, an important factor in the man's choice of his profession. It takes various forms; it may be consciously altruistic, or it may be the joy of doing well what one likes best. The apprentice who enters on the difficult field of authorship may have in mind the financial rewards that come with popular success. But the illusion of great wealth is not very widespread among the workers in literature. What calls one is the opportunity to do work that one likes and hopes to make useful. That is the impelling force with the clergyman and the doctor and the teacher. And that, in the last resort, ought to be the compelling force with the great profession of labor. The impulse to serve is in most of us. What the professional man and the laborer are entitled to is the opportunity to render service under circumstances that do not sacrifice the individual to the common welfare. The work of the mind and of the hands should alike not be carried on under conditions that make the task hateful and seemingly purposeless.

PROFESSOR GOODWIN AND GREEK.

The death of Prof. William Watson Goodwin, the Nestor of the Greek department of Harvard College, where he was actively engaged as full professor from 1861 to 1901, means more to the academic world than even Harvard men can fully realize at the moment. Professor Goodwin's "Greek Grammar" is one of the best-known classical textbooks—so well known, indeed, as to be a sort of classic itself; and of hardly less fame, and of perhaps even higher specialistic value, is his "Greek Moods and Tenses." He was the first director of the American School of Classical Studies at Athens, and was long president of the American Philological Association. His published works brought him ripened celebrity and recognition both at home and abroad. And, more than all else, his long professional career, combined with his well-known modesty and vast learning, rendered him a monumental representative both of the intellectual and the spiritual phases of his chosen career.

In these days of emphasis upon purely practical, money-making studies and pursuits, the life-work of a man like Professor Goodwin is especially significant. What did he stand for, both in the academic world and the general civic life of men of his generation and ours? Just because the study of Greek, and of the ideals connected with that branch of learning, deals with remote, permanent, and "dead" subject-matter, is the student of Greek brought to understand the value of lasting truth, while not undervaluing the present. It is true that it will hardly pay any one —using the word "pay" here in its purely ethical sense—to study Greek text, literature, art, and history for less than six years. In a shorter period than this the ordinary student cannot attain that degree of familiarity with those topics which involves a due appreciation of the Greek mind and of the poetical and philosophical ideals born of Greek culture. In short, he cannot be thoroughly apprenticed to the lines of thought which men like the late Professor Goodwin stand for. Yet, if our civilization is to mean much in the spiritual history of the world—and all literature may truly be called psychic history of civilized man—it is well that some of our educated men, some of our college men, should be imbued with the leaven of that beauty, that heroism, and that lofty and exquisite mentality, which the ancient Greeks have so wonderfully preserved for transmission to all succeeding ages. It is well, not only that some college men should specialize in Greek and emulate the life of such as Professor Goodwin, but that a fair portion of them should become sufficiently acquainted with the noble and peculiar lessons which the world to-day can learn from ancient Greece, to make them higher and better citizens and render them centres of influence, from which Greek ideals, the permanently valuable things in Greek culture, can radiate.

Such a centre W. W. Goodwin was, in a professional sense and to a most eminent degree. Historians, artists, scholars in various lines, and many others, may well feel themselves directly indebted to him; and who shall catalogue the careers which have been indirectly benefited? The influence of a great Greek teacher in these days is felt by many branches of science as well as of art, and should be recognized also by men of affairs. Even the "practical" politician may get points of wisdom from considering the course of demagoguery in ancient Greece; while the

true statesman will gain great lessons from the whole course of Greek history, if his reading of that history be leavened by an intimate and loving familiarity with the Greek mind as portrayed in Greek literature. Greek life was wonderfully rich. The Romans excelled in war and in government; but the ancient Greeks rose high in literature, in art, in philosophy, in historical writing, as well as in war; and ancient Greek democracy has teachings for modern democracy no less valuable in their way than the Roman lesson given in the causes of the decline of Roman republicanism and the rise of Roman imperialism.

There is reason for the learned world to sympathize with Harvard in her loss of Goodwin. But let it not be forgotten that, however strongly Harvard, like other advanced universities, is committed to the "elective system" of studies for her undergraduates, that need not prevent the continued flourishing of her splendid department in Greek. Whatever is of great permanent value to the civilized world is sure to be of some value to every successive age of that world. And if America, as so many critics proclaim, is on the verge of a demoralizing materialism; if the cultivation—almost exclusive cultivation—of so-called "practical" studies for the young is but one evidence of that materialistic trend, Greek culture is needed all the more on these accounts.

GEORGE BORROW.

The good Borrovian probably got his first initiation into the sect (for Borrow, like Peacock, is one of those originals who gather about them a peculiar people) through the sheer love of adventure. But the Borrovian has another anchor to hold his interest. As from the mere entertainment of Borrew's works, which are little more than a continued autobiography, he is drawn on to study the writer, he finds himself looking at one of the most enigmatical and tantalizing personalities of English literature. Such, at least, has been emphatically my own experience while reading the new biography and collection of letters* and after them re-reading Borrow's works. The outlines of the desired portrait are clear enough, but when I have thought to touch the heart of the man I have been curiously piqued and baffled. At times I have been ready to believe that the enigma really had no answer, and there was no possibility of seeing the face behind the masque simply because no such face existed and the masque was all. Which would be only another way of saying that Borrow escapes us by possessing the innocence and elusiveness of nature herself.

I.

Yet in a superficial way Borrow is one of the easiest of men to place. Both in his life and his writings he belongs clearly to the great picaresque tradition which begins as a conscious *genre* with the story of "Lazarillo de Tormes" and in England is continued by Nash and Defoe and Smollett, and was not forgotten by Thackeray when he created his magnificent Becky Sharp. It should seem as if an irresistible instinct of his nature led Borrow to associate himself with the outcast and Bohemian and adventurous waifs of the world. He was born at East Dereham, near Norwich, in 1803, while his father, a captain of the militia, was absent on a recruiting expedition, and his early years, like Sterne's, were passed much in various camps and barracks. From the first he was unamenable to ordinary discipline. He describes himself in childhood as "a lover of nooks and retired corners." At school he rebelled against the routine of study, and his first intellectual awakening came, properly enough, from the pages of "Robinson Crusoe."

At the age of seven he became acquainted with a wandering snake-charmer and herbalist, who filled his mind with strange tales of the King of the Vipers, and on departing left with the boy a tamed and fangless reptile, which he used to feed with milk and carry about with him in his walks. One day he surprised a family of gypsies in their tent, and was saved from harsh treatment or death by his ready wit and his uncanny pet:

"On the spy," said the woman, "hey? I'll drown him in the sludge in the toad-pond over the hedge."

"So we will," said the man, "drown him anon in the mud!"

"Drown me, will you?" said I: "I should like to see you! What's all this about? Was it because I saw you with your hands full of straw plait, and my mother there——"

"Yes," said the woman; "what was I about?"

Myself. How should I know? Making bad money, perhaps! . . .

"I'll strangle thee," said the beldame, dashing at me. "Bad money, is it?"

"Leave him to me, wifekin," said the man, interposing; "you shall now see how I'll baste him down the lane."

Myself. I tell you what, my chap, you had better put down that thing of yours; my father lies concealed within my tepid breast, and if to me you offer any harm or wrong, I'll call him forth to help me with his forked tongue.

Man. What do you mean, ye Bengui's bantling? I never heard such discourse in my life; playman's speech or Frenchman's talk—which, I wonder? Your father! Tell the mumping villain that if he comes near my fire I'll serve him out as I will you. Take that—Tiny Jesus! What have we got here? Oh, delicate Jesus! what is the matter with the child?

I had made a motion which the viper understood; and now, partly disengaging itself from my bosom, where it had lain perdu, it raised its head to a level with my face, and stared upon my enemy with its glittering eyes.

Borrow, when this occurred, was not older than eight. The story, which is related in "Lavengro," might be rejected as a myth, were it not so entirely of a piece with his whole career. The upshot of the encounter was a warm friendship with the gypsy boy, Ambrose Smith (or Petulengro, the Romany equivalent of Smith), which became one of the strongest influences in Borrow's life. Under the name of Jasper he plays only the second rôle in the pages of "Lavengro," and from his lips comes the famous creed, which contains the immemorial philosophy of the true vagabond, and which, once heard, will somehow forever after blow through a man's intellectual heavens like the clean wind it celebrates:

"What is your opinion of death, Mr. Petulengro?" said I, as I sat down beside him.

"My opinion of death, brother, is much the same as that in the old song of Pharaoh. . . . When a man dies he is cast into the earth, and his wife and child sorrow over him. If he has neither wife nor child, then his father and mother, I suppose; and if he is quite alone in the world, why, then he is cast into the earth, and there is an end of the matter."

"And do you think that is the end of a man?"

"There's an end of him, brother, more's the pity."

"Why do you say so?"

"Life is sweet, brother."

"Do you think so?"

"Think so! There's night and day, brother, both sweet things; sun, moon, and stars, brother, all sweet things; there's likewise the wind on the heath. Life is very sweet, brother; who would wish to die?"

"I would wish to die——"

"You talk like a gorgio—which is the same as talking like a fool—were you a Rommany Chal you would talk wiser. Wish to die, indeed! A Rommany Chal would wish to live forever!"

"In sickness, Jasper?"

"There's the sun and stars, brother."

"In blindness, Jasper?"

"There's the wind on the heath, brother; if I could only feel that, I would gladly live for ever. Dosta, we'll now go to the tents and put on the gloves; and I'll try to make you feel what a sweet thing it is to be alive, brother!"

Another lasting influence on Borrow's

The Life of George Borrow. Compiled from unpublished official documents, his works, correspondence, etc. By Herbert Jenkins. New York: G. P. Putnam's Sons.

Letters of George Borrow to the British and Foreign Bible Society. Published by direction of the Committee. Edited by T. H. Darlow. New York: George H. Doran Company.—When Dr. W. I. Knapp wrote his *Life of George Borrow* (1899) these letters were supposed to have been lost; they were discovered in the crypt of the Bible House the very week in which that biography appeared. They add nothing which destroys the value and interest of Dr. Knapp's excellent work.

character was the conversation of William Taylor of Norwich, a vagabond of the mind, who delighted, as Southey said, in "supporting strange and paradoxical opinions," and had "unsettled the faith of many." In one of the chapters of "Lavengro" (No. xxiii) Borrow tells how Taylor instructed him in German, and drew strange parallels between the philosophic profundity of that people and their proficiency in smoking. Borrow was to repudiate his older friend's opinion of the Bible as not quite sound in philosophy, but "respectable from its antiquity," although sometimes one wonders a little how much of Borrow's enthusiasm for the book was due to its religious content, and how much to the fact that it is the production of a wandering and homeless race. Of Taylor's nonchalant free-thinking more, perhaps, entered into the young man's brain than he himself ever knew.

II.

Having spent five years with a firm of Norwich solicitors in the laudable exercise of learning various outlandish languages and neglecting the law, in April of 1824, Borrow, now foot-free by the death of his father, went up to London with a few pounds in his pocket and a "small green box" filled with manuscripts, chiefly translations from the Welsh and Danish. One of the poems gave this description of the author, faithful to life, unless certain friendships broken when his temper became irascible with age and disappointments may be held to annul a single line:

A lad who twenty tongues can talk,
And sixty miles a day can walk;
Drink at a draught a pint of rum,
And then be neither sick nor dumb;
Can tune a song and make a verse,
And deeds of Northern kings rehearse;
Who never will forsake his friend
While he his bony fist can bend;
And, though averse to broil and strife,
Will fight a Dutchman with a knife;
O that is just the lad for me,
And such is honest six-foot-three.

He found the metropolis cruelly indifferent to the charms of Ab Gwilym, whom he nevertheless maintained through life to be "the greatest poetical genius . . . since the revival of literature." But by a proper chance he fell into the clutches of a publisher who employed him at starvation rates in compiling from the Newgate chronicles and elsewhere six volumes of "Celebrated Trials and Remarkable Cases of Criminal Jurisprudence." This and other literary hack work kept him chained to the treadmill until health and spirit were almost broken. After fourteen months of this life he fled from London, and literally took to the road. Of the adventures that followed, "Lavengro" and "The Romany Rye" are the immortal record. Just how much of those books is fiction and how much genuine biography we shall never know, but apparently the *Wahrheit* largely predominates; there is certainly truth at the core of the great chapters which relate his experiences as a wandering tinker, including the magnificent fight with the Flaming Tinman, and the extraordinary courtship, if courtship it may be called, of Isopel Berners in Mumper's Dingle.

After a certain period of years which Borrow has left in obscurity, there came to him his great opportunity. In 1833 he was appointed an agent of the Bible Society. His first task, the translation of the Scriptures into the Manchu, took him, for reasons which need not here be stated, to St. Petersburg. His letters to the Society, as published by Mr. Darlow, tell the strange story of his life in that city, and show him as indefatigable in accomplishing his task as he was shrewd in managing men. In 1835 he was transferred to Portugal and Spain, where for five years he was engaged in distributing translations of the Bible, his zeal in converting the natives being apparently in proportion to the danger and difficulty of reaching them. From the letters which he wrote to the Society, and which so far as they are preserved, have now been printed, and from diaries, he afterwards compiled "The Zincali," an account of the Iberian and African Gypsies, and "The Bible in Spain," the most popular, and, on the whole, the greatest of his books. A comparison of the latter work with the Letters shows that his method of composition was largely a mere matter of transcription, though there is some significance in the fact that the additions that go to make up "The Bible in Spain," from whatever source drawn, have little to do with his missionary labors, and a great deal to do with the incidents of the road and with the Gypsies and other outcasts he met by the way.

Two violent prejudices he carried with him everywhere, the Roman Catholic Church and what he was pleased to call gentility. The two had a strange way of coalescing in his mind, and were, it is scarcely uncharitable to say, merely symbols of that order and convention of society against which his whole nature rebelled. His years in Spain answered in every way to this petulance of his nature, and were altogether the happiest of his life. By the distribution of the Bible he was shattering, as he thought, the idolatry of Rome; while his ramblings through the Peninsula brought him into contact with a people at the furthest possible remove from the smugness of British gentility. He possessed a strange power over the wild creatures of the road, whether human or bestial, and often apparently with a glance or a word could change them from hostility to friendship or submission. Something of his joy in Spain, despite the extraordinary hardships he underwent, was no doubt due to the conscious exercise of this almost supernatural fascination. His service as translator and missionary for the Bible Society also brought into play his remarkable linguistic ability. If he was not quite the philologist he liked to call himself, and was capable of devising etymologies that would cause a trained scholar to gape and stare, he could at least make himself understood in a bewildering variety of tongues, from Manchu to Irish. It is characteristic of the man that his interest in a language increased in proportion to its eccentricity. Of Greek and Latin he apparently knew little and cared for them less. French and German and Italian attracted him languidly. But the vagabond speech of the Gypsy and the isolated language of Wales were his lifelong delight.

His days after leaving the Bible Society were embittered by quarrels and distracted by his own insatiable restlessness. Just before returning from Spain he married an English widow who brought him a small estate at Oulton, in Suffolk. He travelled at times, and "Wild Wales" is the fruit of much tramping and exploring in that country. But on the whole his attempt to settle down as a country gentleman was deplorable. He could not, or would not, make himself at home in conventional society, and as a lion he had no speech between a roar and outrageous silence. Strange stories of his ways got about. Children trembled at his approach: "older people he seldom spoke to when out on his solitary rambles; but sometimes he would flash out such a glance from beneath his broad-brimmed hat and shaggy eyebrows as would make timid country folk hasten on their way filled with vague thoughts and fears of the evil eye." Another writer tells how "his great delight . . . was to plunge into the darkening mere at eventide, his great head and heavy shoulders ruddy in the rays of the sun. Here he hissed and roared and spluttered, sometimes frightening the eel-catcher sailing home in the half-light, and remembering suddenly school legends of river-sprites and monsters of the deep."

Death came to him at the age of seventy-eight, broken, and chilled, and silenced. It was a passage for him, one likes to think, from the crowding conventions of the world into unencumbered spaces and into the heart of that untamed nature to which his own heart was akin.

III.

Such a man and such a life it might seem easy to pigeon-hole: he might be set down at once as the perfect type of the *picaro* in the nineteenth century. Yet there are aspects of his character which refuse to fit into such a frame. "The

picaro," says M. Jusserand, with his accustomed precision, "holds a place in literature which is peculiarly his. Faithless, shameless, if not joyless, the plaything of fortune, by turn valet, gentleman, beggar, courtier, thief, we follow him into all societies. . . . There is no plot more simple or flexible, none that lends itself better to the study of manners, of abuses, of social eccentricities. The only defect is that, in order to abandon himself with necessary good will to the caprices of Fate, and in order to be able to penetrate everywhere, the hero has necessarily little conscience and still less heart." The path of the picaresque writer is indeed, in one sense, narrow and sharply defined. His rôle is to set forth the under side of life with all its variety of incident and its hostility to prescription, but he must do all this with a kind of imperturbability of conscience which converts evil into innocence. The moment he displays a touch of moral indignation he passes from the picaresque to the preacher or satirist, and if he shows the least disposition to gloat over things evil as disgusting or revolting he falls into the *genre* of the modern realist. Now in that strait road Borrow walked with all the apparent *insouciance* of a Gil Blas or a Colonel Jacque. From childhood to old age his pleasure was to associate with vagabonds and thimble-riggers, horse-thieves and poisoners, prize-fighters and cutthroats, and these are the people of his books. Mr. Watts-Dunton has told from personal experience how his very manners were moulded by the free company of the roadside:

> When Borrow was talking to people in his own class of life there was always in his bearing a kind of shy, defiant egotism. . . . But the moment he approached a gypsy on the heath, or a poor Jew in Houndsditch, or a homeless wanderer by the wayside, he became another man. He threw off the burden of restraint. The feeling of "armed neutrality" was left behind, and he seemed to be at last enjoying the only social intercourse that could give him pleasure. This it was that enabled him to make friends so entirely with the gypsies.

As for moral sensitiveness there is scarcely a trace of it to be found in any of the accounts of his astonishing adventures. Even when he relates the grewsome attempted murder of himself by Mrs. Herne, the mother-in-law of his peculiar friend, Jasper Petulengro, not a word falls from him of indignation or surprise or fear. And for his strength of stomach, I would recommend the episode of the Gypsy inn-keepers of Tarifa ("The Zincali," chapter iv) as equal to anything in the writings of Nash or the other mighty men of the Elizabethan age. After telling a story of poisoning and thievery the very memory of which would disturb the nights of a weak man, but which he observed without lifting his finger or uttering a word of protest, he dismisses the victims of the villany with the dispassionate comment: "Upon the whole, however, I did not pity them much." There is no sign of self-restraint in all this, no concealment of righteous anger, he is simply describing the scenes in which he felt himself at home, though, it need scarcely be added, his own conduct was ever scrupulously honest and clean.

That is the rôle of the *picaro*, and that is the part of Borrow generally when he deals with actual events. It might seem as easy to place him as it is to enjoy his sublime indifference to the troublesome laws of morality. Yet there was another side to his character which must not be forgotten: he was, if you please, while stopping at this den of robbers, and through all his extraordinary adventures in Spain and Africa, an evangelist and *colporteur* of Bibles, and he was as bold and as sincere in this rôle as he was in the other. On occasion he could take advantage of his intimacy with Gypsies and other outcasts to bring the Scripture to their attention, and there is one particularly striking scene in "The Zincali" which relates in the same breath how he became a participator in the most secret thoughts of a gang of Cordovese Gitanos, and how he perfected himself in their tongue by getting them to translate with him the Apostles' Creed. Nor when he came to moralize at large on Gypsy life was there anything in his tone to distinguish him from the most proper parson. "It is therefore to be hoped," he remarks, in one of his missionary moods, "that if the Gitanos are abandoned to themselves, . . . the sect will eventually cease to be, and its members become confounded with the residue of the population; for certainly no Christian, nor merely philanthropic heart, can desire the continuance of any sect or association of people whose fundamental principle seems to be to hate all the rest of mankind, and to live by deceiving them." Such is Borrow's impersonal reflection, entirely honest no doubt, on the people who were his chosen comrades and from whom came his philosophy of life. The *picaro* is a common character in literature, and the missionary also has his place, but where, except in the author of "Lavengro" and "The Bible in Spain," shall you find the indissoluble union in one man of the complete *picaro* and the dauntless missionary? The combination is piquant, to say the least.

IV.

And if Borrow's works follow the narrow tradition of the picaresque by avoiding on one side the claims of the conscience, they are equally true to the norm by escaping on the other side the peculiar appeal of the heart which is the essence of romance. Perhaps their most striking trait is just this unexpected absence of emotion in scenes where the follower of Wordsworth would revel in sentiment. In all Borrow's descriptions of the wild country of Wales and the Peninsula I can recall but a single instance of that revery so familiar to the nineteenth century in which the soul loves to lose itself in pantheistic contemplation of nature. Once, indeed, we see him sitting on the ruined wall at Monte Moro, absorbed in a dream of the world's rapturous beauty, while the memories of his past life flitted before his "eyes in airy and fantastic array, through which every now and then peeped trees and hills, and other patches of the real landscape." Yet even from this unwonted spell he rouses himself with the reflection that such "reveries . . . only serve to enervate the mind and steal many a minute which might be more profitably employed." It might seem sufficient to say that to Borrow, as to the other masters of the picaresque *genre*, the desolate and unusual scenes of nature were only a continuation, so to speak, of the spirit of adventure among strange human beings, and that the absence of sentimental personification was as necessary to the proper effect in the one case as the absence of moral concern was in the other. In a way that is true; but it is by no means the whole truth. I know not how it is, but somehow, without a touch of that conscious blending of the human and the natural by which the modern writer awakens our romantic emotions, and with seldom a word to indicate that his own heart was moved, Borrow has succeeded in giving to Nature a magic power to charm or appall the soul which many an artificer in sentiment might envy. There are, for example, two or three pages in "The Bible in Spain" describing the nocturnal journey from Bembibre to Villafranca, which for terror and sublimity it would be hard to match in any other English book; yet only in a single brief sentence, and that at the close of the narration, does any hint escape of deep feeling on the part of the writer himself.

The absence of direct human emotion in Borrow is even more surprising, not to say tantalizing, than the romantic sentiment of nature. It should seem at times as if he were utterly devoid of heart and the common passions of mankind. Think for a moment of the episode in Mumper's Dingle and all its emotional possibilities. It may not appear so extraordinary that he can go through the great fight with the Flaming Tinman as if his breast had never swelled with the feeling of rage or hatred or revenge, but where is the language to describe his relation to Isopel Berners? With minute detail he tells how she and he lived in their tents side by side in the remote and secret glen. We see the tall queen of the roads with

all her blonde beauty and crown of yellow hair, a superb Amazon whose right hand was the flail of evil-doers and puny tempters; night after night we see her by the solitary light of the camp-fire serving her companion in simple devotion, her pride humbled to pliant submission, yet, so far as any expression escapes the writer, you would not know that he possessed a body. When the woman in her threatens to break out, he crushes her with lessons in the Armenian verb, drilling her in these antic exercises as a master might train a dog; but it is a wise reader who can say whether he does this deliberately to avoid the perils of the equivocal situation or as a pure pedant with no pulse to leap at danger. The whole episode is cruel and in any other writer would be sterile and unnatural. Yet withal, though there is no word of passion in these chapters, indeed scarcely a word of human feeling—save after Isopel has fled, and then the note of regret is feeble and false—they are able by some trick of composition, perhaps by the very absence of what is expected, to fix themselves in memory as one of the great love scenes of our literature. Was ever woman so coldly wooed before, we exclaim; but there exudes from that wooing, nevertheless, a thin, impalpable, intoxicating air of passion.

So Borrow appears to me as I seek the man himself within his books. Essentially a picaresque character to whom life was an adventure in which the conscience and heart have no concern, he was still on the one side as clean himself as the wind on the heather and as fearless in missionary work as a Jesuit, and on the other side he can convey to the reader some of the subtlest emotions of romanticism. I state the contrast sharply, knowing that it could be somewhat shaded away by exceptions and reservations; but the paradox is there and piques curiosity. P. E. M.

NEWS FOR BIBLIOPHILES.

In 1899, shortly after its acquisition of the famous Francis Fry collection of Bibles, the British and Foreign Bible Society began the preparation of a new catalogue of its collection of editions of the Holy Scriptures. The first volume, which appeared in 1903, described editions of the Bible or parts of the Bible in the English language. This was an admirable piece of work, and has been continually referred to by every collector of printed English Bibles.

In the Preface of that first volume it was announced that the second volume, enumerating editions of the Scriptures printed in languages other than English, would "appear in 1904." Now, in 1912, this second portion is just ready, and, instead of being in one volume, is bound in three, aggregating 1,750 pages, and describing books printed in more than six hundred languages and dialects.

In order that the book might be as complete as possible, and of the utmost use to students, all known editions are described even though, in certain cases, there be no copy in the Society's own library. Such entries are indicated by being enclosed in heavy square brackets.

In all, there are described in the four volumes, 9,848 books, printed in 628 languages and dialects. Of these, a few are obsolete languages or dialects represented only by printed texts of early manuscript translations and others (no less than sixty-five) are modern dialects, in which versions have been printed purely for philological purposes. Fifty-seven of these latter belong to the series printed at the expense of Prince Louis Lucien Bonaparte. The opening division of this second volume consists of Polyglots, a term which the editors limit to editions printed in three or more languages. In each case the book is again entered under each of the languages included in it, in order that the historical development of the text in each language may be shown.

This division of polyglot versions is a minor one, filling only thirty-six pages. The remainder of the three thick volumes is occupied with descriptions of books printed in almost every known language or dialect of the world. These are arranged alphabetically, the dialects generally being put under the language to which they belong. A full index at the end enters all dialects, with variant spellings, making reference to the entries easy. While a large proportion of these languages and dialects are Asiatic, African, or South Sea Island dialects, into which portions of the Scriptures have been translated and printed for the use of missionaries, the space allotted to older printed editions of the Bible is ample, and the collations and descriptions full enough to answer all requirements. For example, the account of Latin Bibles fills one hundred and one pages, two hundred and forty-one editions being described, many of the descriptions filling a half-page, and some two or three pages. While Copinger, in his "Incunabula Biblica" (1892), enumerates one hundred and twenty-four editions in Latin printed before 1500, the editors of this catalogue reduce this number to "about one hundred after eliminating those which lack sufficient authentication." A considerable number of early editions are lacking in the Society's own collection. Of the Gutenberg Bible, the Society does not seem to own even a single leaf.

The Bible House Library dates its beginning from December 17, 1804, upon which date an appeal was sent out soliciting contributions of Bibles, Testaments, etc. One of the earliest donors was Granville Sharp, who sent in between thirty and forty volumes, among them being a copy of the second edition of Eliot's Indian Bible, printed at Cambridge, Massachusetts, in 1680-1685. The Society does not possess a complete copy of the first edition of this famous translation, but does own the New Testament, which was printed and issued separately in 1661, two years before the Old Testament was ready. They also own the even rarer "Massachusee Psalter" which was prepared by Experience Mayhew for the use of the Indians on Martha's Vineyard and which was printed by B. Green and J. Printer in Boston, in 1709. This "J. Printer" was an Indian first known as "James the printer," afterwards as James Printer, who had assisted in the printing of the earlier editions of the Indian Bible. In the note to the Indian New Testament (1661) we notice a lapse, where it is stated that the first press in Cambridge, established in 1683, was "under the charge of Samuel Green," no mention being made of Steven Daye, nor of his son Matthew Daye. As a matter of fact, Green did not take charge of the press until 1649, after the death of the two Dayes.

The Catalogue is edited by T. H. Darlow and H. F. Maule. In his Prefaces, Mr. Darlow acknowledges assistance from a host of Biblical students and philologists in all parts of the world. In its own field, the work stands alone and will prove indispensible to all who have to do with the bibliography of the Holy Scriptures.

"THE PRESIDENTIAL TERM."

TO THE EDITOR OF THE NATION:

SIR: Referring to your editorial on "The Presidential Term," it seems to me evident that the real issue between yourself and the advocates of the six-year term is not so much the desirability of the six-year term as it is that of the changed conception of the Presidency. That conception, which you consider an argument against the six-year term, they regard as an argument in its favor—as, in fact, one of the very evils which the six-year term is designed in a measure to correct. It is regarded by them as essentially revolutionary. According to your description, the President is no longer a mere official, but something more—something so multiform and vague that his functions cannot be defined, but can only be indicated in a general way by such phrases as that, "he is not only a great public official, but the leader of a party"; that "he has more and more approached the office of a prime minister"; that "he is the great national figure, the chief national voice"; that "the people look to him both to propose and to execute"; that "he is to make use of his authority to put through measures for the general good," etc., etc.

It is evident that this new conception of the Presidency, whatever else may be said of it, is irreconcilably at war with what is most fundamental in our political system. Under that system nothing is more fundamental and essential than the partition of powers and the resultant division of responsibility. And nothing can be plainer than that under that partition of powers and division of responsibility, the duty of making laws is placed upon the people's representatives in Congress, and that, by necessary consequence, on them rests the responsibility for any failure in the performance of that duty.

True, the President is given a voice in legislation, but it is not a continuing voice, but only a well-defined and limited influence; and when that influence has been properly exerted the President's legislative responsibility ends.

As regards law-enforcement, nothing can be plainer than that it is the President's duty to enforce all existing laws with faithfulness and impartiality, regardless of his own opinion of their wisdom; that his responsibility ends with such enforcement;

and that any evils resulting therefrom are chargeable not to the President, but to the law-making branch of the Government. But according to this new conception, the President is held responsible for all such evils, notwithstanding the fact that in order to be so responsible the enforcement of law must not be mandatory upon him but discretionary; and to make it thus discretionary would be to authorize him, at his option, to suspend the operation of laws, thus giving him, in addition to his limited constitutional veto power, an extra-constitutional veto power that is unlimited and absolute.

I say that this new conception of the Presidency is extra-constitutional and revolutionary. Without any change in the Constitution, and with perfect inconsistency and unreason, it ignores this most fundamental feature of our Government, and proceeds by extraneous methods to transform a supposedly constitutional President exercising only well defined functions into a President exercising additional functions that are vague and indefinable and wholly unknown to, and largely inconsistent with, the Constitution.

The assumption that this change has already been made, that this new conception of the Presidency has been accepted by the people, is quite unwarranted, for the very good reason that the people have had no opportunity to choose between accepting or rejecting it; and that if such opportunity were offered them—if a constitutional amendment were proposed vesting the President with such functions as are here involved—it would not even be deemed worthy of serious consideration. Such foothold as this new conception has already gained in practice is due, not to any intrinsic merit recommending its adoption, but to the apathy of the many who are not directly interested, coupled with the clamor and mental habit of the few who are directly interested—the world-old habit of calling upon a one-man power for immediate relief from individual ills, regardless of the remoter effects upon the general welfare.

This state of things is highly objectionable for many reasons, among which are these—that it tends to throw our entire scheme of government into confusion; that while it makes inconsistent and impossible demands upon a conscientious, constitutional President, it offers a golden opportunity to an unscrupulous and self-seeking demagogue; that it is one of the phases of that dangerous disrespect for law that is becoming so prevalent, and is also a phase of that insidious and sinister process of changing the substance of government without changing its form, by which all constitutional governments seem destined sooner or later to perish.

It is perfectly true, as you assume, that the length of the Presidential term should be adjusted to the nature of the Presidency; and if it were also true that we must have a Presidency corresponding to this new conception, the conclusion adverse to the six-year term would be correct. For a constitutional Presidency a six-year term would be short enough, but for an extra-constitutional Presidency the four-year term or any term at all would be quite long enough.

HARDY AND NIETZSCHE.

To the Editor of The Nation:

SIR: In your editorial on "The Love of Good Writing," the other day, you quote Thomas Hardy to the effect that "the shortest way to good prose is by the route of good verse." Hardy's statement recalls Nietzsche's aphorism in "Die fröhliche Wissenschaft" (2d ed., 1886), entitled "Prosa und Poesie," in which the great master of German prose deals with the same matter, and of which I offer the following translation:

Let us remember that the great masters of prose have almost always also been poets, whether openly or only covertly and for the closet; and, indeed, one writes good prose only face to face with poetry! For prose is an uninterrupted polite warfare with poetry: all its charms consist in continually evading and contradicting poetry; every abstraction must be presented as a roguery against poetry and in a mocking voice; all sobriety and frigidity is to set the lovely goddess in a pretty rage; often there are advances, momentary reconciliations, and then a sudden retreat and fits of laughter; often the curtain is raised and a glaring light allowed to enter just when the goddess is enjoying her twilights and sombre colors; often the word is taken out of her mouth and sung to a tune which makes her hold her delicate hands over her delicate ears—and so there are a thousand delights of the warfare, counting the defeats, of which the unpoetical, the so-called prosaic, know nothing; they consequently write and speak poor prose! War is the father of all good things; war is also the father of good prose! There were in this century four very remarkable and truly poetical persons who attained to a mastery of prose for which otherwise this century is not made—for the want of poetry, as already indicated. Apart from Goethe, who is justly claimed by the century which produced him, I regard only Giacomo Leopardi, Prosper Mérimée, Ralph Waldo Emerson, and Walter Savage Landor, the author of the "Imaginary Conversations," as worthy to be called masters of prose.

Nietzsche wrote out of such a wealth of information that one hesitates to question his conclusions. Nevertheless, it is not unlikely that a wider survey of universal literature than is possible to a single individual would readily furnish additions to the quartet of great prose writers enumerated by him. But however that may be, the interesting point here to observe is how closely related his description of the conditions under which good prose is produced is to Thomas Hardy's.

THE MISSION OF THE CHURCH.

To the Editor of The Nation:

SIR: In your issue of June 6, the "Mission of the Church" is discussed, and the question is asked, "What shall the church do to be saved?" The answer seemingly would depend on what one conceives the church to be. In the discussion cited, the answer is that salvation lies neither in a return to the old ways, *i. e.*, more theology, nor in greater social service, but in the elevation of the motives that actuate men and women, the strengthening of their better selves. All this is doubtless true, but before one considers what institutional activity should be it is well to define to oneself just what the institution is. On this depends the true understanding of the relation of "Smith" to the church: "Smith," the man who thinks that the church is a good thing for Jones, but who for himself gets on comfortably without it.

An ancient Greek, who is somewhat of Smith's type, is quoted by Deissmann: *ἐπὶ μὲν τῷ ἐρρῶσθαί σε, εὐθέως τοῖς θεοῖς εὐχαρίστουν.* Compare this with St. Paul's, "We give thanks to God always for you all . . . remembering without ceasing your work of faith and labor of love and patience of hope in our Lord Jesus Christ, before our God and Father." Notice the difference. Our ancient "Smith" thanks the "Gods" and gets along very well, the Apostle thanks the God and Father of our Lord Jesus Christ, and seemingly gets along no better; the former gives thanks for a single past event, the latter's thanks are but the audible expression of a constant prayer-communion with God; the object of the gratitude of the pious heathen is "bodily health," that of the Apostle's thanksgiving is the good condition of his followers as Christians. What now is the Church, the Christian Church, but the institutional form in which a believing spirit akin to that of the Apostle clothes itself? If so, how can it be saved in the absence of such piety? Smith may believe that churches are good things, and "he may do almost anything for a church," but, though his money will doubtless be gratefully accepted and his well-chosen words of encouragement will surely be highly appreciated, yet if he stands outside the circle and enough people follow his example the Church as already defined simply fulfils the course of nature and dies. The burden of proof, whatever these mysterious words mean, may nowadays have shifted to the man who attends church, but it should seem that the multitude of "Smiths" ought at least to tell us why the ideas of Christ and his apostles make such a feeble appeal to them that no corresponding personal activity of a social and institutional kind results. Usually we have no difficulty in estimating the depth of an interest whose results are purely negative.

RELIGION OF SENSIBLE MEN.

To the Editor of The Nation:

SIR: In a communication to the *Nation* for May 30, your correspondent, in discussing the remark concerning the "religion of all sensible men" attributed to Disraeli, traces it back to Garth and suggests that it may be referred to a period even more remote. As a matter of fact, the first Earl of Shaftesbury (1621-1683) is an earlier reputed author. Speaker Onslow in a note to Burnet's "History of His Own Time" (ed. Oxford, 1823, I. p. 164) is the authority for the following anecdote: "A person came to make him a visit while he was sitting one day with a lady of his family, who retired upon that to another part of the room with her work, and seemed not to attend to the conversation between the Earl and the other person, which turned soon into some dispute upon subjects of religion; after a good deal of that sort of talk, the Earl said at last":

"People differ in their discourse and profession about these matters, but men of sense are really but of one religion." Upon which, says the lady, of a sudden, "Pray, my lord, what religion is that which men of sense agree in?" "Madam," says the Earl, "men of sense never tell it."

In the "Dictionary of National Biography," xii, 130, a brief and slightly different version of the same story is cited from Sheffield's memoirs.

"JURMUNGLE."

TO THE EDITOR OF THE NATION:

SIR: In connection with Professor Bruce's letter in your issue of May 30, I should like to call attention to the fact that the Italian *garbuglio* means the same as the Yorkshire *jurmungle*. I do not think, however, that this meaning explains the passage in Nashe's "Lenten Stuffe."

KNOWLEDGE OF ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: "In these last days" one can hardly turn over the pages of a periodical devoted to the advancement of learning without coming upon at least a passage or two deploring the lack of training in the use of our mother tongue exhibited in our current literature, using the term "literature" to designate everything that appears in print.

One of the causes is, of course, the immense quantity of printed matter and the rapidity with which it is produced. But there is no room for doubt that our modern method of educating the young is likewise largely responsible. We are persistently told that we should train the judgment, not the memory. The injunction is in itself meaningless. The savage uses his judgment in spearing a fish, or in tracking game, or in pursuing an enemy. The important question is not whether we should use our judgment, but how and upon what objects. In modern education a great deal of stress is laid upon those branches that are mainly observational. In the natural and physical sciences the student's work is largely of this character. In his experiments he is taught to produce phenomena, or to interpret the phenomena that come under his observation. In nine cases out of ten, this is mere routine work. On the other hand, in the older curricula, the laboratory occupied a very subordinate place. In the nature of the case, the student whose time was mainly occupied in the recitation room, or in preparing for it, no matter what the subject dealt with, was compelled to use his mother tongue, and received a great deal of unconscious training. Neither in England nor in this country was the native language carefully taught; generally it was not taught at all. But the student had much practice in the use of speech. This is not only true of English, but of German as well, as current German periodicals abundantly testify.

The decadence of speech has kept pace with the advance of modern education. The great writers, almost without exception, received their training under the old régime, although in the case of such authors as George Eliot, outside of the schools. To tell what we see is very different from telling what we think. The student at once learns this when he undertakes to describe an experiment, as compared with the writing of an essay on some literary or historical theme. To use authorities with discrimination; to discover a writer's motives beneath his words; to test his credibility as a witness; to distinguish between thoughts and mere phrases; in short, to fathom the psyche through its tangible manifestation, then to set forth the verdict with clearness and force, is a task that is almost infinitely more difficult. It is only after long and arduous practice that the vast majority of young people can attain even moderate success.

THE OLD BUDDHA.

The Great Empress Dowager of China. By Philip W. Sergeant, B.A., Former Editor of the Hongkong *Daily Press*. With 16 illustrations, including a photogravure frontispiece. New York: Dodd, Mead & Co. $3.50 net.

Two Years in the Forbidden City. By the Princess Der Ling, First Lady in Waiting to the Empress Dowager. Illustrated from photographs. New York: Moffat, Yard & Co. $2.

The serious student of modern China may look with misgiving upon any fresh attempt to relate the history of the famous Empress Dowager, whose career was so vividly set forth in the work of Messrs. Bland and Backhouse, already reviewed in these columns. Yet both of these books on the Old Buddha must be accounted worth while. They provide additional material, which the student will accept with becoming gratitude, and they offer the reader who does not pretend to be serious less documented accounts of the most picturesque Imperial personage of modern times. The two volumes before us admirably supplement each other. The Hongkong editor summarizes from the foreigner's point of view the history of half a century, the Manchu Princess supplies incidents and a setting from which we gain a lively impression of a great character.

Mr. Sergeant's résumé of events leading to the crisis that placed the throne of China in charge of a woman is a model of candor and sensible statement. His succinct account of the opium traffic, the "Arrow" War, and the punishment of Manchu arrogance stands by itself among histories written by Englishmen for its detachment from national prejudice. An instance of his fairness is worth citing, for it displays a quality which commends the book as a trustworthy guide to those unable to impugn his evidence. In quoting Lord Elgin's famous decision to burn the Summer Palace as a solemn act of retribution for a great crime, he says:

> The argument is weak. The Congo atrocities would not have been expiated by the burning of the late King Leopold's Palace at Ostend, nor did even the fact of tortures having taken place in the Yuen-Ming-Yuen make it a rational thing to give warning against murder by the destruction of a fine historical monument such as the Summer Palace was. Lord Elgin was right, however, in expecting his deed to impress the Chinese Court.

There are other places in the book where one would willingly stop to consider the author's sympathetic attitude towards China—an attitude the more remarkable because his residence in the Empire was in Hongkong, the hotbed of extreme anti-Chinese views. Some reservations must be made to this general commendation. His opinion of the Tsung-li Yamen's memorandum of 1871 as a basis for the settlement of the missionary question is more optimistic than that of others who have followed the history of this period, but he is justified in blaming the foreign Ministers for ignoring their proposal for friendly discussion, "the result of which was increasing trouble down to the present day for Western Powers, and for China constant unrest." These subjects, however, are mainly introductory to the political career of the great Empress. So far as that remarkable woman's personality is concerned, it must be confessed that she is seen in these pages as through a glass darkly when compared with the singular illumination thrown upon her by the account of her handmaiden.

The tendency among foreigners living in China to interpret the Dowager Empress's character in accordance with their own standards has been stronger than among observers outside. The resulting opinions are utterly confusing. A true estimate of her would seem to lie, as it does in this book, somewhat nearer the opinions of those who defended than those who blamed her. We must rate her among the sovereigns of antiquity, a consistent upholder of dynastic right, not as the Moses of her people. Her genius for leadership, which was great, showed itself in an eminently feminine form as the champion of that which was personally nearest and dearest to her desires. She was detested by her Chinese subjects not on account of her cruelty, but because they hated the Manchus, and this hatred has been reflected in the valuation of many foreigners who only knew the situation at second hand. The other side of the case—the saving influence of her personal superiority—was appreciated only by the very limited number of those who were made aware of the charm and even elevation of her manner. Yet, though possessed of fine traits, she could not be trusted to exercise them if they interfered with her passionate resentments. When once aroused she would not forgive, as was shown in the crushing of Kwang-hsu and in her vindictive persecution of Kang Yu-wei and his follow-

ers, whose programme was a challenge to her supremacy. She was a great opportunist without much constructive statecraft. Her genius lay in reading character, but her autocratic temper rendered the shrewd men she selected chiefly skilful in riding out the storms of her passion with little opportunity to guide her to wiser policies. With her other qualities must also be included her amazing superstition, which explains her belief in the supernatural pretensions of the Boxers and the ease with which some of her unscrupulous attendants played upon her. On the whole, though she cannot be acquitted of grave faults, she impresses the reader as a woman of splendid endowment. It brings us nearer to a just appreciation of the East to listen to Mr. Sergeant's suggestion not to assume that Oriental character must be actuated by motives

different from those of other men and women in similar positions. Yet in no other way can the maxim of Confucius, "under the four heavens all men are brothers," more truly be applied than in the study of motives in mankind, East and West. It is unnecessary to seek for the topseyturveydom which Europeans delight to find in China, or to talk of the inscrutable East. The East is no more inscrutable than the West. But all human nature becomes inscrutable if one begins by rejecting the simple explanations on account of their simplicity.

The Manchu Princess, whose two years in the Forbidden City in attendance on her Majesty is as delightful as it is informing, supplies in her book an appropriate commentary upon this remark. The daughter of a progressive Manchu prince by an educated Eurasian, she had the exceptional fortune of a training under the best auspices of both Chinese and European culture. Upon the return of her father from the post of Chinese Minister in Paris, she was taken with her mother and sister into the Imperial Palace to serve the old Empress as her interpreter and first lady-in-waiting. The contact of East and West under these unusual conditions involved plenty of piquant incidents, but, happily, no occasion for antagonism. The young princess entered the court with hopes of inducing the Old Buddha to learn more about Western ideals and institutions, and of thereby furthering the progress of reform; she discovered that her mistress was too old to depart from her life-long habits and convictions. If we compare her to Marie Antoinette, and recall the satisfied obstinacy with which the French Queen and her court resisted the new conception of sovereignty, demanded by her people with far greater insistence than Tsz Hsi's subjects, we begin to understand the irreducible obstacles in the way of Der Ling's ambition. There is nothing, then, peculiarly Oriental in the situation. What strikes the Western observer is the fact that nothing in her association with the most brilliant and imposing display of Oriental culture which the young girl could have encountered in the modern world modified her own stanch preference for the ways of the West. It is something to note in passing that loyalty to this opinion could withstand the very real temptation of court life and the personal influence of a gracious patron.

The account of the daily life in the palaces of this Imperial lady is given with a simplicity which renders it quite convincing. There are glimpses of dark undercurrents in the mysterious intrigues of the eunuchs and the gossiping court women, almost without exception ignorant and inane, but the healthy mind of the author seems to have noticed the cruelty and the greed lurking beneath the surface only to avoid them. They do not interest her and she does not tell tales. She was obviously a favorite with the *Lao Tsu Tsung* (the "Old Ancestor," the conventional court name for the Empress), and sincerely strove to deserve her kindness by devotion. The irresistible charm of that supreme figure reduces all the glamor, the wickedness, and the work of those two busy years to insignificance. Every turn in this minute and varied account brings us back to the one being upon which it is centred. The character of Tsz Hsi as disclosed in this record shows a woman who, despite her fascination, was capable of ruthless acts and curiously fond of indirections, even where a straightforward course would appear to have offered greater chances of success. One cannot blame her for practices which are understood to be the foundation of Oriental *bienséance*, and were forced upon her from the first by the sinister company of the Palace. Perhaps the pollution about her was the main cause of her failure to achieve statesmanship. We cannot tell; but her habit of concealing while seeming to uncover was vitiating and led her sometimes into fantastic little deceits. When Mrs. Conger was received in a certain private audience there was no necessity, of course, for showing the American ladies her bedroom. She determined, however, to do so, ordering her attendants to "change everything, so as not to show them our daily life."

We started to work (says the author) taking off the pink silk curtains from every window and changing them for sky blue (the color she hated); then we changed the cushions on the chairs to the same color. While we were watching the eunuchs doing the work, several of them came into the room, carrying a large tray full of clocks. By this time her Majesty had come into the room and ordered us to remove all her white and green jade Buddhas and take some of the jade ornaments away, for these things were sacred and no foreigner should see them, so we replaced them with these clocks instead. We also took away the three embroidered door curtains and changed them for ordinary satin ones. . . . Her toilet table was the most important thing. She would not let any one see it—not even the wives of the officials who came in, so, of course, we had to put it in a safe place and lock it up. We changed her bed from pink color into blue. All her furniture was made of sandalwood, also carvings on her bed. This sandalwood, before it was made into furniture, was placed in different temples to be sanctified, so, of course, no foreigner could see it. As we could not take this carving from her bed we covered it up with embroidered hangings.

Though some of the great names of modern China appear in these pages, the narrative adds nothing of importance to our knowledge of political events during the last days of the Ta Ching Dynasty. Fortunately for herself, the author did not possess a capacity for intrigue; if she had she would hardly have retained her position. There are interesting and suggestive sketches of the late Emperor, who mopes quite pathetically in the background, and of his consort, a likeable woman of the old Dowager's clan; also of Miss Carl, the American artist, who seems to have been a closely guarded but unconscious prisoner in the Palace while painting her famous portrait of Tsz Hsi. But these reminiscences are chiefly commendable for what they divulge unconsciously; for, like their subject, their abiding charm lies in their femininity.

CURRENT FICTION.

Fathers of Men. By E. W. Hornung. New York: Charles Scribner's Sons.

The author of "Raffles" has here performed what is clearly a labor of love. It is one thing to write clever and ingenious tales for the market, and it is quite another to officiate as celebrant of the time-honored mysteries of the English public school. Mr. Hornung tells this story of school life in that mood of affectionate loyalty which the great schools of England have always been able to arouse in their sons. The story is good in itself, but, after all, the main thing is the atmosphere. The central situation would be impossible in the really American type of school, though not perhaps in certain of our private institutions built upon the English model. A stable-boy, son of a coachman and an eloping lady, is taken up by his mother's relatives after the father's death, and sent to a public school. From the beginning his career is shadowed by the horrid secret of his birth and early life in the stables; and his eventual triumph as a student, and more particularly as an athlete, is presented as a notable victory over untoward fate. Jan Rutter's experience, compared with that of hundreds of American boys of equally humble origin who are forced to work their own way through school

and college, seems a pretty comfortable one.

The incidental interests of school life, more particularly the incident of athletics, plays an undisguisedly prominent part. We are used to conceding that the English student has more common-sense in this regard than the American. But cricket means as much to Jan as football to Stover of Yale. Even Heriot, the refreshingly human schoolmaster of this story, is moved in the end to wonder what it has all profited. "A bit of Latin and a lot of cricket, no doubt; but how far are they coming in?" Heriot and Jan agree that the school has justified itself as a school of character; and that the sense of loyalty to the school itself is no small thing to have gained: "My brethren and my home are there." The story is not another "Tom Brown at Rugby," but it ranks fairly with later stories of the type—we think especially of Mr. Vachell's "The Hill."

Roddles. By B. Paul Neuman. London: John Murray.

The adult lower middle-class Englishman continues to figure as a favorite hero of current fiction. Such a thing had not been dreamed of half a century ago. Imagine Dickens giving the centre of his stage to Mr. Boffin! Now it is possible for an old Christopher to be the real hero of "Joseph Vance"; and a Mr. Polly or a Roddles may be spared even titular rivalry. Roddles is an uncommonly appealing figure—a little Cockney tailor, superficially weak, but essentially strong. Two sons are left young upon his hands by the death of their mother. For himself Roddles is well enough content to remain poor and shabby and drunken. But he is a man of thought in his way, and a man of will. He determines that his boys shall have the best advantages and win a high place in the world. He takes it for granted that each of them is going to the top, therefore he sends them to separate schools, and starts them toward different careers, so that there may be no chance of their interfering with each other. They are boys of extraordinary ability and docility. His ambition imposes itself upon them as a law, and his programme is actually carried out to the letter. They take the highest honors at school and university, and push rapidly forward in their chosen careers. Roddles has never shown personal affection for them, and it is part of his plan that from the moment they begin to rise they shall see as little of him as possible. He is a drinking man, and, when they are fairly launched, succumbs more and more frequently to his temptation. He sinks lower and lower, and in the end finds himself out of work and on the edge of starvation. He will not apply to his sons, and sees nothing ahead but suicide, when—an extraordinary thing happens. The end of the story is unexpected, and perhaps a little improbable. Suddenly and frankly the narrative is shifted from the plane of realism to romance—or is it merely to a higher realism? There is a fine touch of irony in the closing scene.

Japonette. By Robert W. Chambers. New York: D. Appleton & Co.

The piquant situation with which Mr. Chambers likes to open his popular romances is not wanting here—something less than fresh in substance, but piquancy is a question of handling. The young man who comes home to find his quarters occupied by a beautiful and innocent maiden is a hero at least as old as the Arabian Nights. But there are numberless ways of developing the situation. In the present instance, the maiden is a distant relative of the young man, though they have never met. She and her not less charming sister have been installed in the New York apartment of the absentee by a faithless servant, who does not dream of the master's return. But the master has lost all his money, and returns to America to find himself owner of nothing but the apartment in question—and two new and lovely cousins. The device the three hit upon for making a joint living is sufficiently ingenious and "up-to-date." Of course, the young man is fated to wed that one of the sisters who has first dawned upon his vision. In the meantime, the other persons in the action are suitably active in supplying obstacles, misunderstandings, jealousies, and such indispensable adjuncts to romance; nor is a villain lacking. Mr. Gibson's drawings again admirably illustrate a mediocre text.

Hidden House. By Amélie Rives (the Princess Troubetzkoy). Philadelphia: J. B. Lippincott Co.

The theme of double personality has been pretty frequently handled by writers of fiction during the past decade or two, and we cannot say that the present writer adds anything of novelty to its treatment. The earnest young man, alternately in love with the two different young women who take turns at occupying the same body, has been presented repeatedly; and in two instances, at least, with remarkable skill: in a short story by Miss Alice Brown, the title of which we do not recall, and in W. H. Mallock's novel ("An Immortal Soul"). The Princess Troubetzkoy has given the subject a new setting. The action takes place in a little remote house in the Virginia mountains—a place inaccessible by vehicle or beast of burden. Far up the mountain-side in this house dwell an old Scotchman and his daughter, tended by a huge negress. The hero comes there (rather unaccountably) as a boarder, and finds himself at once under the spell of an unnamable mystery. There are, it seems, two daughters of the house, who are never there at the same time. It is understood that they alternately visit an aunt. One of them, Moina, is a modest, serious, womanly girl, and it is she whom young Marston first finds in possession at Hidden House. He is at once attracted to her, and they have reached the verge of an understanding, when the girl vanishes overnight, and her sister, Robina, takes her place. Robina is a scatter-brained, coquettish, brilliant girl, and soon gets the "paying guest" in a sad state of emotional turmoil. She is the grandfather's favorite, and he does all he can to help along the affair between her and Marston. She has poetic powers, and the unconquerable lust for life which still burns in the old man's veins. He longs to see her in permanent possession of life; but, of course, Moina returns, and it is given us to understand that this time she has won the field. It is the old theme, and it must be admitted that the author of "The Quick and the Dead" has not greatly improved in delicacy of touch or feeling since that little work (it seems mild enough now) made its little sensation.

FRENCH LITERATURE.

A History of French Literature. By C. H. Conrad Wright, Assistant Professor of French in Harvard University. New York: Henry Frowde. $3 net.

Histories of French literature for English readers are neither numerous nor satisfactory. The shorter ones, including Dowden's excellent compend, are too brief to satisfy anybody but the amateur. Of the longer ones, Mr. Saintsbury's uneven and erratic volume has *faute de mieux* long held the field. Mr. Wright's very handsome and substantial work will therefore be received with eager interest.

It is evident from the start that Mr. Wright possesses, especially on the scholarly side, certain qualifications for his task which have not previously been brought to it. He has extraordinary familiarity with French history and politics. There is nothing perfunctory in his sketching in of the historical background. Moreover, he carries his torch into many of the purlieus of literature which the critic is usually only too content to abandon to the scholarly specialist. There is an excellent chapter on Scholasticism, another on Renaissance Platonism. The growth of the Renaissance spirit is competently handled. In Mr. Saintsbury's index neither Abelard nor Ramus appears. The pages dealing with periods where literature and politics overlap are among the best in the book. Throughout there is evidence of intimate and ordered knowledge and of

wide reading easily held and readily utilized.

Unfortunately, however, Mr. Wright has the defect of his quality. He limits himself far too much to the purely historic aspects of his subject. His abundant knowledge results in clear sight rather than in clarifying insight. His lucidity, which is very considerable, remains on the whole a lucidity of the eye. There is no well-defined intellectual reaction on his part, no sifting of fact in the interest of unifying principle. He sees the features of a given age with remarkable fulness and with a conscientiously well-directed gaze; but the ordering of the tangled phenomena remains mechanical. The result, viewed as philosophic criticism, is apt to be only a pigeonholed chaos. Mr. Wright is a judicious and well-informed chronicler rather than a penetrating philosophic critic.

As a result, his treatment of the great writers is decidedly uneven. As soon as he approaches their artistic and personal side, his sentences exhibit a centrifugal tendency. We get scattering observations which he lacks the skill to bind into a sheaf, because they have no underlying unity of conception. So much of a writer as may be intellectually formulated he presents to us in lucid exposition; but this done, he gropes and fumbles. Accordingly, he writes an eminently satisfactory chapter on Taine, a very unsatisfactory one on Sainte-Beuve, a fairly adequate one on the ideas of Renan, but one from which Renan himself is absent. Mr. Wright is at his best in periods where he has to deal mainly with the history of tendencies and movements. He travels with an orderly ease, which Mr. Saintsbury is far from emulating, through the chaotic literature of the sixteenth century, and his eighteenth century is far more satisfactory than his favored period, the seventeenth, and immeasurably more so than his nineteenth century. His chapter on the tendencies of twentieth-century literature is, on the other hand, a masterly disentanglement of very complicated literary phenomena in an as yet virgin field.

In so far as he ventures to appear at all, the critic is almost always the judge. His judgments are summary, severe, Rhadamanthine. They are pervasively tinctured with irony and have an unpleasantly acid, even acrid flavor. They put us out of sympathy even with an expected and justified verdict. The prisoner may deserve hanging, but we protestingly feel that he has not been fairly heard. Even the truth itself becomes unwelcome. When Mr. Strachey, in his excellent epitome of French literature, says that "Chateaubriand had all the vanity of Rousseau, but none of his honesty," we read on unshocked; but the case is different when Mr. Wright tells us that "Chateaubriand was one of the worst liars and plagiarists in literature"—and if, for the moment, we can think of literature at all, it is of campaign literature. When Mr. Saintsbury says that Lamartine's verse is marred by the perpetual current of sentimental complaining, we readily allow his point of view; but when Mr. Wright speaks of "the moping Lamartine" or of "the whine of Lamartine," we are less sensible of the defect imputed to the poet than we are of the defect revealed in his critic.

When not thus negative and ironical, when they remain soberly æsthetic, these summary judgments are nearly always reminiscent of tradition and are pronounced with due knowledge of precedents. One is even tempted at times to think that tradition and precedent are their sole generating source, so sedulous is the author in avoiding the personal attitude and the personal note. Above all, he stoically refuses to betray any hint of personal delectation. He seems so intent on preserving his critical balance that he will neither bow before genius nor condescend to a familiar nod of recognition to authors with whom he cultivates a special acquaintance. He thus deprives us, no doubt, of more than one fine page that he might have given us, pages where analysis is vivified by sympathy, and where criticism acquires something of the accent and the inspiring power of literature because the spirit of the writer is speaking through his interpreter. There is a whole line of writers, men like Boileau, La Rochefoucauld, La Bruyère, perhaps Racine, with whom Mr. Wright would seem to have a certain spiritual kinship, and of whom he might have written *con amore*. It is to be regretted that his austere conception of critical impartiality seems to dictate this colorless and impersonal attitude.

It is in dealing with the great and approved masters that this lack of geniality, this chill abstention from literary delight, is especially striking. What should be the preliminaries of criticism crowd out and replace criticism itself. In the chapter on Rousseau, the longest in the book, we get an excellent though rather ironic exposition of his ideas, but no adequate explanation of the magic by which he imposed those ideas on the world and became the greatest literary influence, perhaps, of all time. Rousseau the sophist is very fully presented, but not the Rousseau who walked every morning to Bercy to hear the nightingales sing. The same remark applies to the "Provinciales." We get very little notion of Pascal's method, of the wit and irony that converted polemic into literature. The "Provinciales" are viewed not as literature, but as history. The miracle of Pascal's style, even in the "Pensées," is hardly more than hinted.

A word must be said about Mr. Wright's own style. In its general texture, it is the unpretending style, a little dry and colorless and lacking in fervency, but clear and occasionally crisp, which satisfies though it may not delight. But this level is by no means kept. There are frequent lapses due to over-hasty condensation which reduces the sentence to a disparate carry-all. We ought to have been spared a sentence like this: "Lamartine had written various poems in the prevailing fashion, . . . but a new emotional crisis came in the form of love for Mme. Charles, the Poet's Elvire (the Julie of Raphaël), the young consumptive wife of an elderly scholar, soon ended by her death, and the effect on him was permanent." There are not less frequent lapses into undignified colloquialism, flippancy, and trivial expressiveness. In an age when expressiveness is killing expression, the abused reader may well protest. Especially in a writer so sober in matter as Mr. Wright, these inebrieties of manner are unbecoming. Mr. Wright's authors produce books which are sometimes "off-color" and sometimes "heavy-weight," they have "fads," they "crib," they "boom" their books, etc. Montesquieu has a "hobby-horse subject," the elder Balzac produces "flatulent periods," Mérimée has a "dirty mind," and Gessner's imitators treat subjects "immersed in the sticky sentimentality of German molasses-literature." Turn, for illustration of all these faults at once, to the pages on Mme. de Staël. The first sentence tells us that she "was the daughter of the Swiss banker Necker, who made fruitless attempts to reform the finances of France, and of his wife, renowned by her salon." The second sentence tells us that "as a girl, she was an excellent example of the infant phenomenon of her sentimental environment." Next we learn that this "compound of brains and emotion" married, and that "her fondness for talking and dabbling in politics kept her in hot water all her life." We learn that Benjamin Constant "for years hung about her skirts," but subsequently "stole a march on her and got another wife," whereafter her desire for love "was at last satisfied by a pretty boy named Rocca," who "had been nearly shot to pieces in military service," Mme. de Staël marrying "what was left of him." Much of what is thus detailed may be not undeserving of satiric comment—but the irony might have been lighter. Mr. Wright presently insinuates a masculine origin for the ideas of "De l'Allemagne," and adds that Schlegel "was for years a tutor in Mme. de Staël's family and she had every opportunity to eviscerate him." Her book, it seems, led the French "to adopt at least for a time a mentality as well as a sentimentality, compounded from England and Germany, grafted on Rousseau."

It would be unjust to cite this chapter as typical of Mr. Wright's habitual manner. It is not. But it is typical of Mr. Wright's manner when he tries to be disagreeable to an author, and this unhallowed mood is far too recurrent in his work to make it a wholly safe guide in literary criticism. It is regrettable that such radical defects in tone and temper, combined with such pervasive æsthetic meagreness, should mar a work so conscientious, so impeccably accurate in the presentation of a vast array of facts, so intelligent in the handling of ideas, and displaying such remarkable grasp of the historic background.

For facts, for analysis of ideas, and for what is now in Chicago called *historicity*, the English reader will find this the safest guide, and he may trust it implicitly—he will find nothing analogous to Mr. Saintsbury's statement: "Chénier has been somewhat unfortunate in his editors!" But for æsthetic criticism, and, strange as it may seem, even for amenity and distinction of style, he may still continue to stick to Mr. Saintsbury—or no—rather let him learn French and turn to some of the works registered in Mr. Wright's excellent and extensive bibliography.

The Abolition Crusade and Its Consequences. By Hilary A. Herbert, LL.D. New York: Charles Scribner's Sons. $1 net.

The author of this brochure was a member of Congress from Alabama for sixteen years prior to his four years of service as Secretary of the Navy during Cleveland's second Administration, and throughout the Civil War, in which he was a loyal Confederate soldier, "he maintained the belief, in which he had been educated, that slavery was right, morally and economically. One day, not long after Appomattox," as he records, "he told his father he had reached the conclusion that slavery was wrong. The reply was, to the writer's surprise, that his mother in early life had been an avowed emancipationist; that she (who had lived until the writer was sixteen years old) had never felt at liberty to discuss slavery after the rise of the new abolitionists and the Nat Turner insurrection; and then followed the further information that when, in 1846, the family removed from South Carolina to Alabama, Greenville, Ala., was chosen for a home because it was thought that the danger from slave insurrections would be less there than in one of the richer 'black counties.' What a creature of circumstances man is! The writer's belief about a great moral question, his home, his schoolmates, and the companions of his youth, were all determined by a movement begun in Boston, Massachusetts, before he was born in the far South!"

In this philosophic mood, Mr. Herbert, who might have pushed further back to the formation of the Constitution, or the landing of the first slaves at Jamestown, for the early determining influences upon his life, has undertaken a brief retrospect of the great conflict which resulted in the abolition of slavery, and points the lessons he thinks should be drawn from it. Briefly stated, these seem to be:

First, that if the Abolitionists had not been so violent in their denunciation of slavery, the South might, in some dim, distant future, have discovered a way (not even now possible of outline) to abolish it peacefully, and that a promising trend in the South towards emancipation (or "reform from within," as the party phrase goes) was summarily stopped by the Northern agitation.

Secondly, that their condemnation of the United States Constitution for its pro-slavery compromises—its tolerance of the African slave trade for a period of twenty years; the unjust political advantage accorded the South in granting (mis)representation for three-fifths of the slave population; and the provision for the return of fugitive slaves—was unpardonable, the Constitution being sacrosanct in the author's eyes, and any suggestion of a "higher law" of morals inadmissable.

Mr. Herbert frankly acknowledges that he has not made much effort in the direction of original research, and has relied mainly on published documents, mostly from Northern and anti-slavery writers, whom he cites occasionally and respectfully. Indeed, he has written in excellent spirit and with due recognition of the courage and unselfishness of the anti-slavery leaders. For his first contention, however, he fails to produce evidence of any depth or vitality of anti-slavery sentiment in the South prior to the Garrisonian movement. Scattered societies existed among the Quakers of North Carolina and Tennessee, and Virginia statesmen from Jefferson and Patrick Henry to John Randolph characterized slavery and its evils in language which the abolitionists of later years were content to adopt as adequate and justifying all that they averred, but the only organized movement which received the countenance of Southern leaders of public opinion was the American Colonization Society, the prime motive of which was to rid the South of its free colored population by deportation to Africa. The destruction of this society, which was Janus-faced in its appeals to Southern slaveholders on the one side, and to Northern philanthropists on the other, was rightly deemed by Garrison the first essential step in his crusade, and it fell under the withering fire of the deadly parallel columns of his "Thoughts on Colonization." The Society's postulate, however, that whites and blacks cannot live on equal terms, and with equal rights and opportunities, in the same communities, is still maintained, and is the root of the unjust denial of full civil and political rights, equal school privileges and opportunities, and protection against mob violence and outrage, against which our colored fellow-citizens have such bitter cause to protest.

Mr. Herbert rejoices in the abolition of slavery and recognizes the marvellous advance made by the emancipated race, but he complacently declares this to be "one of the results of slavery"! On the other hand, he thinks "the wonderful progress made by the Southern white man during the last thirty-five years is by no means all due to the abolition of slavery." "*The initial cause of all our troubles*" he declares to have been—not slavery, but "*the formation by Garrison of those Abolition societies.*" (The italics are his.) Garrison's act of burning the pro-slavery Constitution on a certain occasion (after the rendition of a fugitive slave) fills him with horror, and he even finds "a connecting chord," in the climax of his book, between that and the burning of the poor negro by the Coatesville mob last August, "for one body of outlaws was defying the laws of Pennsylvania; the other was defying the fundamental laws of the nation"—presumably a wickeder offence. But while Mr. Herbert holds the Constitution in such reverence, and confesses that agitation for the repeal of the Fifteenth Amendment would be "worse than useless," he views with unconcern the virtual burning of that corner of the sacred document by the Southern States, and foresees trouble in the future, not from this deadly violation of the "fundamental law of the nation," but from the protest and agitation against it which will not cease until we match our creed with our deed.

Notes

The Index of the *Nation*, January 1 to June 30, will be printed with the issue of July 4.

Two volumes of essays will be published by Houghton Mifflin Co. in the autumn—one by Meredith Nicholson, whose title is not yet announced, and "The American Mind," by Prof. Bliss Perry.

Prof. Arthur H. R. Fairchild is bringing out, through the Putnams, "The Making of Poetry—A Critical Study of Its Nature and Value."

As American representatives of the Cambridge University Press, the Putnams announce: "Silva Latina—A Latin Reading Book," chosen and arranged by J. D. Duff; "Silas Marner," edited, with introduction and notes, by F. E. Bevan, and "Dumfriesshire" (Cambridge County Geographies), by James King Hewison.

John Lane Co. is issuing this week: "The Dewpond," by Charles Marriott; "Elizabeth in Retreat," by Margaret Westrup, and the

English version of "The Recollections of Guy de Maupassant," by his valet François.

The Riccardi Press will issue immediately the first two volumes of "Virgil." The text is that of Henry Nettleship, edited by Prof. J. P. Postgate.

A monograph, entitled "Mrs. Humphry Ward: Her Work and Influence," is in the list of Kegan Paul & Co. The author is J. Stuart Walters.

H. Addington Bruce is at work on a new book for the autumn, entitled "Woman in the Making of America" (Little, Brown).

Holt has in hand "Some English Story Tellers, A Book of the Younger Novelists." It is a companion volume to "Some American Story Tellers."

Laird & Lee of Chicago have in press "A Romance of the Road," a story of business life, by Alice Curtice Moyer.

Autumn announcements of Doubleday, Page & Co. include: "The Opened Door," a novel dealing with economic problems in England, by Alfred Ollivant; "The Man Farthest Down," by Booker T. Washington; "Rolling Stones," a new book of O. Henry material recently brought to light; "Elkan Lubliner: American," by Montague Glass; "Knocking the Neighbors," by George Ade, and "The Soddy," a novel by Sarah Comstock.

Among the miscellaneous books which Stokes will have ready in the autumn are: "The Lighter Side of Irish Life," by George A. Birmingham; "My Robin," by Frances Hodgson Burnett; "The Annals" of the Strand and of Fleet Street, both by E. B. Chancellor; "The Spirit of Christmas and Other Prose Poems," by Arthur H. Gleason; "Football for Public and Player," by Herbert Reed; "William Jones—Indian, Cowboy, American Scholar, and Anthropologist in the Field," by Henry Milner Rideout; "Edinburgh and the Lothians," by Francis Watt; "Sweethearts at Home," by S. R. Crockett; "Be Prepared," a tale of boy scouts, by A. W. Dimock; "Hike and the Aeroplane," by Tom Graham; "Jim Davis," by John Masefield; "The English Fairy Book," by Ernest Rhys; "Two Girls of Old Jersey," by Agnes C. Sage, and "The Adventures of Akbar," by Flora Annie Steel.

"How to Use the British Museum Reading Room," originally a lecture delivered by R. A. Peddie, will be brought out in book form by Grafton & Co.

Vol. VI, 5 of the "E. J. W. Gibb Memorial" (Luzac & Co.) contains Vol. V of Yaqut's great "Dictionary of Learned Men" (the Irshad al-Arib), which gives part of the letter Ayin. The editor, Prof. D. S. Margoliouth of Oxford, will have access to an important MS. that has come into the possession of the Bodleian Library; but there are still gaps in the material, and he will be grateful for any reference to new sources of information. It is highly desirable that this encyclopædic work, which is approaching completion, shall be issued in a form as nearly complete as possible.

The second supplement to the general register of the Society of Colonial Wars contains, besides the list of members and an index of ancestors, a brief historical sketch of the society. It was organized in New York city in 1893 by delegates from five States and the District of Columbia. Since then twenty-one States have been added to the number having societies. The register is beautifully illustrated with twenty-six portraits, historical monuments, seals, and medals.

It is a patriarch with a very young heart whose opinions Judge Robert Grant has recorded in "The Convictions of a Grandfather" (Scribner). Repeatedly, before the end of the book, one feels that "convictions" is too strong a term to describe an outlook upon life that is expressed with so much freedom from dogmatism. But when one has put down the volume there is no impression left of that too, too sweet reasonableness, which, under the ancient pretext of scourging the sin and sparing the sinner, ends by finding everything pretty nearly for the best in this rather comfortably arranged world of ours. Judge Grant sets out with the expressed intention of not being a peevish grandfather, but he does not adopt the common road to cheerfulness which is to admit that grandfather is wrong, and the young who play tennis and drive motor-cars are quite right. He does not look querulously back to the past, but neither is he content to accept things as they are. He is a Radical grandfather, much more Radical than his grandchildren, who find life too pleasant for analysis. He is concerned with the familiar problems that cannot be explained away on the ground that they are a bore, with the growth of luxury, the cultural and moral evolution of the American woman, the decline of learning, the American husband, divorce, the servant problem. The jurist speaks out with exceptional vigor on the decrepitudes and the tyrannies of our American law. He is strongly for the abolition of that unfortunate legal doctrine of the fellow-servant in industry which has stood in the way of the development of a civilized workman's compensation scheme. He is severe on the ways of lawyers and courts in the matter of wills and testaments. He favors the inheritance tax, and has leanings towards old-age pensions. He is so Progressive a grandfather in fact, that his oldest friend suggests, in a fairly loud voice, that the old gentleman is breaking up. But one of the sons-in-law replies that while the old gentleman may be losing his grip a little, there is something to be said for what the old gentleman has just been saying concerning old-age pensions. Whereat the patriarch reflects:

> This was almost exoneration from the charge of lunacy, and let me down gracefully. For if a man of my years can get a fairly favorable verdict from his family on that score, when he is supposed to be out of ear-shot, he need not fear the judgment of the rest of the world.

Delightful little touches like this are to be found here in plenty for the looking.

For the vacation traveller abroad there are three recent issues of Baedeker, "Austria-Hungary," "Norway, Sweden, and Denmark," and "Palestine and Syria," in revised and amplified editions. An excellent little book is Blair Jaekel's "Planning a Trip Abroad" (McBride, Nast & Co.), in which the guide-book interest is subordinated to the question of ways and means. On this subject the writer offers ample and accurate information in very attractive form. In "How to Visit Europe on Next to Nothing" (Dodd, Mead), E. P. Prentys shows how one hundred and nine days of holiday may be had for less than $300. The book promises to be useful, but the title is somewhat misleading. People to whom three hundred dollars is next to nothing will be apt to find hardship in the very close economies demanded by the writer's schedules.

Events occurring as late as February of the present year are recorded in the "Statesman's Year Book" for 1912 (Macmillan). The population figures from the Census of 1910 are used in the article on the United States, although, oddly enough, they are omitted from their proper place in several articles on the separate States. The political changes in China, Morocco, Tripoli, and British India are taken into account. There are excellent maps dealing with Tripoli and the territorial arrangements between France and Germany in Central Africa. It is not necessary, of course, at this date to expatiate on the exceptional utility of this standard book of reference. It offers at the same time an explanation of, and a commentary upon, the movement of international politics as recorded in the daily press.

Prof. Samuel G. Smith's "Social Pathology" (Macmillan) is not happily named. From the title one would expect a systematic interpretation of social ills as the disorders of an essentially physical social organism. In fact, however, the "central doctrine" of the book is, as the author makes clear, a protest against the view that the conduct of human beings in society is virtually controlled by physical forces, internal or external. Crime and poverty are here described (though they are not thereby satisfactorily explained) as the result of primarily psychical social influences working upon individuals more or less responsible for their own degeneracy, but with corresponding power to avail themselves of social aid in self-betterment. Accordingly, Dr. Smith, like many others of long experience in philanthropic work, belittles the physical determinism of heredity. As a corrective of extreme views advanced in the name of eugenics his criticism is welcome; yet it rests on such an imperfect appreciation of the biological principles involved that it cannot be called judicious or adequate. Indeed, the book as a whole seems doomed to inadequacy by its plan. It attempts to cover too much ground. The economics of poverty; the relief of poverty by church, state, and private charity; the relation of poverty to city conditions, to the family, to the individual; the causes and treatment of crime; the care of the insane, feeble-minded, deaf, and blind; drunkenness, suicide, immigration, illegitimacy, prostitution, eugenics, sanitation and public health, social statistics—these are the subjects, and yet not all of the subjects, touched upon in some 350 moderate-sized pages. There is a deal of information, mostly correct and serviceable. Here and there are excellent passages, as in the chapters on crime, where the author is at his best, or in the discussion of the standard of living. Yet for sheer lack of room no one topic can be developed far; the exposition seldom attains momentum; too often the mention of facts seems mumbled and inconsequent. To be sure, the book makes no pretence to be more than an introduction. But the true introduction to vital subjects like these is something dif-

ferent: it is real illumination of a few central problems which challenge and compel further thought, and, after this initiation, advice to the reader at parting, telling him where to seek for the guidance that no one general book can afford.

A series of books on economic subjects of quite unusual merit has appeared as a result of the annual prize offerings of Hart, Schaffner & Marx. The twelfth in the series, "Freight Classification, A Study of Underlying Principles" (Houghton Mifflin Company), by J. F. Strombeck, maintains, if it does not raise somewhat, the standard set by its predecessors. Coming from the pen of a college undergraduate, it deserves the highest commendation for its keen analysis, and for its maturity of thought and expression. Briefly, the book is a scientific dissection of the freight rate, to determine the principles underlying its composition in all the varying circumstances of its employment. While the author relies in large measure for his basic material upon rules of action laid down by the Interstate Commerce Commission in their decisions, which he seems exhaustively to have consulted, he displays independent reasoning in his occasional dissent from the declarations of that body of experts. We are not aware of the existence in English of any so concise, and, at the same time, so exhaustive a handling of the theory of railway freight rates from the practical standpoint as is to be found in this little volume.

Although prepared expressly for the schools of Buckinghamshire, Margaret M. Verney's "Bucks Biographies" (Frowde) may well carry useful suggestions to writers and teachers in this country who seek to utilize more fully for their classes the resources of local history. From the annals of a county which "does not at first sight offer any very dramatic material," the author has put together, with abundant local color and allusion, attractive sketches of Wyclif and the Lollards, Elizabeth and her gallants, John Hampden, Milton, the Whartons, and Disraeli, besides a host of ministers, teachers, doctors, lawyers, literary workers, and country gentlemen who have either lived in or had notable contact with the county. As a product, in part, of the recent revival of pageants, the book is an excellent illustration of the historical interest which such enterprises may arouse.

A second edition of "The Law of Interstate Commerce and Its Federal Regulation" (T. H. Flood & Co.), by Frederick N. Judson, is welcome, in view of the fact that the first edition appeared in 1905, a year before the adoption of significant amendments to the Interstate Commerce act. (See *Nation*, September 21, 1905.) This revision brings down to date the legislative amendment, the administration, and the judicial interpretation of the Commerce act which was so radically altered in 1906 and 1910. It also contains chapters on related legislation, such as the Anti-Trust act of 1890, the Safety Appliance acts, Hours of Service act, and others. Mr. Judson's personal association with important litigation of this sort has made him thoroughly conversant with the intricacies of this new field of law, and his volume has been long held an authoritative exposition of its principles.

Elizabeth S. Haldane and G. R. T. Ross have performed a useful and scholarly service in supplying English readers with a translation of "The Philosophical Works of Descartes," of which the first of two volumes has been published by the Cambridge University Press; Putnam. Their version includes all the philosophical works originally intended for publication, but omits the portions of the "Principles" which treat of astronomy and physics. The most important additions to the ground covered by other accessible versions are the "Objections" directed against the "Meditations," with Descartes's replies (to appear in the second volume), and "The Passions of the Soul," both of which are necessary for a thorough understanding of Descartes's views.

"Intimacies of Court and Society: An Unconventional Narrative of Unofficial Days" (Dodd, Mead), by the widow of an American diplomat, is a book that one, having picked up with some distaste for its prejudicial title, is likely to continue skimming from page to page, because, at once, of the agreeable personal vein in which it is written, the absence of any undue snobbishness or adulation in approaching the elevated personages with whom the pages are filled, and the real information and sober judgments offered. The anonymous author's husband began his diplomatic career as a secretary, and became an ambassador. But it is rather of her own subsequent life that she writes, as for years she has passed from capital to capital, enjoying the hospitable fruits of friendships formed in official days. She deplores with good American sense and justice the etiquette of courts, reflected in the exclusiveness of diplomatic society, which makes it difficult for those in the service to choose their associates freely. And it is the particular charm of her book that it contains no mere monotonous record of official functions and social triumphs, but an account of friendships and intimate impressions. Such great functions as she does describe, like, for example, the coronation of Nicholas II and the Czarina at Moscow, she gives from the point of view of one who, while enjoying the *entrée* to these great pageants, is still an outsider in the sense that she bears no official relation to them.

She has a philosophical appreciation of the extraordinary social situation brought about by a stubborn and unimaginative attempt on the part of the Czarina to impose upon a sensuous, intellectual, and semi-oriental court, the moral standards of her grandmother, Victoria. Equally without political influence, through a similar unadaptability, but from different causes, is the Queen of Italy, in whose case, also, a strong-minded queen mother still further complicates a difficult situation. But Elena, the Montenegrin princess, is beloved of her people in a way that the Czarina never has been or can be; and, however *gauche* in her court life, she is without narrow-mindedness or pettiness, making an attractive and lovable figure, simple, without fastidiousness, and good, without the pretentiousness of middle-class virtue, in the ensemble of contemporary royalty. But in pages that bristle with royalty, it is a peasant woman that presents the most striking figure, the wife of the President of the French republic, Mme. Fallières. This plain, speechless, stout little housewife, pitchforked by her husband's political fortune into the Elysée palace, where is held a state comparable to that of the oldest monarchical courts of Europe, certainly affords one of the most curious anomalies of republican France to-day. Somehow the impression she produces is a little painful as well as pathetic; for, however inarticulate, she possesses a positive force of character, and her habitual response to all criticisms on her régime, "We do the best we can," conceals beneath an apparent humility, a provincial stubbornness and self-complacency. This is shown by the way in which she discharged the Elysée chef, so as to install her own old cook, with the result that, as our author tells us, many an official dinner guest has taken the precaution of eating a hearty meal at home before starting out.

Arthur E. Copping is a journalist of the old-fashioned, stay-at-home, top-of-an-omnibus variety. Far from rampant newspaper-corresponding, he had been three times, strictly superintended, on the back of a horse before he went to ride through Palestine, under the protection of the great Mr. Cook. So, naturally, his record ("A Journalist in the Holy Land"; Revell) is much of equine escapades and afternoon tea camping. Thus might Mr. Pickwick, smiling benevolently, have been conducted in Oriental wanderings by a Samuel answering to Solomon. But his touch is so light and pleasant that we do not mind hearing much about himself. His attitude is unpretentious; there is a saving, if slight, vein of humor; and some passages, notably those on the Russian pilgrims, rise to real insight. The picture of Jericho, with its "mineral waters of exorbitant price," will stir memories. The present reviewer can witness that he spent there in one twenty-four hours two dollars and a half on strictly "soft" drinks. Best of all, there are no photographs; only a number of not particularly distinguished sketches in black-and-white and in colors by his brother, Harold Copping. In Cairo, Mr. Copping saw the Moharrem Shiite procession, and describes it rather blotchily, but where and how in Cairo of to-day did he see the dancing and howling dervishes?

A chatty book is the Rev. Edward S. Weeden's "Year with the Gaekwar of Baroda" (Dana Estes), the democratic ruler of an important native state of India, whose visit to America, a few years ago, aroused considerable interest. Mr. Weeden went to India as the privileged guest of the Gaekwar, and, after his return to England, compiled his volume from his letters home. His ignorance of the land which he visited was almost incredible, although, fortunately, he had a Murray's "Handbook," which is obviously responsible for his account of Shivaji's murder of Afzal Khan (p. 226). Yet he also knew how to use his own eyes, for, whereas Murray mentions merely "nymphs sporting with heavenly alligators" on the Baroda Gate at Dabhoi, Mr. Weeden notes on it carvings of elephants, as well (p. 140). Very good descriptions are given of the palaces of the Gaekwar and of the residency at Baroda, as well as of the city itself, of hunting with cheetas and lynxes, of buffalo, ram, and elephant fights, and of a Hindu cremation; but the author's account of a

tiger hunt leaves the reader wondering how there can be much real sport, when the tiger seems to have no chance at all. Mr. Weeden is "awfully keen" on sport, and has a "fearfully jolly" time, but the reader grows a little weary of dinners, bridge, cricket, croquet, billiards, dancing, and motor-cars, all of which he can enjoy at home, and each of which is characterized by the author with at least one superlative. It seems curious that a man with only a short time to spend in India should prefer to stay at Bangalore for the races to visiting the temples at Madura; but, after reading of Mr. Weeden's sojourn at Poona, where the Gymkhana Club and the Bund were evidently much more interesting to him than the shrines of Parbati, surprise yields to a less complimentary sentiment, especially when it is remembered that the author enjoyed exceptional opportunities for observation. By far the best portion of the book is the picture which it gives of the attractive personality and home life of the ruling house of Baroda.

The Life and Love of the Insect. By J. H. Fabre. Translated by Alexander Teixeira de Mattos. New York: The Macmillan Co. $1.75 net.

For more than thirty years fascinating accounts of the life and habits of common insects have been appearing from the pen of the French naturalist and philosopher, Jules Fabre, under the title, "Souvenirs Entomologiques." Unfortunately, the some three hundred essays that have been published have been almost unknown to English students, although a translation of Volume I appeared about a year ago. A true service is therefore rendered by Mr. Teixeira de Mattos, who has now made accessible to English readers the greater part of a book of selected essays.

A better selection than that of the eighteen included could hardly have been made to show the wonderful patience in observation, the skill in interpretation, and the poetic spirit of this devoted naturalist who, at the age of ninety, is still seeking new truths with undimmed enthusiasm. Reared in poverty, his early dreams of travel, "rosy illusions, rich in voyages, were soon succeeded by dull, stay-at-home reality. The jungles of India, the virgin forests of Brazil, the towering crests of the Andes, beloved by the condor, were reduced as a field of exploration to a patch of pebble stones enclosed within four walls." But, he continues, "Heaven forefend that I should complain! The gathering of ideas does not necessarily imply distant expeditions. . . . I go the circuit of my enclosure over and over again, a hundred times, by short stages; I stop here and I stop there; patiently, I put questions; and, at long intervals, I receive some scrap of a reply."

Little wonder that "the smallest insect village has become familiar," and that the most common insects have yielded secrets which have escaped all other observers. Accepted ideas of the life-history and habits of the sacred beetle, of the Scolia which provisions her nest with spiders, of the Languedocian scorpions and their droll nuptial allurements—in fact, of virtually every species which Fabre has studied, must be revised in the light of his observations.

Not only are his observations recorded with an enthusiasm which is contagious, but his interpretations and his digressions into most unexpected fields make the volume one which the lay reader, however little interested in technical entomology, will be loath to put down. At every opportunity there is a sly dig at "ingenuous theorists, so triumphant on paper, so vain in the face of reality," for Fabre has no patience with current ideas of evolution. The parasitic gnat, which believes that business means getting hold of the honey of Halictus is comparable to man, who, "to play the brigand to better purpose, invents war, the art of killing wholesale and of doing with glory that which, when done on a smaller scale, leads to the gallows." An interesting excursus on numismatics precedes the discussion of fossil weevils, and a delightfully intimate reminiscence of Pasteur illustrates the author's conviction that "in many cases ignorance is a good thing; the mind retains its freedom of investigation and does not stray along roads that lead nowhither, suggested by our reading."

The translator is to be congratulated on carrying over into the English much of the vivacity and charm of the original, for, while Fabre is "convinced that one can say excellent things without employing a barbarous vocabulary," and that "clearness is the supreme politeness of whoso wields a pen," he is an unusually difficult writer to translate. It is to be hoped that this little volume may be the means of attracting many to the original writings of one whom Maurice Maeterlinck has called "the insect's Homer," "one of the purest writers, and, I was going to say, one of the finest poets of the century that is just past."

This week Holt is bringing out "Elements of Physics," by E. H. Hall, which is described by its publisher as something more than a successor of Hall and Bergen's "Text-Book of Physics."

Cambridge books in Putnam's list include: "Numerical Trigonometry," by J. W. Mercer; "Examples in Numerical Trigonometry," by E. A. Price, and "A Shorter Geometry," by C. Godfrey.

Nearly six years ago we commended in these columns a book by Dr. Albert S. Morrow on "The Immediate Care of the Injured." The second edition, just now at hand (W. B. Saunders Co.), may be recommended as showing revision suited to make the book still more useful. The book might be improved by some account of the things to be done in cases of injury by lightning or the electrical current. At present the treatment of burns from these causes is mentioned, or at least indicated, only in the index. In the matter of artificial respiration Schaefer's method is worthy of mention as having some distinct advantages. The new method of Meltzer is, of course, quite too new to be taken into this book, but if it shall prove to be as efficacious in humans as it is alleged to be in dogs, it may well replace all the older methods, provided the relatively simple outfit is at hand.

The *Annales de Géographie* for May opens with an article by Prof. D. W. Johnson of Harvard University on the stability of the Atlantic Coast of North America. He shows that the numerous facts alleged as proofs of its recent subsidence have an entirely different explanation. The submerged trees, for instance, are explained by the local conditions of the few places to which they are confined. The rapidly growing importance of the port of Caen, through the development of the iron mines in Normandy is described by Y. Lemarec with a diagram and three charts. Other subjects treated are the ancient glaciers of the Carpathians, by Prof. L. Sawicki of the University of Cracow, and the changes in the course of the rivers of western Africa, by H. Hubert. Some rivers which, in comparatively recent times, have flowed north have been "captured" by streams flowing south, with a consequent increase of the desert.

"La France: Géographie Illustrée" (Paris, Librairie Larousse), by P. Jousset, is the first volume of a remarkably interesting and valuable illustrated gazetteer of France. The parts treated are the central and western massifs, the Pyrenees, and the Mediterranean coast. The text has for its special aim to show how the natural features of the land have affected the life of the inhabitants. To many the 871 photographic reproductions will be a revelation of a country in which the wonderful beauty of the scenery is constantly enhanced by the work of man in castles, churches, and simple homes. The various industries and methods of agriculture are also shown, as well as the distinctive costumes of the peasants. A work of this kind treating different sections of our country is greatly to be desired, for there is virtually no gazetteer of the United States.

"Garden Design in Theory and Practice" (Lippincott), by Madeline Agar, is well printed and illustrated, and, for the most part, ill written. Like most books on gardening, it is written in a rambling style, with a word on this matter and a word on that; and though it contains a great deal of information, it can by no means be called a solid book. The fragmentary mode of treatment is particularly noticeable in the

first section, on the History and Description of Styles. Succeeding sections include Preparation of the Design, Structural, Component Parts of a Garden, and Planting. The book is intended for the student of garden design, but it is not without interest to the owners of estates and those who desire a general and yet not superficial understanding of the principles of garden construction. Although the writer has in mind an English audience, referring frequently, as she does, to "the London neighborhood," and computing, in one table, in shillings and pence, there is little in the book that is not equally applicable to conditions in America. This fact is mainly due to the scant allusion to purely horticultural matters, and a corresponding emphasis on questions of plan and construction. It is worth noting, in the light of the returning popularity of formal gardening, that "landscape" gardening receives what many would deem less attention than it deserves.

Much knowledge of contemporary astronomy has been packed into "A Beginner's Star-Book" (Putnam), by Kelvin McKready, and of the lesser instruments of optics by which these may be studied by the amateur with profit. But the beginner who has no instrument, not even an opera-glass, can make an excellent start with the book, the author's primary object being to enable any one who is not possessed of technical equipment to gain, by his unassisted eye, or at most by the simplest instruments, a real knowledge of the sky. The descriptions of celestial objects are brief, and the illustrations abundant, well chosen, and excellently reproduced. Encouragement for the amateur is everywhere provided by practical suggestion and a readable text, with judicious interlarding of poetical selections. The night-time charts, with their keys, are especially well designed and executed. Mountings of telescopes, the appropriate use of different magnifying powers, information on the positions, up to 1931, of the principal planets, with an observing catalogue of telescopic objects, and a brief bibliography, conclude this excellent and up-to-date book. For setting the amateur on the right road to a broad, general, and at the same time thorough acquaintance with the northern sky, there is no better book.

Shakespeare: A Study. By Darrell Figgis. New York: Mitchell Kennerley. $2 net.

The results of Mr. Figgis's study do not differ in essentials from what we may call the current orthodox interpretation of Shakespeare; it is in his method of approach that his originality —whether for good or for evil—consists. This is apparent to a certain degree even in the titles of the three chapters which embody most of his discussion of the plays. They are headed successively His Craft, His Art, His Thought. These titles are calculated to awaken at once curiosity as to how the author is going to keep distinct in his analysis matters that are necessarily divided by such shadowy boundary lines. On reading the book as a whole one discovers, however, that it is just the tenuity of the distinctions that attracts Mr. Figgis. To be sure, the subject-matter of the first and third of these chapters turns out to be something more definite than the headings suggest—for the first, after all, is substantially nothing more than a discussion of Shakespeare's methods of plot-construction, and the third of his philosophy of life. The figurative and the mystical, however, exercise such a strong attraction for Mr. Figgis's mind that the reader has to puzzle out for himself that these are in reality the things that are being discussed. It is trying enough to have to extract from the following sentences the simple idea that in writing Shakespeare's life his biographer is at liberty to select one traditional statement and reject others less credible:

> Its selection from among its companions need be no imputation on their fair fame and veracity, but can only mean that it, at least, is buttressed and supported by a collateral requirement. It has its place in an entity that may or may not cast its raiment over its companions.

But when the lines of discussion through whole chapters are determined by this cast of mind, the matter becomes serious indeed. A striking illustration of this tendency is supplied by the chapter on Shakespeare's Thought, where the author is apparently developing the idea that as Shakespeare advances in his work he is less and less inclined to offer definite answers to the great moral questions raised by human life and that the recognition of the mystery of such questions is most marked in the tragedies. Here he seizes on Hamlet's words:

> "There's a Divinity that shapes our ends
> Rough-hew them how we will,"

and for the greater part of the chapter the whole development of the above mentioned idea is from the point of view of this personified abstraction, "the Divinity"—a term which recurs throughout with wearisome reiteration. Thus when he wishes to say that comedy, being more artificial than tragedy —such, at least, is Mr. Figgis's view— and, requiring a happy ending, does not admit of so wide a moral vision, this is the way he puts it: "The fact of an expectant Divinity at the conclusion of the five acts, waiting for all the issues awakened to converge at his feet, must needs so foreshorten the psychology, and so restrict the characters thereby, that unreality is supreme: whereas the business of Thought, whether conscious or instinctive, is the quest of Reality." The thought is, in itself, sound enough, but the mode of expression is so perplexingly artificial that the reader has to brace himself to the effort in order to keep the track of this shadowy Divinity to the end of the chapter.

The whole structure of the book suffers from the peculiar habit of mind which we have endeavored to exemplify, but it is only fair to add that the work also contains a great deal that is acute and stimulating, even where one does not agree with the author. So, for instance, in his discussion in the fifth chapter of the predominance of emotion over intellect in poetry and his application of this principle to the study of Hamlet and Othello, or again in this same chapter the pages on the subject of Shakespeare's transitions from verse to prose. To be sure, the latter discussion neglects many matters worthy of note, as, for example, the curious connection pointed out by Professor Bradley between Lear's madness and his use of prose. Suggestive, too, is the distinction of five different successive movements in Shakespeare's development of a plot, but our author drives the theory too hard in identifying each movement with the scope of an act. What inducement was there to adopt so artificial a mode of construction when on the Elizabethan stage, to use the words of a recent authority, "act-divisions were indicated rather than realized"? Mr. Figgis's whole treatment of the subject of Shakespeare's methods of plot-construction suffers from the fundamental defect of not taking into consideration the influence of the poet's sources. It is safe to say that the most powerful single factor in determining the structure of a Shakespearean plot is the nature of the source from which it is drawn. While recognizing fully the dramatist's supreme gift of characterization, we can not blind ourselves to the fact that comparison with the sources is likely to throw real light on problems of this order, whereas if we adopt the mystical conception expressed in the following words, we should never get out of the wilderness: "It was never he himself that wrought the construction wherein to place his characters; he created the characters that should themselves achieve their destiny, weaving it in a certain fashion according to the impulsion of life that drove them forward."

The most noteworthy feature of the chapter on Shakespeare's life is the attempt to piece together our information on the subject so as to show the influence of material conditions on the poet's work. Our author's reconstruction of the dramatist's early life particularly is very ingenious and worthy of attention, but, after all, he is here merely following the methods of the modern representatives of Shakespearean research, at whom, like Professor Saintsbury, he has his fling—only that, unlike these dryasdusts, he fails to buttress his statements with documentary references and relates the story, for the most

part, with the assurance of a writer of fiction describing the actions of his characters. Indeed, it seems to us that Mr. Figgis out-Germans the Germans when he explains the difference between "The Merchant of Venice" and "Hamlet" by the change which Shakespeare had made from the audiences of The Theatre to those of the Globe in the interval that separated the composition of these dramas. We see something of the same thing in the excessive zeal with which he labors the now popular idea of the influence of the Elizabethan stage on the structure of Shakespeare's plays. He pursues this theory with such intensity in his analysis of "The Merchant of Venice" that one begins to feel that, after all, the problem of the play for Shakespeare was not Shylock's character, but the question of by what doors he was to get his actors off the stage and other matters of a similar kind.

In striking contrast with Mr. Figgis's generally super-subtle style we note certain remarkable crudities of diction that disfigure his book—"to fault" for "to blame," "to structure" for "to construct," "pulled off" in the familiar sense which it bears in American college slang. Similarly, when actors make their exits, they "issue off." Finally, when Mr. Figgis speaks of "the ill portion of an apple," we recognize what he means, but, surely, this mode of expression leaves as unpleasant a taste in the mouth as the thing itself.

Music

The Norwegian city of Bergen is to have a large new concert hall, which will be named after Grieg, who was born there, and who has done as much to make Norway musically famous as Chopin for Poland, Wagner for Germany, and Liszt for Hungary.

Rubinstein occasionally played all of Chopin's preludes (which, as he justly held, are the best things ever written for the piano), at one concert, and Josef Hofmann has done this too. Chopin also figures more prominently (and deservedly so) in concert programmes than any other composer. But, so far as known, it has remained for the French pianist, Robert Lortat, to play all of Chopin's compositions from first to last. This he accompanied in a series of five recitals in London. The pieces were not played in chronological order, the programmes being arranged with a view to variety and contrast. The first, for instance, included the Fantasie, the sonata in B minor, and some of the mazurkas, nocturnes, valses, and polonaises.

The Royal Library of Berlin has received from Marie von Bülow, widow of the great pianist, a most valuable gift, consisting of more than 2,000 printed volumes of music, many of them with the autographs of the composers, or with von Bülow's marginal annotations and suggestions. In addition to these, there are many portfolios of manuscripts, press clippings, and so on, besides six volumes and fifteen packages of concert programmes.

It is a new feather in the cap of the admirable operatic conductor, Cleofonte Campanini, that he has been chosen to direct the most important of the festivals which will be held in Italy next season to celebrate the centenary of Verdi's birth. It will take place at Parma, to which belongs the village Busseto, where Verdi was born. In the Royal Theatre of that city will be performed some of his earliest works, "Oberto," "Conte di S. Bonifacio," "Nabucco," "Araldo," besides "Traviata," "Ballo in Maschera," "Aïda," and "Don Carlos," perhaps also "Otello" and "Falstaff." The "Requiem" will be sung, too, and there will be, in connection with these performances, an exposition, the first of its kind ever held in Italy, which will afford a sort of bird's-eye view of the development of the theatre and opera in that country, besides a special section devoted to Verdi relics.

Paris has been enjoying a series of performances given by the Monte Carlo Opera Company, with ensembles of stars such as used to be the glory of the Grand Opéra. This company sings French operas in French, Italian operas in Italian. It is commonly supposed that the Parisians want all operas in French versions. But, as the critic of *Comœdia* remarked the other day, in speaking of a performance of "Rigoletto": "Je dois dire que l'exécution en italien ajoute un intérêt tout spécial à la musique et elle gagne sensiblement en retrouvant sa véritable prosodie."

Nine German works were sung in the opera-houses of Italy during the past season. Of the 133 performances of them, 90 were devoted to Wagner, 33 to Richard Strauss, and the other ten to Weber and Meyerbeer.

In the field of operetta it is surprising how much more popular the Viennese school is in Italy than the French or any other. The English "Geisha" was sung 143 times last season, and the most popular of the French operettas, known in America as "The Chimes of Normandy," was given 35 times. Of Viennese operettas, "The Merry Widow" had 458 hearings, "The Waltz Dream" had 290, "The Dollar Princess" 147, "The Count of Luxembourg" 144, "Fürstenkind" 61, "Herbstmanöver" 50, "Frühlingsluft" 48, "Boccaccio" 47. Altogether there were 1,584 performances in Italian cities of products of the Viennese school. Doubtless, this school possesses more vitality than any other at present; yet it does not rank with the great epoch of Johann Strauss, Suppé, and Millöcker.

Mary Garden will probably appear next season in several American cities in Massenet's new opera "Roma," and in "Monna Vanna," by Maeterlinck and Henry Fevrier.

France has plenty of living composers. In commenting on a new volume by Octave Séré, entitled "Musiciens Français d'aujourd'hui," which is devoted to Massenet, Saint-Saëns, d'Indy, Lalo, Fauré, Charpentier, and several others not so well known, the *Ménestrel* suggests that there is room for another volume, which might include Guilmant, Dubois, Reyer, Paladilhe, Widor, Magnard, Leroux, Dupont, Fevrier, Lecocq, Laparra, de Bréville, etc.

Municipal support is granted to the theatres and opera houses in many of the German cities which have not the advantage of royal support. Mannheim donates for this purpose 541,000 marks; Düsseldorf, 464,000 marks; Chemnitz, 332,000; Leipzig, 329,000; Cologne, 326,000; Freiburg, 318,000; Frankfurt, 272,000; Dortmund, 200,000; Breslau and Mülhausen, 132,000 each; Mayence, 181,000; Barmen, 125,000; Halle, 108,000; Regensburg, 84,000.

Art

AWARDING FRENCH PRIZES.

PARIS, June 12.

The highest honor which a French painter can receive is the medal of honor voted by his fellow-artists. It supposes that his pictures in the year's Salon are worthy of the honor, and that he has won reputation in the past. This is the case with Paul Chabas, who carries off the medal this year. He is past forty, and twenty years ago he began a career of official honors by winning an honorable mention. In 1895 he had a third medal, the next year a second, in 1899 the national or Salon medal, and a gold medal at the Exposition of 1900.

This year he exhibits one painting in the style which has won him all these honors—A September Morning—diaphanous, with blue-gray tints, and the blond-haired girl showing her native graces in unison with the yellowing year. His other picture is the portrait of the wife of a Paris-American painter, who is also much medalled—Mrs. Aston Knight. Paul Chabas has been going in for portraits, which offer the most real rewards to painters nowadays—with success, it should seem, for he has painted notable persons: his own wife; Madame Constans; Madame Daniel Lesueur, the novelist; the Queen of Greece, and others. This means that America is bound to see him later.

Two first medals were voted this year—the highest honors bestowed by the annual jury. One goes to Edouard Monchablon for one of the most striking pictures of many years, at least for those who know the literature of galley slaves and are not angered by splashes of vivid red. La Chiourme shows a crew of such convicts, rowing under the eye of their ill-famed guard, against a lurid sky. Monchablon was a Prix de Rome man in 1903, and exhibited good, flamboyant Italian work in the after years. He, too, has a portrait. The other first medal also goes to a Prix de Rome man, François Maurice Roganeau, for an Evening by the River.

The only medal falling to an American painter this year is a third for John Rachmiel of New York. His picture is Le Braconnier (The Poacher), a good subject, though un-American. He has been a pupil of Jean Paul Laurens and Bonnat. The number of Americans ex-

hibiting in the official Salon seems decreasing—it is seventy-one this year out of a total of more than fourteen hundred. One or two very old-timers reappear—Carroll Beckwith, who was with Carolus Duran in the seventies and had an honorable mention in 1887, and Henry Mosler, who was a long-time resident in Paris.

A curious comparison might be made with the work of those who are studying newly here—colors, lights, composition, brush-work, fashions, and fads—all are different. It is not probable that the number of American art students in Paris is decreasing, but the Salon wave has gone backward, while English, Australians, South Americans have come wonderfully to the fore.

The Rosa Bonheur prize, which was founded in accordance with her wishes by her executor, Miss Anna Klumpke, an American artist, is bestowed on Félix Planquette. He is equally devoted to the shivering sands of Mont Saint-Michel and the Channel coast and to the cattle grazing in the lush salt meadows. He began his honors in 1900, winding up with a second medal and Bourse de Voyage in 1905. I learn that his pictures are finding their way into the United States, where things "different" are desired. In his case, as in that of the others I have named, the honors go to pupils of the older painters, although those who received them long ago struck out for themselves. This is surely not for academic reasons, or because this is the Old Salon in more senses than one; but because those who follow after the evanescent, vacillating, newer art drift away from these annual exhibitions, to which honors and prizes are attached.

Albert Besnard, who is a great man at the New Salon, and is, beyond doubt, one of the great painters of France, has been showing some of his daring experiments in color in a private exhibition of studies made during his late journey in India. I had the advantage of going through it with an experienced Indian; and, as this "real" art has been made the occasion of a noisy triumph, his careful judgment is worth heeding:

> These subjects, men and things, have been taken out of their setting in which they really exist. This violence of red and yellow is not seen in India, with all reverence for M. Besnard. He received the color splash full in the eye, and transcribed it in isolation, whereas it exists in a complex reality into which it melts. This constitutes the tone or note of all things seen in India—and his art leaves the tone out. Perhaps the painter unconsciously concentrates his sight on the color spot, without noticing that it is but a part of a whole—but I cannot recognize in this painting the atmosphere, the environment, in which everything Indian must be seen to be real.

As one of the current New York magazines has at last discovered the painter Caro-Delvaille, I should say that I have not mentioned his exhibit at this year's Salon—on principle. That is, his work shows no great step forward. He is always a good, a very good, painter; and I am still willing to repeat what I wrote eleven years ago: "He promises to be a great painter." Long ago he left the Old Salon, where he won a third medal, for the New, in which he holds an honorable place. He has great power of design, greater than in color, although his work is full of the joy of living. By the way, a mere ancestral strain does not warrant calling him a "Spanish" painter any more than "gypsy." He is from Bayonne, the heart of the Basque country in France, where some of the most interesting French painters were born, including Bonnat. He is a Frenchman by birth and family and training and in his art methods. He, too, has been doing good work in portraits and decoration, and two of his paintings exhibited this year—Pan's Thicket and The Presents of the Earth—are decorations for the house of Dr. Semprun in Buenos Ayres.

In sculpture the main interest of the year has been out of the salons, and, indeed, out of the pale of art. It is a question of propriety, or, to talk as most people do, of morality. The first case was the exclusion of three pieces from the Société Nationale (New Salon). One of these groups supposedly represented Francesca da Rimini and her lover when they "together go forever on the accursed air" in Dante's "Inferno." A certain kind of curiosity has pervaded its subsequent exhibition in Brussels; and it is said that it will be taken to Berlin, London, and New York—to show that it is art, and therefore moral. It would certainly have shocked Dante.

The Pennsylvania Academy of the Fine Arts, and the Pennsylvania Society of Miniature Painters, announce that under their joint management the eleventh annual exhibition of the Society will be held in the galleries of the Academy, in Philadelphia, from Saturday, November 9, to Sunday, December 15, inclusive. The exhibition will consist exclusively of original miniature paintings, which have not before been publicly shown in Philadelphia. Works will be received, without packing-cases, between the hours of 9 A. M. and 5 P. M. on Monday, October 28. The following are the committees: Jury of selection—John W. Alexander, Ludwig E. Faber, Lucia Fairchild Fuller, Evelyn Purdie, Edna Huestis Simpson, and Emily Drayton Taylor. Hanging Committee—A. Margaretta Archambault, Sarah Yocum McFadden, Emily Drayton Taylor, Blanche Dillaye, and Edna Huestis Simpson.

How John La Farge would acquit himself of the stereotyped theme "A Hundred Masterpieces of Painting" (Doubleday, Page), has been a matter of curiosity to his admirers. By giving free rein to all manner of associations and by admitting many charming pictures which are not strictly masterpieces, he made his last book a characteristically unconventional one. The general amenity and human rightness of his attitude—he simply tells how the pictures must have affected their painters and the contemporary public—will appeal to all readers. What will strike the student is the unexpected turns of the author's intelligence and sympathy. Who but La Farge would have opened the chapter on children's portraits with a lovely effigy of Ko-Bo-Dai-Shi, the Japanese apostle of Buddhism? The main divisions are Portraits of Civic Life, War—where one is surprised at the omission of Titian, Michelangelo, and Leonardo da Vinci; Dreams of Happiness, Triumphs, Allegories, Unknown Portraits, Portraits of Fashion, Sacred Conversations, Annunciations, the Madonna, the Stanze, the Borgia Apartments. The casualness of the book—it is the casualness of a very wise person—is its attraction. To glean a number of well-said things from these pages would be a pleasure, but one example must suffice. Vindicating Raphael even when badly repainted, he says, "The intention of such a design is so profound as to carry a special form of life with it. We see such things in literature, or in applied literature—for example, Shakespeare as prepared for the stage." Perhaps the most important part of the book is the running commentary on the Marie de Médicis decorations of Rubens. One misses the intellectual grip and consecutiveness of La Farge's "Considerations on Paintings," but this last book is full of his peculiar mellowness. We may note that the frontispiece, Frans Hals's St. Adriaen's Company, should be dated 1633 and that the cut of Botticelli's Magnificat is tilted askew.

Sir Lawrence Alma-Tadema, the English painter, died on Monday at Wiesbaden, Germany, where he was being treated for stomach trouble. He was born in Dronrijp, in the Netherlands, January 8, 1836. In his reminiscences, published recently, he wrote that his father died when he, Lawrence, was four years old, and that his mother experienced difficulty in supporting herself and two children on the slender means at her command. Lawrence attended the Gymnasium at Leeuwarden. He wanted to be an artist, but his mother discouraged his ambition in that direction. The boy persisted, and drew an admirable sketch of his mother, which received the praise of his school-teachers. At the age of fourteen he made a drawing of his sister which was accepted by the jury of the Leeuwarden Exhibition. After this his career was settled. He entered as a student at the Royal Academy, Antwerp. One of his early paintings, How the Egyptians Amused Themselves Three Thousand Years Ago, attracted the attention of an English picture-dealer, who paid a good price for it. This led to Alma-Tadema's decision to make his home permanently in England. Other notable productions from his brush are The Education of the Children of Clovis, Tarquinius Superbus, Pyrrhic Dance, The Vintage, and the Roses of Heliogabalus. Alma-Tadema was knighted in 1899. In 1892 the University of Dublin gave him the degree of Litt.D., and in 1893 the University of Durham that of D.C.L. He received gold medals from most of the art societies and associations of Europe.

POLITICAL EXCITEMENT AND THE STOCK EXCHANGE.

There has seldom been a convention week in a Presidential year when stock market trading has been so utterly at a standstill as it was last week. Even the professional traders, who are always alive to the possibility of making a favorable turn, thought it wise to await developments and do nothing. The public was out of the market entirely, and the investment buying which is often effective just before the July disbursements are made was insignificant. This attitude was perfectly natural in view of the bewilderment felt concerning the trend of affairs at Chicago and the probable outcome of the extraordinary strife between the Roosevelt and the Taft forces.

At other times such confusion has been used by speculators for the decline to raid the market and force general liquidation. Nothing of the kind occurred last week, one reason being that real holders of securities were not disposed to sell, and instead of becoming alarmed about the outlook, did not evince the slightest uneasiness. This confidence was in striking contrast to the unsettlement of a year ago, when there was no Presidential campaign for the market to consider, but sentiment was greatly depressed by the corporation suits and the feeling of unrest about the future. The relative firmness of prices this year reflected the growing optimism of the people over the permanence of trade recovery and the belief that better times were ahead. Whether this attitude takes too much for granted remains to be seen, but the fact that prices held well in spite of the circulation of rumors calculated to upset the market showed that the community took a hopeful view of the situation, and that most people believed that conditions were sound. Under such circumstances it is difficult to predict what the market would have done had it heard that Mr. Roosevelt had been nominated, or that President Taft had obtained the prize, or that some new man had been determined upon.

With the falling off in speculation there has been a considerable piling up of idle funds in those banks which for weeks past have confined their operations to loans made on call. Within the last few days, however, there have been fresh loans made to Berlin institutions, and although it is probable that the heaviest requirements have been met, there is likely to be another flurry in money rates in the German market in the last days of the month. At any rate, the London market has been somewhat upset by the feeling that the half-yearly settlement requirements might lead to disagreeable complications at the last minute, with a hurry call for more gold shipments. As it is, various foreign markets have given up $15,000,000 gold to Germany during the last few weeks, and there is reason to believe that a part of this was sent in connection with the special loans made by New York banks to German institutions.

Owing to the complications of a Presidential year there has been an indisposition on the part of some of the Wall Street banks to renew the loans that recently matured on the other side. But the offer of a 5½ per cent. rate for one month accommodation was sufficient to attract a good deal of fresh money from this side in addition to the renewal of loans originally made three and six months ago. How this account will finally be settled, and whether or not it will lead to gold imports from Europe in the autumn, depends on the continuance of business revival here and the course of affairs on the Stock Exchange. Should a broad speculative movement be started, the aggregate burdens upon New York banks might be sufficient to advance money rates to a point where gold imports would be called for. An interesting situation is certain to develop in the autumn. The Berlin, Paris, and London markets will have heavy payments to finance at that time, and it is recognized that, should stringency develop here or business broaden in a way to afford employment for much of the money that New York banks have tied up in foreign loans, the strain upon foreign markets would become acute. This would be inevitable if the banks here were forced to recall all their loans made to Berlin and London.

An interesting test will be put to the bond market next month, when the July disbursements are made. Payment of $250,000,000 for interest and dividends must have some influence, even if the public is not disposed to purchase securities in the old way. The preliminary demand, so far, has not been sufficient to indicate whether the attitude of investors is different from what it was three or six months ago. But the fact that the banks, trust companies, and life insurance corporations have become purchasers of bonds on a large scale is important. Absorption by savings banks is sufficient to indicate that wage-earners are no longer obliged to use their savings-bank balances to meet living expenses in the way that they did a year ago. Although the bond market has been rather backward, the situation here is much stronger than it is at London, where new capital issues have been so heavy as to force serious congestion. The foreign syndicates have taken such heavy losses through inability to market the bonds that they had underwritten, that it is now difficult for the English corporations to obtain the capital which they actually require. There is no such congestion on this side, and in spite of the large bond offerings that have been made during the last six months, the syndicates here are really in a more comfortable position than they were at the time in either 1911 or 1910.

THE LIFE OF NIETZSCHE

By Mrs. FOERSTER-NIETZSCHE

VOLUME I.—THE YOUNG NIETZSCHE
Volume II.— *Preparing.*

This life is written by Nietzsche's sister, whose life-long devotion to her brother, as intellectual companion and as nurse, is well known. Now for the first time published, simultaneously in English and German, it will supersede all other biographies of the philosopher, by its completeness and its fresh material. It draws upon all available sources, including hitherto unknown documents possessed by the biographer, and upon her own wonderful memory. In it the author vividly presents her brother's personality and environments in a narrative of engrossing interest.
